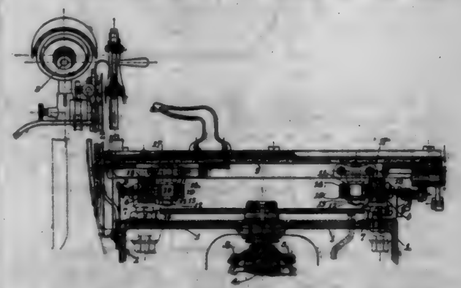
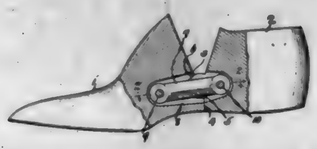
1. In a system of telegraphing, means for supplying to a conductor impulses of opposite polarity of a given potential and separate means for supplying to said conductor increased potential in phase with said impulses of opposite polarity in connection with a movable coil relay at a receiving station adapted to move in opposite direction by the current reversals and close a circuit to one set of translating devices in response to said reversals and move to a greater distance in either direction in response to the current impulse of increased potential and close another circuit to operate a different set of translating devices by the additional movement.



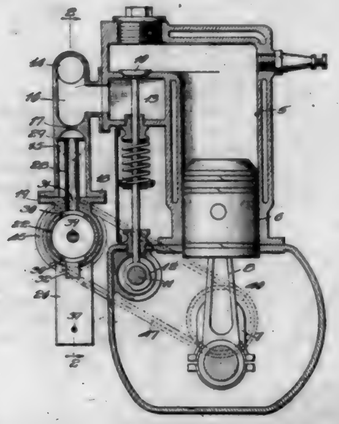
1,537,745. PRINTING TELEGRAPHY. WILLIAM MANSFIELD BRUCE, Jr., Springfield, Ohio. Filed Feb. 12, 1921. Serial No. 444,581. 8 Claims. (Cl. 178—28.)

1. The method of producing word spacing in printing telegraph systems which consists in supplying an extra impulse as a part of a letter combination and causing this impulse to operate mechanism at the receiving end prior to or during the time that the letter combination is being transmitted and set up so as to operate the spacing mechanism of the printer as for the purpose specified.



1,537,746. MEAT-SLICING MACHINE. JOHANNES ANTONIUS BUNGENS, Deventer, Netherlands, assignor to Naamlooze Vennootschap Nederlandsche Onderdeelen Corporatie, Deventer, Netherlands. Filed Mar. 5, 1924. Serial No. 697,071. 6 Claims. (Cl. 146—102.)

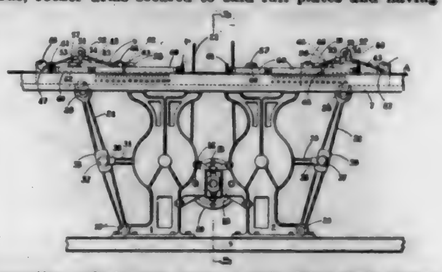
1. A meat slicing machine including a reciprocating table, a fixed support therefor, guide members on said support, and rotary members carried by said table and



each including a plurality of rows of horizontally arranged ball bearings, said rotary members being engaged with said guide members so that the latter will take up pressure on all sides of said rotary members.

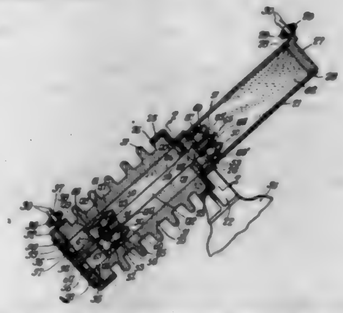
1,537,747. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Mar. 7, 1923. Serial No. 623,322. 2 Claims. (Cl. 12—136.)

1. In a last, the combination of a fore part and a heel part each of which is provided with a longitudinally extending groove, a rigid link for attaching the last parts to each other to prevent their separation and comprising two plates lying side by side, spring pins passing through said plates for attaching the rigid link to the last parts, said plates intermediate said pins being of increased cross section relatively to the remaining portions of the plates, to substantially fill the said longitudinally extending grooves in the toe and heel parts of the last.



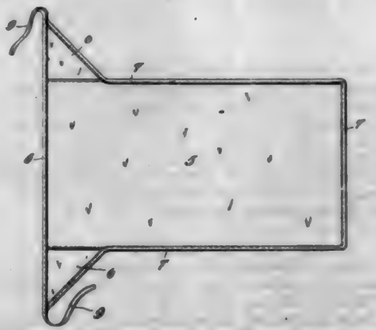
1,537,748. INTERNAL-COMBUSTION ENGINE. DON COLE, Chicago, Ill., assignor of one-half to John A. Dienner, Chicago, Ill. Filed June 28, 1919. Serial No. 307,292. 11 Claims. (Cl. 123—119.)

1. In combination, an engine cylinder, fuel feeding means, air admission means, a conduit connecting with said cylinder, and a single valve for first connecting said fuel feeding means to said conduit and for subsequently connecting said air admission means to said conduit during the intake stroke in said cylinder.



1,537,749. LINER MACHINE. CHARLES EVERETT COLGROVE, Toronto, Ontario, Canada. Filed Oct. 11, 1923. Serial No. 667,885. 10 Claims. (Cl. 271—2.5.)

1. In a liner machine, a plurality of reciprocating platens having upper and lower coacting sections, rail plates mounted on said lower coacting sections, eccentrics having rods connected to the upper coacting sections, rocker arms secured to said rail plates and having

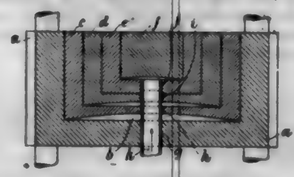


connecting rods to spur gears, a main drive shaft having intermeshing pinions, said intermeshing pinions oscillating the spur gears.

1,537,750. HIGH-TENSION LIQUID BREAK SWITCH. NICHOLAS J. CONRAD, Wilmette, Ill., assignor to Schweitzer & Conrad, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1924. Serial No. 720,306. 27 Claims. (Cl. 200—48.)

1. A device of the character described comprising a movable closed container, stationary contacts therein, a plurality of loosely carried solid circuit controlling members therein adapted to occupy either an open-circuit or closed-circuit position depending upon the position of said container, a plurality of said members making a butt contact with each of said stationary contacts and an arc extinguishing fluid within said container.

1,537,751. COMBINATION SUNBONNET AND HOUSE CAP. GLADYS B. COOKSON, Cleveland, Ohio. Filed Aug. 15, 1924. Serial No. 732,201. 2 Claims. (Cl. 2—198.)

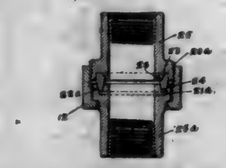


1. A combination sun bonnet and house cap comprising a cloth body portion adapted to cover the head of a wearer and project forwardly of the face to shield the eyes, said body portion terminating at the back of the head, substantially triangular sections stitched to the longitudinal sides of the body portion near its rear end and designed to be carried around the sides of the wearer's head to a point over the temples and a bias binding strip attached to the rear edge of the body portion and extending beyond the triangular sections to form tie strings, said tie strings being secured together immediately above the forwardly projecting portion.

1,537,752. ART OF PRODUCING WATERPROOF SHEETS FROM FIBROUS MATERIAL BY THE USE OF SULPHUR. FRANK H. COYNE, Bryn Mawr, Pa.; Frances Moffett Coyne executrix of said Frank H. Coyne, deceased. Filed Mar. 8, 1919. Serial No. 281,465. 7 Claims. (Cl. 154—40.)

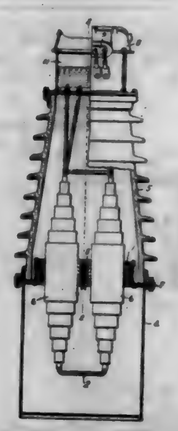
1. The process of making a laminated paper structure which consists in moving a layer of paper over a support, applying to said layer, while it is moving over the said support, sulphur previously heated until it reaches a temporarily viscous adhesive condition and while the sulphur is still in its adhesive condition applying a second sheet and subjecting said sheets after sulphur has been applied and they are stuck together to conditions which transform them into an elastic and temporarily flexible fabric.

1,537,753. FLUID-PRESSURE PRESS. JOHN MAURICE FROST CRAVEN, Sheffield, England. Filed Apr. 13, 1923. Serial No. 631,865. 3 Claims. (Cl. 78—42.)



1. A press comprising, in combination, a cylinder, a plurality of rams assembled as a unit in said cylinder, each succeeding ram also forming the cylinder for the one preceding it, a port in said cylinder and also in each ram serving as a cylinder, and a valve consisting of a tubular member communicating with the source of supply and adapted to be moved to establish the communication with any desired cylinder.

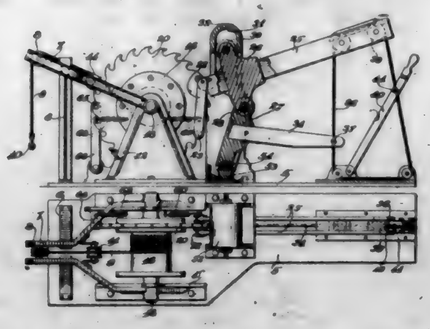
1,537,754. CURTAIN STRETCHER. MICHAEL J. DE GRAVE, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,379. 2 Claims. (Cl. 45—24.)



1. In a curtain stretcher, the combination of a rigid frame having longitudinally extending grooves for the reception of a series of curtain pins; cross bars slidably mounted on said frame substantially at right angles with respect to each other; brackets mounted adjacent the ends of one of the side and end bars of said frame; rollers revolvably mounted on said brackets; flexible tapes connected to said cross bars and adapted to be wound on said rollers; a ratchet wheel mounted on the end of each of said rollers; and a spring held double acting pawl adapted upon engagement with said ratchet wheel to alternately lock said roller against winding and unwinding operation, substantially as described.

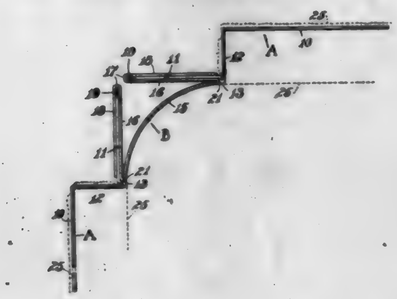
1,537,755. UNION PIPE FITTING. FRANCIS J. DOWLING, New York, N. Y. Filed Nov. 12, 1924. Serial No. 749,365. 3 Claims. (Cl. 285—120.)

1. A pipe connection comprising, in combination, a plurality of co-operating members having a tubular passage, and means for forcing said members into engagement with each other, one of said members having an annular groove spaced from and surrounding said passage and constituting a double-faced seat, the other member having a tongue mating with said groove, the faces of said groove being of conical formation and intersecting to form a substantially acute angle so as to form a groove of conical section, said tongue being of approximately conical cross-section and having elements in contact with the elements of the groove thus providing for a conical surface contact along each of the groove faces, but the apex of said tongue being blunter than the apex of said groove, whereby when said tongue is forced coaxially to flow into the groove, the length of the elements in contact between the tongue and the groove is increased, and a continuous conical surface contact maintained.



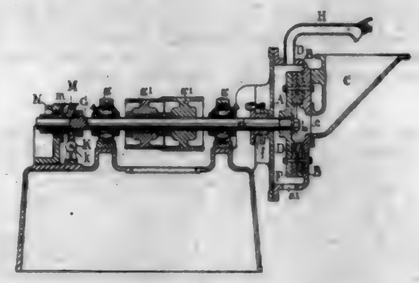
1,537,756. ENCASED TRANSFORMER. EUGENE D. EBY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 8, 1923. Serial No. 637,562. 2 Claims. (Cl. 175—361.)

1. The combination with a high tension transformer of a casing therefor, the wall of said casing comprising a lower metallic section and an upper insulating section, the transformer comprising a horizontally disposed core supported by said lower metallic wall section near



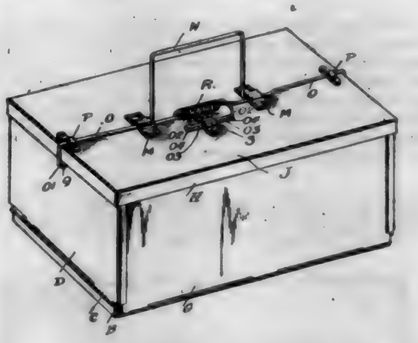
its upper edge, high tension bushings extending from the space within said lower metallic wall section through said core into the space within said upper insulating wall section, the transformer having a high tension winding extending through said bushings, and an outlet cover at the upper end of said casing wall.

1,537,757. LIFTING APPARATUS. PETER ERICKSON, Chicago, Ill. Filed May 28, 1924. Serial No. 716,451. 10 Claims. (Cl. 254—186.)



10. A lifting apparatus comprising a base, a vertically arranged guide mounted on said base and having oppositely arranged channels, a pair of toggle links connected at their adjacent ends, one of said toggle links being provided with rollers received in said channels whereby the movement of the links is guided, means to support one of the toggle links for rocking movement, levers connected to said toggle links, an endless cable connected to said levers for rocking the same, said cable being securely connected to one of said levers and being slidably connected to the other lever, an actuating lever connected to said cable, lifting links connected to one of said first named levers in advance of said toggle links, a ratchet wheel operated by said lifting link, means to hold said ratchet wheel in an adjusted position, a drum having connection with said ratchet wheel, and a lifting cable having connection with said drum.

1,537,758. EXPANSION CORNER FOR PLASTER. ANTHONY FISCHER, Indianapolis, Ind. Filed July 5, 1924. Serial No. 724,196. 3 Claims. (Cl. 72—116.)

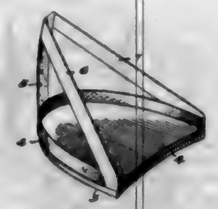


1. A plastering corner unit comprising three associated strips of suitable material, two of said strips being formed to be attached to a building frame and to receive plaster and the other being formed to bridge the gap between the first two mentioned strips, said three elements having interdigitated portions in series.

1,537,759. GRINDING MILL. JOSEPH M. FLEMING and WILLIAM H. BARNES, Manchester, England. Filed June 25, 1923. Serial No. 647,742. 2 Claims. (Cl. 83—8.)

1. A grinding, mixing or incorporating apparatus comprising in its construction an enclosed stationary grinding chamber adapted to contain a fluid mixture, a fixed vertical grinding ring fitted therein with central feed aperture, a feed device fitted thereto feeding into the aperture in the fixed grinding ring, a vertical rotary grinding disc mounted within the grinding chamber, a horizontal driving shaft to which the rotary grinding disc is affixed, a frame and anti-friction bearings to support the driving shaft and grinding disc, driving pulleys on the shaft, a thrust collar on the driving shaft, a screwed boss carried in a screwed bracket abutting against the thrust collar of the shaft and a worm wheel on the boss and a worm to rotate it to apply the desired pressure to the grinding discs.

1,537,760. FOLDING LUNCH BOX. WILLIAM JOSEPH GASSETT, Waycross, Ga. Filed Dec. 5, 1923. Serial No. 678,620. 3 Claims. (Cl. 220—7.)

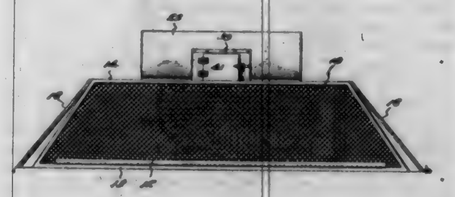


1. A folding or collapsible box, consisting of a box or container member, a lid or cover adapted to fit on said container member, and locking means carried by the cover for securing the container member in open or folded positions, said locking means consisting of a pair of arms having latching hooks at their outer ends, bent guiding portions at their inner ends formed with handles and a spring mounted upon said guiding portions to effect locking of the said hooks.

1,537,761. CAP FOR RUBBER HEELS. JOSEPH GEISMAN, New York, N. Y. Filed Mar. 20, 1923. Serial No. 626,344. 4 Claims. (Cl. 36—72.)

1. A removable cap for rubber heels, comprising a leather base, a plurality of resilient straps connected

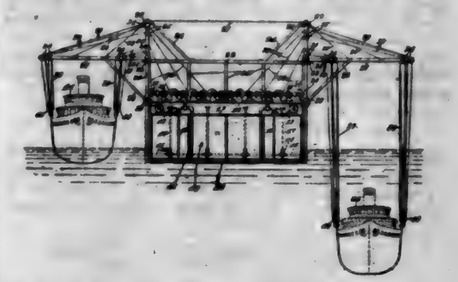
with said base and interengaging with the heel on which the base is mounted, and a back strap connected with the first mentioned straps for holding part of the base in



position, said straps being constructed and arranged to interengage with the heel on which the device is to be mounted.

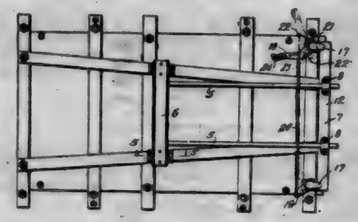
1,537,762. ATTACHMENT FOR KNITTING NEEDLES. DAVID GENESS, Baltimore, Md. Filed Jan. 16, 1924. Serial No. 686,578. 9 Claims. (Cl. 66—17.)

1. An attachment for knitting needles consisting of several resilient tubular members fully open at both extremities and disposed in separated relation to each other, the said tubular members being connected by flat members arranged in divergent planes.



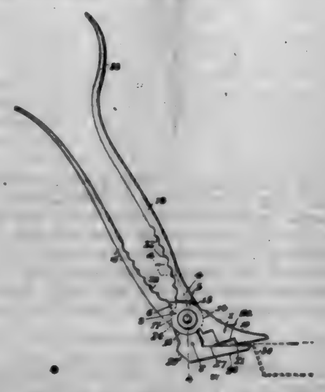
1,537,763. ANIMAL TRAP. GIACOMO GIANOLI, Hartford, Conn. Filed Jan. 30, 1924. Serial No. 689,542. 3 Claims. (Cl. 43—70.)

1. A trap comprising a casing having an opening in the top thereof, a horizontally disposed platform pivotally mounted within and normally closing the opening, a platform compartment supported upon the top of the casing above the platform and open at each end and means including vertically movable pivotally mounted segmental plates located at the ends of the platform compartment and operated by depressing the platform to close said ends.



1,537,764. APPARATUS FOR RAISING SUNKEN VESSELS. CHESTER A. GOOD, Groveton, Tex. Filed Jan. 12, 1925. Serial No. 1,880. 5 Claims. (Cl. 114—50.)

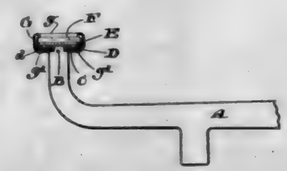
1. An apparatus of the class described, comprising a floating barge, a plurality of booms carried by said barge and extending from opposite sides thereof, a floating counterpoise supported from said booms at one



side of the barge, and means adapted to connect a vessel to be raised to the booms at the opposite side of the barge.

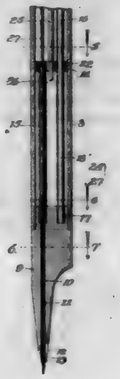
1,537,765. VEHICLE DUMPING BODY. FRANK M. GOOSSEN, Hillsboro, Kans. Filed July 24, 1923. Serial No. 653,573. 3 Claims. (Cl. 298—38.)

1. An end gate for dumping vehicles comprising in combination with a vehicle body, an end gate member pivotally carried by the body, a plurality of hook members carried by the body, a latch carried by the end gate member and adapted to engage behind the hook members, and ground-engaging means carried by the hook members and adapted to disengage the latch from the hook members upon the body moving to dumping position.



1,537,766. COMBINATION TOOL. CHARLES H. GREENE, West Blocton, Ala. Filed May 26, 1924. Serial No. 715,988. 2 Claims. (Cl. 294—3.)

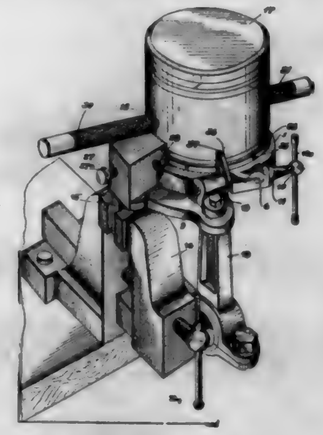
1. A device for the purpose set forth comprising a pair of shanks, superposed jaws extended therefrom, one of said jaws formed of a short and a long leg, the



latter disposed at right angles to the former and having its inner face plane throughout, the other of said jaws having its inner face cutaway transversely thereof to provide an inner and an outer gripping point extending from one side to the other side of such jaw, said gripping points opposing and coacting with said plane surface, and the inner face of each of said jaws being of the same width with respect to each other.

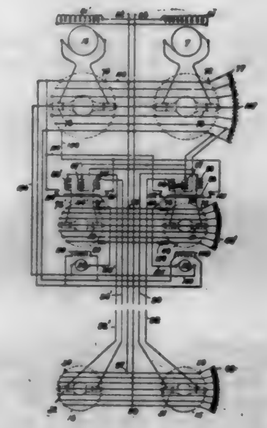
1,537,767. TYPEWRITING MACHINE. PATRICK M. GREENE, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1924. Serial No. 728,863. 5 Claims. Cl. 197—102.)

5. A key cap comprising a cup, a washer fitting therein, a character disc, and discontinuous surface portions on the washer into interlocking engagement with which the disc is pressed when the parts are assembled to hold the disc against rotation.



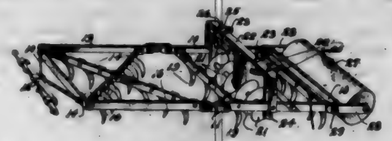
1,537,768. LEAD PENCIL. CLARENCE O. GRONBERG, Elgin, Ill., assignor of one-third to Albert M. Price, Elgin, Ill. Filed Jan. 27, 1922. Serial No. 532,062. 3 Claims. (Cl. 120—18.)

1. A lead pencil having a body portion provided with a tip, said body portion being of substantially uniform cross section throughout its length up to said tip, said tip being of less cross section than said body portion and containing a bore eccentric to the axis of said body portion, a feed rod slidable in said bore, and a threaded rotatable rod concentric with said body portion and operatively engaging said rod for propelling the latter.



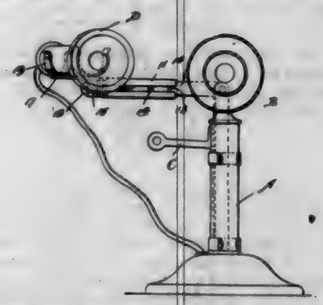
1,537,769. PISTON TOOL. ALBERT S. HAISLIP, Fredericksburg, Va. Filed May 22, 1923. Serial No. 640,753. 25 Claims. (Cl. 82—4.)

1. A tool of the character described comprising a work receiving portion for supporting rotatable work, a support for said work receiving portions, and a work reducing and retaining means associated with said support.



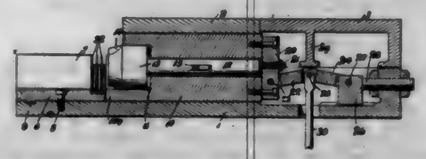
15. A tool of the character described comprising a contractible work receiving annulus, an arcuate support for said annulus, a work reducing and retaining means associated with said annulus and means for rotating said work in said work receiving portion.

1,537,770. POSITIONING MECHANISM FOR SEARCH-LIGHTS. THEODORE HALL, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 28, 1919. Serial No. 319,383. 2 Claims. (Cl. 172—239.)



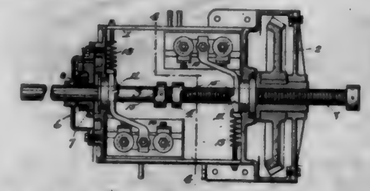
1. In combination, a plurality of rheostats, a common source of E. M. F. therefor, each rheostat having a movable contact arm, contacts on the ends of each contact arm, a polarized relay, including two coils, one end of each coil being electrical connected to the ends of one of said contact arms, the other end of each coil being electrically connected to the ends of the other of said contact arms, and a motor controlled by said polarized relay and mechanically connected to one of said movable contact arms.

1,537,771. PULVERIZING HARROW. JAMES WALTON HARRIS, Sellers, S. C. Filed Aug. 15, 1923. Serial No. 657,604. 2 Claims. (Cl. 55—12.)



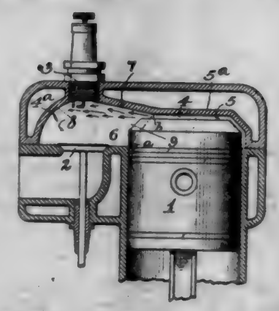
1. In a harrow, a frame, parallel cross bars carried thereby, fixed clod cutting blades depending from said bars, a yoke disposed intermediate the parallel bars, gangs of disk harrows independently and adjustably pivoted upon said yoke to track intermediate said blades or at an angle thereto, a crushing roller supported at the rear of said frame by arms pivoted thereon, and a breaker frame pivotally connected to the front of the first mentioned frame and provided with clod cutting blades disposed in parallel transverse and longitudinal planes.

1,537,772. RECEIVER SUPPORT FOR TELEPHONES. GEORGE HITZLER, Hoboken, N. J. Filed June 18, 1923. Serial No. 645,962. 1 Claim. (Cl. 179—147.)



A telephone receiver support comprising bars pivotally connected together, means for frictionally fixing the bars with relation to each other, spring clasps carried by one of the bars, an abutment member carried by the other bar, a channeled bar having inturned flanges which are disposed at the opposite sides of the abutment, the channel bar and the flanges receiving the edge portions of that bar which is provided with the abutment, a pin carried by the channel bar and disposed across the space between the inner edges of the flanges, a channel bar having an angularly disposed end portion and a flat bar carried by the angularly disposed end portion of the channel bar and provided with spaced spring clips.

1,537,773. PISTON-RING-APPLYING MACHINE. CHARLES E. JOHNSON, Muskegon, Mich., assignor to The Piston Ring Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed Oct. 27, 1924. Serial No. 746,135. 11 Claims. (Cl. 29—86.4.)

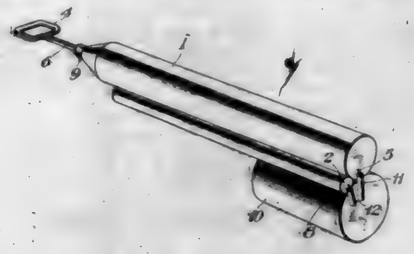


1. In a device of the class described, means for holding a plurality of piston rings in spaced apart relation, means for spreading said rings, and means for acting on said holding means to clamp the rings in their spread position whereby the grooved end of a piston may be inserted through the spread rings, substantially as described.

1,537,774. LIMIT SWITCH FOR ELECTRIC HOISTS. SAMUEL E. KALBACH, Reading, Pa., assignor to Roeper Crane and Hoist Works, Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1924. Serial No. 749,212. 2 Claims. (Cl. 200—47.)

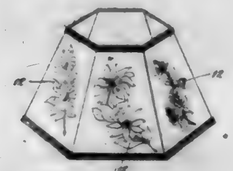
1. In a limit switch for electric hoists, the combination of a timing gear, a threaded shaft, means for holding the shaft against rotation while it moves longitudinally, adjustable stops on the shaft, electric contacts having spring-backed fingers thereon, registering lugs on the stops and on the fingers whereby contact of the stops with the fingers will stop the longitudinal movement of the shaft and cause it to rotate and open one of the contacts.

1,537,775. INTERNAL-COMBUSTION ENGINE. ISAAC J. KELLY and HORATIO W. SMITH, San Jose, Calif., assignors to Automatic Bearing Machine Co., San Jose, Calif. Filed Sept. 24, 1923. Serial No. 664,551. 4 Claims. (Cl. 123—191.)



1. A combustion motor comprising a cylinder; a reciprocating piston in said cylinder; a cylinder head; a recessed surface substantially parallel to the head of said piston formed in said cylinder head and spaced sufficiently from the end of said piston at the end of a compression stroke thereof to form a compact combustion space between said surface and said piston; an enlarged combustion space formed in said cylinder head communicating with said compact combustion space; and a pair of spark points in said enlarged space; said compact and said enlarged combustion spaces being so proportioned and formed that a violent agitation of gases is set up in said enlarged section by a compression stroke of said piston without substantially choking the flow of gases between said cylinder and said spaces.

1,537,776. SPRAYER. MARTIN F. LANGWORTHY, Detroit, Mich. Filed Mar. 4, 1920. Serial No. 363,181. 1 Claim. (Cl. 299—88.)



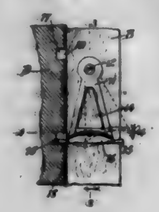
A spraying device comprising a large pump barrel having an end opening and a side opening, a reciprocable piston in said pump barrel, a small barrel mounted against an outer wall of said large pump barrel, said

small barrel having an end opening and a side opening with said side opening registering with the side opening of said large pump barrel, a tank mounted against outer

walls of said large and small barrels, and jet tubes at one end of said tank and having the jets thereof in proximity to the end openings of said large and small barrels.

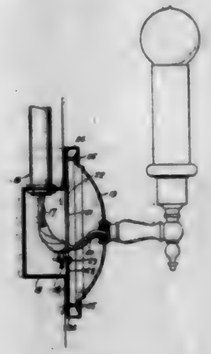
1,537,777. SELF-LUMINOUS DECORATIVE MATERIAL AND PROCESS FOR THE MANUFACTURE OF SAME. GERTRUDE LIEDTKE, New York, N. Y., assignor, by direct and mesne assignments, of one-half to Julius Lippmann, New York, N. Y., and one-half to David Lippmann, Atlantic City, N. J. Filed Mar. 3, 1922. Serial No. 540,672. 8 Claims. (Cl. 41—21.)

1. The herein described luminous decorative material comprising a translucent body and coating on said body, said coating having arranged thereon in harmonious decorative relation translucent non-luminous portions and self-luminous portions.



1,537,778. RUBBER OVERSHOE. BARNEY R. NYHAGEN, New York, N. Y. Filed June 27, 1924. Serial No. 722,725. 8 Claims. (Cl. 36—5.)

1. An overshoe of relatively thin sheet elastic, having two flat walls normally lapping upon each other and the edges of the walls exclusive of the entrance being integral.

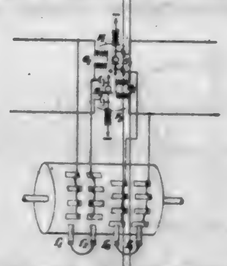


1,537,779. WINDOW-SASH LOCK. PATRICK J. O'BRIEN, Bay Bulls, Newfoundland. Filed May 24, 1924. Serial No. 715,580. 1 Claim. (Cl. 292—238.)

A window sash locking device comprising a latch member including a stationary section and a laterally movable section mounted on the side rail of a window sash, a locking lug on the movable section, a keeper plate carried by the window frame and having a plurality of vertically spaced keeper openings for receiving the locking lug, a handle member constituting respectively a means for effecting engagement and disengagement of the lug with the keeper openings and for moving the sash, a common means extending through one end of each of the latch sections for pivotally associating

the movable section with the sash, a slotted portion in the opposite end of the movable section, and a common means extending through said slotted portion and through the stationary section for holding the latter section against movement and for constituting a stop to limit the lateral swinging movement of the movable section.

1,537,780. ATTACHING BRACKET FOR LIGHTING FIXTURES. JOHN LEE OBERNDORF, Los Angeles, Calif. Filed Dec. 8, 1923. Serial No. 679,408. 6 Claims. (Cl. 240—85.)

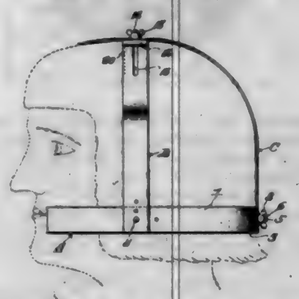


2. In combination, a junction box, an attaching bracket for lighting fixtures which is continuously curved to conform generally to the contour of the periphery of the box and approximately of the same diameter, means for securing the bracket in concentric relation to the periphery of the box and to permit circumferential adjustment thereof, and arms on the bracket adapted to be secured to the canopy of the lighting fixture adjustable about axes parallel to the axis of the bracket and in planes parallel to the plane of the bracket.

1,537,781. RECIPROCAL TELEPHONE REPEATER. WILHELM OHNESORGE, Dortmund, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 30, 1921. Serial No. 496,916. 2 Claims. (Cl. 179—171.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

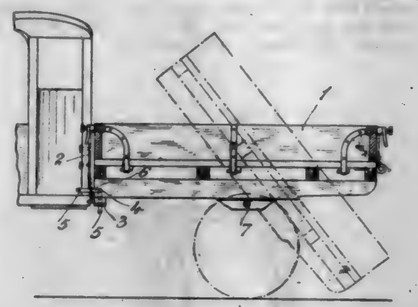
1. In a reciprocal telephone repeater system the combination of the repeater connection with commutating

means adapted to alternately put said repeater connection into and out of operation, for either the one or



other direction of speech, at a suitable speed at which the clearness of the telephonic conversation is not affected.

1,537,782. SALT AND PEPPER BOX. GUSTAVE OLSON, Chicago, Ill. Filed Apr. 21, 1924. Serial No. 707,989. 3 Claims. (Cl. 68—45.)

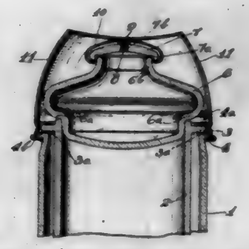


1. A device of the class described comprising a cylindrical receptacle open at the bottom; a removable vertical partition fitting said receptacle; a threaded stem on the top of said partition projecting through the top of said receptacle; a removable cap fitting over the top of said receptacle and rotatable on said stem there being openings in said cap and corresponding openings in said top, the openings in said cap being angularly displaced with reference to the openings in said top but arranged to be brought alternately into and out of registration therewith; a nut on said threaded stem holding said cap and partition in place; and a removable bottom for said receptacle, substantially as described.

1,537,783. HAIR-BOBBING GAUGE. JOHN H. OLSON, Red Wing, Minn. Filed May 6, 1924. Serial No. 711,415. 2 Claims. (Cl. 132—45.)

1. A hair bobbing gauge comprising a bottom band, side and back supporting straps for said bottom band and means for adjusting the latter vertically or circumferentially for tilting the same either up or down in a vertical plane.

1,537,784. TILTING MECHANISM FOR MOTOR TRUCKS. HANS JOHANNSEN ÖVERAASEN, Gjovik, Norway. Filed Nov. 5, 1923. Serial No. 673,010. 2 Claims. (Cl. 298—38.)

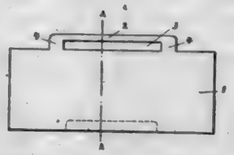


1. In tilting mechanism for motor trucks the combination with a truck body, a tilting box turnably connected with said truck body, detents fastened to said tilting box, locking springs fastened to the upright part of said truck body and engaging said detents, of a releasing bar transversely disposed and rotatably mounted on the tilting box and having crank shaped turning handles on each end one on each side of the said box for releasing the locking springs from engagement with the detents on the tilting box.

1,537,785. SWIVEL CONNECTION. LUKE EVERETT PARKER, Po Ell, Wash. Filed July 18, 1923. Serial No. 652,398. 2 Claims. (Cl. 59—95.)

2. A swivel connection comprising an outer member having a substantially cup-shaped body portion having a bore formed with the wall thereof consisting of a series of portions circular in cross-sectional contour and stepped in diameter, said portions being of substantially the same length and each two adjacent circular portions of the bore being merged one into the other by an annular shoulder, and a socket member rotatably received in the body portion of the outer member and having the outer wall thereof fashioned to provide portions circular in cross sectional contour and closely interfitting the corresponding portions of the body portion of the outer member, each two adjacent circular portions of the outer wall of the socket member being merged into each other by an annular shoulder adapted to rest on the corresponding shoulder of the inner wall of the body portion of the outer member, said socket member having a bore including a tapered portion increasing in area toward the end of the socket member which has the largest outer diameter, and a substantially U-shaped attaching member secured at its ends to said socket member and extending beyond the larger end of the latter.

1,537,786. STOPPER. WILLIAM W. SIMONSON and LEWIS V. D. BLAIR, Cincinnati, Ohio; John C. Thompson, administrator of said Lewis V. D. Blair, deceased, assignors to The Mantle Lamp Company of America, Chicago, Ill., a Corporation of Illinois. Original application filed June 1, 1918, Serial No. 237,831. Divided and this application filed Mar. 22, 1922. Serial No. 545,692. 15 Claims. (Cl. 215—48.)

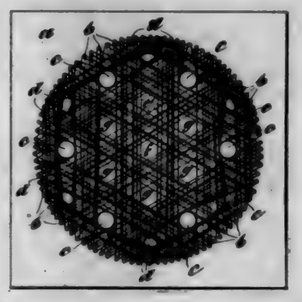


1. A multi-part heat-insulating hollow stopper having a hermetically sealed and interiorally silvered glass body portion provided with a closed bottom and an upstanding neck.

1,537,787. PISTON RING. MARTIN E. SIPE, Ridgeville, Ind., assignor to Seal-Tite Piston Ring Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 9, 1919. Serial No. 309,764. 4 Claims. (Cl. 74—109.)

1. A piston ring provided in its peripheral surface with shallow, approximately semi-circular, oil pockets that extend to one edge of the ring, the semi-circular area of said pockets being adapted to face the cylinder wall.

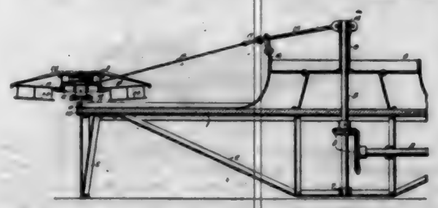
1,537,788. ADVERTISING SIGN. OSCAR W. WENTZ, New York, N. Y. Filed Jan. 25, 1922. Serial No. 531,542. 3 Claims. (Cl. 40—128.)



1. An advertising sign consisting of a strip of material of preferably uniform width, an extension of the material at its upper rim, a slot in the aforesaid extension so as to form a handle, an upwardly bent flap at the lower rim of the strip, the handle of such sign being adapted to be slipped over the flap of any other such sign so as to form a continuous chain.

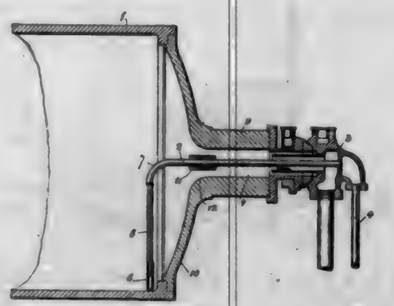
1,537,789. LAMP-SHADE HOLDER. LOUIS YENTIS and WILLIAM LANGE, New York, N. Y. Filed Apr. 14, 1924. Serial No. 706,443. 3 Claims. (Cl. 240—148.)

1. In a lamp shade holder, in combination, a base capable of fixment to a lamp standard, oppositely opposed upwardly extended ends to said base, a locking means carried by the ends and a shade support pivotally carried by said ends capable of removal from jointure with the base ends when the support is in a horizontal position and capable of resilient placement within said locking means when it is in vertical position.



1,537,790. UNIVERSAL COUPLING AND THE MANUFACTURE THEREOF. ROBERT JOHN ALPE, Birmingham, England. Filed Sept. 17, 1923. Serial No. 663,266. 3 Claims. (Cl. 64—96.)

2. A winding frame comprising a base, a series of main pegs upstanding therefrom and corresponding to the concyclically disposed points of attachment of the disc to the driving and driven elements, a series of upstanding secondary pegs corresponding to the rivet holes required for attachment of external stiffening plates for the disc, and an external annular series of closely spaced upstanding pins for the looping of the bights of a cord.



1,537,791. AMUSEMENT DEVICE. GUSTAV AMUNDSEN, Myrtle Point, Oreg. Filed Jan. 22, 1924. Serial No. 687,872. 9 Claims. (Cl. 272—43.)

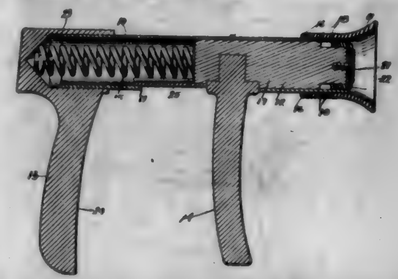
1. A car of the character described, constituting an imitation airplane and held to move in a defined circular path comprising a body, castor wheels supporting the body when in lowest position, elastic equalizing means for holding the wheels in normal vertical alignment,

planes at both sides of the body, and manually operated means for tilting the planes to control the elevation of the body when in motion.

1,537,792. DRIER FOR PAPER MACHINES. FRED W. AUCUTT, Millwood, Wash., assignor to Inland Empire Paper Co., Millwood, Wash., a Corporation of Washington. Filed Mar. 21, 1924. Serial No. 700,899. 6 Claims. (Cl. 34—4.)

1. The combination with a paper drying machine having a hollow drying cylinder provided with a hollow journal, of means for removing the water of condensation from said cylinder, said means including a siphon pipe extending through said journal into said cylinder, and a flexible tubular member extending from the inner end of said pipe toward the inner surface of said cylinder.

1,537,793. DENTAL TWEEZERS. THOMAS F. BATES, Shelbyville, Tenn. Filed July 9, 1923. Serial No. 650,472. 3 Claims. (Cl. 128—260.)

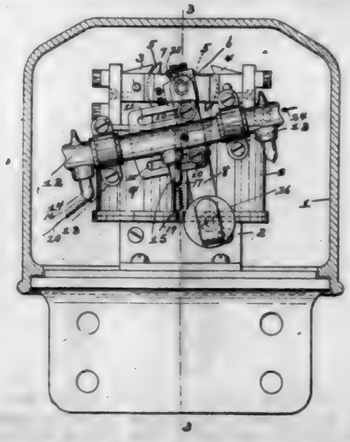


2. A dental tweezer having tapering coacting legs, the inside surfaces of which are flat throughout, and are provided with registering liquid receiving grooves, adapted to completely enclose the liquid.

1,537,794. GLOVE-FINGER-SUPPORTING DEVICE. DAVID BAUM, Livermore Falls, Me., assignor to The Baum Machine Co., Livermore Falls, Me., a Corporation of Maine. Filed Aug. 29, 1923. Serial No. 660,000. 3 Claims. (Cl. 223—20.)

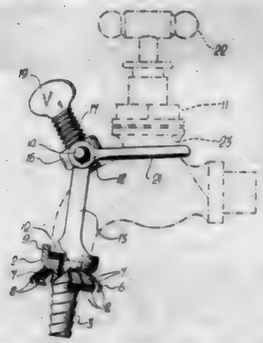
2. A supporting device for glove fingers and other articles to be turned, said device having diametrically opposite resilient upstanding arms, slightly deflected inwardly at their upper ends, and a tubular clamp at the upper end of said arms and composed of laterally disposed members U-shaped in cross section and carried by the respective arms.

1,537,795. MASSAGE DEVICE. FRED C. BOHM, New York, N. Y. Filed July 25, 1923. Serial No. 653,810. 2 Claims. (Cl. 128—297.)



1. A suction massage device comprising an open ended barrel, a cup formed at one end thereof, a grip member having a head secured to the other end of the barrel for closing the same, a slot formed in said barrel, a sucker slidable in said barrel, a suction grip member carried by said sucker and extending through the slot, the last mentioned grip member co-acting with one end of the slot to limit the movement of said sucker in one direction, a plate carried by said sucker for closing the slot in said barrel when the sucker is in normal position and during the movement of said sucker, the second grip member being movable toward the first grip member to effect movement of the sucker to set up a suction action at said cup.

1,537,796. ELECTRIC FLASHER. GILBERT L. BOSSARD, Troy, N. Y., and RUDOLF ZAUGG, Berne, Switzerland, assignors, by direct and mesne assignments, to Bossard Railway Signal Corporation, Troy, N. Y. Filed June 1, 1920. Serial No. 385,608. 6 Claims. (Cl. 200—112.)

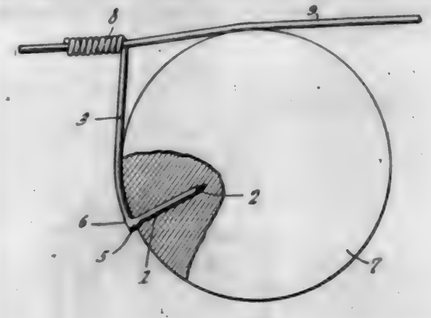


1. A device of the class described having circuit-interrupting mechanism comprising a field-magnet provided with pole-pieces, a movable armature mounted between

said pole-pieces and movable between the pole-pieces without impact engagement therewith, a freely swinging pendulous member operatively connected to said armature, a tube carried by said pendulous member, and fluid

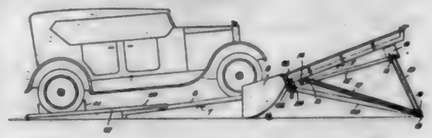
means within said tube adapted when the pendulous member is oscillated to one position to close the circuit and when the tube is oscillated to another position to open the circuit.

1,537,797. **DEVICE FOR CONNECTING HOSE PIPES TO WATER TAPS.** HAROLD L. A. BUNBURY, East Malvern, Victoria, Australia. Filed Apr. 30, 1924. Serial No. 710,163. 1 Claim. (Cl. 205—108.)



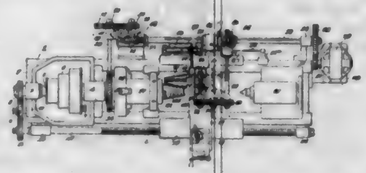
An improved device of the nature indicated comprising in combination, a body member, an externally serrated nipple extending therefrom which is capable of being entered into one end of a hose, metal tongues radiating outwardly from the nipple, said tongues having inturned or hooked outer ends which may be pressed inwardly on to the exterior of the hose, a rubber or like jointing ring accommodated by a cup shaped recess formed in the upper end of the body member, a pair of opposite arms integral with and upstanding from the body member, a nut having outstanding trunnion pins accommodated in the upper ends of said opposite arms, a U-shaped yoke pivotally attached to said trunnion pins and adapted to pass over and embrace the top portion of the tap and a clamping screw passing through said trunnion nut, by manipulation of which clamping screw the jointing ring is drawn into leak proof engagement with the outlet end of the tap substantially as described.

1,537,798. **STUD.** FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 15, 1919. Serial No. 344,787. 2 Claims. (Cl. 24—219.)



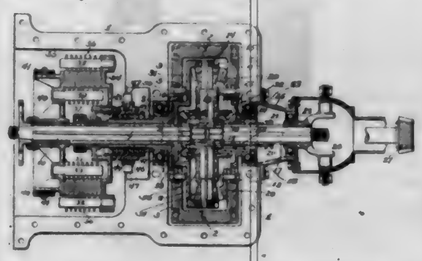
1. A three-piece screw stud providing a screw having a polygonal head, a stud having a base, and a connecting collect presenting a preformed flange for engagement over said base of said stud, a preformed polygonal portion extending over both said head and said base, and a post assembly crimped flange beneath said head formed from an initially round flange underlying said polygonal portion.

1,537,799. **STAPLE-WIRE CLINCHER.** LE ROY J. CHAPMAN, Salt Lake City, Utah. Filed Mar. 22, 1924. Serial No. 701,124. 2 Claims. (Cl. 256—57.)



1. In a device of the class described, a prong and an arm joined to produce an angle which is sufficiently prominent to receive a hammer blow, the prong being stiff enough so that it can be driven into a post, and the arm being flexible enough so that it can be wrapped about a wire fence, there being an enlargement, for the reception of a hammer blow, at the point of juncture between the prong and the arm.

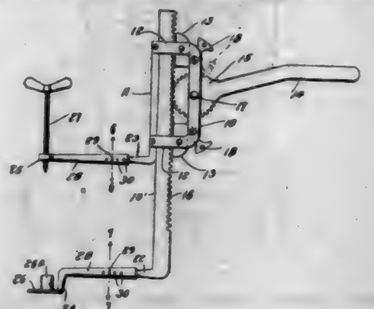
1,537,800. **AUTO SUPPORT AND JACK.** WILLIAM M. CHAPMAN, New Orleans, La. Filed Mar. 16, 1925. Serial No. 15,975. 7 Claims. (Cl. 214—1.)



5. In a jack for elevating motor vehicles, a main frame including track sections bent intermediate their ends to provide upwardly extended portions, rockers secured to the main frame, carriages for the reception of motor vehicle wheels adapted to move onto the track sections, adjustable means for securing vehicle wheels to the carriages, means for moving the carriages onto the track sections, and a collapsible frame for elevating one end of the main frame.

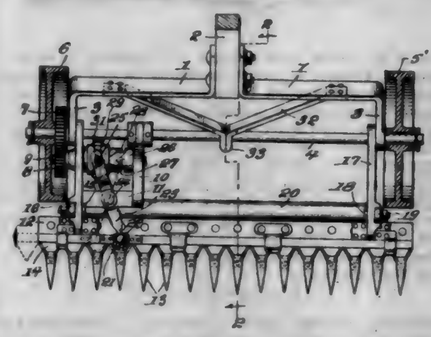
1,537,801. **COMBINED TURNING AND MILLING LATHE.** FRANCIS B. COCKBURN, Cincinnati, Ohio, assignor to The Lodge & Shipley Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1922. Serial No. 582,649. 3 Claims. (Cl. 29—27.)

1. In a machine tool, a rail-base, a head-stock carrying a work-supporting spindle mounted on one end of said base, a carriage translatable upon said rail base, transmission mechanism for rotating said spindle and traversing said carriage, a tool-slide mounted on said carriage, a tool-holder carrying a stationary tool mounted on one end of said slide and a second tool-holder for supporting and rotating a milling cutter mounted upon the opposite end of said slide, a shaft journaled upon one side of said base and extending longitudinally thereof, and transmission means mounted on said carriage connecting with said shaft for rotating said cutter.



1,537,802. **TRANSMISSION MECHANISM.** DENNIS P. COLLINS, Pittsburgh, Pa. Filed Nov. 1, 1923. Serial No. 672,191. 6 Claims. (Cl. 74—34.)

1. In transmission mechanism, the combination of a driving member, a driven member alined axially with the driving member, a friction clutch, a rotatable weight member connected with one member of the clutch, a train of planetary gearing connected with another member of the clutch and adapted to drive the rotatable weight member, means whereby the planetary gearing may be actuated by the driving member, and means whereby the driven member may be operatively connected with the planetary gearing or with the rotatable weight member.

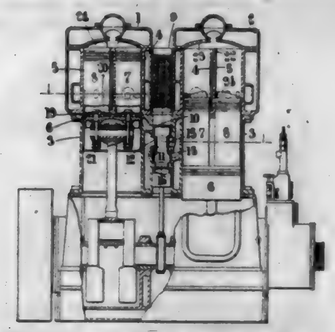


1,537,803. **VALVE LIFTER.** EVERETT L. COX, Fort Scott, Kans. Filed Oct. 12, 1922. Serial No. 594,077. 1 Claim. (Cl. 29—86.3.)

A valve lifter comprising a guide bracket including a pair of U-shaped side members spaced apart and having their bight portions vertically disposed, a bar positioned between said members and secured thereon adjacent the free ends thereof, said bar having its lower end outturned to project forwardly of the bracket, a lifting bar slidably mounted in the rear of said bar and between the members of said bracket, said lifting bar being provided with rack teeth on its rear edge and having its lower end outturned to project forwardly of the bracket, spacing blocks secured to and between said side members on the side of the lifting bar opposite to the first mentioned bar, opposed members detachably secured to the outturned ends of said bars for respectively engaging a valve and the remote end of the valve actuating spring, a lever pivoted between the bight portions of the side members of the bracket and having a segmental gear head engaging said rack teeth, said lever being located between the spacing blocks adapted

to move the sliding lifting bar to compress and release a valve actuating spring, and pawls mounted on said bracket and adapted to engage a tooth of said segmental head and hold the lever in desired position in the rear of said spacing blocks and between said side members.

1,537,804. **LAWN MOWER.** MARTIN FRANKLIN CROSBY, Mount Berry, Ga. Filed Aug. 27, 1924. Serial No. 734,507. 2 Claims. (Cl. 56—263.)

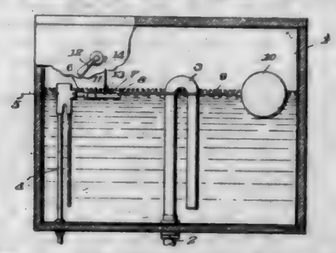


1. A lawn mower of the sickle type including a substantially U-shaped frame and a handle centrally connected to the frame, a shaft journaled through the parallel arms of the frame, a fixed wheel on one end of the shaft, a loose wheel on the opposite end of the shaft, an auxiliary frame pivotally supported on the shaft and carrying the finger bar and the reciprocating knife bar of the sickle, a double cam grooven roller journaled in the auxiliary frame, a sleeve on the cam roller having pins entering the grooves thereof, a lever pivotally secured to the auxiliary frame, having a forked end straddling and loosely associated with the sleeve, a ball on the outer end of the lever, a socket on the knife bar of the sickle in which the ball end is received, and means operable upon the turning of the wheels for revolving the cam roller.

1,537,805. **INTERNAL-COMBUSTION ENGINE.** JOHN DAVIDSON, Tutbury, Burton, England, assignor to The Record Crude Oil Engine Company, Limited, London, England. Filed Sept. 10, 1923. Serial No. 661,919. 6 Claims. (Cl. 123—53.)

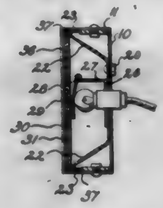
3. In an internal combustion engine, a charging piston a charging cylinder, a plurality of working pistons

connected to the charging piston, a plurality of working cylinders rigid with the charging cylinder and having a



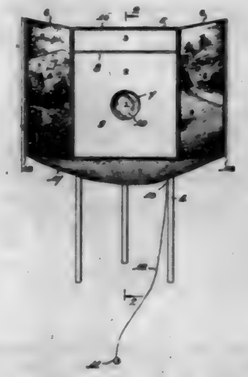
common explosion chamber, means whereby the working pistons are capable of tilting movement relatively to said charging piston.

1,537,806. FOUNTAIN PEN. JOHN J. DEVINE, Middletown, Conn. Filed Aug. 6, 1924. Serial No. 730,469. 3 Claims. (Cl. 290—8.4.)



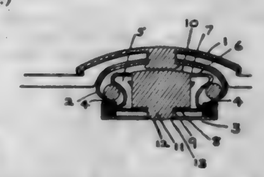
1. A pen barrel comprising a body portion, a battery arranged therein, a carrier extending in and lengthwise adjustable with respect to said battery and permanently spaced therefrom, a spring controlled lamp holder mounted in the carrier and provided with a lamp normally spaced from the battery, a retaining member mounted in the carrier for said lamp holder, and said carrier and holder having coacting means arranged within the carrier for shifting the lamp holder against the action of its controlling spring to electrically contact the lamp with the battery to close the lamp circuit when the carrier is adjusted inwardly with respect to said body portion.

1,537,807. FLUSH TANK. THEODORE C. DOREDANT and HENRY P. PFEFFER, New Orleans, La. Filed Oct. 5, 1923. Serial No. 666,762. 1 Claim. (Cl. 4—45.)



A flush tank comprising a siphon discharge pipe, an inlet pipe, a valve thereon, a channel-shaped member connected with the valve stem, a block pivotally arranged in the channel-shaped member, a float having its rod connected with said block, a bar pivoted in the channel-shaped member and when therein preventing movement of the block, a handle and means for connecting the same with the bar to raise the same out of the channel-shaped member to permit movement of the block by the float.

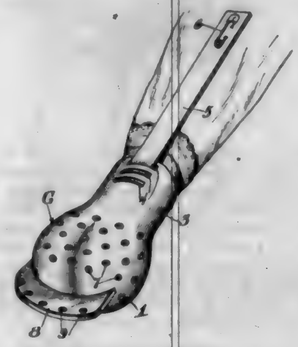
1,537,808. ILLUMINATED LICENSE PLATE. CLAYTON C. DOUGLAS, Felts Mills, N. Y. Filed Feb. 12, 1923. Serial No. 618,562. 1 Claim. (Cl. 40—132.)



In a device of the character described, a casing, plates mounted therein, a reflector, a socket extending through the reflector and carrying an incandescent bulb, and an auxiliary reflector formed as an angular plate member secured upon the center of the main reflector and having a depending leaf hinged upon its free edge for extending downwardly below and outwardly of the bulb for throwing the light from the bulb back onto the main reflector.

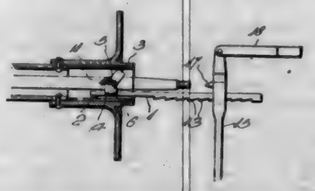
1,537,809. GAME APPARATUS. ERNEST C. EASTON, Maplewood, N. J. Filed Apr. 10, 1924. Serial No. 705,588. 4 Claims. (Cl. 273—35.)

1. In a game apparatus, a frame, a flexible element having one end secured to said frame, a ball secured to the other end of said element, and a counter weight carried by said flexible element and capable of taking up slack in said flexible element when said ball is hit toward said frame.



1,537,810. SNAP FASTENER. GEORGE HENRY ELWELL, Cleveland, Ohio, assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed June 9, 1923. Serial No. 644,414. 5 Claims. (Cl. 24—208.)

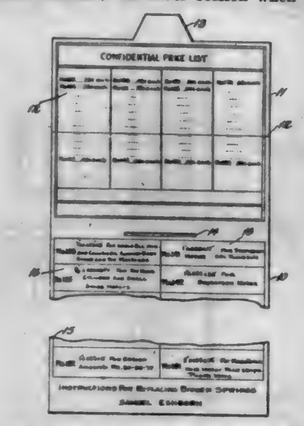
1. A snap fastener comprising stud and socket members having an interlocking means; a base-plate upon which one of said members is slidingly mounted, said base-plate having an attaching means and also having



a series of indentations, and said sliding member having a hollow interior and openings communicating with said interior and certain of said openings adapted to register in sequence with said indentations as said sliding member travels said base-plate; and means operable within said hollow interior and adapted to project through said openings to co-operate with said socket member and said indentations to rigidly maintain said sliding member in a fixed position as regards said base-plate.

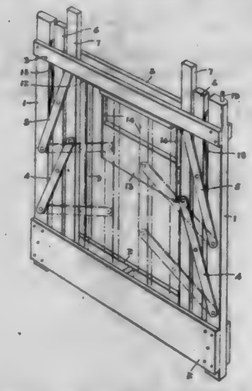
1,537,811. HAND GUARD AND DECIDUOUS-TOOTH ERUPTER. GILES T. EPLING, Welch, W. Va. Filed Oct. 20, 1923. Serial No. 669,787. 3 Claims. (Cl. 128—133.)

1. As a new article of manufacture, a hand guard and deciduous tooth erupter comprising a globular body adapted to house the hand and provided in its wall with an opening through which the hand is insertable, and an erupter flange extending outwardly from the outer end of the globular body.



1,537,812. ROLLER-BEARING-SLEEVE PULLER. THEODORE ERICKSON, Holland, Mich., assignor to Holland Mfg. Co., Holland, Mich. Filed Apr. 28, 1924. Serial No. 709,613. 5 Claims. (Cl. 29—88.2.)

1. A roller bearing sleeve pulling device comprising a bar for insertion into a bearing sleeve, said bar having means to engage the sleeve at one side of the latter, and a sleeve-engaging member insertable into the sleeve with and pivoted to said bar on an axis transverse to the latter, said member extending laterally from said bar and being adapted to swing toward the same for insertion into said sleeve, said member being then adapted to swing outwardly from said bar and abut the sleeve to hold said bar in engagement therewith.

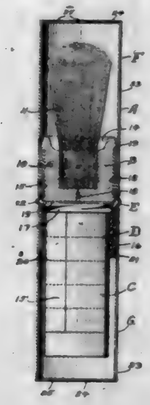


1,537,813. ADVERTISING DISPLAY. SAMUEL EHRBORN, New York, N. Y. Filed Apr. 27, 1923. Serial No. 635,085. 1 Claim. (Cl. 283—56.)

A chart divided into a lower section and an upper section, the chart being formed with a slot intermediate the divisions, the cover section having foldable connection with the upper edge of the chart and adapted when folded to cover and conceal the upper section of the chart, said cover section having a tongue adapted to be passed through the slot when the cover section is in folded relation, the cover section when open being

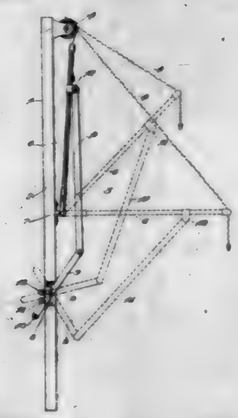
aligned with the chart proper to provide an extension of the upper surface of the chart for the reception of data to be concealed when the cover section is in folded relation.

1,537,514. POULTRY-NEST TRAP. DAVID W. EVANS, Newmarket, Ontario, Canada. Filed Apr. 24, 1922. Serial No. 556,156. 3 Claims. (Cl. 119—49.)



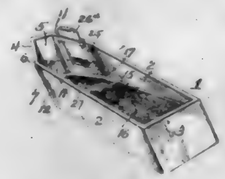
1. A poultry nest trap, comprising, a frame having rigid side posts, closure members pivoted toward the bottom of said posts to swing inward and downward, and movable means suspended between said posts and engaging and holding said closure members spaced apart to form an opening therebetween.

1,537,815. PURIFICATION OF AMMONIUM SULPHATE. EDWARD VICTOR EVANS and PERCY PARRISH, London, and ORLANDO WILLIAM WRIGHT, Bromley, England. Filed Nov. 14, 1921. Serial No. 515,027. 1 Claim. (Cl. 23—120.)



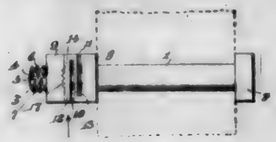
A process of neutralizing acid ammonium sulphate crystals removed from the saturator, which consists in making alkaline with ammonia free from sulphuretted hydrogen, mother liquor which has drained from crystals removed from the saturator, then treating the ammoniacal mother liquor with an oxidizing agent and filtering it, and finally stirring the filtered mother liquor with the ammonium sulphate crystals, substantially as described.

1,537,816. COMBINED SHAVING BRUSH AND SOAP CONTAINER. GEORGE W. FICKETT, Chicago, Ill. Filed Dec. 24, 1923. Serial No. 682,441. 5 Claims. (Cl. 132—81.)



1. A toilet article comprising a brush including a base and bristles extending from one end of said base, a screw threaded socket secured to the opposite end of said base, a screw threaded cap adapted to hold a soap stick or the like, rotatable in said socket for feeding the soap stick outwardly of the socket and a sleeve encircling the base and socket and held against longitudinal movement thereby.

1,537,817. AWNING ATTACHMENT FOR WINDOW SCREENS. CHRISTOPHER FISENBAUM, Harvey, Ill. Filed June 29, 1923. Serial No. 648,608. 1 Claim. (Cl. 156—44.)

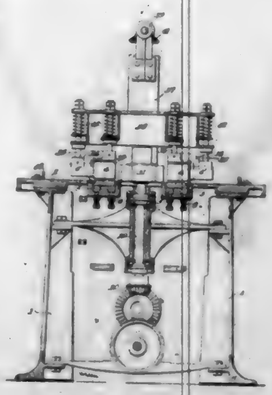


In combination with a window screen and frame, of a, spring operated roller supported at the upper end of said frame, an awning mounted upon said roller, a U-shaped operating member having its ends pivotally connected to the intermediate portion of the frame and the intermediate portion of said operating member having connection with the outer end of the awning, connecting links having their outer ends pivotally connected to the first of the operating members adjacent the intermediate portion of said member, operating levers pivotally connected to the inner ends of said links, said frame being recessed upon opposite sides thereof for receiving the ends of said operating levers, means for pivotally mounting said levers in the recesses, a handle connecting the inner ends of said levers whereby the levers may be moved upon their pivots for raising and lowering said operating member, and adjustable catch members carried by the frame for supporting said levers in various adjusted positions.

1,537,818. APPARATUS FOR DEWATERING SLUDGE. CHARLES R. GRIFFITH, South Manchester, Conn. Filed June 21, 1922. Serial No. 569,902. 2 Claims. (Cl. 210—149.)

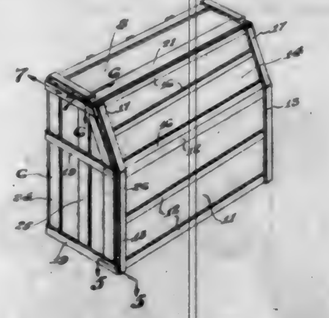
1. Dewatering means comprising a tank, an inclined bottom member therein having longitudinal channels, screening cloth supported over said channels, said tank having a gutter communicating with said channels, means for discharging water from said gutter, vertical channels in a wall of said tank at the lower end of the bottom communicating with the gutter, screening cloth in front of said vertical channels, and a cover for said last mentioned screening cloth slidably mounted in the wall of the tank.

1,537,819. NUT AND BOLT LOCK. JESSE GRIMM, Dover, Ohio. Filed July 17, 1924. Serial No. 726,491. 2 Claims. (Cl. 151—21.)



1. In a nut and bolt lock, the combination with a bolt having intersecting right and left hand threads, of a pair of superposed nuts, one having right and the other left hand threaded bores, one of said nuts having its bore threaded through approximately one-half its length and having the remainder thereof of increased diameter and unthreaded, said last mentioned nut having a pair of slots cut thereinto from opposite faces thereof, each extending to a point adjacent the opposite side to set up a resilient portion adapted to be distorted by the first mentioned nut seating thereon, one of the slots being at the inner end of, and the other at the central portion of, the threadless bored portion of the nut.

1,537,820. WOODWORKING MACHINE. HERMAN W. GRUNOW, Saginaw, Mich., assignor of one-half to Ernest E. Grunow, Saginaw, Mich. Filed Nov. 3, 1922. Serial No. 598,050. 1 Claim. (Cl. 144—90.)

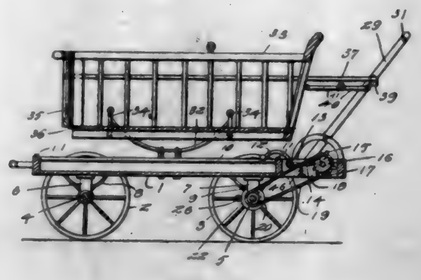


In a wood working machine, a supporting frame including a flat top provided with longitudinally extending grooves arranged adjacent and to each side of the center thereof, rotatably mounted endless feed chains having their upper reaches arranged to slide in said grooves, strips having portions overlying the outer marginal edge of the said grooves and adapted to retain said chains therein, spaced vertically adjustable strips adapted to engage the side walls of said grooves and the bottom of the said portion of said chains within the grooves, a

cutter head horizontally rotatably mounted between the grooves, guide members longitudinally disposed between the grooves and having their inner ends terminating adja-

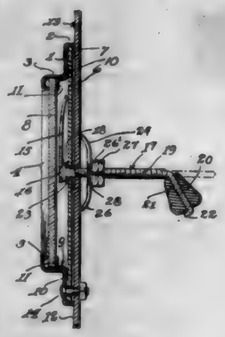
cent the cutter head, and means for adjusting said guide members with respect to the cutter by longitudinal movement thereof.

1,537,821. BOX. ALWIN GUNDLACH, Chicago, Ill. Filed Feb. 26, 1923. Serial No. 621,408. 4 Claims. (Cl. 217—5.)



1. A box comprising a back, bottom, top, upper and lower fronts and ends, said ends overlapping the ends of the various other parts of the box and secured directly thereto, and all of the joints of the box overlapping and fitting snugly to provide a dust proof box, said bottom, back, upper and lower fronts, ends and top each composed of a plurality of spaced boards attached to form the respective portions of the box, and linings of relatively thin material attached to the inner surfaces of a part of the box.

1,537,822. BABY CARRIAGE. JOHN HAYES, Belle Vernon, Pa. Filed Mar. 23, 1922. Serial No. 546,118. 1 Claim. (Cl. 46—47.)

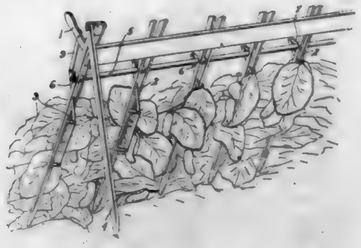


A device of the class described including an open horizontal casing mounted on wheels, a body supported on said casing, strings contained within the casing and located under and protected by said body, a transverse rod

on said casing, hammers pivoted on said rod and arranged to engage the strings, a rotary cylinder carried by the casing substantially rearwardly of the body and

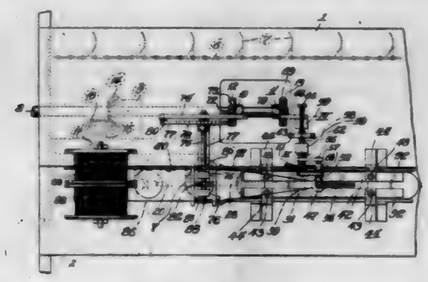
provided with pins for operating the hammers, and gearing for connecting the cylinder for driving movement from one of the wheels.

1,537,823. AUTOMOBILE BATTERY INDICATOR. JOHN R. HENDERSON, Hamlet, N. C. Filed Jan. 10, 1925. Serial No. 1,619. 2 Claims. (Cl. 116—133.)



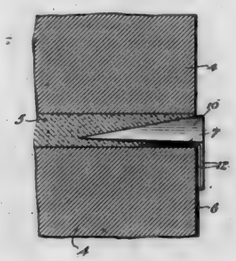
2. In an indicator, a casing adapted to be applied to the obverse face of a wall, a dial in said casing, a pointer in the casing for cooperation with the dial, a shaft carrying the pointer and adapted to be extended through the wall beyond the reverse face thereof, said shaft being continuously threaded toward its rear end and having its rear portion flattened at two diametrical sides, spring pressure means on the shaft engaging the reverse face of said wall, threaded adjusting members engaging the shaft for regulating the pressure of said spring pressure means, and an operating knob fitted on the threaded and flattened portion of the shaft, said portion being bent at an angle to the plane of the shaft and having its extremity bent at an angle to its plane for retaining said knob in position thereon.

1,537,824. CUCUMBER-PICKING APPARATUS. LEONIDAS R. HIBBS, Wapato, Wash. Filed Dec. 29, 1923. Serial No. 683,445. 3 Claims. (Cl. 56—327.)



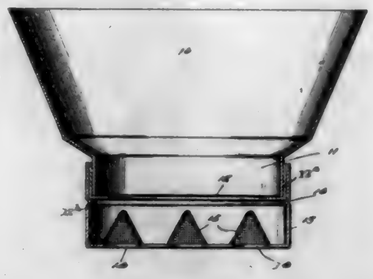
1. An apparatus for facilitating the picking of cucumbers comprising a plurality of spaced upright fingers,

teeth on the fingers and movable relative thereto, a handle, and a connection between the handle and the sev-



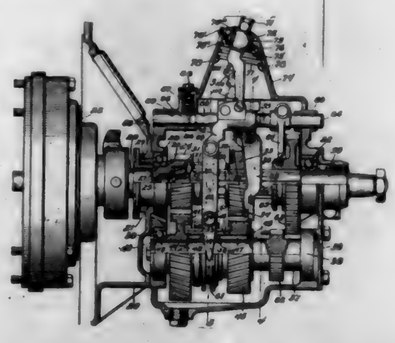
eral teeth whereby movement of the handle will be attended by the movement of teeth relative to their respective fingers.

1,537,825. CAN-SOLDERING MACHINE. THOMAS A. JETT, Greenville, Ill. Filed Jan. 20, 1923. Serial No. 613,873. 11 Claims. (Cl. 113—91.)



1. In a soldering machine, the combination of a soldering tool, a table, means for conveying articles along said table to a point adjacent said tool, and other means having a portion extend above said table for placing the articles directly adjacent said tool, said tool being restricted to a vertical movement with respect to the table.

1,537,826. FLASHING PLUG. CHARLES OLOF JOHANSON, Tucson, Ariz., assignor of one-half to Harry F. Bryant, Tucson, Ariz. Filed Jan. 25, 1924. Serial No. 688,580. 3 Claims. (Cl. 108—26.)

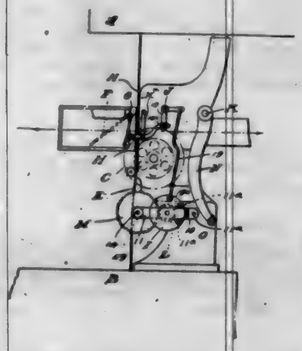


1. A flashing plug including a body of tapered formation bent to provide angularly disposed complemental sections capable of insertion into a wall to engage the free edges of said sections with a flashing, and overlapping flanges at one end of said body forming a driving head therefor.

1,537,827. STRAINER. JOHN E. JOHNSON, Washington, D. C. Filed July 21, 1922. Serial No. 576,609. 1 Claim. (Cl. 210—155.)

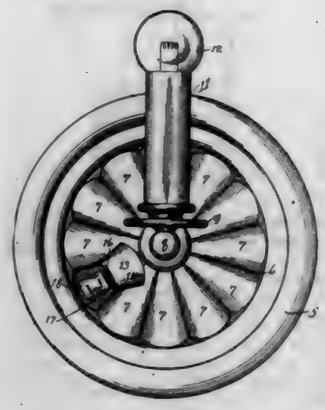
A strainer of the character described comprising an open lower cylindrical portion, an annular flange having an upstanding wall and a narrow inwardly extending support, the lower reduced cylindrical portion of the strainer being received within the annular flange and supported by the inwardly extending support, a foraminous covering supported by the annular flange and closing the opening defined by same and a cup-shaped member having a plurality of strainer elements in the bottom thereof, and having a head formed intermediately thereof to receive and engage the lower edge of the annular flange when the same is inserted in the cup-shaped member.

1,537,828. TRANSMISSION GEAR. FRANK H. JONES, Cleveland, Ohio. Filed Aug. 21, 1923. Serial No. 658,610. 10 Claims. (Cl. 74—57.)



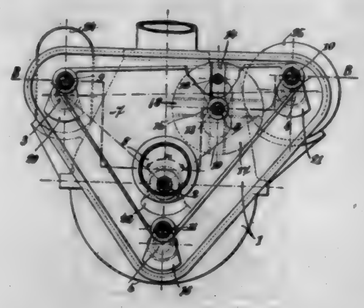
1. A transmission mechanism including a shaft comprising axial driving and driven sections, the former having a gear provided with clutch teeth, a countershaft with a fixed gear meshing with the first gear, said fixed gear having clutch teeth, a gear loose on the countershaft and operatively geared to the driven section and provided with a sleeve, a clutch element splined on said sleeve, a clutch element on the driven section respectively positioned to cooperate with the clutch teeth of the first two gears, and unitary means operatively connecting with the clutch elements for shifting them respectively, one into engagement with the clutch teeth of the gear on the driving section, the other out of engagement with the clutch teeth of the fixed gear, and vice versa, whereby the driven section may operate for high speed or for second speed through the medium of the countershaft and the fixed gear.

1,537,829. TOURIST'S FLEXIBLE REFRIGERATOR. FURMAN M. KANDLE, Atlantic City, N. J. Filed Sept. 15, 1923. Serial No. 662,898. 13 Claims. (Cl. 62—31.)



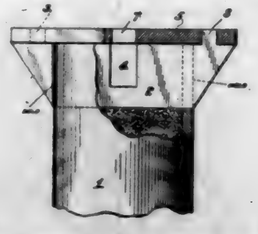
3. A tourist's refrigerator formed of flexible material comprising a body of satchel-like shape having a hingedly opening mouth, attaching straps carried by said flexible body, a partition within said body forming an ice containing compartment and an article containing compartment, an ice containing bag in said ice containing compartment, said bag formed of flexible material, a water-valve structure carried by said ice bag at the bottom thereof, and a rigid ice support in the bottom of the bag, a drain-tube having communication with the interior of said ice bag upwardly of its bottom to permit the retaining of a predetermined quantity of water within the ice bag.

1,537,830. AUTOMATIC FIRE-SHUTTER MECHANISM. LUKE KIRAL, New York, N. Y. Filed July 20, 1922. Serial No. 576,284. 4 Claims. (Cl. 88—17.)



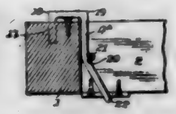
1. A fire shutter mechanism for picture projecting machines having a shutter and operating means therefor including a clutch, means adapted to be driven from the film and to which said clutch is transferable for driving movement therefrom so that upon breakage of the film the shutter will protect the film against fire, and means to establish a driving connection between the clutch in its latter position and said shutter.

1,537,831. LIGHTING FIXTURE. EWALD A. KOENIG, San Francisco, Calif. Filed May 20, 1924. Serial No. 714,716. 1 Claim. (Cl. 240—73.)



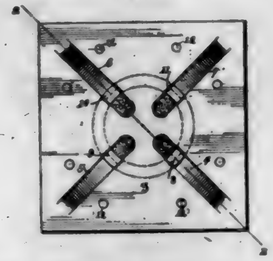
In a device of the character described, a base, a rosette mounted on said base, a pocket formed beneath said rosette and extending into said base, a receptacle mounted in said pocket, said rosette comprising a plurality of radially positioned portions, one of said portions being hinged so as to form a cover for said pocket.

1,537,832. KINEMATIC ACTUATING DEVICE FOR VALVE GEARS AND THE LIKE. THEODORE LAFITTE, Paris, France. Filed Apr. 5, 1922. Serial No. 549,948. 3 Claims. (Cl. 74—14.)



1. In a motor, a driving mechanism comprising a driving shaft a plurality of parallel shafts adapted to actuate the machines pertaining to the motor such as the magneto, pump, lighting generator, air fan and the like, cranks of equal length disposed upon all of these shafts and in parallel position, a plate having all of the said cranks pivoted thereto, means for rotating the said plate in a circular path in concordance with the rotation of the motor shaft, a cam shaft parallel with the driving shaft, and with said parallel shafts adapted to drive parts of the motor, a disk having two crossed grooves disposed on the end of the cam shaft adjacent the said plate, two slides cooperating with the said grooves, two wrist pins disposed upon the said plate, the said wrist pins being respectively connected with the said slides and spaced apart by a distance equal to the diameter of the circle described by the said cranks.

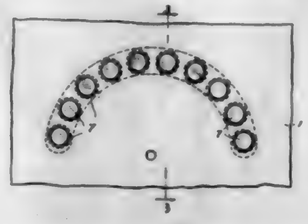
1,537,833. BUILDING COLUMN. JOHN LALLY, Boston, Mass. Filed Aug. 10, 1921. Serial No. 491,179. 4 Claims. (Cl. 72—75.)



1. A building column comprising a slotted casing, a bracket in said casing slot provided with a cut out portion, a lug on said bracket and an apertured top plate, one aperture of which engages the bracket lug and the other of which alines with the cut out portion of the bracket, the bracket and slot edges being welded together.

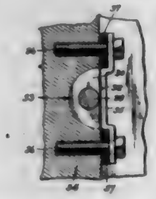
1,537,834. BEAM HANGER. JOHN LALLY, Boston, Mass. Filed Feb. 20, 1923. Serial No. 620,231. 9 Claims. (Cl. 20—94.)

1. Building construction comprising an apertured header, a joist, a bracket formed with a bottom bar carrying the joist, side bars between which the joist lies and ends entering apertures in the header and bearing plates interposed between the hanger and the header and joist.



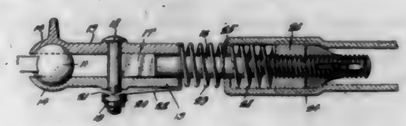
1,537,835. BUILDING COLUMN. JOHN LALLY, Great Neck, N. Y. Filed Feb. 23, 1924. Serial No. 694,617. 4 Claims. (Cl. 189—42.)

1. A column comprising a metal tube perforated adjacent its end, a column cap thereon comprising a metal plate with a plurality of flanges slit and punched from said plate at a distance from the edges thereof and bent at an angle to the plane thereof, the free ends of said flanges engaging the perforations in the tube.



1,537,836. SWITCH-POINT ASSEMBLY. SIGMUND M. LAUTER, Brooklyn, N. Y. Filed Feb. 19, 1923. Serial No. 620,113. 1 Claim. (Cl. 200—166.)

A switch point unit which comprises, in combination, a panelboard having a plurality of apertures therein, a plurality of switch points passing loosely through said apertures, contacting caps on the projecting ends of said points, the ends of said points being pointed, a pair of insulating plates having apertures therein into which said points are threaded, a stiffening plate disposed between said insulating plates and having apertures larger in diameter than the apertures in the insulating plate, a flange on each point fixed thereto and disposed between

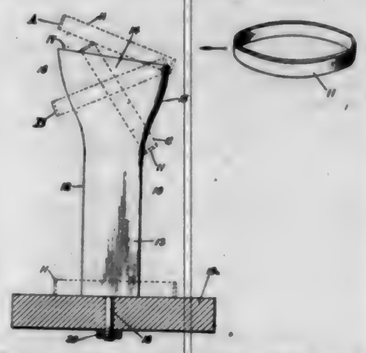


the panelboard and one of said insulating plates, and a clamping nut threaded on to the end of each point opposite the end on which the contacting cap is threaded, said nuts adapted to hold the insulating plates against the flange.

1,537,837. VALVE-OPERATING MECHANISM. JOSEPH F. LENNON, Painesville, Ohio. Filed Mar. 12, 1923. Serial No. 624,487. 2 Claims. (Cl. 123—90.)

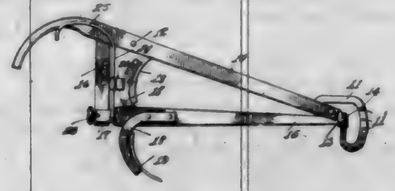
1. The combination with an engine having a spring closed valve in the head thereof and a cam shaft of a horizontally disposed pull-bar, one end of said pull-bar engaging the said valve, a dummy spring engaging the other end of said pull-bar, a flexible member connected to the center of said pull-bar, a half-moon shaped tappet guidingly supported adjacent the cam shaft of the engine, a cam ring carried by said tappet, a cam on said cam ring and engaging the cam of the engine cam shaft, said tappet being connected to said flexible member whereby said horizontally arranged pull-bar may be displaced vertically to operate said valve.

1,537,838. CUSHIONING DEVICE FOR CUTTER BARS. HUBERT F. LEUCK, Pilger, Nebr. Filed Jan. 18, 1925. Serial No. 2,194. 2 Claims. (Cl. 74—48.)



1. In a pitman, a rod, a coupling member, a yoke secured to one end of the rod and provided with an opening, a coupling member, a bolt having one end engaged in the coupling member and its opposite end extending through the opening of the yoke; a spring surrounding the bolt between the coupling member and yoke, an adjusting nut mounted upon the bolt and slidingly engaging the yoke to prevent relative rotary movement and a spring surrounding the bolt between the end of the yoke and the adjusting nut.

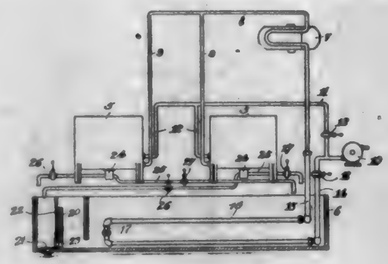
1,537,839. MANUFACTURE OF METAL BLANKS. HUGO LOHMANN, Berlin-Johannisthal, Germany. Filed Aug. 26, 1921. Serial No. 495,732. 12 Claims. (Cl. 148—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. Process for the manufacture of very hard, but ductile metal capable of withstanding breakage, consisting in casting a block of carbonless crystalline metal, converting its crystalline structure into a fibre-like structure, and then carbonizing said blocks.

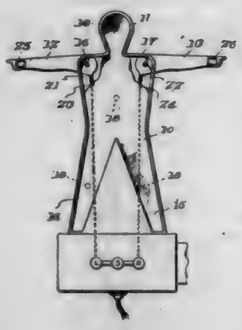
1,537,840. AMUSEMENT APPARATUS. SIMON J. LUBMAN, Bronx, N. Y. Filed Feb. 11, 1925. Serial No. 8,581. 6 Claims. (Cl. 273—100.)

1. A game apparatus including a post having a shank and an enlarged head at the top thereof, the front and rear edges of said head being curved, and a hoop adapted to be thrown toward said post for striking engagement with either the front or rear edge for causing the hoop to pass over said head.



1,537,841. REVERSIBLE PLOW. JOHN W. MCCARTER, Wedowee, Ala. Filed Apr. 12, 1923. Serial No. 631,005. 3 Claims. (Cl. 97—28.)

1. A reversible plow comprising converging handle bars, a bearing carried by the converging ends of the bars, a bearing below and supported by the other ends of the bars, a revolvable shaft rotatably supported in the bearings and extending longitudinally of the handle bars, plow standards carried by and rotatable with the shaft, and a flexible notched means supported below the rear ends of the handle bars in position to receive the standards, successively, for holding the shaft against rotation.

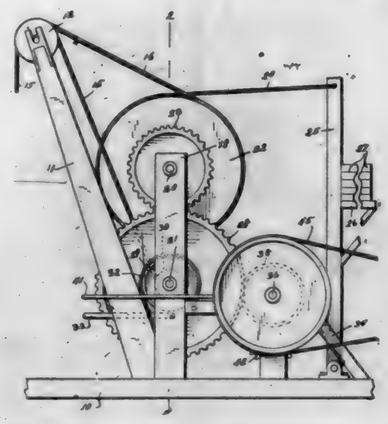


1,537,842. WATER-HEATING SYSTEM. CHARLES ALOYSIUS MCCARTY and WALTER AUGUSTUS HOWLAND JONES, Plymouth, Mass.; said Jones assignor to said McCarty. Filed Mar. 12, 1924. Serial No. 698,812. 5 Claims. (Cl. 68—37.)

1. The combination with a washing machine and a heating element connected with the machine for supplying heated water thereto; of a tank above which said machine is supported and into which the water in the machine is directly discharged, a heating coil in said tank for raising the temperature of water fed to said

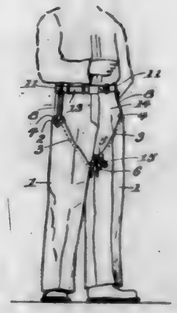
coil from a source of supply, and a connection between said coil and heating element for feeding the water to the latter subsequent to its passage through said coil.

1,537,843. DIRECTION INDICATOR. JAMES JULIUS MCDERMITT and SAMUEL WALTER PROBST, Renovo, Pa. Filed Jan. 15, 1924. Serial No. 686,341. 1 Claim. (Cl. 116—51.)



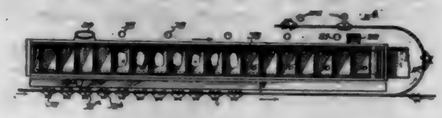
In a device of the class described, a body portion of transparent material and having a chamber therein, illuminating means mounted within the chamber, arms pivotally connected with the body and independent illuminating means therein, each arm including a lateral extension projecting inwardly, operating devices connected with the extensions and movable for raising the arms separately or together, said operating devices including elements relatively slidable in one direction and movable together in the opposite direction.

1,537,844. OIL-WELL RIG. WILLIAM EDMON MCDONALD, Sperry, Okla. Filed May 24, 1924. Serial No. 715,681. 5 Claims. (Cl. 255—9.)



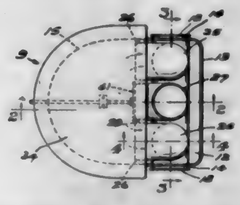
1. In a combined pumping and pulling rig, a shaft, a line pulley mounted for rocking movement thereon, a pair of lines oppositely wound upon the line pulley, a connection between one of said lines and the pump line of the well, a connection between the other of said lines and a counterweight, means for rocking said line pulley

including a drive shaft, means for rotating the drive shaft, a third shaft, a gear mounted upon the third shaft, a gear secured to the line pulley and with which the



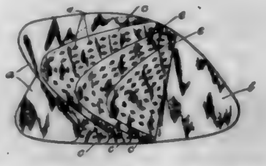
pulley of the third shaft is engageable, and a connection between the drive shaft and the gear of the third shaft for rocking the gear of the third shaft.

1,537,845. ADJUSTABLE WATERPROOF LEGGING. WILLIAM T. MCELWEE, Crestline, Ohio. Filed Mar. 29, 1923. Serial No. 628,597. 2 Claims. (Cl. 36—2.)



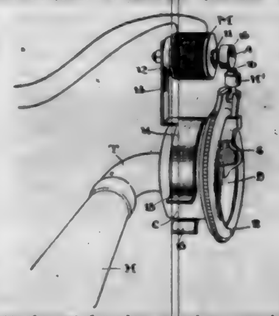
2. Protective leggings of light waterproof material having their sides at the upper portion thereof cut at a downward angle from the outer to the inner seam thereof and the ends thereof notched to provide extensions which are folded upon themselves and stitched to the sides of the legging to provide channeled hems, reinforcing strips secured to the leggings and having looped portions arranged around and secured to the ends of the hems, a supporting member designed for engagement with the waistband or belt of the user of the legging, a draw string guided through the supporting member and having its strands passed through the channeled hems, and the ends of the said draw string designed to be tied and knotted against the inner seam of the legging for holding the legging adjusted on the leg of the user.

1,537,846. VISCERA-INSPECTION TABLE. ALLEN MCKENZIE, Chicago, Ill. Filed July 10, 1919. Serial No. 309,821. 10 Claims. (Cl. 17—43.)



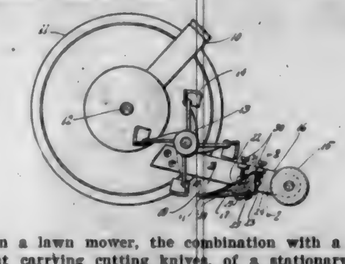
10. A viscera inspection table comprising a series of isolated retaining pans; said pans being of imperforate unitary structure and serially connected together to form an endless conveyor; means to support and drive the conveyor; and means to sterilize said pans prior to reuse.

1,537,847. HEATING APPARATUS. ALBERT C. MACBETH, Seattle, Wash. Filed Oct. 27, 1924. Serial No. 745,986. 2 Claims. (Cl. 126—67.)



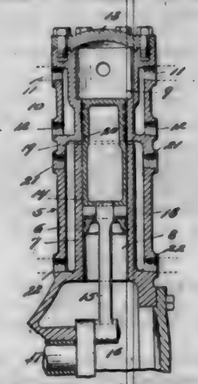
1. The combination with a stove having a combustion chamber, and a smoke pipe, of heating apparatus comprising a vertically disposed casing having open ends, a horizontal manifold provided within the lower portion of the casing and supported thereby, three vertical flues of substantially the same horizontal internal areas arranged in side by side relation and extending upwardly from the manifold, the central flue having its upper end communicatively connected to said smoke pipe, a by-pass pipe communicatively connecting said combustion chamber with the smoke pipe, the other two of said flues having their upper ends communicatively connected directly with the combustion chamber, and a a damper provided for said by-pass pipe to cause the gases from the combustion chamber to enter the smoke pipe selectively through the by-pass pipe or through all of the flues and the manifold.

1,537,848. TOE PUFF, STIFFENER, INSOLE, AND LIKE PARTS FOR BOOTS AND SHOES. DAVID BAIRD MACDONALD, Leicester, England. Filed May 31, 1921. Serial No. 473,636. 5 Claims. (Cl. 154—46.)



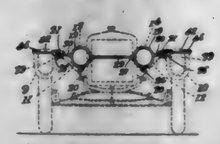
5. Toe-puffs, stiffeners, insoles and like parts for boots and shoes composed of a paper front layer, a paper back layer, a plurality of paper inner layers, and a stiffening agent in solution in a solvent of volatile character interposed between said layers, the inner layers being formed with cells for the purpose of retaining the stiffening agent, and the said front layer being treated with a water soluble colloidal or gelatinous material which serves to prevent evaporation of the water insoluble stiffener solvent, substantially as described.

1,537,849. ATTACHMENT FOR PHONOGRAPHS. WILL J. MADOLE, Atlanta, Ga. Filed Mar. 24, 1922. Serial No. 546,363. 2 Claims. (Cl. 179—100.1.)



1. An attachment for phonographs, comprising a clamp bracket to grip the casing of a phonograph reproducer, an electro-magnet supported by the bracket, an armature, and a stem extending from the armature for fastening the armature in the needle holder of the reproducer.

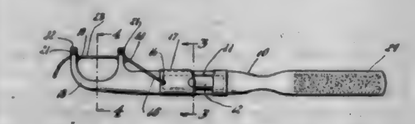
1,537,850. LAWN MOWER. MARIUS I. MAGOON, Hammond, Ind. Filed Nov. 5, 1923. Serial No. 672,798. 4 Claims. (Cl. 56—250.)



1. In a lawn mower, the combination with a rotary element carrying cutting knives, of a stationary blade having a cutting edge with which said cutting knives cooperate and having a shoulder extending adjacent to said cutting edge and means arranged upon said stationary blade for supplying oil along said shoulder.

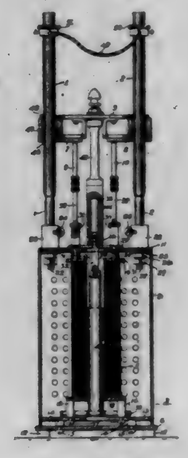
1,537,851. AMMONIA COMPRESSOR. WILLIAM P. MAINGAULT, Tacoma, Wash. Filed May 15, 1924. Serial No. 713,523. 1 Claim. (Cl. 230—27.)

An ammonia compressor of the class specified, comprising a body cast in one piece of material without joints and having outside and inside spaced annular walls, the inner wall providing a piston chamber and the space between the two walls providing a deep annular gas-receiving chamber, the inner wall enclosing the piston chamber extending practically the full length of the gas chamber and having at the upper limit of the latter chamber a continuous horizontally disposed narrow slot to produce an unobstructed passage between the interior of the piston chamber and the annular gas chamber, the outside wall having ports at the lower termination of the annular gas chamber for drainage purposes and also similar ports near the top limit of the gas chamber and below the said narrow slot for gas supply, and a piston mounted to reciprocate in the piston chamber and pass over the said narrow slot during its reciprocating operation.



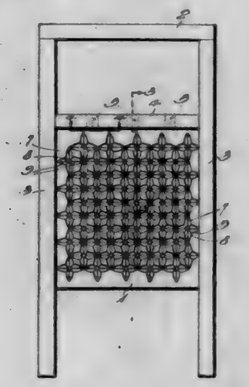
1,537,852. FENDER BRACE. ARTHUR J. MANDRY, New Orleans, La. Filed Dec. 23, 1924. Serial No. 757,719. 3 Claims. (Cl. 280—152.)

1. A fender brace for vehicles comprising companion clamps for fitting against the inner beaded edges of the fenders and aprons, said clamp members having opposed clamp surfaces for conforming to the apron and to fit about the bead of the fender, a clamp bolt fitting loosely through said clamp members and engaged about the outer edge of the fender, means extending transversely of the vehicle for coupling rigidly together the inner clamp members of each pair, and nuts on the clamp bolts fitted against opposite faces of the clamp members for adjusting the same along the bolt.



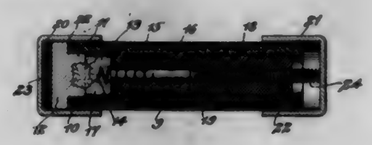
2. In combination with a vehicle having lamp perches, lamp casings thereon, casing fenders and fender aprons, rings split at their bottom portions for fitting about the lamp casings, split pins extending down from the ring, clamps for holding the split pins together and supported on said perches, a rod for connecting the two rings, diagonal arms projecting from the outer sides of said rings, clamp members at the upper, outer ends of said arms, companion clamp members cooperating with the arm clamp members, bolts having hooks to engage the outer edges of the fenders fitted slidingly through said clamp members, said clamp members adapted to engage upon opposite sides of the aprons and inner headed edges of the fenders, and nuts threaded upon said bolts and engaging adjustably against opposite faces of said clamp members.

1,537,853. TOOTH-CLEANING DEVICE. SAUL MASON, Detroit, Mich. Filed Nov. 19, 1923. Serial No. 675,547. 9 Claims. (Cl. 132—84.)



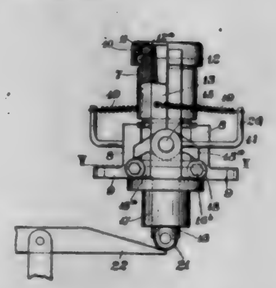
8. A tooth cleaning device including a handle portion having a cavity formed therein, an integral holder including spaced parallel legs having downwardly tapered grooves formed therein, a container mounted in the cavity adapted to receive a coil of dental floss and provided with a slot through which the dental floss is taken to be mounted within the grooves, and a closure member adapted to embrace said handle portion for walling in said cavity.

1,537,854. ARC-LIGHT-CONTROL DEVICE. SVEND M. MEYER and WILLIAM JAMES, Brooklyn, N. Y. Filed Mar. 24, 1921. Serial No. 455,292. 5 Claims. (Cl. 176—59.)



2. An arc controlling device comprising a support, an electrode carrier mounted thereon, a guiding post on the support, a sleeve on the carrier loosely embracing the post and adapted to loosely guide the motion of the carrier, a magnet, and a magnetic core pivotally connected to the carrier.

1,537,855. WASHBOARD. JAMES C. MICHIE, Newport News, Va. Filed June 21, 1923. Serial No. 646,979. 2 Claims. (Cl. 68—29.)



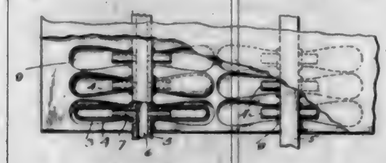
1. A washboard having a clothes rubbing surface provided with a multiplicity of vertically elongated depressions forming pockets, said pockets being decreased in width from their centers toward their opposite ends to dispose the ends of the edges thereof at acute angles with respect to each other, said washboard being provided with unobstructed openings communicating with the centers of said pockets for passage of air and water, said pockets being increased gradually in depth from their ends to said openings and from their side openings to said openings to facilitate the discharge of water through the latter.

1,537,856. CRYSTAL DETECTOR. FREDERICK MICHELS and ADOLPH ERISMAN, New York, N. Y. Filed Sept. 16, 1922. Serial No. 588,589. 5 Claims. (Cl. 250—31.)

1. A crystal detector for radio apparatus comprising a tubular body, a crystal holder extending into one end of said body, an insulated conductor extending through said body, a crystal in said holder, a flexible conducting element connected to said insulated conductor and engaged at one of its ends upon the face of the crystal, a comminuted non-conducting material surrounding the crystal and said flexible conducting element to prevent displacement of the latter, and circuit closing contact members fixed upon the ends of the tubular body.

1,537,857. PARISON MOLD. EDWARD MILLER, Columbus, Ohio. Filed Dec. 31, 1924. Serial No. 759,200. 6 Claims. (Cl. 49—65.)

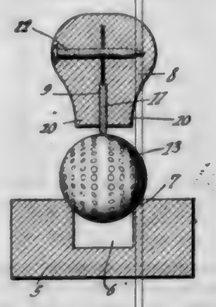
1. In combination with a parison mold, a neck ring mold composed of sections, levers supporting said sections and fulcrums for said levers extending at right angles to the axis of the parison mold, and means for actuating said levers to open and close said neck ring sections.



1,537,858. METHOD OF VULCANIZING RUBBER AND THE LIKE. THOMAS W. MILLER, Ashland, Ohio. Filed Nov. 25, 1922. Serial No. 603,847. 1 Claim. (Cl. 18—53.)

The method of vulcanizing rubber and the like, which consists in subjecting a rubber compound, such as rubber, a metallic oxide and sulphur, in a closed chamber while under a vulcanizing heat, to the action of a current of air containing an organic accelerator.

1,537,859. METHOD OF VULCANIZING RUBBER AND THE LIKE. THOMAS W. MILLER, Ashland, Ohio. Filed Dec. 23, 1922. Serial No. 608,751. 4 Claims. (Cl. 18—53.)

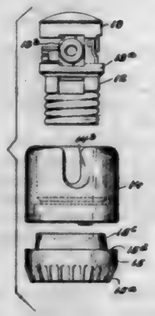


3. The method of vulcanizing rubber compounds, containing rubber, sulphur and an organic accelerator, which consists in dusting or packing the compound in a metallic oxide, and then subjecting the same to a vulcanizing heat.

1,537,860. APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES, SUCH AS NIPPLES, FINGER COTS, BULBS, AND THE LIKE. THOMAS W. MILLER, Ashland, Ohio, assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Feb. 28, 1924. Serial No. 695,728. 1 Claim. (Cl. 18—6.).

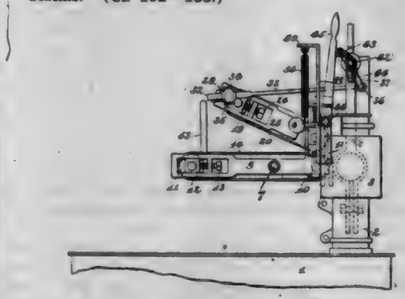
A mold for forming and vulcanizing hollow rubber articles closed at one end, comprising a longitudinally apertured mandrel formed with lateral projections, each adapted to receive thereon the open end of one of the articles to be formed, said projections being apertured to communicate with the aperture in said mandrel and open at their other ends, and complemental mold plates adapted when assembled to enclose said mandrel with the articles thereon disposed in cavities shaped conjointly to the shape of the finished articles.

1,537,861. GOLF-BALL MARKER. JAMES P. MOFFETT, Hartford City, Ind. Filed Aug. 30, 1924. Serial No. 735,128. 1 Claim. (Cl. 101—35.)



A printing device for printing on spherical bodies comprising a support, a marker comprising a body portion having a slot formed therein, defining opposed jaws, printing members adapted to be positioned between the jaws, and a screw extending through the jaws for moving the jaws into gripping relation with each other.

1,537,862. MEANS FOR SECURING ANTISLIPPING ATTACHMENTS TO VEHICLE WHEELS. ERNEST MORN and FREDERICK RICHARD VAUGHAN TIMBURY, Roma, Queensland, Australia. Filed Feb. 25, 1925. Serial No. 11,502. 4 Claims. (Cl. 152—14.)



1. Means for securing anti-slipping attachments to vehicle wheels, comprising a rim or felloe bolt formed with an integral locking member and provided with a nut having a hook shaped end.

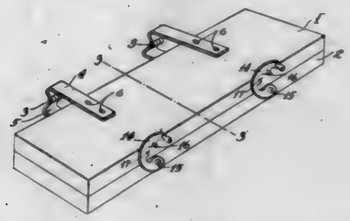
1,537,863. ELECTRIC RECEPTACLE. HARRY J. MOREY and DON N. THOMPSON, Syracuse, N. Y., assignors to Pass & Seymour, Inc., Solvay, N. Y., a Corporation of New York. Filed Jan. 22, 1920. Serial No. 353,166. 5 Claims. (Cl. 173—339.)

1. The combination with a thin supporting body and an electric lamp socket having an insulating base and a depending externally and internally threaded shell, of a cylindrical insulating sleeve having an open upper end thru which the lamp socket may be introduced, a support for said base on said sleeve, said base being adapted to close the open upper end of said sleeve, and a threaded ring of insulating material adapted to screw on said shell to hold said socket in position in said sleeve and to clamp said thin supporting body against said sleeve to support the socket and sleeve.

1,537,864. SAFETY FEED AND AUTOMATIC STOP FOR WRINGERS. HENRY LOUIS MORIN, Springfield, Mass. Filed Apr. 9, 1924. Serial No. 705,290. 8 Claims. (Cl. 192—133.)

1. The combination with a power driven clothes wringer having a power disconnecting member, of an automatic feed and automatic stop, said automatic feed and stop comprising a pair of feed members for feeding clothes to the rollers of the wringer, one of said feed members being swingable, and means for operatively connecting said swingable feed member with said power disconnecting member whereby when it is swung to a given position, said power disconnecting member will be thrown out of operation.

1,537,865. METHOD OF MAKING PATCHES FOR RUBBER GOODS. HAROLD A. MORTON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 4, 1924. Serial No. 717,897. 2 Claims. (Cl. 18—53.)

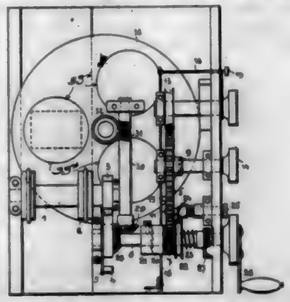


2. The hereindescribed method of forming a sheet of patching material, which comprises providing two separate sheets of rubber compound, one containing sulphur

and an organic accelerator which is rendered more active in the presence of zinc but no zinc activator, and the other containing rubber and a non-migratory zinc activator, superimposing said sheets one on the other and subjecting the same to a temperature which will cure the zinc containing layer, while leaving the other layer unvulcanized.

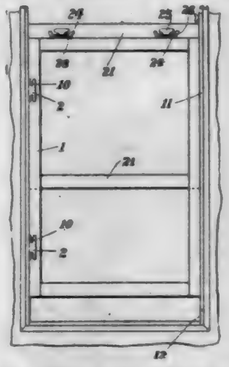
1,537,866. PROCESS OF MANUFACTURE OF SHEET RUBBER. HAROLD A. MORTON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 4, 1924. Serial No. 717,898. 5 Claims. (Cl. 18—53.)

1. The process of making an article of vulcanized rubber, which consists in producing two stocks, one containing rubber, sulphur and a migratory zinc-activated accelerator but no zinc activator, and the other rubber and a migratory zinc compound, juxtaposing said stocks, and subjecting the same to vulcanizing temperature.



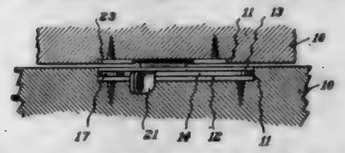
1,537,867. TIE PRESS. SOLOMON MOSSBACHER, New York, N. Y. Filed Mar. 17, 1924. Serial No. 699,666. 1 Claim. (Cl. 100—57.)

A tie press embodying two strips hinged together by hinges, the leaves of which are of resilient material and are relatively long, means for securing the free end portions of each leaf to one of the strips, so as to leave a relatively long portion of the leaf unattachably extending between the hinge pivot and the adjacent edge of the strip, and which unattached portion is bent to bring that portion of each leaf adjacent the hinge pivot into angular relation to the remaining portion of the leaf, whereby said extending portions of the leaves embody sufficient resiliency to permit parallelism between the strips while said strips are at different distances apart in order to compensate for ties of different thicknesses, and the angularly disposed portions of the leaves serving also to maintain a predetermined angular relation between the strips when the press is in open position, and means associated with the corresponding free edges of said strips and adapted to cooperate to draw the strips into parallelism and simultaneously place the hinge leaves under tension when the tie is positioned between said strips.



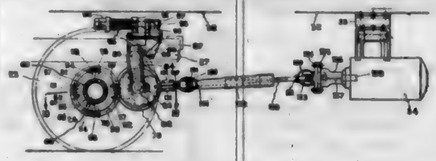
1,537,868. APPARATUS FOR TAKING THE COLOR-COMPONENT NEGATIVES FOR MULTICOLOR PHOTOGRAPHY. JOSEF MRÓZ, Vienna, Austria. Filed Feb. 25, 1922. Serial No. 539,163. 4 Claims. (Cl. 95—2.)

1. In an apparatus for taking the color-component negatives for multi-color photography the combination of a mechanism for intermittently moving a film on the back of an objective, a toothed sector engaging with a toothed wheel driving the said mechanism, a spring connected to the said toothed sector, tending to rotate it in such a direction so as to drive the film forwards, a click engaging with a stop of the toothed sector in its position under tension, means for disengaging this click, a device for stopping the toothed sector after its automatic movement which has caused the film driving mechanism to bring the required number of film sections in coincidence with the objective, a movable carrier of light-filters and a mechanism for automatically bringing these



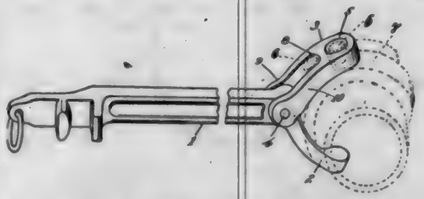
filters successively in coincidence with the objective in the same measure of time as the film sections come in coincidence with the objective.

1,537,869. WINDOW FITTING. HUGH DOUGLAS MURRAY, Glasgow, Scotland. Filed Sept. 22, 1924. Serial No. 739,131. 3 Claims. (Cl. 20—46.)



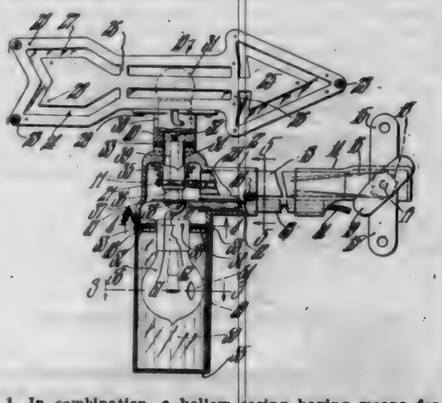
1. A fitting for sliding sash windows arranged to open inwardly comprising a bracket adapted to connect the two sashes together, said bracket having slots, at least one of which extends vertically and horizontally across the bracket, means adapted to be fixed to one sash for engaging one of said slots to detachably secure the bracket on said sash, and a stud adapted to be fixed on the other sash and to engage in said vertically and horizontally extending slot to detachably mount the bracket on said sash, said slot allowing a limited amount of relative movement between the stud and bracket so as to permit one sash to move relatively to the other sash.

1,537,870. CASKET TOP AND PANEL FASTENER. JOHN R. NESTER, Boyertown, Pa. Filed June 18, 1923. Serial No. 646,169. 5 Claims. (Cl. 292—304.)



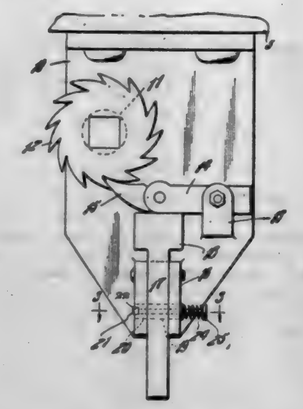
1. In a device of the class described, the combination of a bottom plate formed with a boss, an upper plate, and a locking latch pivoted therebetween at the end of the plates opposite the said boss.

1,537,871. TRANSMISSION GEAR. WILLIAM A. NEWMAN, Montreal, Quebec, Canada. Filed Apr. 7, 1921. Serial No. 459,505. 27 Claims. (Cl. 105—109.)



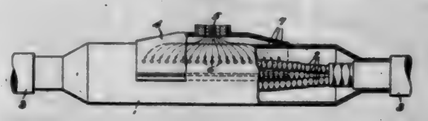
1. In the transmission of power the combination with a driven axle and a member mounted thereon and adapted to transmit rotation, a part to be driven, the angular position whereof relatively to the axle is variable, of transmission mechanism consisting of a floating member in operative relation with the member upon the axle, means including universal rotative connections between the floating member and part to be driven, and means yieldingly maintaining the floating member in the rotative relation with the member upon the axle.

1,537,872. SPANNER FOR HOSE COUPLINGS. CHARLES NUHRING, Cincinnati, Ohio. Filed Oct. 27, 1923. Serial No. 671,260. 4 Claims. (Cl. 81—90.)



1. A spanner for hose couplings, comprising a bar, an arm angularly disposed with respect to said bar, a second arm, said second arm being bifurcated at one end so as to admit said bar, and means for pivotally securing the forks of said second arm to said bar, the crotch between said forks being adapted to engage the pin of a hose coupling.

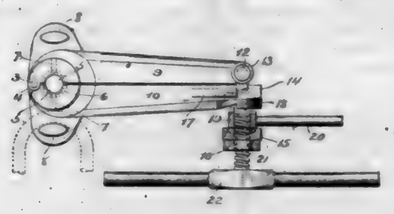
1,537,873. SAFETY EQUIPMENT FOR AUTOMOBILES. RAY E. PARMENTER, Longmeadow, Mass. Filed Dec. 27, 1921. Serial No. 525,026. 3 Claims. (Cl. 116—46.)



1. In combination, a hollow casing having means for attaching it to a vehicle, a hollow arm extending outwardly from said casing, a second hollow casing carried by said arm, a shaft rotatably mounted in each of said casings, a sprocket wheel on each shaft within its casing, a rotatable member mounted on the shaft in the second casing and located outside the latter, manually operable means for rotating the shaft in the first casing, and an endless flexible member extending through said hollow arm, and connecting said sprockets, one of said casings being longitudinally adjustable on said arm to tension said endless member.

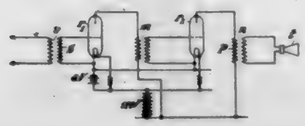
1,537,874. LOCK. FRANK PETROSKY, Republic, Pa. Filed Nov. 12, 1924. Serial No. 749,488. 4 Claims. (Cl. 74—10.)

2. The combination with a shaft provided with a ratchet wheel, a member pivotally mounted adjacent the ratchet wheel, a pawl pivoted to the pivoted member, a latch element pivotally mounted below the pivoted member and provided with a head adapted to underlie the pivoted member and the pawl for holding the same against pivotal movement, and means to hold the pivoted latch member against movement.



1,537,875. CABLE SLEEVE. WILHELM PFANNKUCH, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 18, 1922. Serial No. 607,584. 4 Claims. (Cl. 173—268.)

1. A sleeve for sheathed electric cables comprising a tubular shell provided in its side walls with pouring holes, an auxiliary shell secured to the top portion of said tubular shell to enclose said pouring holes and form with said tubular shell a distributing reservoir for filling material, and a pouring entrance in said auxiliary shell.

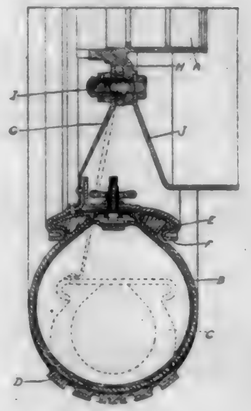


4. In combination, jointed sheathed cables, a shell which surrounds the joint and also the adjacent ends of the cables, and is provided with pouring holes, located below the top thereof, a second shell which surrounds the first and is sealed at its ends, said shells defining between them a reservoir for insulating material, and a pouring entrance in said second shell.

1,537,876. CLAMP. LEWIS PIRDUN, Tulsa, Okla. Filed May 22, 1924. Serial No. 715,151. 5 Claims. (Cl. 24—135.)

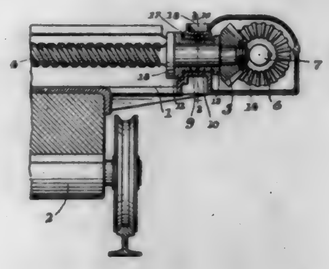
2. In a cable clamp, a pair of pivotally connected jaws, elements pivotally mounted at one jaw to extend across the other jaw, means carried by said elements to effect an initial clamping movement of the jaws, and other means carried by said elements to effect final clamping movement of the jaws.

1,537,877. PROTECTIVE CONNECTION FOR AMPLIFIER SYSTEMS. BRUNO GERHARD POHLMANN, Siemensstadt, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Oct. 26, 1920. Serial No. 419,781. 3 Claims. (Cl. 179—171.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. An amplifying system comprising amplifying tubes, transformers for connecting said tubes in cascade, two batteries, one battery feeding the heating circuit and the other feeding the anode circuit, and having a common pole, which is grounded, both batteries being suitably associated with said tubes, in combination with connections inserted between the primary windings of said transformers and the non-grounded pole of the said second named battery and other connections between the secondary windings of said transformers and said common grounded poles of the batteries of the system, the input and output transformers connected to the system, the primary and secondary windings of said input and the output transformers being connected to the grounded common poles of said batteries.

1,537,878. SYRINGE. LEWIS E. POIRIER, Cleveland, Ohio. Filed Jan. 16, 1922. Serial No. 529,620. 4 Claims. (Cl. 128—244.)

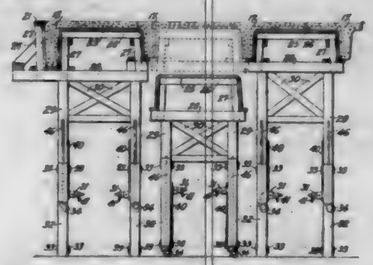


1. A syringe comprising a liquid-conveying tube, having discharging apertures adjacent one end, a plurality of links pivotally attached to said tube beyond said discharging apertures, arms pivotally attached to the outer ends of said links, a sleeve freely slidably movable on said tube, said arms being pivotally connected to said sleeve, whereby movement thereof will cause outward movement of said arms, and said tube being provided with apertures arranged between said arms.

1,537,879. PNEUMATIC-TREADED VEHICLE WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor to Detroit Pressed Steel Company, Detroit, Mich., a Corporation of Delaware. Filed Aug. 13, 1920. Serial No. 403,192. 3 Claims. (Cl. 152—13.)

1. A pneumatic tire of normally circular cross-section and designed to carry a predetermined normal load at a substantially reduced inflation pressure, modified from standard practice for the same load by a substantial increase in cross-sectional area and a substantial decrease in ratio of wall thickness to cross-sectional diameter.

1,537,880. SAWMILL CARRIAGE. JOSEPH S. REID, Olean, N. Y., assignor to Clark Brothers Company, Olean, N. Y., a Corporation of New York. Filed Nov. 9, 1922. Serial No. 599,854. 4 Claims. (Cl. 64—10.)

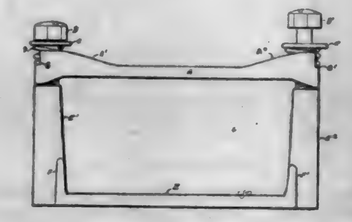


1. The combination of a base, a bearing, rotatable nuts adapted to be moved longitudinally of the bearing when rotated, a shaft received in the nuts, said nuts having complementary radial notches therein, and means adapted to be received in the notches for holding the nuts together in their adjusted position.

1,537,881. LOOM ATTACHMENT. ROGER N. REYNOLDS and THOMAS F. DOUGHERTY, Atlanta, Ga. Filed June 7, 1924. Serial No. 718,550. 4 Claims. (Cl. 139—68.)

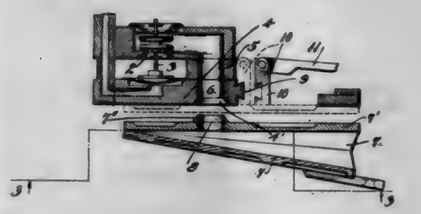
1. A harness strap for looms comprising a member adapted to connect with the harness, an inner tapering clamp member associated therewith, an outer tapering clamp member sliding relatively to the first mentioned member, a strap received between the two members and clamped thereby, and cam means for forcing the two members upon said strap.

1,537,882. MOVABLE FORM FOR CONCRETE WORK. OWEN HAWORTH ROBERTS, Spartanburg, S. C. Filed Oct. 1, 1924. Serial No. 740,993. 7 Claims. (Cl. 25—131.5.)



1. A plastic form comprising a supporting frame, a form on said frame, means for bracing the frame against swaying motion, spaced legs carrying said frame, casters secured to the lower ends of said legs, extension legs slidably receiving portions of the legs of said frame therein, interengageable means on the adjacent portions of said first legs and said extension legs whereby to prevent relative lateral movement between the same, and adjusting means carried on said extension legs engageable with portions of said first legs whereby to effect raising and lowering of the frame.

1,537,883. HANDLE FOR VARIOUS INSTRUMENTS. OLIVIERI ROCCO, Buffalo, N. Y. Filed Feb. 2, 1924. Serial No. 690,288. 1 Claim. (Cl. 300—1.)

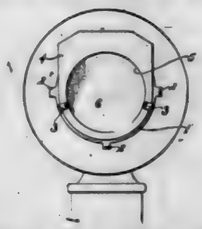


A device of class described comprising a handle, a ferrule connected therewith and having a rectangular shaped end to engage a correspondingly shaped tool socket and means to receive a pin for detachably connecting the socketed tool with the ferrule, said ferrule also having a transversely arranged hole cooperating with said means and pin to alternately engage and secure a shanked tool.

1,537,884. CLAMP FOR DENTAL FLASKS. WILLIAM M. ROMINE and WALTER J. CLARK, Wichita, Kans. Filed July 7, 1923. Serial No. 650,180. 3 Claims. (Cl. 18—33.)

2. A dental flask clamping press, consisting of two diamond shaped plates, one of which, having an upright hollow standard, of equal length on each end of the plate, the interior of each standard being threaded its full length, the other plate being provided with openings, one in each end of the plate, adapted to receive a bolt, and seat a coil spring, a bolt having threads its full length, said bolt being adapted to pass through the coil spring, and screw into the standards on the lower plate, all substantially as shown and described.

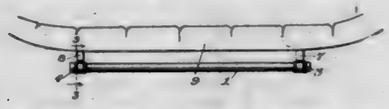
1,537,885. ACTION MECHANISM FOR PIANOS AND LIKE INSTRUMENTS. JOHN T. RYDBERG, Harrison, N. J., assignor, by direct and mesne assignments, to Supreme Player Action Corporation, a Corporation of New Jersey. Filed Mar. 11, 1924. Serial No. 698,440. 9 Claims. (Cl. 84—65.)



1. In a piano action, a support, hammer actuating instrumentalities, and means adjustably connecting said instrumentalities to the support which are adapted to be fixed to accord with a particular scale.

5. A pneumatic player action unit including a pouch board, finger flanges slidably mounted on said pouch board, and pneumatics angularly adjustable with relation to the pouch board to accord with the adjustment of the finger flanges.

1,537,886. TELEPHONE-MOUTHPIECE ATTACHMENT. GUSTAV H. SACKL, Milwaukee, Wis. Filed Dec. 22, 1923. Serial No. 682,251. 1 Claim. (Cl. 179—185.)

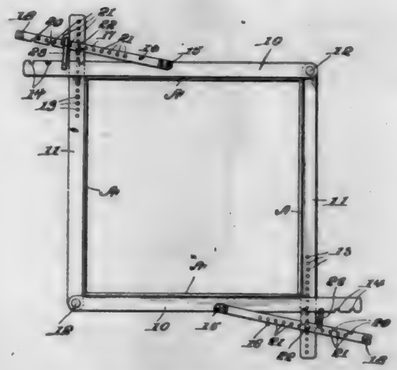


A device of the class described comprising a ring-shaped member having spring clips thereon for engaging the mouth piece of a telephone, holding clips on

the outer part of the ring-shaped member, a frame adapted to be held to the ring-shaped member by the holding clips and a cover sheet supported by the frame, said

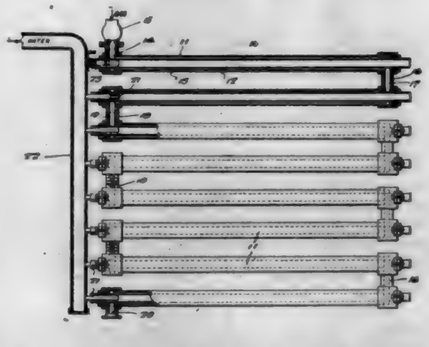
frame consisting of a sheet folded upon itself and provided with a pair of registering openings, the cover sheet being arranged between the two parts of the folded sheet.

1,537,887. BLANKET HOLDER AND FIRE EXTINGUISHER. GEORGE COLLINS SAVAGE, Glastonbury, Conn. Filed Feb. 6, 1924. Serial No. 691,080. 2 Claims. (Cl. 169—2.)



1. In combination, spring-clip bracket plates, a tube, removable caps on the ends of said tube, each of said caps having a pair of spaced ribs thereon, the ends of said clips adapted to embrace the caps between said ribs to detachably support the tube therefrom, and fire extinguishing means contained within the tube.

1,537,888. SPECIFIC-GRAVITY TESTER. OSCAR O. R. SCHWIDETZKY, Hasbrouck Heights, N. J., assignor to Becton, Dickinson & Co., Rutherford, N. J., a Corporation of New Jersey. Filed Apr. 23, 1923. Serial No. 634,074. 5 Claims. (Cl. 265—45.)

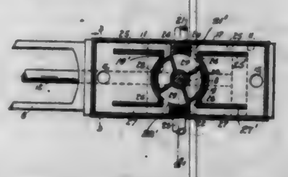


1. A specific gravity tester, comprising a glass container, formed with a plurality of integral spaced annular inwardly extending portions presenting edges, and a hydrometer arranged in the container adapted to be guided by said edges, said edges being so positioned that the hydrometer will be continually engaged by two of the edges.

1,537,889. COLUMN-FORM CLAMP. CHARLES A. SECKINGER, Kansas City, Kans. Filed Aug. 9, 1924. Serial No. 731,196. 3 Claims. (Cl. 144—291.)

1. A form clamp comprising pairs of bars, the bars of each pair being pivotally connected and the pairs being disposable upon a form with said pivot points at diagonally opposite edges of the form, the free end of one bar of each pair being formed with a series of holes, the outer edge of the other bar of each pair being formed with notches, and abutment arms pivotally mounted upon the other bars of each pair and having their edges notched opposite said first named notches, said abutment arms being formed with a series of holes adapted to be selectively registered with said first named holes for the passage of a securing element, and wedges disposable between opposed ones of said notches.

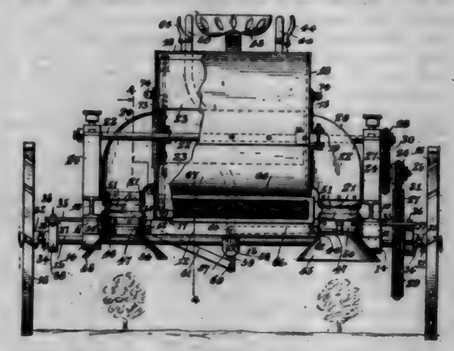
1,537,890. AMMONIA CONDENSER. SAMUEL CLAYTON SEITZ, Towson, Md. Filed Aug. 25, 1923. Serial No. 659,375. 1 Claim. (Cl. 257—37.)



In a condenser, a coil formed of a plurality of spaced horizontal pipe sections, hollow fittings connecting the alternate ends of the sections, an inner pipe extending throughout each section and through said fittings, said inner pipe being spaced from the first mentioned pipe to provide a circulating passage which includes the hollow fittings and said inner pipe being open at each end, a header located at one end of the pipes and nozzles extending from the header into the ends of and spaced from the inner walls of said inner pipes, whereby water under pressure may be forced through the pipes to draw air through said pipes and provide a combined water and air cooling agent.

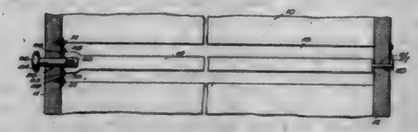
1,537,891. CALENDAR. HUGH E. SHEDD, Minneapolis, Minn. Filed Oct. 30, 1924. Serial No. 746,871. 1 Claim. (Cl. 283—2.)

A calendar sheet having clearly defined date spaces, each bearing a particular date number, each of said spaces with the exception of the date number being wholly colored in accordance with a particular color for indicating a weather forecast for that date, the colorings of the weather forecast indications being sharply and distinctively defined over the coloring of the date numbers to thereby permit the weather forecast indication to be determined at any distance from the calendar which permits the date number to be read, the weather forecast colorings of each of the date spaces permitting such colors of adjacent date spaces to merge one into the other in the event of similar weather forecasts or to be sharply defined relative to each other in the event of different weather forecasts.



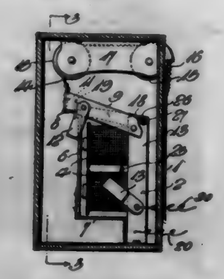
1,537,892. STEAM ENGINE. ANTHONY T. SMITH, Kansas City, Mo. Filed Apr. 18, 1922. Serial No. 554,816. 1 Claim. (Cl. 121—186.)

A steam engine comprising a cylinder having on one side at opposite ends a port, a casing opening into said ports and having aligning inwardly extending supply and exhaust nipples respectively at the top and bottom thereof, spaced vertical partitions within said casing and having curved portions coacting with the inner ends of the nipples to form a circular valve chamber, said nipples in connection with said partitions providing a pair of inlet and a pair of outlet ports, means extended from the upper and lower ends of said partitions and forming in connection with the top and bottom of the casing respectively a pair of oppositely disposed supply passages leading from said inlet ports and a pair of oppositely disposed exhaust passages leading to said exhaust ports, and a shiftable valve bearing against the wall of said chamber and having diametrically disposed pockets for alternately opening said inlet ports and said exhaust ports.



1,537,893. INSECT DESTROYER. EUGENE A. SMITH, La Fayette, Ga. Filed May 28, 1924. Serial No. 715,373. 3 Claims. (Cl. 43—140.)

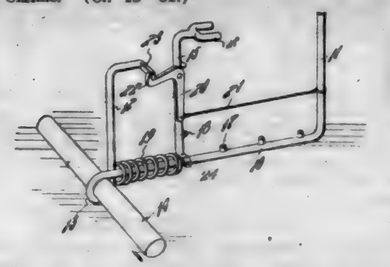
2. In an apparatus of the class described, a supporting frame, a fan device mounted on said frame and including a downwardly directed intake trunk, a flexible tubular member attached to the intake end of the trunk, a coupling member attached to the lower end of said flexible member and having a socket element, a flaring intake device including a lateral flange adapted to detachably engage the socket of the coupling member and with its



forward portion cut away to enable the intake device to receive the tops of the plants and bend them downwardly as they pass thereover, and means for laterally adjusting said coupling member and the flaring intake carried thereby.

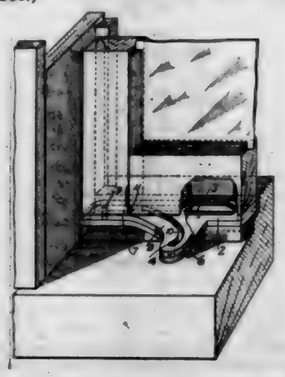
1,537,894. RETAINING DEVICE FOR FILING CABINETS. FRANK C. SMITH, Tampa, Fla. Filed Sept. 29, 1923. Serial No. 665,712. 6 Claims. (Cl. 129—16.)

6. A retaining means for the contents of filing receptacles consisting of a member mounted therein for longitudinal and rotary movements, stationary means capable of being engaged by said member to prevent rotary movement of said member, and means for normally effecting longitudinal movement of said member to engage the same with the first-mentioned means.



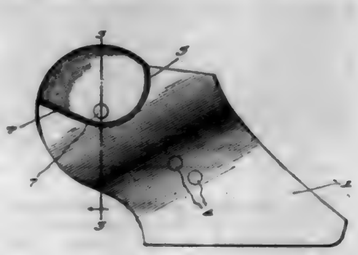
1,537,895. BURGLAR ALARM. JOHN D. SMITH, Marysville, Calif. Filed Sept. 1, 1921. Serial No. 497,525. 1 Claim. (Cl. 200—106.)

A circuit maker and breaker for primary and auxiliary circuits comprising a support, an electro-magnet carried by said support and insulated therefrom, a latch forming armature yieldably mounted in operative relation to said magnet and moved out of its normal position when the electro-magnet is energized, an arm of conducting material connected with said support and insulated therefrom, the winding of the electro-magnet having one end thereof connected with said arm and its other end adapted for



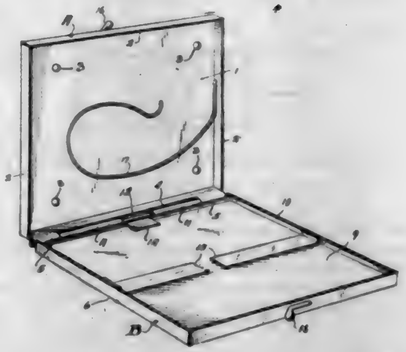
connection with one side of a source of energy, a contact carried by said support in insulated relation thereto and adapted for connection with a lead wire of an auxiliary circuit, and a swinging arm of conducting material pivotally connected with said support in insulated relation thereto and adapted for connection with a lead wire from the other side of the source of energy, said swinging arm being held in an open position and in engagement with the first mentioned arm by said armature until the electro-magnet is energized and draws the armature out of its normal position, the swinging arm then having movement into engagement with said contact to close the auxiliary circuit.

1,537,896. ANIMAL TRAP. WALTER STANCHFIELD, Austin, Pa. Filed June 2, 1924. Serial No. 717,367. 4 Claims. (Cl. 43—81.)



1. A trap of the character described comprising a base, a vertical member rising from one end of the base, a movable jaw including a shank pivoted on said base and normally arranged vertically in parallelism with said member, said jaw projecting at a right angle from said shank and designed to straddle the base when said jaw assumes its active position, lugs rising from said base, similar lugs carried by said shank and arranged in staggered relation with the first mentioned lugs, means for holding said shank in its normal position, a flexible element terminally connected with said means and with said vertical member, and adapted to effect a release of said shank when the body of the animal is brought into contact with said element, and means for forcibly moving said shank to its active position when released.

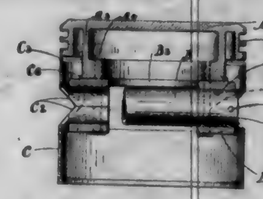
1,537,897. HINGE. WARREN E. STEELE, San Francisco, Calif., assignor to May C. Steele, San Francisco, Calif. Filed Sept. 19, 1922. Serial No. 589,222. 4 Claims. (Cl. 16—166.)



4. A hinge comprising a pair of similar plates, each formed with a similar lateral extension, one plate having a longitudinal slot extending substantially the entire length of the body thereof, a pin fixed in the extension, the other plate having a curved slot extending substantially the entire length of the extension thereof and engaging said pin, and a pin fixed in said other plate and engaging said first-named slot.

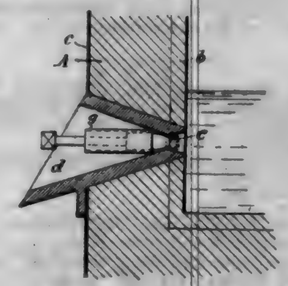
1,537,898. MOLDBOARD. ALBERT STONE, Clarksville, Mo. Filed Nov. 2, 1923. Serial No. 672,418. 1 Claim. (Cl. 97—121.)

In a plow construction, a mold board having its upper rear corner notched to provide a lower angle edge which merges into an upwardly directed inwardly rounded edge, both of said edges being sharpened, an angle bracket secured to the rear face of the mold board and projecting into the notch, and a disk cutter pivotally secured to the bracket, and covering the notch of the mold board, as and for the purpose set forth.



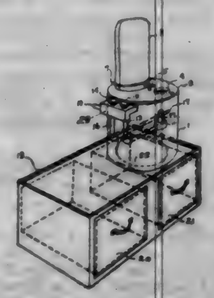
1,537,899. HOLDER. CLENDENON L. STUBBS, Huntington Park, Calif. Filed June 17, 1924. Serial No. 720,660. 4 Claims. (Cl. 40—10.)

3. A holder of the class described comprising a box body part and a cover part, both of said parts having marginal flanges in overlapping relation when the cover part is applied to the box body part, said cover part being provided with an opening, a transparent sheet within the cover part and disposed over said opening, a backing sheet overlying the transparent sheet, spring arms arranged within the cover part for holding the sheets in applied position.



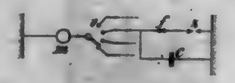
1,537,900. PISTON. ERNEST TALBOT, Lowestoft, England. Filed Apr. 16, 1923. Serial No. 632,511. 8 Claims. (Cl. 74—108.)

1. In a piston for a fluid pressure engine, the combination of a head carrying packing rings, a reduced portion constituting a neck extending from the crown of said head and integral therewith, a skirt directly



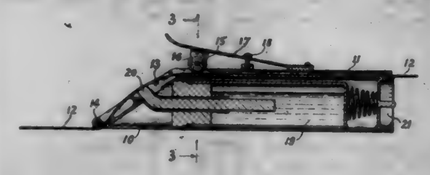
attached to said neck, and a divided bearing for the reception of a piston pin wholly carried by said skirt, substantially as set forth.

1,537,901. DEVICE FOR PLUGGING SMELTING FURNACES. FILIP THARALDSEN, Bestum, near Christiania, Norway. Filed May 29, 1923. Serial No. 642,320. 5 Claims. (Cl. 266—42.)



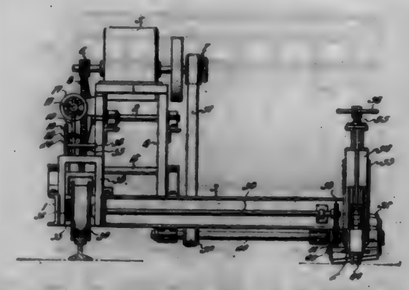
1. The method of sealing tap holes of smelting and like furnaces which comprises embedding a rigid core in a plastic material and introducing the core and plastic material simultaneously into a tap hole.

1,537,902. SPARK-PLUG CLEANER. KENNETH F. TAGGS, Huntington, Ind. Filed Mar. 3, 1924. Serial No. 696,622. 4 Claims. (Cl. 51—8.)



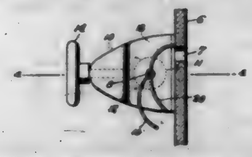
4. A casing comprising means for supporting the spark plug in position to be cleaned, a nozzle beneath said supporting means, means for admitting compressed air and sand to the nozzle, and an independent air jet in said casing, substantially as set forth.

1,537,903. CONNECTION FOR THE IGNITION OF EXPLOSION MOTORS. ROBERT VON LAPPEL, Berlin-Wilmersdorf, Germany. Filed Sept. 30, 1922. Serial No. 591,555. 5 Claims. (Cl. 123—148.)



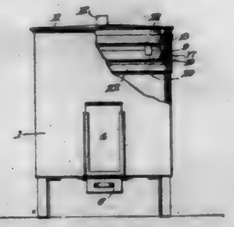
3. An ignition circuit comprising a source of electric energy; an electric capacity connected across said source of energy; a quenched spark gap connected in series with said source of energy; a distributor in series with said source of energy and said gap; and a spark plug in series with said distributor, said gap and said source.

1,537,904. TAPE-PASTING DEVICE. CHRISTOPHER JAMES WALBRAN, Brooklyn, N. Y., assignor to Kleinschmidt Electric Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed June 28, 1922. Serial No. 571,879. 9 Claims. (Cl. 216—33.)



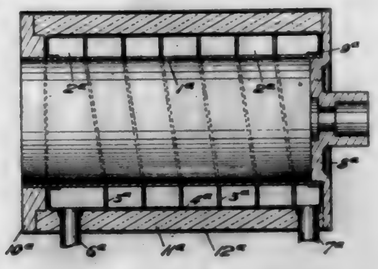
1. In combination, a casing having an inclined end, a channel on said casing for receiving and guiding material to be moistened, a spring-pressed roller at one end of said channel and at the top of the incline of said casing, a pressure roller at the base of the incline of said casing, a container for liquid in said casing, an absorbent member extending into said container and adapted to apply liquid from said container to the lower side of the material to be moistened, and a closing cap at the other end of said casing, having a spring to apply pressure to the adjacent end of said container.

1,537,905. ADZING MACHINE. J WILLIAM WARREN, Kansas City, Mo. Filed Dec. 15, 1922. Serial No. 607,142. 2 Claims. (Cl. 144—138.)



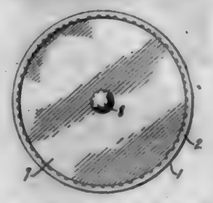
1. An apparatus of the class described comprising a supporting frame, flanged wheels at the front thereof, means for adjusting the same vertically, endless tread chains at the rear thereof, supporting means for the chains, a motor, means for connecting the motor with the wheels and chain supporting means, an adzing tool and means for driving the same from the motor.

1,537,906. FLY REJECTOR FOR WINDOWS. CHARLES WEBB, Fort Myer, Va. Filed Aug. 23, 1924. Serial No. 733,851. 6 Claims. (Cl. 156—37.)



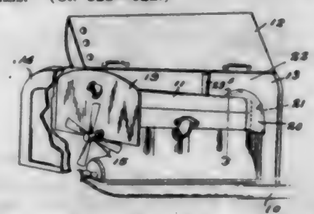
5. In a device of the kind described, a window having an opening, a rod supported inwardly of the pane, and slightly below the opening, upper fingers extending from said rod and toward the window pane above the opening, a second set of fingers extending downwardly from the rod and toward the window, but being spaced therefrom, and a third set of fingers also extending downwardly from said rod and inwardly of said second set of fingers, said third set of fingers being also spaced from the window.

1,537,907. FRUIT-DRYING DEVICE. CLARENCE W. WELLS, Cherryville, N. C. Filed July 22, 1922. Serial No. 576,828. 4 Claims. (Cl. 34—22.)



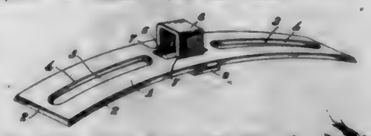
1. An apparatus of the class described comprising a furnace having an open top, a pan having a flange at its top for engaging the edge of the furnace with the pan fitting in the upper part of the furnace, said furnace having an opening therein and the pan also having an opening therein in alignment with the first opening, a cover plate for closing the opening in the furnace and a cover for covering the pan.

1,537,908. HEATING AND COOLING APPARATUS. JOSEPH WILLMANN, Derby, Conn. Filed Apr. 18, 1922. Serial No. 554,586. 2 Claims. (Cl. 257—212.)



2. In apparatus for the interchange of heat, the combination of a fluid-tight unitary jacket structure comprising a cylinder to contain a substance to be heated or cooled, a relatively flat convoluted wall having its inner circumferential edge presented to and united with the wall of the cylinder and an enclosing wall lying in substantial parallelism with the cylinder wall and bridging the convoluted channels formed between the convolutions of the wall first-mentioned, the ends of the enclosing wall being joined to the respective peripheral end portions of the cylinder, thus forming direct fluid-tight closures for the ends of the jacket, and heads connected to the ends of the cylinder independently of the enclosing wall of the jacket.

1,537,909. HEADLIGHT. HERMAN M. WOLTER, San Francisco, Calif. Filed Dec. 4, 1922. Serial No. 604,853. 1 Claim. (Cl. 240—48.4)



A lens for the head-light of a motor vehicle comprising a transparent disc having a central bulb formed integral therewith and filled with a colored liquid adapted to absorb certain constituents of the light rays passing therethrough for eliminating the glare of the headlight and for indicating to an observer the position of the headlight on the motor vehicle.

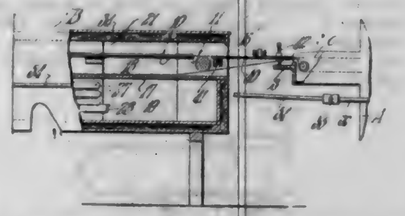
1,537,910. APPARATUS FOR SUPPLYING HEATED AIR TO CARBURETORS. WAYNE C. WRIGHT, Port Lavaca, Tex. Filed July 15, 1921. Serial No. 484,961. 2 Claims. (Cl. 123—122.)

1. In a motor vehicle, a hood structure, a transverse partition element at the rear end of the hood, a transverse forward partition under the hood whereby a chamber is formed, a motor mounted at the bottom of the chamber and with its upper part only included within the chamber space so that air can enter the chamber around the motor, and a charge forming device associated with the motor having air supply means arranged to inspire at the extreme upper part of the chamber air heated by and rising from around the motor.

1,537,911. BRAKE SHOE. OTTO B. WUNSCHOW, Chattanooga, Tenn. Filed Dec. 31, 1923. Serial No. 683,675. 4 Claims. (Cl. 188—258.)

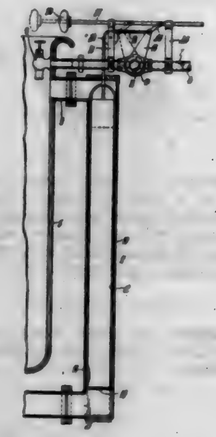
3. In a brake shoe, the combination of a reinforcing plate having a longitudinal slot, a hanger lug loop extending through the slot, a brake shoe body bonded with the plate and a brake shoe lug embedding parts of the loop, the slot being of greater length than the width of the material of the loop and of less length than the width of the lug, the material of the body of the shoe extending into the loop beyond the plane of the back face of the body and forming an integral part of the lug.

1,537,912. WOVEN TUBULAR FABRIC AND METHOD OF MAKING THE SAME. LOUIS A. AUMANN, Chicopee, Mass. Filed Mar. 16, 1922. Serial No. 544,327. 2 Claims. (Cl. 139—387.)



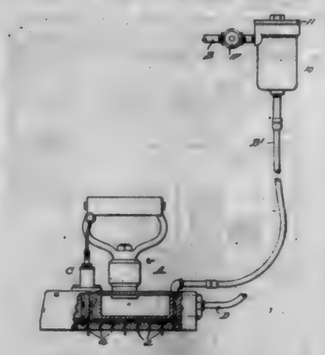
1. A new fabric product comprising a transversely endless and longitudinally continuous tube of indefinite length provided along each of two diametrically opposite longitudinal lines with an integral woven tape portion of single thickness corresponding in the fabric of the tube and extending continuously throughout the length of the tube, said tape portion including not more than one half of the same weft threads as the tube.

1,537,913. PIANOFORTE AGRAFFE. WILLIAM M. BAUER, Chicago, Ill. Filed Oct. 28, 1922. Serial No. 596,290. 4 Claims. (Cl. 84—212.)



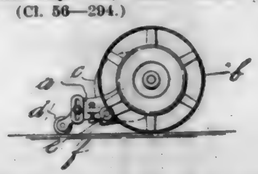
4. A built-up agraffe comprising a series of separately formed members of vulcanite fiber, threaded pins extending transversely through the series and rigidly securing the members together in spaced relation, said agraffe having opposite-end bearings and an intermediate bearing, and forward and rear anchoring studs provided with flattened heads surrounding said pins between adjacent members.

1,537,914. DELIVERY APPARATUS FOR CONFECTIONERY MACHINES. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1922. Serial No. 600,161. 7 Claims. (Cl. 198—102.)



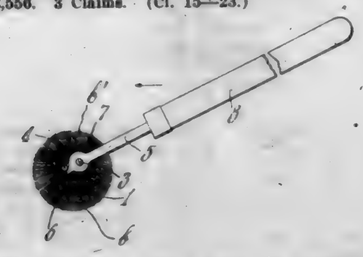
1. In combination, a frame having laterally spaced upright side walls, a table disposed between said walls and pivotally supported at one end, means carried by said frame for supporting the other end of said table in a manner such that the latter may be swung upwardly on its pivotal support when desired, a belt travelling over said table from the first named to the last named end and returning closely adjacent the lower face thereof, and a second conveying means having a part located beneath said table and accessible by swinging the table upwardly.

1,537,915. AUTOMATIC SHUT-OFF. SARAH L. BELL, Cambridge, Mass. Filed Sept. 4, 1924. Serial No. 735,841. 5 Claims. (Cl. 4—205.)



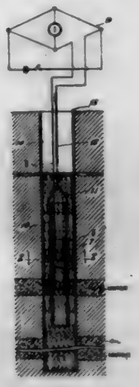
1. In combination, a liquid container, an inlet pipe for said container, a valve for said inlet pipe, a discharge pipe for said container, a gravity actuated member located within said discharge pipe and operatively connected to said valve and adapted to close the latter, a push rod to manually operate said valve and gravity member, and guides in which said push rod is slidably mounted.

1,537,916. PRESSING AND STARCHING IMPLEMENT. LOUIS BLACK, New York, N. Y., assignor of one-half to Eastman Machine Company, Buffalo, N. Y. Filed May 25, 1923. Serial No. 641,402. 6 Claims. (Cl. 68—26.)



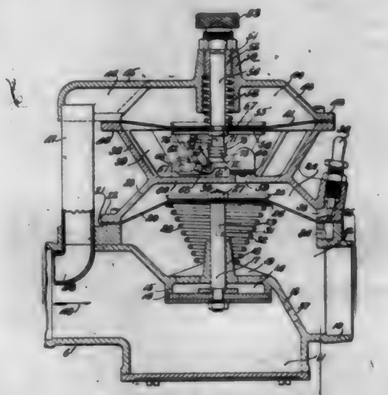
1. The combination with a pressing implement, of a starch container, means for passing fluid through said starch container, said pressing implement being provided with one or more perforations through which the fluid from said starch container can be delivered to the goods for dampening and starching the same while they are being pressed with the implement.

1,536,917. LAWN MOWER. ADELBERT B. CASE, Springfield, Mass.; Union Trust Company, administrator of said Adelbert B. Case, deceased, assignor to Blair Manufacturing Company, a Corporation of Massachusetts. Filed Sept. 28, 1921. Serial No. 503,733. 6 Claims. (Cl. 56—294.)



1. The combination in a lawn mower, having revoluble spiral blades, of a knife stationarily mounted for cooperation with said blades and having sufficient flexibility to yield away from the blades when engaged therewith, and means underlying said knife for limiting the extent of said yielding movement.

1,537,918. BRUSH OR THE LIKE. HENRY CAVE, Springfield, Mass. Filed Mar. 7, 1923. Serial No. 623,556. 3 Claims. (Cl. 15—23.)



1. The combination with a frame, of a substantially cylindrical brush, a core therefor disposed eccentrically of the brush and mounted for turning movement in said frame, and means for limiting the relative turning movement of said core and frame.

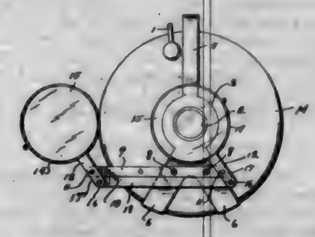
1,537,919. METHOD OF LOCATING THE LEVEL AT WHICH WATER ENTERS A WELL. RAYMOND D. ELLIOTT, Whittier, Calif., assignor of one-half to Edmund J. Young, Berkeley, Calif. Filed Sept. 15, 1921. Serial No. 500,993. 10 Claims. (Cl. 175—183.)

1. In the method of locating the level at which water enters a well, the combination of steps consisting in displacing the contents of the well by filling the well from the bottom up with a liquid of known electrical resistance, then withdrawing sufficient of the liquid from the well to permit the entrance of water from the water bearing stratum, and then testing the electrical conductivity of the liquid column in the well at successive levels until a level is ascertained at which the electrical conductivity of the liquid column is different than that of the displacing liquid.

1,537,920. POWER-CONTROL APPARATUS FOR PNEUMATIC-DISPATCH SYSTEMS. CHESTER S. JENNINGS, Wellesley Farms, and CLIFFORD R. DUMBLE, Arlington, Mass., assignors to The Lamson Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 12, 1922. Serial No. 581,364. 35 Claims. (Cl. 243—15.)

1. In combination in a pneumatic dispatch system, a carrier transmission tube, means for causing a current of air of normal predetermined amount constantly to enter the mouth of the tube, and controlling means, comprising a pressure actuated element constantly exposed upon one side to the pressure in the transmission tube and freely open upon the other side to the atmospheric pressure, for admitting an abnormal quantity of air to flow through the tube for a predetermined interval of time.

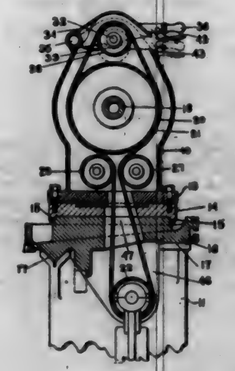
1,537,921. MERCURY SWITCH. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 10, 1923. Serial No. 667,625. 20 Claims. (Cl. 200—152.)



1. In a mercury tube switch, in combination, an envelope of boro-silicate glass carrying an appreciable quantity of lead and contacts sealed into the walls of said envelop, said envelope being filled with a gas having the property of assisting in removing heat from the high temperature points in the envelope.

8. In a mercury switch, in combination, an envelope of glass containing an appreciable quantity of metal

and having the property of withstanding high temperatures and rapid fluctuations in temperature, mercury pools in said envelope in the open position of said switch, and lead wires passing through the wall of the envelope and in contact with said pools.



1,537,922. ATTACHMENT FOR HEAD MIRRORS. GEORGE M. MAXWELL, Roanoke, Va. Filed Nov. 21, 1923. Serial No. 676,086. 9 Claims. (Cl. 128—21.)

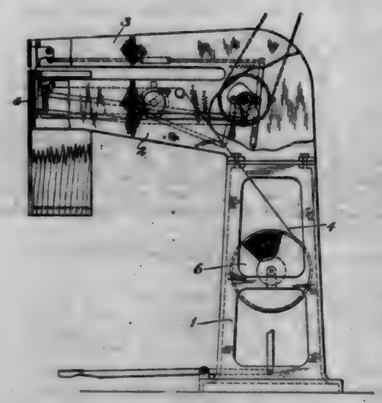
1. In combination with a head mirror provided with a peep opening, an attachment provided with means for detachably securing the same to the mirror, a pair of lenses movably supported by the attachment, one of said lenses when in one position being disposed over

the peep opening and the second lens being positioned to one side of the mirror, said lenses when in such positions permitting binocular vision.

1,537,923. HEADSTOCK-DRIVING MECHANISM. CHARLES H. NORTON, Plainville, Conn., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 21, 1922. Serial No. 602,452. 11 Claims. (Cl. 192—11.)

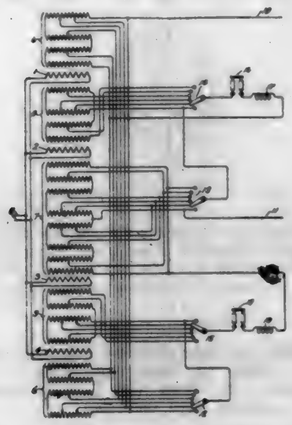
1. A head stock spindle driving mechanism, comprising a pulley on the spindle, a driver connected with a source of power, an adjustably positioned idler pulley, a single belt passing over said driver and pulleys, means for automatically moving the idler pulley to tension the belt and cause a driving action, and manually controlled means for moving the idler pulley to release the driving friction of the belt and stop the spindle.

1,537,924. SPLITTING BUCK. GROVER C. REESLER, Okmulgee, Okla., assignor to Baker Brothers Glass Company, Okmulgee, Okla., a Corporation of Indiana. Filed Dec. 12, 1924. Serial No. 755,384. 3 Claims. (Cl. 49—48.)



1. A splitting buck comprising a suitable main frame and an endless hammock carried by the main frame and mounted for free movement in the direction of its length, said hammock forming a support for a glass cylinder.

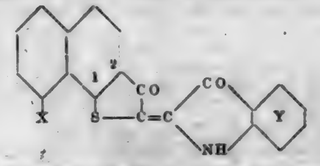
1,537,925. DENTAL X-RAY-FILM PACKAGE. LEONARD M. BOLIN, Chicago, Ill., assignor of one-half to Stanley Bolin, Chicago, Ill. Filed Aug. 7, 1922. Serial No. 580,107. 16 Claims. (Cl. 250—34.)



1. A container for films consisting of a body portion, and forwardly and inwardly turned resiliently yieldable edge portions on the said body portion adapted to encompass elastically the other elements of the assembly.

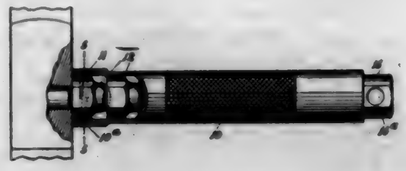
1,537,926. MACHINE FOR USE IN MAKING BOXES, CRATES, AND THE LIKE. BRUCE J. DAVIDSON, Marseilles, Ill., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Oct. 29, 1920. Serial No. 420,414. 24 Claims. (Cl. 1—11.)

1. A machine for use in fastening heads, ends, partitions or the like to boxes comprising, in combination, a stapling arm adapted to operate within a box; wire severing means; a staple former adapted to perform operations on a plurality of staples simultaneously; and a staple driver.



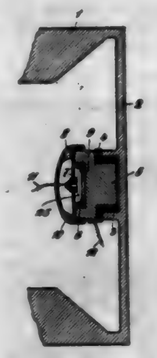
1,537,927. TRANSFORMER. LOUIS F. BLUME, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 16, 1923. Serial No. 645,729. 5 Claims. (Cl. 171—119.)

1. A transformer comprising a winding having four sections, each section being provided with a plurality of taps, means for connecting one end of each section to any selected tap of one of the other sections, and means for connecting the other ends of two of said sections across an external circuit.



1,537,928. VAT DYESTUFF CONTAINING SULPHUR AND PROCESS OF MAKING SAME. ERWIN HOFFA and HANS HEINA, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 14, 1924. Serial No. 732,117. 3 Claims. (Cl. 260—419.)

2. As new substances, the dyestuffs of the general formula:



wherein X signifies halogen, Y a benzene or naphthalene nucleus, and wherein the isatin and the benzooxythionaphthene residues may be substituted in any manner, which dyestuffs are, in a dry state, brownish-violet powders and dissolve in concentrated sulphuric acid with a characteristic coloration.

1,537,929. BOX SPANNER. HENRY JAMES LEE, Coventry, England, assignor to Leon Britton, London County, England. Filed Feb. 27, 1923. Serial No. 621,665. 4 Claims. (Cl. 81—125.)

1. A magazine spanner for operating on nuts comprising in combination a tube, a coil spring for gripping and retaining the nut or nuts, said spring being located in an annular recess formed in the inner periphery and near the mouth of the said tube and normally projecting thereinto, a slidable member within said tube, a closure member for the one end of the tube, and a coil spring located between the slidable and the closure member.

1,537,930. SOUND RECEIVER, PARTICULARLY FOR RECEIVING SOUND WAVES IN LIQUIDS. HUGO LICHTE, Kiel, Germany, assignor to Signal Gesellschaft mit beschränkter Haftung, Kiel, Germany, a Firm. Filed Jan. 22, 1923. Serial No. 614,173. 8 Claims. (Cl. 177—386.)

1. In submarine sound receiving apparatus, a tuned radiating system of high radiation damping including one member of a vibratory sound detector, and an independently vibratory structure coupled therewith, comprising another detector member the coupling between the radiating system and said independently vibratory structure being not greater than 40%.

Patents Nos. 1,537,931 to 1,538,878.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 334—No. 3. TUESDAY, MAY 19, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, May 1, 1925.*

Westerly Shirt Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Orent's Department Store, Inc., 1225 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered October 22, 1912, No. 88,814, to Westerly Shirt Co., of Westerly, R. I., and 23–25 East Twenty-first Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Westerly Shirt Co., at Westerly, R. I., as well as letters forwarded by the attorney of record to both of the above addresses having been returned to the respective senders by the post-office authorities as undeliverable, notice is hereby given that unless said Westerly Shirt Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, May 5, 1925.*

Dawson Metals Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Samuel R. Dawson, of 395 St. Johns Place, Brooklyn, N. Y., for registration of a trade-mark and trade-mark registered November 2, 1920, No. 136,396, to Dawson Metals Inc., 52 Vanderbilt Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Dawson Metals Inc., at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Dawson Metals Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, May 5, 1925.*

Isaac J. Silverstein, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Linen Thread Company, 96–98 Franklin Street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 16, 1912, No. 86,169, to Isaac J. Silverstein, 147 Spring Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Silverstein at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Silverstein, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Disclaimer.

1,530,359.—*John H. Deppeler*, Weehawken, N. J. CRUCIBLES FOR EXOTHERMIC AND LIKE REACTIONS. Patent dated March 17, 1925. Disclaimer filed May 2, 1925, by the patentee, the assignee *Metal & Thermit Corporation*, consenting.

Hereby enters his disclaimer to all of the claims of said Letters Patent, which are as follows, to wit:

"1. A receptacle for use in effecting the reduction of metals by means of metallic reducing agents comprising a metal crucible of sufficient wall thickness to chill on its inner surface a thin layer of slag produced by the reaction.

"2. A receptacle for use in effecting exothermic reactions comprising an initially unlined metal crucible of sufficient wall thickness to chill on its inner surface a thin layer of slag produced by the reaction.

"3. A receptacle for use in effecting exothermic reactions comprising a metallic crucible of sufficient wall thickness to convey away sufficient of the heat of reaction to prevent fusion of its inner surface, said crucible having a lining of slag produced by the reaction."

ADJUDICATED PATENTS.

(D. C. N. Y.) The Twitchell patent, No. 927,298, for pressure gauge for pneumatic tires, *Held* valid and infringed. *A. Schrader's Son, Inc.*, v. *Weis Sales Corporation*, 3 F. (2) 999.

(C. C. A. Wis.) The Hunter patent, No. 1,164,815, for device for tightening harrow teeth, claim 4 *Held* not infringed. *Walden Worcester, Inc.*, v. *American Grinder Mfg. Co.*, 3 F. (2d) 933.

(C. C. A. Ill.) The Roark patent, No. 1,346,337, for solid cake of paradichlorbenzol and odoriferous substance, claim 2 *Held* invalid. *U. S. Sanitary Specialties Corporation* v. *West Disinfecting Co.*, 3 F. (2d) 997.

Condition of Applications Under Examination at Close of Business May 8, 1925.

(Total number of applications awaiting action, excluding Trade-Mark Division, 45,983; Trade-Mark Division, 2,391. Oldest new case, Nov. 11, 1924; oldest amended, Nov. 10, 1924. The dates given are 1925 except where † indicates 1924.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

STEVENS *v.* CLULEE.

No. 1,896. Decided March 2, 1925.

APPEAL from Patent Office. Affirmed.

Mr. David Rines for Stevens.

Mr. Robert S. Blair, Mr. J. Harold Kelcoyne, and *Mr. H. G. Manning* for Clulee.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

PER CURIAM:

Appeal from concurrent decisions of the Patent Office in an interference proceeding in which priority was awarded the party Clulee.

The invention relates to a mounting for eyeglasses and is set forth in a single broad count originating with Stevens. The right of Clulee to make the claim was challenged, but the Law Examiner sustained that right, basing his decision upon the failure of Stevens to specify in the claim the limitations contended for in his motion for dissolution. Each of the three tribunals of the Patent Office has exhaustively and satisfactorily discussed the questions involved and each has reached the conclusion that Clulee is entitled to make the claim and is, in fact, the prior inventor.

Finding no error, we affirm the decision appealed from.

Affirmed.

U. S. Circuit Court of Appeals—Ninth Circuit.

SUPREME MFG. CORPORATION *v.* SECURITY MFG. CO.

Decided May 11, 1925; rehearing denied June 9, 1925.

[299 Fed. Rep. 65.]

1. ESTOPPEL—ACQUIESCENCE IN REJECTION OF CLAIMS—EQUIVALENTS.

A patentee by acquiescence in rejection of claims is estopped to claim the benefit of the rejected claims or a construction of those allowed which would be equivalent to them.

2. REISSUE—BROADENED CLAIMS.

The Ellis reissue patent, No. 14,956, for improvement in auto theft signals, *Held* invalid, as broader than the original patent, which covered a specific chock which when in place would prevent the rotation of an automobile wheel, while the reissue claims are for a chock which permits the wheel to be "freely rotated with the signal in place," but imparts a bumping motion thereto.

3. SAME—SAME.

A claim is broadened if it serves to bring within the monopoly an intervening structure which otherwise would be free.

4. SAME—INTERVENING RIGHTS.

One who has acquired intervening rights between the time of issuance of a patent and application for a reissue can not be charged with infringement of broader claims of the reissue.

5. ANTICIPATION—MAKING PART INTEGRAL INSTEAD OF IN TWO PIECES.

Anticipation is not avoided by making a part in one integral piece instead of two pieces fastened together.

APPEAL from the District Court of the United States for the Southern Division of the Southern District of California, Benjamin F. Bledsoe, judge.

Suit in equity by the Security Manufacturing Company against the Supreme Manufacturing Corporation. Decree for complainant, and defendant appeals. Reversed and remanded, with directions to dismiss.

Certiorari denied by U. S. Supreme Court, Oct. 20, 1924.

Mr. William K. White and *Mr. William R. Litzenberg* for the appellant.

Mr. Frank L. A. Graham and *Mr. Ford W. Harris* for the appellee.

Before GILBERT, HUNT, and RUDKIN, Circuit Judges.

GILBERT, *Cir. J.:*

The court below found that the appellant had infringed claim 2 of the Ellis reissue patent, No. 14,956, and claims 6 and 7 of the Chapman patent, No. 1,343,709.

[1] The history of the Ellis patent is as follows: Patent issued August 25, 1914, to Ellis and McKee, upon an application filed by Ellis November 3, 1913. In the application the invention was described as an "improvement in chocks for vehicle wheels," to—

> provide a chock with means for being releasably locked to an automobile wheel for the purpose of preventing the wheel from revolving, and thereby preventing theft or unauthorized use of the automobile.

There were four claims in the application. The first two were broad claims, covering any form of a chock attached to a wheel for the purpose indicated. The Examiner, referring to four American prior patents and one French patent, rejected those claims as being substantially met in the prior art. Ellis acquiesced in the rejection, and the patent was issued upon the remaining two claims. The patentees were thereby estopped to claim the benefit of the rejected claims or a construction which would be equivalent to them. *Morgan Envelope Co.* v. *Albany Paper Co.*, 152 U. S. 425; 14 Sup. 627; 38 L. Ed. 500; 67 O. G. 271; 1894 C. D. 238; *Computing Scale Co.* v. *Automatic Scale Co.*, 204 U. S. 609; 27 Sup. Ct. 307; 51 L. Ed. 645; 127 O. G. 849; 1907 C. D. 687.

On August 23, 1918, the Ellis patent was assigned to the Miller-Chapman Company, and that company thereafter, in 1918, assigned the same to the appellee herein. On January 26, 1920, Ellis, on behalf of the then owners of the patent, made application for a reissue of his patent, and the same was reissued October 12, 1920. In his oath

accompanying the application Ellis stated as his reason for applying therefor that all the claims of the original patent "read directly upon and are anticipated and invalidated by a certain patent, No. 997,228, issued November 29, 1910, to Benjamin Schestopol." And in the complaint in the present suit it was alleged that the Ellis original patent was void, for the reason that Ellis claimed as new more than he had the right to claim. The oath further stated that the effect of the Schestopol patent on the validity of the Ellis patent was not brought to the attention of the affiant until January 1, 1920. The evidence was, however, that the original patent had been assigned to Miller on February 21, 1917, Miller being at that time a partner with Chapman for the purpose of manufacturing chocks, and from the file wrapper of the Chapman patent it appears that the attention of Chapman was directed to the Schestopol patent as early as March, 1917. In applying for the reissue, Ellis again made broad claims; 14 claims were rejected, and 2 were allowed.

[2] One of the questions for decision is whether the two claims which were allowed were or were not broader in their scope than the claims of the original patent. In the reissue patent the invention is described as an "improvement in auto theft signals." In the original patent the purpose was said to be to prevent the wheel from revolving, and thus to prevent theft or unauthorized use of the automobile, and the two claims which were allowed covered only the specific mechanism of the device. In the claims of the reissue patent there is added to the description of the projection on the device these words:

> Said projection being of such size and shape as to permit the wheel to be freely rotated with the signal in place on the wheel, thus raising the wheel from the ground and imparting a marked bumping motion thereto.

It is obvious that what Ellis originally sought to accomplish by his device was a light-weight chock which would prevent the revolution of an automobile wheel. By way of excusing its possible failure to accomplish its primary purpose, he pointed out that, even if it permitted revolution of the wheel, it would nevertheless be effective to prevent theft, for it would attract attention by its noticeable irregular and limping movement. It is obvious, also, that no advantage was to be gained by making a chock which would permit rather than prevent the revolution of the wheel. If Ellis conceived the advantage of a chock of such light weight as to be easily carried and adjusted in place, he made no claim for it as a feature of his invention in applying for his patent.

There was a delay of 5 years and 5 months in applying for the reissue. In the meantime, on January 4, 1916, Gillespie received Letters Patent 1,166,828, for a chock for vehicle wheels, the specifications containing the following:

> Unauthorized persons, in attempting to use the vehicle, will be prevented from so doing by the chock, or, even if they should attempt to run the vehicle, the irregular movement of the wheel will prevent any rapid movement of the machine and will render detection a comparative certainty.

On November 14, 1916, Cook and Reid received a patent, 1,204,847, on a device intended "to constitute a chock and prevent rotation." In the specifications it was said:

> In the event, however, that the wheel should rotate, its motion will be so irregular as to attract attention to the car before a thief can escape therewith.

These inventors had no notice from the Ellis original patent that Ellis had conceived the idea of using a chock as a theft signal, or that he broadly claimed a monopoly of a chock of such size and shape as to permit the wheel to be revolved with a bumping motion and thus to attract attention. These inventors went as far as did Ellis in inventing a chock having, as he did, the primary purpose of preventing the revolution of an automobile wheel, but incidentally suggesting, as did he, that if the wheel revolved its irregular movement would direct attention to the fact that the use was unauthorized. Such was the condition of the prior art when Litzenberg, on March 9, 1918, filed application for his patent, which was issued January 28, 1919. He also was without notice that Ellis claimed a monopoly of a chock which would permit revolution of the wheel in an irregular or bumping manner, and thus operate as a theft signal. Litzenberg described his chock as one to be applied to a wheel "for the purpose of retarding its rolling action, and for the further purpose of indicating that the automobile, to the wheel of which it is applied, is in all probability being stolen." He was chargeable only with knowledge of what Ellis had claimed in his patent; that is, a chock constructed and attached in a described form and manner.

[3] There was nothing in Ellis' claim to suggest the broader claim of the reissue patent for an "auto theft signal," with a projection of "such size and shape to permit the wheel to be freely rotated with the signal in place on the wheel." A claim is broadened if it serves to bring within the monopoly an intervening structure which otherwise would be free. The original Ellis patent secured to the patentee the exclusive right to a chock, made in accordance with his two claims which were allowed. By the reissue patent the claims are expanded, so that thereunder the appellee now claims a monopoly, as against every chock which the inventive faculty can devise, provided only that it will clear the mud guard, or, in other words, provided that it is not of such dimensions as to prevent the revolution of the wheel to which it is attached. The assignees of Ellis, who owned the patent, had, at least two years prior to the reissue, notice of the Schestopol patent, which, it is admitted, anticipated the claims of the Ellis patent as they were framed. Where a patentee seeks a reissue with broadened claims 5 years and 5 months after the original issue, it must be presumed, in the absence of a showing that the delay was unavoidable, that he abandoned the new matter to the public. *Mahn* v. *Harwood*, 112 U. S. 354; 5 Sup. Ct. 174; 6 Sup. Ct. 451; 28 L. Ed. 665; 30 O. G., 657; 1885 C. D., 314; *Wollensak* v. *Reiher*, 115 U. S. 96; 5 Sup. Ct. 1137; 29 L. Ed. 350; 31 O. G., 1303; 1885 C. D., 314; *Topliff* v. *Topliff*, 145 U. S. 156; 12 Sup. Ct. 825; 36 L. Ed. 658; 59 O. G., 1257; 1892 C. D., 402; *Chapman* v. *Wintroath*, 252 U. S. 126; 40 Sup. Ct. 234; 64 L. Ed. 491; 272 O. G. 913; 1920 C. D. 465.

[4] The appellant here has intervening rights as against the reissue for it has acquired the right to manufacture and sell that which Ellis failed to claim, and, having expended considerable sums of money in the manufacture of a device at a time when the original Ellis patent was as yet unsurrendered, it cannot be held to infringe the added claims of the reissue. *Ives* v. *Sargent*, 119 U. S. 652; 7 Sup. Ct. 436; 30 L. Ed. 544; 38 O. G., 781; 1887 C. D. 191; *Autopiano Co.* v. *American Player Action Co.*, 222 Fed. 276; 138 C. C. A. 38; 217 O. G. 1055; 1915 C. D. 243; *Diamond Drill Contracting Co.* v. *Mitchell (C. C. A.)*, 269 Fed. 261; *Keller* v. *Adams-Campbell Co. (C. C. A.)*, 287 Fed. 838; 317 O. G. 787; 1923 C. D. 578; *Ashley* v. *Samuel C. Tatum Co. (D. C.)*, 240 Fed. 979; 240 O. G. 643; 1917 C. D. 93. We find no conflict between these views and the decision in *Abercrombie & Fitch Co.* v. *Baldwin*, 245 U. S. 198; 38 Sup. Ct. 104; 62 L. Ed. 240; 246 O. G. 567; 1918 C. D. 329, cited by the appellee. In the latter case it was held that the reissue did not enlarge the original patent, and the court was of the opinion that the original claims were sufficient in their scope to include, under the doctrine of equivalents, the more explicit claims of the reissue. It is manifest that in such a case there could be no loss of rights by delay in applying for a reissue, and there could be no impediment by way of intervening rights; the original claims being found sufficient to protect the whole invention of the patentee.

The construction to be placed upon claim 6 of the Chapman patent is largely controlled by the proceedings had upon the application in the Patent Office. It there appears that the claim was rejected on the ground that it was substantially met by the patent to Gillespie, No. 1,666,828, issued January 4, 1916, and the patent to Ellis. There was no appeal from that finding of fact, and Chapman canceled the claim. The claim was finally allowed, because of the addition of these words:

> Tapered to form a sharp wedge extending across the device parallel to the axis of the wheel.

Thereby claim 6 was narrowed to a chock in which was used a spike tapered to form a sharp wedge extending across the device parallel to the axis of the wheel. A spike or projection was old in the art, and Chapman was limited to the precise form of spike which he claimed. Otherwise the claim is anticipated by Gillespie and Ellis. The appellant used a spike of a different form and shape, and thereby it avoided infringement of Chapman's claim 6.

The appellant's chock was patented to Litzenberg January 28, 1919, by Letters Patent No. 1,292,822. It was issued before the Chapman patent, but it is subsequent to it, for the reason that Chapman's application was prior in time. The fact that the Litzenberg patent was allowed raises a presumption that the officials of the Patent Office found a patentable difference between his and Chapman's invention, which was pending at the same time. *Boyd* v. *Janesville Hay Tool Co.*, 158 U. S. 260, 261; 15 Sup. Ct. 837; 39 L. Ed. 973; 71 O. G. 1315; 1895 C. D. 376. The Litzenberg patent presents a chock with an integral body surrounding the tire, with one end or arm extending upwardly to a point above the felly, from which projects a second arm, at the end of which is hinged a third arm, adapted to surround a spoke and be locked to the end of the first arm. The radial projection of the chock is a wedge extending at right angles to the axis of the wheel.

Claim 7 of the Chapman patent reads as follows:

> A vehicle shackle for an automobile tire, comprising a member fitting over the tread of the tire and extending upwardly and fitting inside the felly of the wheel on which the tire is placed; a projecting form on said member in such a position that it extends radially from the tread of the tire with the device in place; a means for locking said member on said wheel.

This presents nothing new in addition to the Ellis patent and the Eastwood patent, No. 938,990, patented November 2, 1909. The value of the Eastwood patent as indicating the prior art is not lessened by the fact that it was called a "detachable spur," and its purpose was to prevent slipping or skidding. Nor do we think it should be set to one side as belonging to a different art. It is true that it was intended as a calk, but it was to be attached to the rim of the wheel, and it fitted over the tread of the tire, and extended upwardly and fitted inside the felly, and was formed of two integral pieces.

[5] Nor is it important that in the Chapman device the member fitting over the tread of the tire extending upwardly and fitting inside the felly of the wheel is one integral piece, and not composed of two pieces fastened together as in the Ellis and Gillespie devices. *Consolidated Electric Mfg. Co.* v. *Holtzer*, 67 Fed. 907; 15 C. C. A. 63; 72 O. G. 415; 1895 C. D. 476; *General Electric Co.* v. *Yost Electric Mfg. Co.*, 139 Fed. 569; 71 C. C. A. 552; *Pedersen* v. *Dundon*, 220 Fed. 810; 136 C. C. A. 143. It seems to us clear that the appellant's device avoids infringement of claim 7 of the Chapman device, in that it does not fit over the tread of the tire and, extending upwardly, fit inside the felly of the wheel. It is essential to the operation of both the Chapman patent and the Ellis patent that the device shall "fit" the felly, so as to hold the projection in radial extension from the tread, and prevent the rotation of the device about the tire and felly, thus moving the projection to one side of the tread. In brief, in view of the prior art, the Chapman invention is a very narrow one, and the appellee must be held substantially to the precise form in which the invention is presented. The appellant's device, while it fits the tire, does not fit or conform to the felly, nor is it in contact with the felly, except at the point where the lock, which encircles the

spoke, rests upon the inner surface of the felly. The device depends upon its attachment to the spoke and its contact with the tire to prevent its lateral turning.

The decree is reversed, and the cause is remanded, with instructions to dismiss the bill.

PATENT SUITS.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,376,310, P. A. E. Armstrong, Roller bearing, decided March 9, 1925, claims 7 and 8.

Pat. 1,422,110, J. Labovici, Interlock circuit-protector, decided April 6, 1925, claims 1 to 9, inclusive.

Pat. 1,448,207, W. F. Gehrig, Wireless-telephone receiving apparatus, decided April 11, 1925, claim 1.

Pat. 1,471,916, W. C. Perry, Motor fuel, decided April 29, 1925, claims 1, 2, and 3.

Pat. 1,477,494, M. R. Hutchison, Monorail carrier, decided April 9, 1925, claim 10.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 19, 1925.

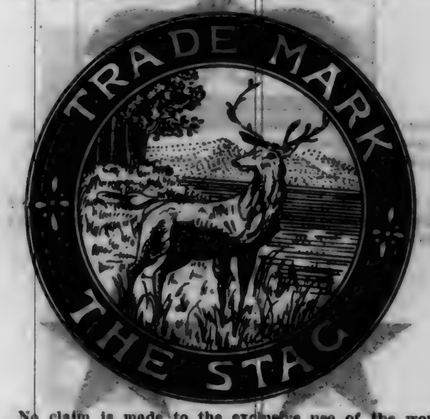
[VOL. 334. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 123,258. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN B. ROGERS & COMPANY, Chicago, Ill. Filed Sept. 29, 1919.



Particular description of goods.—Baking Powder.
Claims use since Aug. 9, 1918.

Ser. No. 156,589. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JACOB MILLER SONS & CO., Philadelphia, Pa. Filed Dec. 12, 1921.

CLOUD

Particular description of goods.—Shirtings Comprising Silk Goods.
Claims use since Oct. 30, 1920.

Ser. No. 174,594. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SOCIÉTÉ INDUSTRIELLE DE ROQUEFORT, Roquefort, France. Filed Jan. 13, 1923.

No claim is made to the exclusive use of the words "Trade-Mark" apart from the mark shown on the drawing.
Particular description of goods.—Cheese.
Claims use since Oct. 20, 1919.

Ser. No. 177,997. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PROCTER AND GAMBLE COMPANY, Cincinnati, Ohio. Filed Mar. 24, 1923.

Particular description of goods.—Red Oil Used as a Commercial Oil in the Manufacture of Paints, Printing Inks, Carbon Paper, and in the Manufacture of Textile Soaps.
Claims use since January, 1900.

Ser. No. 179,415. (CLASS 39. CLOTHING.) MCGRATH SHOE CO., INC., New York, N. Y. Filed Apr. 20, 1923.

Particular description of goods.—Children's Leather Shoes.
Claims use since Mar. 1, 1922.

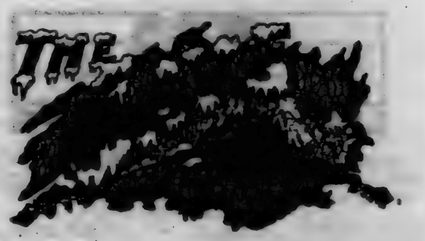
Ser. No. 180,564. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MILLS NOVELTY COMPANY, Chicago, Ill. Filed Oct. 4, 1923.

VENS

Particular description of goods.—Flavored Sugar Tablets (Candy).
Claims use since Aug. 27, 1923.

Ser. No. 186,805. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SHAFFER PRODUCTS CO., Minneapolis, Minn. Filed Oct. 10, 1923.

Olivette



Particular description of goods.—Salad Dressing Adapted to be Used as a Salad Spread and Consisting of Chopped Olives in a Mayonnaise Base.
Claims use since on or about Apr. 1, 1922.

Ser. No. 189,232. (CLASS 39. CLOTHING.) ASSOCIATED MERCHANDISING CORPORATION, Newark, N. J., and New York, N. Y. Filed Dec. 5, 1923.

Formold

Particular description of goods.—Corsets and Brassières.
Claims use since July 31, 1923.

Ser. No. 190,122. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM C. MORGAN, Everett and Tacoma, Wash. Filed Dec. 26, 1923.

Particular description of goods.—Lunches Consisting of Cakes, Pies, Sandwiches, Soups, Bouillons, Salads, Oyster Cocktail, Shrimp Cocktail, Fruit Cocktail, Sweet Pickles, Dill Pickles, Ripe Olives, Green Olives, Sliced Tomatoes, Sliced Cucumbers, Salted Almonds, Salted Peanuts, Cold Roast Pork, Cold Roast Beef, Cold Boiled Ham, Cold Baked Ham, Ice Cream, and Sherbets.
Claims use since 1910.

Ser. No. 190,130. (CLASS 39. CLOTHING.) GIOVANNI V. ROSI, Los Angeles, Calif. Filed Dec. 26, 1923.

Particular description of goods.—Ballet Slippers, Dancing Shoes, Slippers and Pumps of Leather and of Leather and Fabric Combined; Hosiery, and Gloves of Leather and Fabric.
Claims use since Nov. 21, 1923.

Ser. No. 190,575. (CLASS 15. OILS AND GREASES.) CASPAR LUBRICANTS, INC., New York, N. Y. Filed Jan. 9, 1924.

Particular description of goods.—Lubricating Oils, Greases, and Compounds.
Claims use since on or about June 1, 1923.

Ser. No. 191,125. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) H. D. FIANDT, Wolcottville, Ind. Filed Jan. 22, 1924.

Particular description of goods.—Automobile Polish and Polish for Enameled Surfaces and Woodwork.
Claims use since Dec. 1, 1921.

Ser. No. 191,409. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE SANDS CHEMICAL COMPANY LTD., Bradford, England. Filed Jan. 28, 1924.

ZYP

Particular description of goods.—Liquid Chemical Preparation for Use in Conjunction with Soap and Water to Increase Their Efficiency.
Claims use since Dec. 14, 1923.

Ser. No. 192,066. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ALPHONSE B. D. CHAMPAGNE, doing business as Massachusetts Sales Service, Lowell, Mass. Filed Feb. 9, 1924.

ALLBRITE

Particular description of goods.—Metal and Glass Polish.
Claims use since about May 1, 1923.

Ser. No. 192,182. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GRACE M. KROTER, doing business as Motor Meals Company, Los Angeles, Calif. Filed Feb. 12, 1924.

JUST EAT AND EAT

Particular description of goods.—Canned Prepared Meals.
Claims use since Dec. 15, 1923.

Ser. No. 192,329. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JAMES S. KIRK & COMPANY, Chicago, Ill. Filed Feb. 15, 1924.

Satinet Soft Skin Soap

The words "Soft Skin Soap" are disclaimed apart from the mark shown.
Particular description of goods.—Soap.
Claims use since on or about Oct. 15, 1877.

Ser. No. 192,734. (CLASS 7. CORDAGE.) JOHN A. ROEBLING'S SONS CO., Trenton, N. J. Filed Feb. 23, 1924.

Trade-mark drawing consists of a green fibrous core of the wire rope. No claim is made herein to the representation of wire rope apart from the said green fibrous core.
Particular description of goods.—Wire Rope.
Claims use since Feb. 15, 1924.

Ser. No. 192,890. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BRILLO MANUFACTURING COMPANY, Brooklyn, N. Y. Filed Feb. 27, 1924.

BRILLO

Particular description of goods.—Polish for Hardwood Surfaces, Furniture, and Automobiles.
Claims use since Jan. 24, 1924.

Ser. No. 192,971. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) GILLESPIE BROTHERS, Newburgh, N. Y. Filed Feb. 28, 1924.

THE PYRAGLASS PANEL

No claim is made to the word "Panel" aside from the mark shown.
Particular description of goods.—Advertising Display Signs Comprising a Display Surface Protected by a Coating of Transparent Material.
Claims use since Jan. 1, 1923.

Ser. No. 193,615. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) NOPIN DIDY CO., INC., Atlantic City, N. J. Filed Mar. 11, 1924.

NO-PIN

No claim is made to the word "Nopin" apart from the mark as shown.

Particular description of goods.—Diapers and Cut Bandages.

Claims use since Mar. 5, 1924.

Ser. No. 194,391. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BISHOP & COMPANY, Los Angeles, Calif. Filed Mar. 25, 1924.

The pictorial representation of boy in trade-mark is merely fanciful.

Particular description of goods.—Cocoa.

Claims use since about 1904.

Ser. No. 194,596. (CLASS 39. CLOTHING.) ELDER MFG. CO., St. Louis, Mo. Filed Mar. 28, 1924.

TUDOR

Particular description of goods.—Men's and Boys' Dress, Negligee, Work, and Under Shirts and Boys' and Children's Blouses.

Claims use since Dec. 1, 1923.

Ser. No. 194,689. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN BIRD COMPANY, doing business as The Atlantic Spice Company, Rockland, Me. Filed Mar. 31, 1924.

Particular description of goods.—Cream of Tartar, Saleratus, Soda, Petrolatum, Epsom Salts, Camphor, Friars' Balsam.

Claims use since Apr. 1, 1890.

Ser. No. 194,979. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CREAMETTE COMPANY, Minneapolis, Minn. Filed Apr. 4, 1924.

Creamette

Particular description of goods.—Potato Chips, Candy, Seedless Raisins, Canned Tomato Soup, Corn Sirup, Canned Pork and Beans, Canned Yellow Cling Peaches, Shredded Coconut, Pancake Flour, Pure Honey, Dutch Toast, Queen Olives, Peanut Butter, Sliced Bacon, Canned Potted Ham, Canned Salmon, Creamery Butter, Pure Lard, Canned Tomatoes, Canned Corn, Canned Evaporated Milk, Jelly Powder, Cornstarch, Unpopped Pop Corn, Package Biscuits, Catchup, Wheat Flour, Cocoa, Fruit Preserves, and Bread.

Claims use since Jan. 29, 1917.

Ser. No. 196,435. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CHEMISCHE FABRIK POTT & CO., Dresden, Germany. Filed May 2, 1924.

HYDRAPHTAL

Particular description of goods.—Preparations for Washing and Cleaning Wool, Cotton Wool, and Cotton Yarns and Fabrics Made Therefrom and for Degreasing Textiles and Leathers.

Claims use since January, 1921.

Ser. No. 196,523. (CLASS 2. RECEPTACLES.) JACOB A. KANTER, Chicago, Ill. Filed May 3, 1924.

KA-M-CO

No claim is made to the word "Brand" apart from the mark as shown.

Particular description of goods.—Mixing Boxes Made of a Combination of Wood and Metal.

Claims use since August, 1922.

Ser. No. 196,620. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) RADIO VACUUM CLEANER COMPANY, St. Charles, Ill. Filed May 5, 1924.

Radio

Particular description of goods.—Vacuum Cleaners.

Claims use since August, 1923.

Ser. No. 197,557. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PETER FOX SONS CO., Chicago, Ill. Filed May 24, 1924.

DE-LUXE

Particular description of goods.—Dressed Poultry and Eggs.

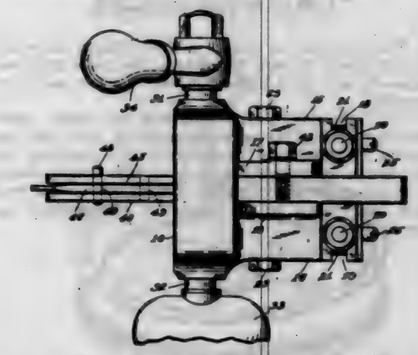
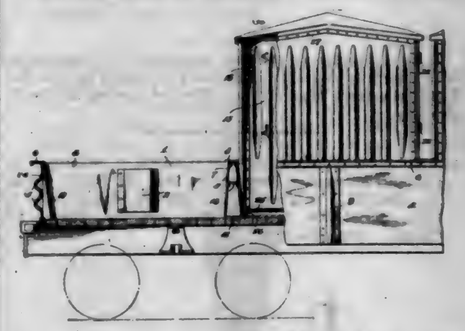
REISSUES



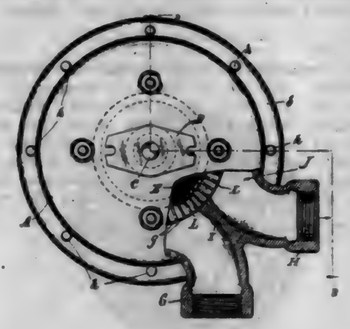
MAY 19, 1925.

16,071. PRESSURE-RELIEF VALVE. Parmer Dorsey, Wichita, Kans., and Ronsby D. McIntosh, River Forest, Ill., assignors to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1923. Serial No. 18,926. Original No. 1,493,774, dated May 13, 1924, Serial No. 406,501, filed Aug. 27, 1920. 17 Claims. (Cl. 137—53.)



9. In a pressure operated release valve, the combination with a casing, of a spring metal diaphragm covering a chamber in said casing, an inlet to said chamber, an outlet for the chamber associated with said casing, a valve seat in said outlet, a valve co-operating with the seat and connected to the diaphragm, and means for applying pressure to the outside of the diaphragm, said diaphragm being concaved and provided with an annular offset that causes the center of the diaphragm to tend to be held by the inherent resiliency of the diaphragm in position either to close the valve completely or hold it wide open, for the purpose described.

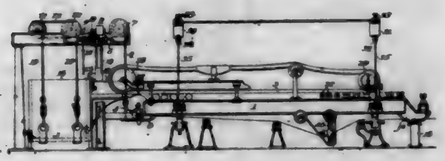
16,072. SWAGE SHAPER. John F. Priebnow, San Diego, Calif., and Nels Waldemar Soderin, Duluth, Minn., assignors to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 18, 1924. Serial No. 756,839. Original No. 1,279,156, dated Sept. 17, 1918, Serial No. 229,488, filed Apr. 19, 1918. 23 Claims. (Cl. 76—49.)



1. A swage shaper, comprising a yoke having legs adapted to project on opposite sides of the saw of which the teeth are to be shaped, shaper jaws mounted in said legs, a unitary guide-bar projecting in both directions past the working point of said shaper jaws and adapted to engage saw teeth, the angular position of said unitary guide-bar with relation to the plane of operation of said shaper jaws being adjustable, and a tooth gage carried by said guide-bar for engaging a saw tooth.

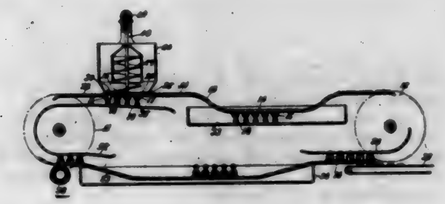
16,073. COMPARTMENT FREIGHT CAR. Alfred H. Smith, New York, N. Y. Filed Feb. 21, 1924. Serial No. 694,438. Original No. 1,407,593, dated Feb. 21, 1922, Serial No. 387,517, filed June 9, 1920. 22 Claims. (Cl. 105—366.)

1. The combination with a car, of a plurality of separate freight compartments detachably mounted therein, and interlocking members on inner face of the walls of the car and compartments respectively, whereby each compartment is independently and rigidly anchored in the car and whereby each compartment may be removed as a unit without impairing the stability of the other compartments or of the car.



16,074. ROTARY PUMP. Adolph Wahle, Davenport, Iowa. Filed Jan. 23, 1922. Serial No. 531,268. Original No. 1,228,267, dated May 29, 1917, Serial No. 59,905, filed Nov. 6, 1915. 12 Claims. (Cl. 103—96.)

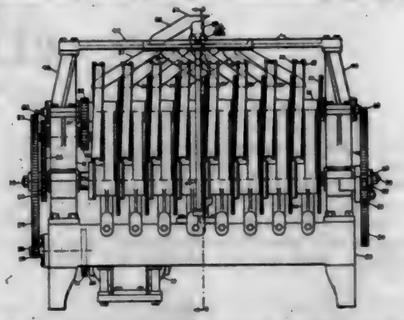
1. In a rotary pump, a rotor the marginal portion of the outer circumference of which is provided with a series of buckets the bottoms of which are substantially



flat and incline from the periphery thereof to the side of the same nearer the center of the rotor and are separated by the blades having flat transverse sides.

16,075. PAPER-MAKING MACHINE. ALONZO ALDRICH, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed Oct. 17, 1923. Serial No. 669,187. Original No. 1,421,754, dated July 4, 1922, Serial No. 485,180, filed July 16, 1921. 66 Claims. (Cl. 92—44.)

1. In a machine of the class specified, the combination of a laterally movable table, and overhead means for lifting the front edge of the table and moving the table laterally.



16,076. SOAP-MOLDING MACHINE. MARION L. CROUCH, Milwaukee, Wis. Filed Mar. 29, 1921. Serial No. 456,662. Original No. 1,308,758, dated July 8, 1919, Serial No. 189,099, filed Aug. 31, 1917. 13 Claims. (Cl. 25—99.)

1. A mold structure for a soap making machine comprising a plate, a plurality of closed molds projecting from one face of said plate and spaced apart to freely expose their adjacent surfaces on different sides thereof and freely admit a cooling liquid to all sides thereof, and a liquid cooling tank to receive said molds.

16,077. MACHINE FOR FORMING SPHERICAL BODIES. HOWARD M. JENKINS, Steubenville, Ohio. Filed Jan. 24, 1925. Serial No. 4,613. Original No. 1,488,817, dated Apr. 1, 1924, Serial No. 600,851, filed Nov. 11, 1922. 26 Claims. (Cl. 49—25.)

22. In a machine for making spherical bodies, a pair of rotating peripherally grooved co-operating forming wheels of different peripheral speeds with the wheel of greater peripheral speed moving upwardly at forming position and means operating automatically and in synchronism with said wheels for periodically separating the same for the purpose of discharging finished articles therefrom.

16,078. BATTERY CUP. JOHN M. OLIN, East Alton, Ill., assignor, by mesne assignments, to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Sept. 6, 1923. Serial No. 661,293. Original No. 1,438,779, dated Dec. 12, 1922, Serial No. 554,313, filed Apr. 17, 1922. 12 Claims. (Cl. 102—18.)

1. A cartridge having a partly empty primer cavity provided with a flash hole, and a membrane closing said flash hole.

16,079. VISCERA AND HEAD INSPECTION TABLE. ALVIN O. LUNDELL, Chicago, Ill., assignor to The Allbright-Nell Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1925. Serial No. 7,436. Original No. 1,445,632, dated Feb. 20, 1923, Serial No. 562,560, filed May 20, 1922. 12 Claims. (Cl. 17—43.)

1. The combination with a movable viscera inspecting table, of means thereon for dividing the table into compartments, and head holders on said table in said compartments.

2. An inspection device comprising an endless table, means for driving the same, members on said table for dividing the table into compartments for receiving viscera, and a receptacle for each of said compartments for receiving the removed head of the same carcass from which the viscera in the respective compartment has been removed.

DESIGNS

MAY 19, 1925.

67,327. BUTTON OR SIMILAR ARTICLE. WILLIAM A. ANSLEY, Port Washington, N. Y., assignor to Swansdown Knitting Company, Hudson, N. Y., a Corporation of New York. Filed Nov. 30, 1921. Serial No. 519,013. Term of patent 14 years.

The ornamental design for a button or similar article substantially as shown.

67,328. BEDSTEAD END FRAME. CHRISTFORR M. AUGUSTINE, Linden, N. J., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 19, 1925. Serial No. 12,771. Term of patent 14 years.

The ornamental design for a bedstead end frame as shown.

The ornamental design for a frame for a nut cracker as shown.

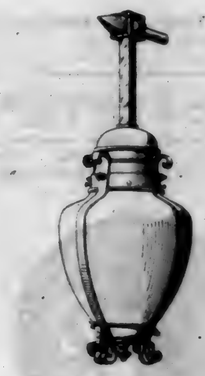
67,330. SOCKET FOR CANDLESTICKS OR SIMILAR ARTICLES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Jan. 29, 1925. Serial No. 12,194. Term of patent 14 years.

The ornamental design for a socket for candlesticks or similar articles, as shown.

67,331. PILLAR FOR CANDLESTICKS OR SIMILAR ARTICLES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Jan. 29, 1925. Serial No. 12,195. Term of patent 14 years.

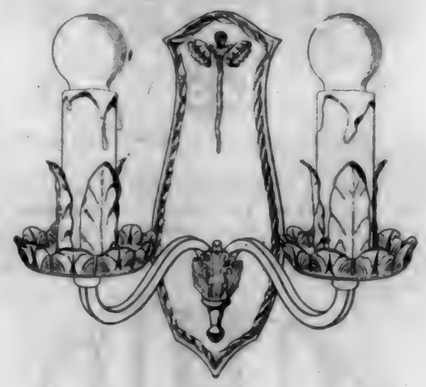
The ornamental design for a pillar for candlesticks or similar articles, as shown.

67,332. BASE FOR CANDLESTICKS OR SIMILAR DEVICES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Jan. 29, 1925. Serial No. 12,196. Term of patent 14 years.



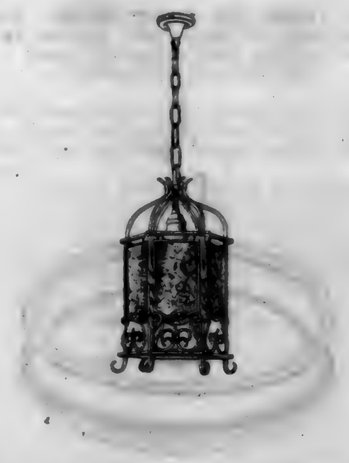
The ornamental design for a base for candlesticks or similar devices, as shown.

67,333. CANDELABRUM. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Jan. 29, 1925. Serial No. 12,197. Term of patent 14 years.



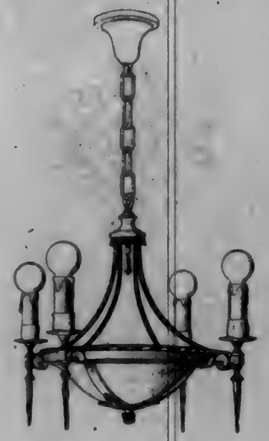
The ornamental design for a candelabrum as shown.

67,334. LAMP. CHARLES BELL, Philadelphia, Pa. Filed Mar. 27, 1925. Serial No. 12,917. Term of patent 3½ years.



The ornamental design for a lamp as shown.

67,335. WALL BRACKET. JOHN L. CHAPPELL, Los Angeles, Calif., assignor to Union Art Glass & Fixture Co., Los Angeles, Calif., a Partnership composed of J. L. Chappell, B. E. Rieg, and E. B. Williams. Filed Jan. 6, 1925. Serial No. 11,940. Term of patent 3½ years.



The ornamental design for a wall bracket, as shown.

67,336. CHANDELIER. JOHN L. CHAPPELL, Los Angeles, Calif., assignor to Union Art Glass & Fixture Co., Los Angeles, Calif., a Partnership composed of J. L. Chappell, B. E. Rieg, and E. B. Williams. Filed Jan. 6, 1925. Serial No. 11,941. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

67,337. CHANDELIER. JOHN L. CHAPPELL, Los Angeles, Calif., assignor to Union Art Glass & Fixture Co., Los Angeles, Calif., a Partnership composed of J. L. Chappell, B. E. Rieg, and E. B. Williams. Filed Jan. 6, 1925. Serial No. 11,942. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

67,338. TEXTILE FABRIC. RICHARD COCKING, Waltham, Mass. Filed Mar. 25, 1925. Serial No. 12,874. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

67,339. RADIOCABINET. WILLIAM H. DEWAR, Philadelphia, Pa., assignor to Pooley Furniture Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 22, 1924. Serial No. 9,686. Term of patent 7 years.

The ornamental design for a radiocabinet as shown.

67,340. PRINTED FABRIC. CHARLES E. GILMAN, Kew Gardens, N. Y., assignor to Goldstein-Wilkins Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1925. Serial No. 12,146. Term of patent 3½ years.

The ornamental design for printed fabric, as shown.

67,341. PRINTED FABRIC. CHARLES E. GILMAN, Kew Gardens, N. Y., assignor to Goldstein-Wilkins Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1925. Serial No. 12,147. Term of patent 3½ years.

The ornamental design for printed fabric, as shown.

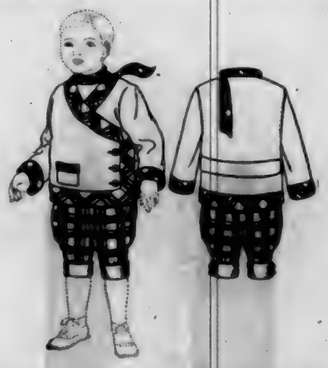
67,342. NECKTIE HOLDER. MABEL W. HAMMER, New York, N. Y. Filed Dec. 11, 1924. Serial No. 11,671. Term of patent 3½ years.

The ornamental design for a necktie holder.

67,343. RING. SOLOMON HYMAN, Boston, Mass. Filed Mar. 21, 1925. Serial No. 12,804. Term of patent 14 years.

The ornamental design for a ring, as shown.

67,344. BADGE. FRANK S. LAND, Kansas City, Mo., assignor to Grand Council Order of De Molay for Boys, Kansas City, Mo. Filed Dec. 1, 1924. Serial No. 11,550. Term of patent 14 years.

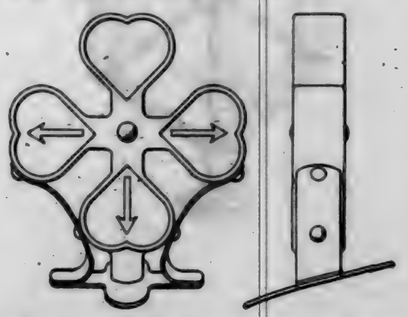


The ornamental design for a badge, as shown.

67,345. GOBLET. VIRGIL LOOMIS, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1925. Serial No. 12,811. Term of patent 7 years.

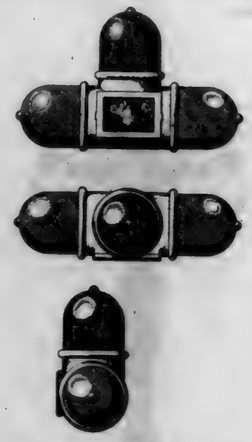
The ornamental design for a goblet substantially as shown.

67,346. COMBINATION CHILD'S SUIT. MARGARET D. MACKINNON, Lincoln, Nebr., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1925. Serial No. 12,213. Term of patent 14 years.



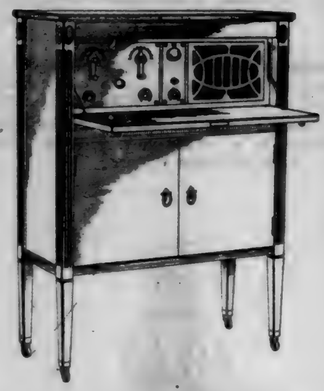
The ornamental design for a combination child's suit, as shown.

67,347. HAT. BESSIE OLDEN MASON, East Orange, N. J., assignor to James McCreery & Company, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1925. Serial No. 12,976. Term of patent 3½ years.



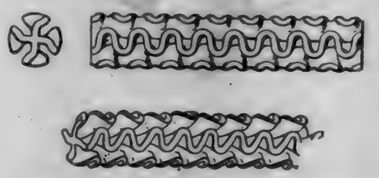
The ornamental design for a hat, as shown.

67,348. AUTOMOBILE SIGNAL. NATHAN R. MATOSA, Memphis, Tenn. Filed Mar. 14, 1925. Serial No. 12,722. Term of patent 14 years.



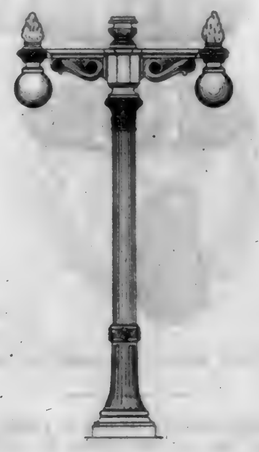
The ornamental design for an automobile signal as shown.

67,349. CASING FOR SIGNAL LIGHT. WILLIAM F. NEUBECK, Brooklyn, N. Y. Filed Mar. 9, 1925. Serial No. 12,643. Term of patent 14 years.



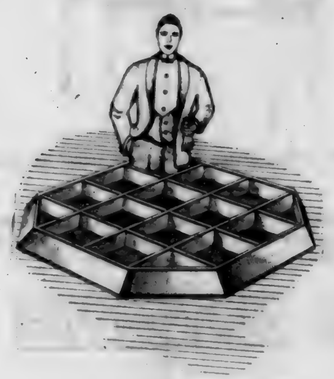
The ornamental design for a casing for signal light, as shown.

67,350. RADIOCABINET. ALBERT O. PRICE, Coshocton, Ohio. Filed Aug. 4, 1924. Serial No. 10,374. Term of patent 14 years.



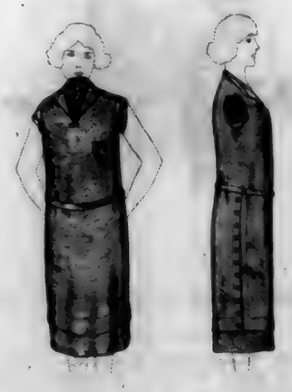
The ornamental design for a radiocabinet as shown.

67,351. MACARONI OR SIMILAR ARTICLE. GIUSEPPE RANUCCI, New York, N. Y. Filed Jan. 17, 1925. Serial No. 12,076. Term of patent 14 years.



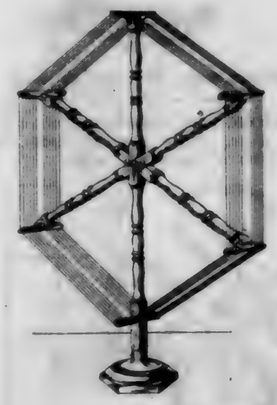
The ornamental design for macaroni or similar article, as shown.

67,352. LIGHTING STANDARD. HARRY O. RASTETTER, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 17, 1924. Serial No. 11,720. Term of patent 3½ years.



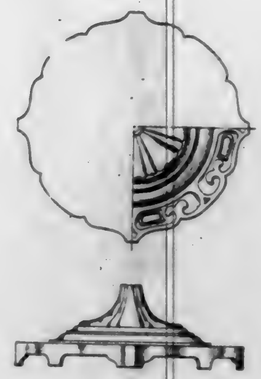
The ornamental design for lighting standard, as shown.

67,353. DISPLAY TRAY. EVERETT IRVING ROGERS, Jr., Providence, R. I. Filed Nov. 7, 1924. Serial No. 11,311. Term of patent 7 years.



The ornamental design for a display tray substantially as shown.

67,354. DRESS. MILDRED C. SCHMOLER, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 16, 1925. Serial No. 12,304. Term of patent 3½ years.



The ornamental design for a dress, substantially as shown.

67,355. LOOP ANTENNA. ROMEYN B. SCRIBNER, Rye, N. Y. Filed Mar. 27, 1925. Serial No. 12,912. Term of patent 14 years.

The ornamental design for a loop antenna, as shown.

67,356. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,890. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

67,357. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,891. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures as shown.

67,358. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,892. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures as shown.

67,359. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,893. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

67,360. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,894. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

67,361. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,895. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

67,362. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,896. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

67,363. PENDULET. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,897. Term of patent 3½ years.

The ornamental design for a pendulet as shown.

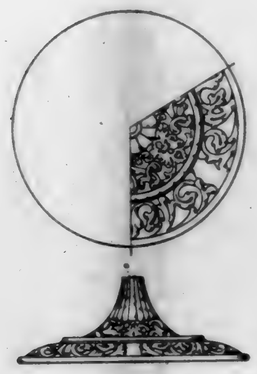
67,364. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,898. Term of patent 3½ years.

The ornamental design for a spindle for lighting fixtures, as shown.

67,365. PENDULET. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,899. Term of patent 3½ years.

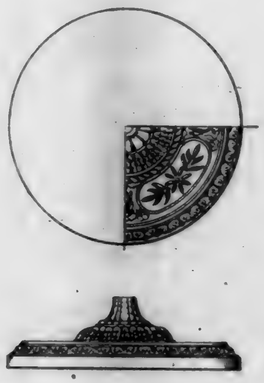
The ornamental design for a pendulet as shown.

67,366. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,900. Term of patent 3½ years.



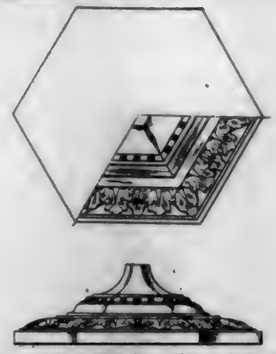
The ornamental design for a spindle for lighting fixtures as shown.

67,367. SPINDLE FOR LIGHTING FIXTURES. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,901. Term of patent 3½ years.



The ornamental design for a spindle for lighting fixtures as shown.

67,368. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,902. Term of patent 3½ years.

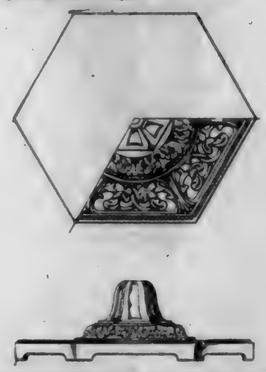


The ornamental design for a lamp base as shown.

67,369. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,903. Term of patent 3½ years.

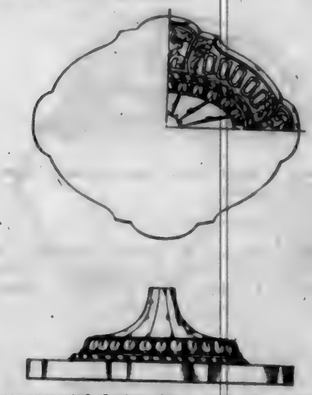
The ornamental design for a lamp base as shown.

67,370. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,904. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

67,371. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,905. Term of patent 3½ years.

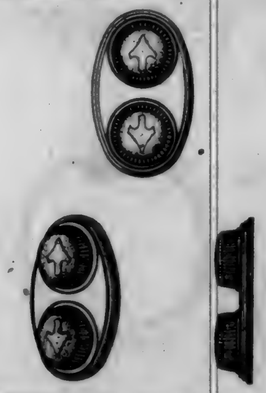


The ornamental design for a lamp base as shown.

67,372. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,906. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

67,373. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 5, 1925. Serial No. 11,907. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

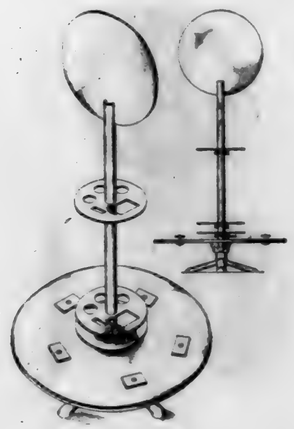
67,374. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1925. Serial No. 12,022. Term of patent 14 years.

The ornamental design for paper as shown.

67,375. ELEVATOR SIGNAL PANEL. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 12,724. Term of patent 7 years.

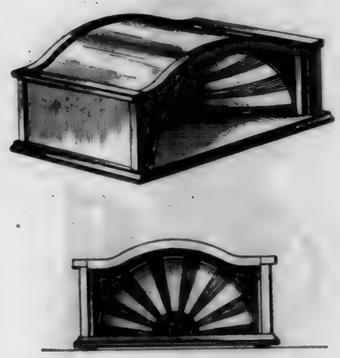
The ornamental design for an elevator signal panel, as shown.

67,376. ELEVATOR SIGNAL PANEL. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 12,725. Term of patent 7 years.



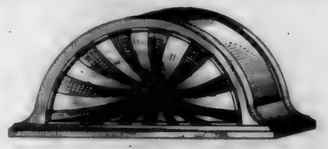
The ornamental design for an elevator signal panel, as shown.

67,377. ELEVATOR SIGNAL PANEL. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 12,726. Term of patent 7 years.



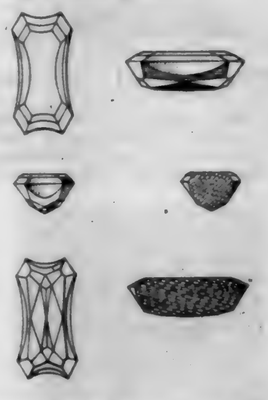
The ornamental design for an elevator signal panel, as shown.

67,378. DISPLAY STAND FOR JACKS. WILLARD T. WALKER, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 21, 1924. Serial No. 8,695. Term of patent 7 years.



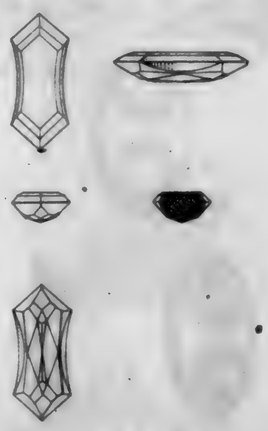
The ornamental design for a display stand for jacks, as shown.

67,379. COMBINED RADIOCABINET AND LOUD SPEAKER. JOHN S. WATTERS, Vincennes, Ind. Filed Mar. 7, 1925. Serial No. 12,639. Term of patent 7 years.



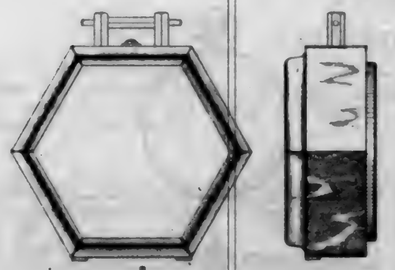
The ornamental design for a combined radiocabinet and loud speaker, as shown.

67,380. COMBINED RADIOCABINET AND LOUD SPEAKER. JOHN S. WATTERS, Vincennes, Ind. Filed Mar. 7, 1925. Serial No. 12,640. Term of patent 7 years.



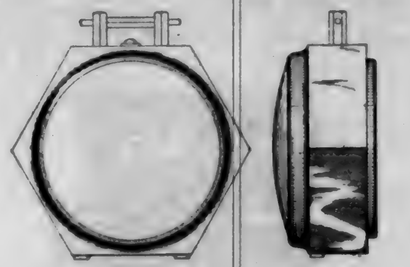
The ornamental design for a combined radiocabinet and loud speaker, as shown.

67,381. GEM. JOSEPH J. WHITE, Cranston, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Mar. 11, 1925. Serial No. 12,681. Term of patent 14 years.



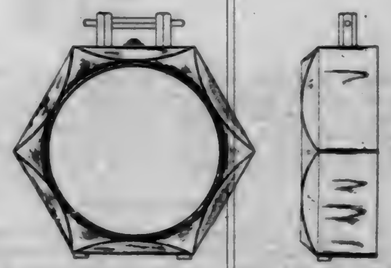
The ornamental design for a gem, as shown.

67,382. GEM. JOSEPH J. WHITE, Cranston, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Mar. 16, 1925. Serial No. 12,734. Term of patent 14 years.



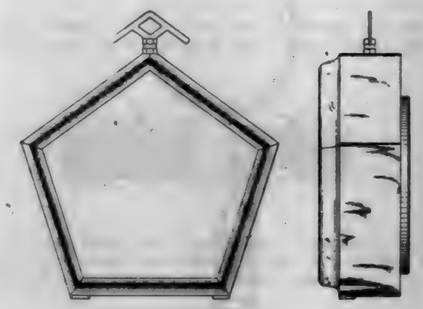
The ornamental design for a gem, as shown.

67,383. CLOCK CASE. RICHARD HENRY WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Sept. 26, 1923. Serial No. 7,328. Term of patent 14 years.



The ornamental design for a clock case as shown.

67,384. CLOCK CASE. RICHARD HENRY WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Sept. 26, 1923. Serial No. 7,329. Term of patent 14 years.



The ornamental design for a clock case as shown.

67,385. CLOCK CASE. RICHARD HENRY WHITEHEAD, New Haven, Conn., assignor of New Haven Clock Co., New Haven, Conn., a Corporation. Filed Sept. 26, 1923. Serial No. 7,330. Term of patent 14 years.

The ornamental design for a clock case as shown.

67,386. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Sept. 29, 1923. Serial No. 7,361. Term of patent 14 years.

The ornamental design for a clock case as shown.

67,387. WATCHCASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Apr. 9, 1924. Serial No. 9,209. Term of patent 14 years.

The ornamental design for a watchcase as shown.

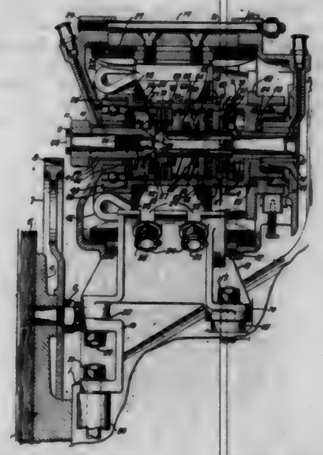
67,888. WATCHCASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Apr. 9, 1924. Serial No. 9,210. Term of patent 14 years.

The ornamental design for a watchcase as shown.

67,889. WATCHCASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Apr. 9, 1924. Serial No. 9,212. Term of patent 14 years.

The ornamental design for a watchcase as shown.

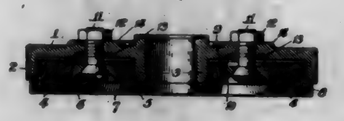
PATENTS



GRANTED MAY 19, 1925.

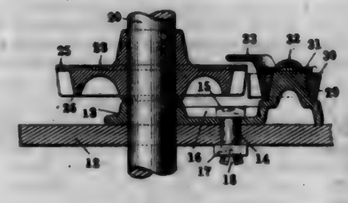
1,537,931. RAIL JOINT. CHARLES A. ALDEN, Steelton, Pa. Filed Jan. 26, 1923. Serial No. 615,170. 9 Claims. (Cl. 238—164.)

3. A splice plate for a rail joint having a strip welded to its inner surface adjacent the upper edge thereof, said strip having its upper surface adapted to bear against the under surface of a rail head, for the purpose set forth.



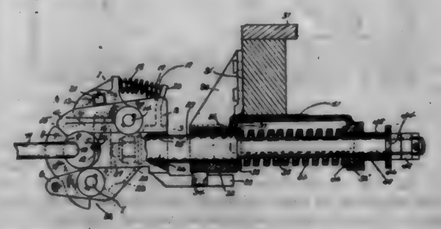
1,537,932. ENGINE-STARTING APPARATUS. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Oct. 2, 1919, Serial No. 327,920. Renewed Oct. 2, 1924. 18 Claims. (Cl. 290—48.)

2. The combination, in an engine starter, of a shell having inclined guide means, a splined, slidable shaft passing through said shell coaxially therewith, a pinion on said shaft, shifting means for said pinion, comprising a member encircling said shaft and interfitting said guide means, and means transmitting torque to said pinion.



1,537,933. VALVE. JOHN J. BOMBARD, Chicago, Ill., assignor to The Hill Pump Valve Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1924. Serial No. 708,868. 2 Claims. (Cl. 251—160.)

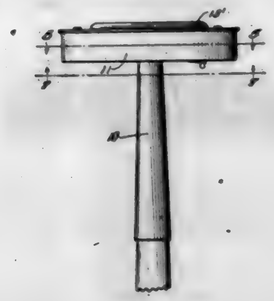
1. In a valve, a pair of annular facing members, a plate having a groove for receiving and holding said facing members, a retaining ring adjustably mounted between said annular member for holding them in the



groove and permitting their removal therefrom, said plate being arched over the retaining ring to give a maximum of strength for the material used.

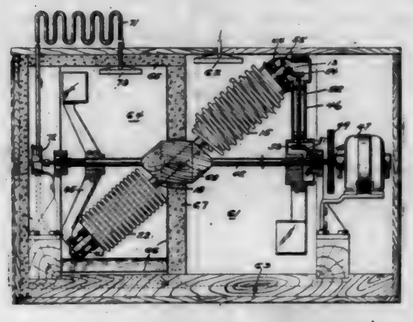
1,537,934. BRAKE MECHANISM. STERLING H. CAMPBELL, St. Louis, Mo., assignor to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 26, 1924. Serial No. 740,064. 5 Claims. (Cl. 74—118.)

1. In a device of the class described, the combination with a base plate, of a brake staff mounted therein, a ratchet wheel on said staff, a pawl bearing forming a part of the base plate and provided with an integral rivet, a pawl carried on said bearing and permanently secured in place by said rivet and a guard carried by said pawl and overlapping the wheel.



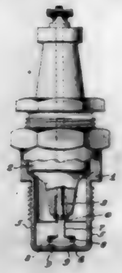
1,537,935. AUTOMATIC COUPLER FOR VEHICLES. JAMES HARRY CLARK, River Rouge, Mich. Filed Feb. 26, 1923. Serial No. 621,447. 13 Claims. (Cl. 280—33.16.)

1. The combination with a coupler of a draft connection for said coupler including a bracket for attachment to a vehicle, a drawbar slidably mounted in said bracket and connected to said coupler, yieldable means for re



sisting either tension or compression on said drawbar, and annular means intermediate the ends of said drawbar and adapted to abut an outer edge of said bracket for limiting the sliding movement of said drawbar.

1,537,936. AUTOMATIC FISHING REEL. OSCAR DANIELS, Bowmanville, Ontario, Canada. Filed Feb. 5, 1924. Serial No. 690,763. 4 Claims. (Cl. 242—84.3.)

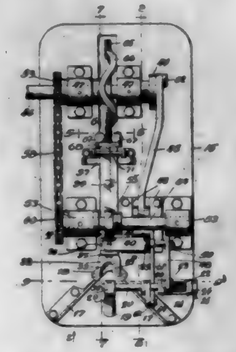


1. An automatic fishing reel of the class described, comprising in combination with a fishing rod, of a tapered tube adapted to be fitted upon the said rod, a rotatable reel mounted on said tube and adapted to have a fishing line wound thereon, a spring positioned within the reel and adapted to rotate the same, a casing enclosing the reel, and means for controlling movement of the reel.

1,537,937. REFRIGERATING APPARATUS. JAY GRANT DE REMER, Greenwich, Conn., assignor to Savage-De Remer Corporation, a Corporation of New York. Filed Feb. 23, 1921, Serial No. 447,265. Renewed July 23, 1924. 25 Claims. (Cl. 62—115.)

1. In a refrigerating apparatus, the combination with a tube adapted to be rotated about an axis at an angle to the axis of the tube, of a quantity of liquid in said tube adapted to exert pressure on the end of the tube remote from the axis of rotation during rotation of the tube about said axis of rotation, a second tube disposed within said first tube and opening in said liquid and passing from said first tube at a point closer to said axis of rotation than its open end and being formed into a helix externally of said first tube.

1,537,938. SPARK PLUG. FRANK DUMBOVICH, Detroit, Mich. Filed May 19, 1924. Serial No. 714,387. 5 Claims. (Cl. 123—169.)

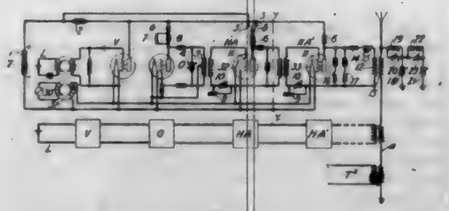


1. In a device of the class described, a firing member in the form of a plate, and a further firing member having downwardly projecting arms provided with lateral projections extending approximately parallel to said plate.

1,537,939. CASEIN WATERPROOF GLUE OR CEMENT. ANDREW A. DUNHAM, Bainbridge, N. Y., assignor to Casein Manufacturing Company, New York, N. Y., a Corporation of Vermont. Filed Mar. 26, 1923. Serial No. 627,738. 3 Claims. (Cl. 87—17.)

1. A waterproof casein glue containing casein, an alkaline earth hydroxid and animal glue in a condition readily soluble in cold water.

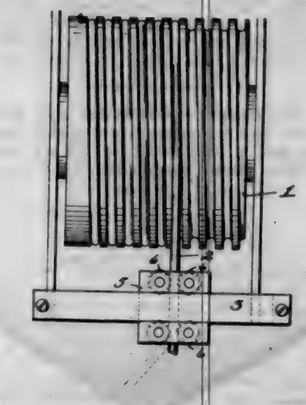
1,537,940. ROUND-CORNERING MACHINE FOR BOOK COVERS. FRITZ A. ERICSON, Chicago, Ill., assignor of one-half to Nellie C. Benson and Hjalmar Peterson. Filed Aug. 12, 1922. Serial No. 581,360. 20 Claims. (Cl. 11—2.)



6. A round cornering machine comprising, in combination, an oscillatory shoe, spring pressed in one direction, a rock shaft supporting said shoe, a reciprocatory plaiting finger, finger reciprocating mechanism, an arm secured upon said rock shaft, a link secured upon said finger actuating mechanism and having a lost motion connection with said arm, a stop device for limiting the movement of said shoe in one direction, a shouldered member secured upon said rock shaft, a hook arranged to engage with said shouldered member for holding the shoe in raised position, said hook having a cam face, and a cam engaging member connected with said finger actuating mechanism, for releasing said hook from said shouldered member.

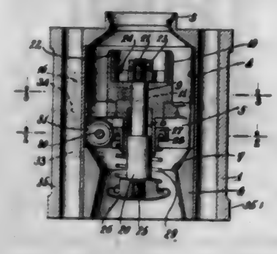
12. A round cornering machine comprising, in combination, a reciprocatory and oscillatory plaiting finger,

a slide block connected thereto, a main drive shaft, a crank on said main drive shaft, a link connecting said crank with said slide block, and operative connections between said slide block and finger for oscillating the same.



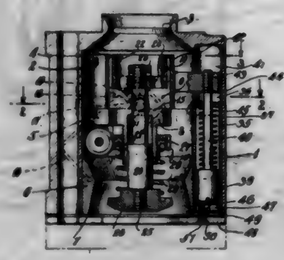
1,537,941. WAVE TRANSMISSION. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,258. 24 Claims. (Cl. 179—171.)

1. A system comprising a plurality of vacuum tubes having filaments and input circuits, a source of alternating current for heating the filaments and connections whereby the action of said source upon the input circuit of one tube is compensated for by the action thereof upon another tube.



16. In combination two space discharge devices having filamentary cathodes, a current source for heating said cathodes, said cathodes being connected in series with said source, plate and grid circuits for said devices terminating at a point between the two cathodes.

1,537,942. ROPE GUIDE. FRANK H. HOWARD, Reading, Pa., assignor to Reading Chain and Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1925. Serial No. 9,101. 1 Claim. (Cl. 242—157.)

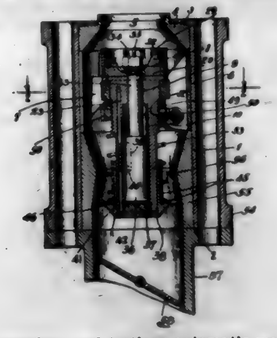


In a rope guide for hoists, a frame having an elongated slot therein, a cross-head slidably mounted upon said frame, two pairs of rollers carried by the cross-head between which the rope passes, and a winding drum upon which the rope is wound, said cross-head being capable of longitudinal movement on the frame through the action of the cable passing through it and being tiltable thereon, whereby a binding action is effected between the cross-head and the frame when the rope leads off at an oblique angle.

1,537,943. GOVERNOR FOR INTERNAL-COMBUSTION MOTORS. RAYMOND HUFFORD, New York, N. Y., assignor to K. P. Products Company, Inc., New York, N. Y., a Corporation of New York. Filed June 18, 1923. Serial No. 646,036. 4 Claims. (Cl. 137—152.)

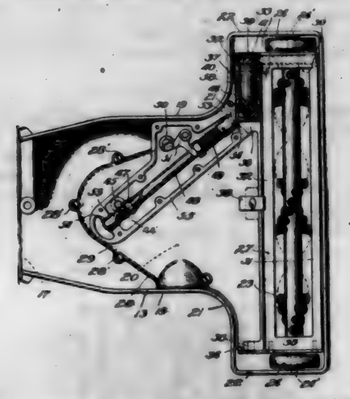
1. A governor for internal combustion motors comprising in combination a passageway through which explosive mixture may pass to a motor, a discharge outlet of lesser diameter than said passageway a cylinder mounted in said passageway around but not through which the explosive mixture may pass, a valve mounted in said cylinder and automatic means positioned upstream from said valve, for moving said valve toward said discharge outlet.

1,537,944. GOVERNOR FOR INTERNAL-COMBUSTION MOTORS. RAYMOND HUFFORD, New York, N. Y., assignor to K. P. Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 22, 1923. Serial No. 658,832. 21 Claims. (Cl. 137—152.)



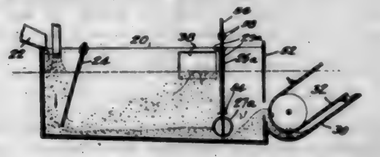
21. A governor for internal combustion motors comprising in combination a body, a passage in said body through which mixture may pass to a motor and primary, secondary and tertiary automatic means for restricting the flow of mixture through such passage.

1,537,945. GOVERNOR FOR INTERNAL-COMBUSTION MOTORS. RAYMOND HUFFORD, New York, N. Y., assignor to K. P. Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1924. Serial No. 705,732. 8 Claims. (Cl. 137—152.)



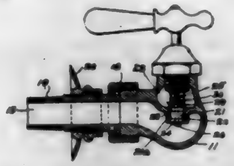
1. A governor for internal combustion motors comprising in combination a body, a passage in said body

through which the combustible mixture may pass to a motor, a valve adapted to reduce the effective area of such passage as it is moved toward its closed position,



primary, secondary and tertiary automatic means adapted to cause a movement of such valve toward its closed position.

1,537,946. VACUUM CLEANER. JOHN T. HUME, Chicago, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1921. Serial No. 523,414. 8 Claims. (Cl. 15—8.)

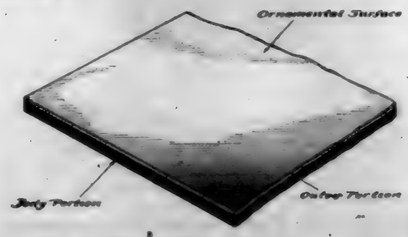


5. In a vacuum cleaner a frame structure providing a brush receptive nozzle, and an air passage leading thereto and having a bottom plate, a sub-frame pivoted to said bottom plate for movement within the nozzle structure free from the weight of the latter, and a brush carried by said sub-frame.

1,537,947. SEPARATOR FOR COAL AND ORE. EFFINGHAM P. HUMPHREY, Upper Lehigh, Pa. Filed Feb. 26, 1924. Serial No. 695,240. 4 Claims. (Cl. 83—58.)

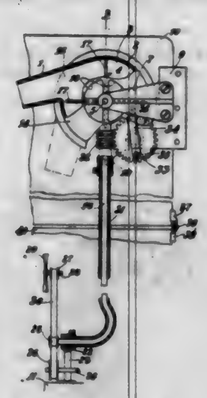
1. In a hydraulic jig separator of the class described, a combined barrier and float consisting of a vertically movable plate having a buoyant member secured to its lower extremity, said member defining one side of the port or opening through which one of the materials is discharged.

1,537,948. VALVE. JACOB S. KATZIN, Newark, N. J., assignor of one-half to Gizella Kleinman, Brooklyn, N. Y. Filed Jan. 10, 1925. Serial No. 1,663. 2 Claims. (Cl. 251—162.)



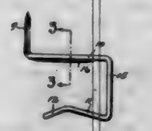
1. In a valve mechanism, the combination with a valve stem and a stem rotatably mounted therein, of a valve of frusto-conical form rotatably mounted upon said stem, and a seat of similar formation to receive said valve when the same is projected thereinto and to control the passage of fluid between the tapered side of the valve and the tapered sides of the seat, said valve having a central bore co-axial with said seat and extending through the valve to permit the same to be rotatably mounted upon said stem, a frusto-conical seat being provided between said valve and said stem and surrounding the axis of said bore to prevent the passage of fluid therethrough, said seat being made effective by the abutment between the valve and the first mentioned seat to stop the flow of a fluid, said valve being provided with a pair of ring portions of frusto-conical form, the elements of the different ring portions being substantially parallel to the elements of said seat, said ring portions having co-operation with said seat to control the flow of fluid, said ring portions being located wholly at the ends of said valve to secure a proper balance and ease of alinement of said valve.

1,537,949. WATERPROOF PRODUCT. LESTER KIRSCHBRAUN, Evanston, Ill. Original application filed Feb. 1, 1919, Serial No. 274,498. Divided and this application filed Feb. 19, 1921. Serial No. 446,489. 1 Claim. (Cl. 92—21.)



A waterproof sheet consisting of a solid bitumen containing its native non-bituminous matter, flux intimately mixed therewith to form a homogeneous mixture, an emulsifying agent and fiber mixed with the bitumen, the whole being formed into a sheet and having the characteristics of having been formed on a paper machine.

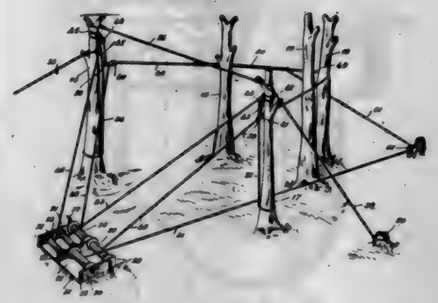
1,537,950. WATERPROOF COVERING AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Evanston, Ill. Filed Feb. 1, 1919, Serial No. 274,496. Renewed Oct. 28, 1921. Serial No. 511,099. 10 Claims. (Cl. 92—42.)



1. A process of making an ornamental waterproof covering, consisting in forming a mixture of fibre and a bituminous emulsified matrix into a sheet, simultaneously forming sized paper stock into an outer ply portion, bringing together the plies drying out the water and allowing the bitumen to intimately unite with the fibre, and the plies to intimately unite together, and then painting an ornamentation on the outer ply.

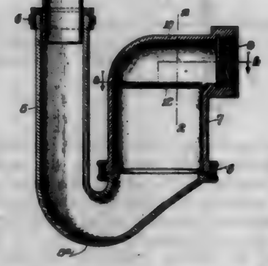
1,537,951. MECHANISM FOR CLEANING WINDSHIELDS FOR AUTOMOBILES OR SIMILAR DEVICES. LOUIS L. KOBACH, Chicago, Ill. Filed Feb. 17, 1921. Serial No. 445,818. 11 Claims. (Cl. 20—405.)

1. In a device of the class described, the combination with the wind shield of a motor vehicle and a nozzle supported in movable relation to the wind shield and in position to discharge a current of air against and at an angle with respect to the surface of the wind shield, of means for forcing a current of air through the nozzle and against the surface of the wind shield, and means for automatically moving the mouth of the nozzle with respect to the wind shield.



1,537,952. SHINGLE LOCK CLIP. BERNIE CHARLES KRIDLER and JAMES C. BOYLE, Flint, Mich., assignors to The Shingle Lock Company, Flint, Mich., a Corporation of Michigan. Filed Sept. 25, 1922. Serial No. 590,261. 4 claims. (Cl. 108—33.)

1. A shingle lock clip comprising a shank adapted to lie over a roof member, an upstanding end portion on said shank adapted for piercing a shingle and being bent thereover for holding same, a depending end portion on said shank and bent upon itself to form a resilient loop for engagement under a roof member, and a roof member engaging enlargement formed on said shank for preventing lateral twisting thereof on the roof member.

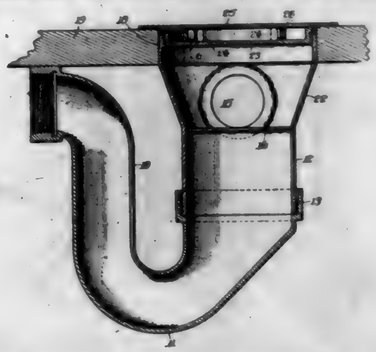


1,537,953. CABLE SAW FOR TREES. PETAR JOHN LUCICH, New York, N. Y. Filed Nov. 30, 1923. Serial No. 677,633. 2 Claims. (Cl. 144—34.)

1. In a cutting apparatus, harnesses engageable with supports and each including a vertical guide member secured at opposite ends to its support, a pulley block movable longitudinally of each guide member, flexible elements connected to said pulley blocks for raising and lowering the same along said guide members, other flexible elements passing around said pulley blocks, a flexible cutter connecting adjacent ends of said other

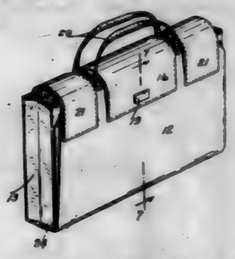
flexible elements and capable of engagement with an object to be cut, and means for actuating said other flexible elements to reciprocate said cutter.

1,537,954. RESEALING TRAP. HENRY J. LUFF, Cleveland, Ohio, assignor, by mesne assignments, to Mary A. Luff, Cleveland, Ohio. Filed June 9, 1922. Serial No. 567,181. 6 Claims. (Cl. 182—7.)



1. A resealing trap for the discharge lines of plumbing fixtures having a discharge leg of greater diameter than the discharge opening, and flat baffle plates disposed transversely of said discharge leg in the same horizontal plane and forming between them an opening of substantially the area of said discharge opening.

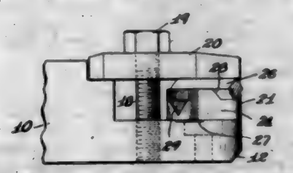
1,537,955. RESEALING TRAP. HENRY J. LUFF, Cleveland, Ohio, assignor, by mesne assignments, to Mary A. Luff, Cleveland, Ohio. Filed June 9, 1922. Serial No. 567,182. 3 Claims. (Cl. 182—7.)



1. An under-floor resealing trap for the discharge lines of plumbing fixtures having a discharge leg of greater diameter than the inflow leg and comprising coaxial lower and upper vertical portions of lesser and greater cross-sectional areas at their upper ends respectively, said upper portion being open throughout the entire area of its upper end to form a hand-hole and having a lateral discharge opening, a pair of oppositely disposed horizontal segmental baffle plates located trans-

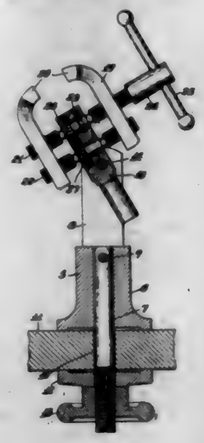
versely of the upper end of said lower vertical portion of the discharge leg and forming between them a central substantially rectangular flow passage having approxi-

mately the area of said discharge opening, and a removable plug closing the open upper end of said discharge leg.



1,537,956. COMBINED FOLDING BAG, BRIEF CASE, AND PURSE. JOHN E. MCNALLY, Minneapolis, Minn., assignor, by mesne assignments, to George S. Meyers, Cleveland, Ohio. Filed Jan. 9, 1922. Serial No. 528,113. 5 Claims. (Cl. 150—1.)

1. A bag having an outer pocket, a single piece of material intermediately secured to the outside of the bag above said pocket to afford two flaps, one of said flaps being arranged to close said pocket, and the other of said flaps being arranged to be folded over the open top of the bag, and separable fasteners for securing the free ends of the flaps in respect to the bag on opposite sides thereof.



4. A bag, bellows connecting the front and back of the bag at the longitudinal edges thereof, the sides of the bag being adapted to be transversely folded toward each other into overlapping arrangement to afford a false bottom, and longitudinally spaced separable fasteners on the bellows for securing the bag thus folded.

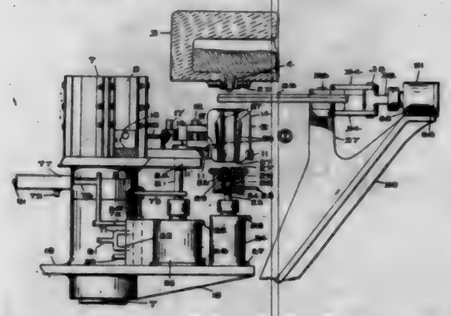
1,537,957. TOOL HOLDER. WILLIAM F. MARSHALL, New York, N. Y. Filed Sept. 26, 1923. Serial No. 664,891. 7 Claims. (Cl. 29—98.)

5. A device of the class described comprising a body portion provided with a suitable shank, a member rotatably adjustable in said body portion, said member being fashioned to receive and support a suitable tool, a clamp block, means for adjustably supporting said block in connection with said body portion, said means being in spaced relation with said member, and said clamp block cooperating with the body portion and a tool supported in said member, for retaining the tool and said member in predetermined position.

1,537,958. VISE. WILLIAM FRANKLIN MARSHALL, New York, N. Y. Filed Nov. 6, 1923. Serial No. 673,073. 10 Claims. (Cl. 81—34.)

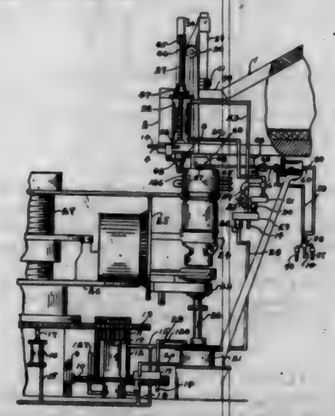
10. A universally supported vise of the class described comprising a stock, means whereby said stock may be rotatably adjustable in connection with a suitable support, the upper end portion of said stock being U-shaped in form, a vise supporting member mounted and movable within the U-shaped end portion of said stock and capable of rotary adjustment through an arc greater than 180 degrees, means passed through said U-shaped stock portion and said member for coupling said parts together and for retaining said member in different positions of adjustment, two vise jaws movably mounted in connection with said member, and means on said member for moving both of said jaws into different positions relatively to each other.

1,537,959. TRUCK CAB. EDWIN C. MORINE, Detroit, Mich., assignor to Weatherproof Body Corporation, Corunna, Mich., a Corporation of Michigan. Filed Apr. 1, 1922. Serial No. 548,560. 2 Claims. (Cl. 296—44.)



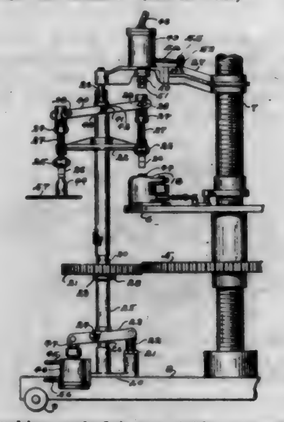
1. In a cab construction, a door frame having grooves in the opposed faces of the upright portions thereof from the top to the bottom of the door opening, a flexible door curtain slidable in said grooves, and a swinging door mounted in the lower part of the door opening.

1,537,960. HARDENING AND PRESERVING COMPOSITION FOR PAPER AND OTHER FABRICS AND METHOD OF MANUFACTURING SAME. WILLIAM B. OLIVER, Detroit, Mich., assignor of one-half to Lydia B. Koch, New York, N. Y. Filed Mar. 26, 1923. Serial No. 627,899. 5 Claims. (Cl. 134—16.)



5. A composition as characterized comprising a solution of arrow root powder and water in proportion of four parts of water to one of arrow root, swelled gelatine, and a small quantity of evaporated milk.

1,537,961. GLASS-FEEDING APPARATUS. FRANK O'NEILL, Toledo, Ohio. Filed May 14, 1919. Serial No. 297,035. 4 Claims. (Cl. 49—5.)

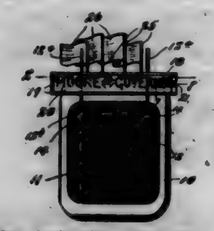


1. A glass tank having a pool of molten glass, said tank having a projecting portion into which the pool extends, said portion being provided with a bottom outlet, relatively movable sectional suction means for withdrawing glass from the pool through the outlet, said means being movable laterally to a position adjacent said outlet, and then directly toward said outlet into sealing position at said outlet and then downward, and a shear operable relatively to the means for severing the molten glass from said means.

1,537,962. PLUNGER GATHERING OF GLASS. FRANK O'NEILL, Toledo, Ohio, assignor to The O'Neill Engineering Company, Toledo, Ohio, a Corporation of Ohio. Filed June 24, 1921. Serial No. 480,198. 5 Claims. (Cl. 49—55.)

2. A glass feeder plunger drive embodying a rock shaft having two pinions, a piston and cylinder actuator for one of the pinions, and a plunger stem driven from the other pinion.

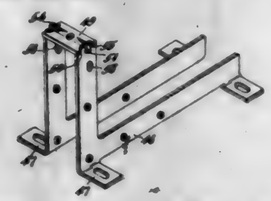
1,537,963. TAKE-OFF MECHANISM. FRANK O'NEILL, Toledo, Ohio. Filed Oct. 17, 1921. Serial No. 508,320½. 15 Claims. (Cl. 49—14.)



1. A machine embodying a table, a sectional mold carried by the table, an intermittent drive for rotating the table to a position of rest for the mold, mold opening means, a take-off embodying ware gripping means, a first gear rotatable with the table, a second gear in mesh with the first gear drive for bringing the gripping means to said mold position of rest, actuator mechanism for lowering the gripping means toward the opening mold, additional means coacting to effect gripping of the ware by the gripping means, and control means for reversing the actuator mechanism to lift the gripped ware, said connections coacting to shift the gripping means and ware held thereby away from said additional means.

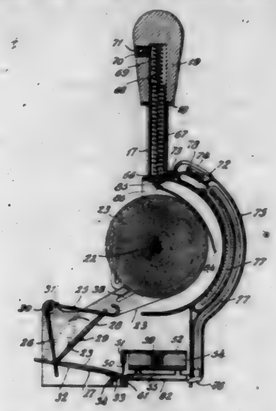
1,537,964. HAIRPIN. KARL FREDRIK WILHELM PETTERSSON, Edsbyn, Sweden. Filed June 18, 1923. Serial No. 645,068. 5 Claims. (Cl. 132—51.)

1. A hair-pin having at least one of its two legs bent back inwards between the legs and forming a resilient abutment approximately parallel to and cooperating with the other leg.



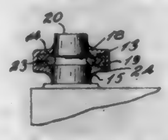
1,537,965. DISPLAY DEVICE FOR AUTOMOBILES. JACOB RANZ, St. Louis, Mo. Filed Apr. 5, 1924. Serial No. 704,500. 11 Claims. (Cl. 40—129.)

3. In a display device for automobiles, a support having parallel extensions, a display sign holder, a bar secured to and disposed rearwardly of said holder and



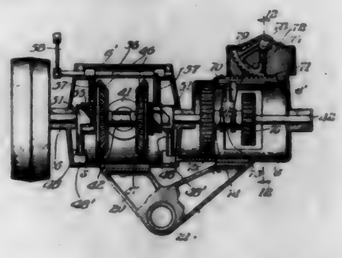
provided with seats for engaging said extensions, and screws in said bar for holding said extensions to their seats.

1,537,966. ELECTRIC BELL. LOUIS E. RICHMOND, Cleveland, Ohio, assignor, by mesne assignments, to The Autocall Company, Shelby, Ohio, a Corporation of Ohio. Filed May 8, 1919. Serial No. 295,688. 3 Claims. (Cl. 175—21.)



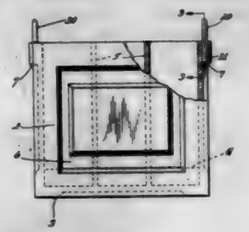
1. A magnet core frame, comprising parallel side members, a cross bridge member connecting the same, and interlocking projections connecting said members.

1,537,967. STAMP-AFFIXING DEVICE. GRANVILLE S. RIDER, New York, N. Y. Filed Mar. 1, 1923. Serial No. 622,020. 20 Claims. (Cl. 216—25.)



1. A feeding device adapted to engage and feed a perforated stamp strip comprising a rotatable plate, a plurality of plates arranged on opposite sides of the axis of said rotatable plate, and means to resiliently urge said plurality of plates into the path of movement of said rotatable plate whereby said plurality of plates will engage the ends of said rotatable plate with a yielding frictional contact.

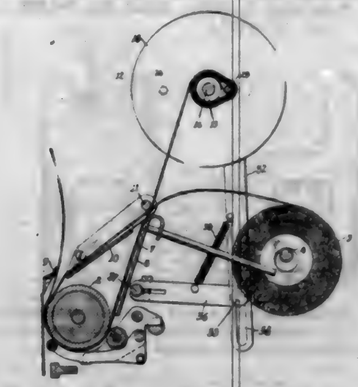
1,537,968. BATTERY CONNECTER. HENRY M. SCHNABEL, Greenwich, Conn. Filed Feb. 21, 1921. Serial No. 446,819. 2 Claims. (Cl. 173—259.)



2. In a device of the character described, an annular member having a groove in the inner wall thereof, the inner edges of said annular member being of reduced thickness and a screw-threaded member projecting from said annular member, both said annular member and said projection being split by a single continuous slit and said screw-threaded member being provided with a perforation communicating with said groove and a nut adapted to be received upon said projection and to crush the walls of said annular member against a battery post received therein, to partially seal the groove therein.

1,537,969. TRACTOR. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Original application filed Mar. 20, 1916, Serial No. 85,516. Divided and this application filed Dec. 9, 1920. Serial No. 429,860. 12 Claims. (Cl. 74—58.)

1. In apparatus of the class described, a support having propelling wheels thereon, a prime mover having a drive shaft, a transverse shaft, a sleeve splined on said transverse shaft and having bevel gears at its ends, bearings for said transverse shaft, gears having cam surfaces thereon, cams having co-operating cam surfaces revolubly mounted on said shaft and bearing against the ends of said bearings to longitudinally shift said sleeve, and manually operable means for rotating said cams.

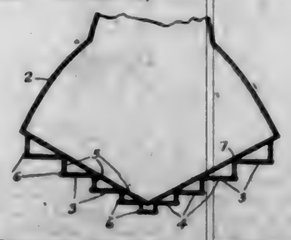


1,537,970. HANDLE FOR BATTERY BOXES. GEORGE C. STEBBINS, Ashtabula, Ohio. Filed Apr. 27, 1922. Serial No. 556,912. 1 Claim. (Cl. 16—125.)

A battery box having one of its walls provided with an outward projection along its upper portion, a handle having shank portions extending through said projection and exposed outside of the box beneath the same, said shank portions being provided with side recesses, and a soft metal bar bent to enable it to be introduced between said shank portions and permanently interlocked with the recesses thereof by straightening said bar.

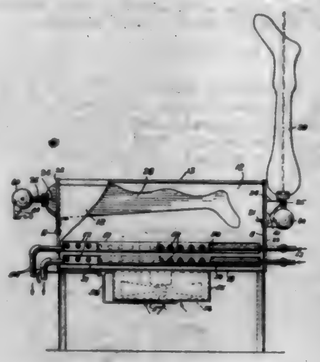
1,537,971. ADDING AND LISTING MACHINE. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Nov. 5, 1921. Serial No. 512,985. 9 Claims. (Cl. 242—55.)

8. An adding and listing machine having, in combination, means to support a supply roll, a platen for feeding tape from said roll, a reel for rewinding said tape, and means for rotating the reel, said rotating means comprising a disk carrying a stud, a pin on the reel ly-



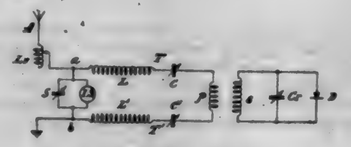
ing in the orbit of said stud, a ratchet wheel connected to said disk, and a ratchet member to turn the ratchet wheel.

1,537,972. DEMOUNTABLE RIM. FELIX TWOREK, Duncan, Nebr. Filed Dec. 11, 1923. Serial No. 679,875. 1 Claim. (Cl. 301—38.)



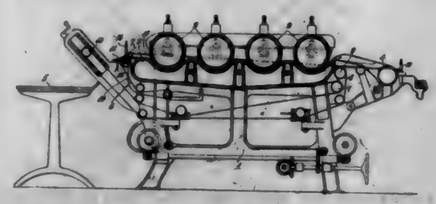
A rim having abutting ends adapted to form a joint, a lever hinged to said rim adjacent one end thereof to extend past the joint, a pair of blocks fixed in spaced relation on the other end of said rim, pivoted arms connecting said lever and blocks, said blocks acting to guide said lever, a central guide for the lever, and a spring clip normally holding said lever in close proximity with the rim.

1,537,973. FLYING-BOAT HULL. INGLIS M. UPPERCU, Deal Beach, N. J., assignor to Aeromarine Plane & Motor Company, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1921. Serial No. 515,485. 5 Claims. (Cl. 244—2.)



4. A flying-boat hull having a complete substantially deep-V bottom and flights of longitudinally extending applied steps on opposite sides of said complete bottom, said steps being formed of horizontal and vertical members, the edges of the horizontal members projecting beyond the vertical members.

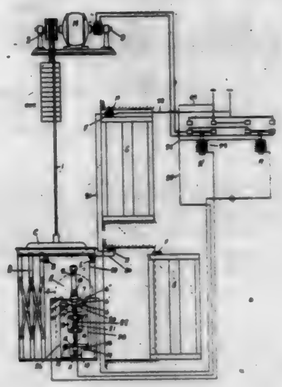
1,537,974. HOSIERY-DRYING FORM. JULIUS OTTO VON STETTEN, Philadelphia, Pa. Filed Aug. 26, 1922. Serial No. 584,410. 6 Claims. (Cl. 34—40.)



2. A drier having a drying chamber, a swinging form for an article to be dried, said form being supported to be swung into and out of the chamber, a closure for the chamber in line of movement of the form, means for moving the closure to its open or closed position, and means actuated by the movement of the form for moving said first mentioned means.

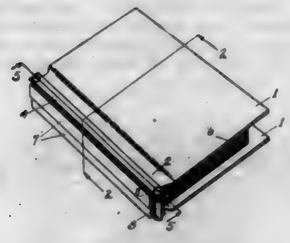
1,537,975. STRAY ELIMINATION IN RADIORECEIVERS. FREDERICK K. VREELAND, Montclair, N. J. Filed Aug. 6, 1919. Serial No. 315,651. 45 Claims. (Cl. 250—20.)

1. In a receiving system for radiant energy, an electromotive element, a baffle element tuned to the signal frequency, by-pass means including a reactance and an intensity selector cooperating to divert preferentially stray energy from the receiving system and a receiver associated with the baffle element, substantially as set forth.



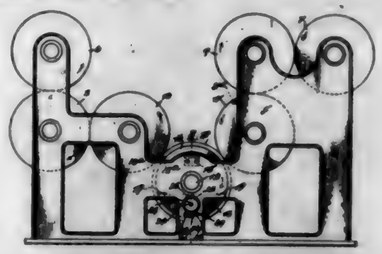
1,537,976. IRONING MACHINE. CHARLES E. WARREAM, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 28, 1921. Serial No. 524,413. 3 Claims. (Cl. 68—0.)

1. In an ironing machine, the combination of means for performing a plurality of successive ironing operations upon given materials, said machine being adapted to receive the materials at one point and to discharge



the same at another point, of means for selectively causing the materials to be discharged at said discharge point after the first ironing operation or to be subjected to further ironing and then discharged at said point of discharge, said means being operable from both the receiving and discharge points of said machine.

1,537,977. SEQUENCE SAFETY SWITCH FOR ELEVATORS. HAROLD WATERS, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 1, 1922. Serial No. 585,618. 4 Claims. (Cl. 187—31.)

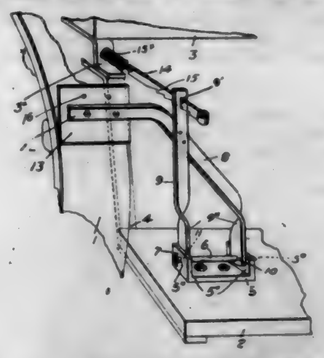


3. In the art of safety operation of electric elevators having a car operating switch, means to prevent, should the operating power fail during the running of the elevator, continuing the operation of the elevator if the power is again turned on unless the car operating switch is first restored to its neutral or off position.

1,537,978. TEMPORARY BINDER OR LOOSE-SHEET HOLDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Co., Kalamazoo, Mich. Filed June 10, 1921. Serial No. 476,416. 6 Claims. (Cl. 129—8.)

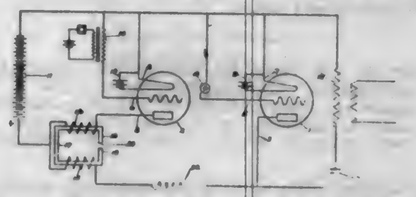
4. In a loose leaf binder, the combination of independent cover members, back members independent of said cover members, detachable post bars provided with sheet-engaging posts with which said cover members and back members are also adapted to engage, and means for connecting said post bars.

1,537,979. PRINTING PRESS. CHARLES J. WRIGHT, Cleveland, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 7, 1921. Serial No. 506,138. 24 Claims. (Cl. 101—177.)



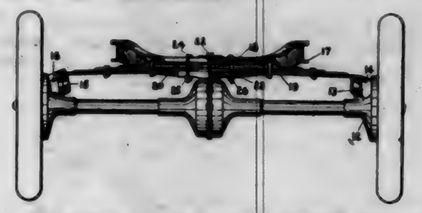
1. In a printing-press, a pair of sheet-carrying members, and an interposed coacting sheet-carrying member laterally shiftable on its transverse support.

1,537,980. DRAG SAW. LOUIS A. G. ASSELIN, Prince Albert, Saskatchewan, Canada. Filed June 9, 1922. Serial No. 567,216. 1 Claim. (Cl. 143—68.)



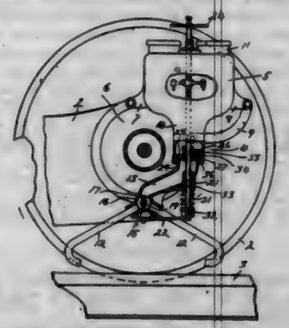
A saw of the class described comprising a guiding frame of tapered shape in cross section having a guiding groove in its wide edge and having a wide outer part having an opening therein, the upper part of which forms a continuation of the groove, a saw also of tapered shape in cross section having its upper edge fitting in said guiding groove and an end extension engaging the opening and means for reciprocating the saw in the frame.

1,537,981. IMPLEMENT-WHEEL SCRAPER. LARS GUSTAF BERGQUIST, Shaunavon, Canada. Filed Aug. 27, 1924. Serial No. 734,550. 2 Claims. (Cl. 280—158.)



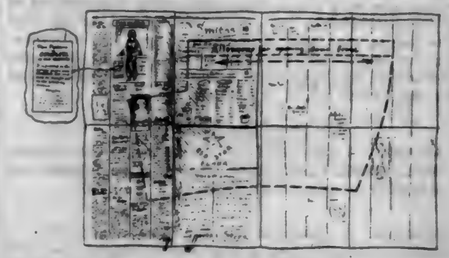
1. In a scraper for agricultural implements, the combination with the running board and a wheel of the implement, of a bracket pivotally mounted upon the running board and having a laterally extending arm, a plate secured to the arm and adapted to contact at its lower edge with the periphery of the implement wheel, a bar provided with a toothed edge adapted to engage the swinging bracket and a tension spring connected to the inner end of the bar at one end and to the stationary portion of the implement at the opposite end.

1,537,982. MODULATOR. ROBERT C. BOHANNAN, Columbus, Ohio. Filed Feb. 23, 1924. Serial No. 694,541. 14 Claims. (Cl. 179—171.)



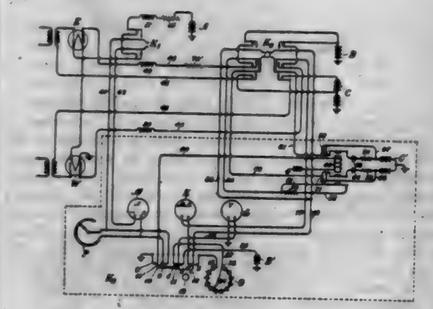
1. In an apparatus of the class described, the combination with two vacuum tubes of the three electrode type having their plate-filament circuits connected in parallel across a source of constant potential current supply, of means in the grid-filament circuit of one of said tubes to cause potential variations of relatively low frequency, means in the grid-filament circuit of the other tube to produce electric oscillations of relatively high frequency, and an electromagnet connected between the plate of each tube and the source of current supply said magnets being connected and arranged to induce opposed magnetic fields as and for the purpose set forth.

1,537,983. SPRING SUSPENSION FOR VEHICLES. CHESTER H. BRASELTON, New York, N. Y., assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 30, 1920. Serial No. 434,031. 12 Claims. (Cl. 267—41.)



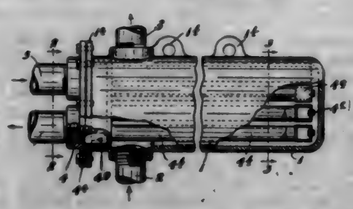
1. In a vehicle, a frame, an axle arranged below said frame at an appreciable distance inwardly from one end thereof, a pair of cantilever springs having their small ends mounted upon said axle, the large or butt ends of the springs being overlapped and attached to the end of the frame in such manner as to make substantially the entire length of the springs effective.

1,537,984. SAND-DELIVERY MECHANISM FOR TRACTOR-LOCOMOTIVE ATTACHMENTS. JAMES H. CLARK, Detroit, Mich. Filed Sept. 24, 1923. Serial No. 664,571. 17 Claims. (Cl. 291—5.)



1. The combination with a vehicle, of a sander attachment therefor including a hopper for the sand straddling a portion of the vehicle and constituting a seat for the driver of the vehicle.

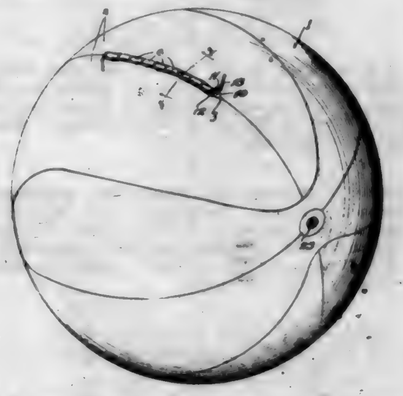
1,537,985. PATTERN AND METHOD OF PUBLICATION. HARRY COLLINS, New York, N. Y., assignor to Hattie Collins, New York, N. Y. Filed Apr. 17, 1923. Serial No. 632,709. 2 Claims. (Cl. 41—20.)



1. A newspaper having on the same page normally visible printed matter and a normally invisible pattern or design for wearing apparel adapted to be rendered visible by treatment of the paper with appropriate chemical reagents, substantially as set forth.

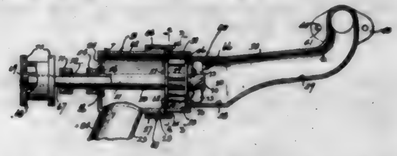
1,537,986. TELEPHONE REPEATER EQUIPMENT. GEORGE CRISSON, Hackensack, and SAMUEL P. SHACKLETON, Wyoming, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 18, 1921. Serial No. 453,812. 4 Claims. (Cl. 179—171.)

1. In combination, an electron tube, a plate circuit, filament circuit and a grid circuit associated therewith, means for adjusting the current in the filament circuit, means for adjusting the voltage in the plate circuit, means for adjusting the voltage in the grid circuit, and a device for simultaneously connecting said adjusting means into said circuits.



1,537,987. WATER HEATER. VIRGIL F. DECKERT, Minneapolis, Minn. Filed Aug. 1, 1921. Serial No. 488,845. 11 Claims. (Cl. 257—239.)

2. A water heater comprising an outer shell open at one end, an inner core member formed of a multiplicity of U-shaped tubes secured in water-tight relation with said shell at the open end, and extending therein con-

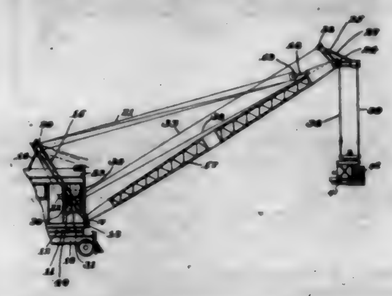


stituting a plurality of closed circuit units, one of said units being constructed to form a partition and engaging grooves formed in the sides of said shell and dividing it into two chambers, a pair of chambers at the other end of the core, each chamber communicating with one end of all of said tubes, a pipe for introducing a heating fluid into one of said pair of chambers, a pipe for withdrawing said fluid from the other of said pair of chambers, and means for circulating a fluid to be heated within the shell about all of said tubes.

1,537,988. GAME BALL. CHARLES E. DILLINGER, Santa Maria, Calif. Filed June 15, 1923. Serial No. 645,653. 3 Claims. (Cl. 273—64.)

2. In an inflatable game ball, a casing having a mouth provided at its opposite sides with a series of recesses defining tongue portions which are united to the inner side of the wall of the casing to provide loops, bearing sleeves housed within the loops and covered thereby, the loops and bearing sleeves at the opposite sides of the mouth being arranged in staggered relation whereby the bores of the sleeves will assume an alined relation when the mouth is closed, an eyelet at each side of the mouth and arranged near the adjacent loops, and a locking member fitting through the bearing sleeves and the adjacent eyelets.

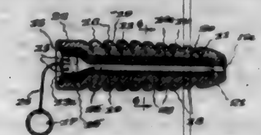
1,537,989. COOLING SYSTEM FOR ENGINES. CHARLES A. DU POY, Omak, Wash. Filed Nov. 15, 1922. Serial No. 601,130. 1 Claim. (Cl. 123—175.)



In a cooling system for engines the combination of a housing, a member secured in the housing to subdivide the same into a liquid chamber on one side thereof and a mixing chamber on the other side thereof, said member comprising a pair of spaced walls and tubes extending between the walls providing passageways which communicate the liquid chamber with the mixing chamber, the spaced walls of said member and said housing providing between said walls an air chamber, the wall of said member adjacent the mixing chamber having perforations therein which communicate the air chamber with the mixing chamber, liquid inlet means for the liquid chamber, air inlet means for the air chamber, and churning means in the mixing chamber adapted upon operation to draw air from the air chamber through the perforations in the wall adjacent said mixing chamber and to draw liquid from the liquid chamber through the passageways of the tubes of said member.

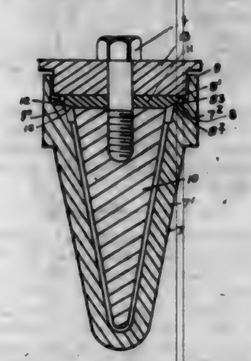
1,537,990. METHOD OF IMPROVING BROADCAST RECEPTION. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 11, 1924. Serial No. 705,950. 9 Claims. (Cl. 250—2.)

1. The method of reducing the effect of "fading" upon radio receiving sets in a local area when signals are radiated from a distant point, which consists in producing at some point in the local area a carrier wave of the same frequency as the carrier wave employed at the distant signaling station, and radiating said wave to the receiving sets in the local area.



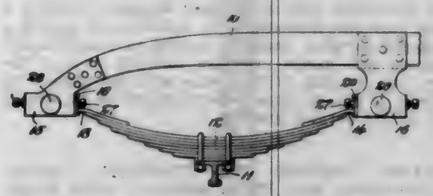
1,537,991. CRANE. CLAUD E. FULLER, New York, N. Y., assignor to American Equipment Company, Chicago, Ill., a Corporation of Ohio. Filed Jan. 4, 1922. Serial No. 526,904. 1 Claim. (Cl. 214—6.)

Hoisting apparatus of the kind described, comprising, in combination, a base, a mast mounted on, and in fixed relation thereto, a boom pivotally mounted on the base at the foot of the mast, a frame including two bell crank levers arranged parallel to, and spaced apart from, each other, pivotally mounted on the free end of the boom at the apex of the bell crank levers, means arranged at the ends of the pivotal mounting of the bell crank levers and at the ends of one of the arms of said levers, and constituting a four-point suspension for a work support, and means extending from the free ends of the other arms of the bell crank levers to the mast for maintaining the four-point suspension means in planes bearing a constant relation to a horizontal plane.



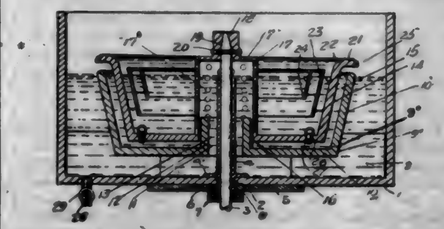
1,537,992. MEDICATOR. EDWARD GEARON, Chicago, Ill. Filed Feb. 16, 1923. Serial No. 619,525. 10 Claims. (128—271.)

3. The combination with a medicator comprising a resilient body portion; of a means for compressing said body portion for reducing the diametric dimensions thereof, said means comprising a normally hard and soluble suppository having a longitudinal concavity extending therethrough, threads molded upon the outer surface of the medicator body portion, and said con-



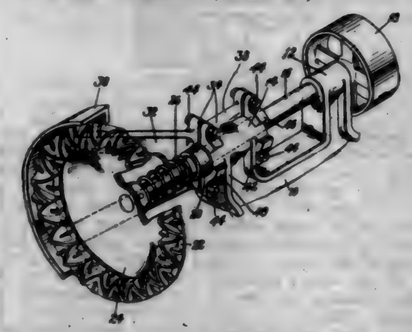
cavity of said suppository being internally threaded to receive the threads of said body portion to permit screwing of the medicator in the suppository.

1,537,993. TRIMMING DEVICE FOR ICE-CREAM-CONE-MAKING MACHINES. LEWIS LEWISON, Hamilton, Ontario, Canada, assignor to The Cone Company of America, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,948. 4 Claims. (Cl. 107—58.)



1. A trimming device for ice cream cone making machines comprising a mold formed with a lower interior recess at the upper end of the conical portion terminating in a sharp corner, and a core provided with a flaring upper end bevelled at its lower side and designed to rest intermediate of its width upon the sharp corner to form a severing means.

1,537,994. SPRING DEVICE. LEONARD M. MCGEORGE, Richmond, Va. Filed Apr. 16, 1924. Serial No. 706,972. 4 Claims. (Cl. 267—20.)

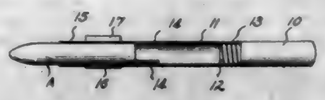


1. The combination with the frame and axle of a vehicle and a leaf spring supporting the frame from said axle; of a housing secured to the frame, and provided with grooves, an end extension on said leaf spring extending into said housing and slidably engaged at its edges within said grooves, and means within said housing cooperating with said end extension to check rebound movements of said leaf spring.

1,537,995. CENTRIFUGAL WASHING MACHINE. ALLAN FRASER MCNAUGHTON, Toronto, Ontario, Canada. Filed May 1, 1924. Serial No. 710,363. 5 Claims. (Cl. 68—18.)

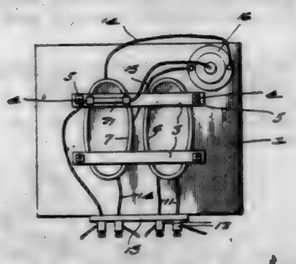
1. In a centrifugal washing machine, the combination with an outer container and a central shaft journalled in the bottom of the container and extending upward thereinto, of an inner stationary container supported within the outer container in a spaced apart position from the walls and bottom of the outer container and having a central orifice in the bottom thereof provided with a surrounding annular flange, a revolving container forming a clothes receptacle and supported within the inner container in spaced apart relation thereto and having an imperforate outer wall and a central orifice into which the aforesaid annular flange extends, and a perforated cylindrical portion extending upward from round the central orifice of the revolving container and secured at its upper end to the operating shaft.

1,537,996. CHANNEL-FLAP-LAYING MACHINE. WILLIAM C. MEYER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 14, 1922. Serial No. 606,909. 6 Claims. (Cl. 12—29.)



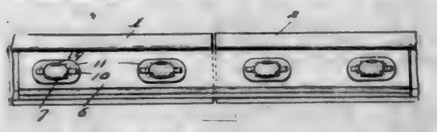
6. A reversible guard for a rotary tool journaled in a bearing having projecting portions symmetrically disposed with respect to the axis of the tool comprising a member shaped to protect one side of the tool while leaving the other side of the tool unobstructed, a clamp carried by said member and adapted to encircle the bearing, and positioning surfaces symmetrically arranged relatively to the axis of the clamp for co-operation with the projecting portions of the bearing to locate the tool protecting member in similar positions at opposite sides of the tool.

1,537,997. METHOD OF MAKING IRON AND STEEL. TAKEO MIYAGUCHI, Tokyo-fu, Japan. Filed Oct. 19, 1921. Serial No. 508,816. 7 Claims. (Cl. 75—45.)



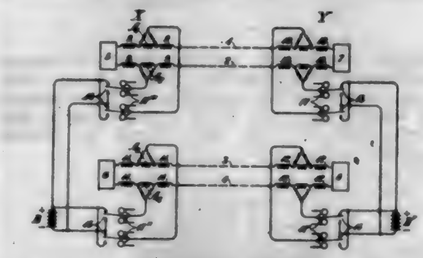
1. A method of manufacturing iron and steel having a low manganese content, from manganese containing ferrous materials, comprising, adding to the said ferrous materials, during the deoxidation stage, a boron containing material.

1,537,998. CRAYON HOLDER. CECELIA MOHR, Chamberlain, S. Dak. Filed Mar. 3, 1923. Serial No. 622,599. 1 Claim. (Cl. 120—13.)



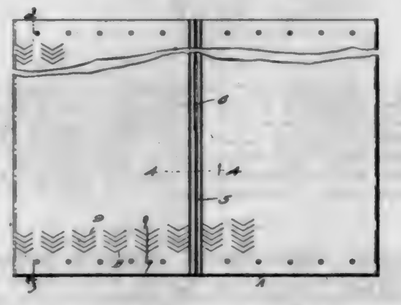
A device of the character described comprising an elongated cylindrical handle member formed with a reduced extension, an elongated cylindrical member detachably engaged upon said reduced extension, the handle and the shell being of the same diameter and having smooth peripheries, the shell being slit at a plurality of points throughout the major portion of its length, said slits extending through the end most remote from the handle, said slitted ends being adapted to have a crayon inserted therein, and a contracting sleeve slidably mounted upon the shell and movable toward the free end thereof for contracting the slitted end into clamping engagement upon the crayon, said sleeve being formed as a split metallic band having the ends out-turned to provide a finger hold.

1,537,999. BATTERY-CHARGING TRANSFORMER. ALBERT B. NELSEN, Beresford, S. Dak. Filed June 27, 1924. Serial No. 722,726. 1 Claim. (Cl. 175—356.)



A transformer construction comprising a base, a pair of bar members secured on said base in spaced parallel relation, a pair of tubular stove pipe members mounted in vertical spaced relation on said bar members, a pair of cooperating bar members mounted in spaced relation on the upper ends of said tubular members, a plurality of rod members connecting the ends of the first mentioned pair of bar members with the corresponding ends of the second mentioned pair of bar members, a primary winding on one of the tubular members, a secondary winding on the other tubular member, a terminal panel mounted on the base, and connections between said primary and secondary windings and terminals on said panel.

1,538,000. RAIL JOINT. CARL EDUARD NEUBAUER, Lutsen, Minn. Filed Aug. 6, 1923. Serial No. 655,978. 3 Claims. (Cl. 238—250.)



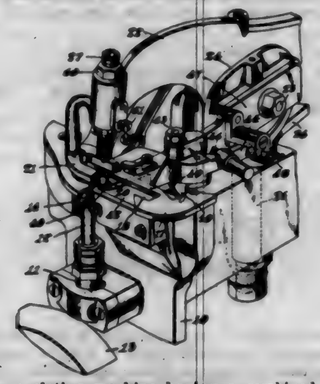
1. A rail fastening adapted to secure the confronting ends of adjacent rails, including cooperating fish plates, one of which is apertured, and fastening means carried by the other fish plate comprising a projecting member of non-round cross section having its major dimension lying in a direction longitudinally of the rail and provided with a transverse slot having a branch slot opening in the upper face of said member, a detent normally projecting through said branch slot into the transverse slot, said detent being resiliently supported by said member, and a wedge slidable in said slot and abutting clampably against the apertured fish plate when said member is passed through the rail and said apertured fish plate, said wedge being formed with a recess engageable by said detent.

1,538,001. CURRENT-MEASURING ARRANGEMENT. RALPH E. PIERCE, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 3, 1922. Serial No. 565,589. 3 Claims. (Cl. 178—63.)

1. A telegraph circuit including a pair of line wires, and a current measuring device comprising a movable indicating element controlled by differentially arranged windings, said windings being included in opposite sides of said telegraph circuit.

1,538,002. BUILDING MATERIAL. WILLIAM O. RHODES, Covington, Ky. Filed Mar. 5, 1924. Serial No. 697,117. 5 Claims. (Cl. 72—116.)

1. A building unit of the class described including a sheet body bent intermediate its ends so as to provide a V-shaped sectional formation having an intermediately disposed slot, flanges extending from the ends of the sheet and provided at their edges with the tongues receivable in slots of other similar units all in the manner and for the purpose specified.



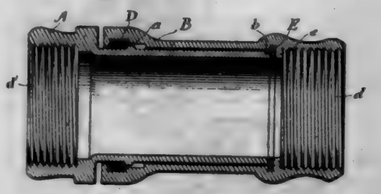
1,538,003. PROCESS FOR PURIFYING LIQUIDS. ELOI RICARD, Melle, France, assignor to Société Ricard, Allenet & Cie., Distilleries des Deux-Sevres, Melle, Deux-Sevres, France. Original application filed Dec. 24, 1921, Serial No. 524,763. Divided and this application filed May 26, 1924. Serial No. 716,066. 5 Claims. (Cl. 127—48.)

1. A process of purifying liquids of various kinds which consists in adding a water soluble alginate to the liquid, and means to precipitate an insoluble alginate so as to form a precipitate in the mass of the liquid.

1,538,004. PROCESS FOR PURIFYING LIQUIDS. ELOI RICARD, Melle, France, assignor to Société Ricard, Allenet & Cie., Distilleries des Deux-Sevres, Melle, Deux-Sevres, France. Original application filed Dec. 24, 1921, Serial No. 524,763. Divided and this application filed May 26, 1924. Serial No. 716,067. 5 Claims. (Cl. 127—48.)

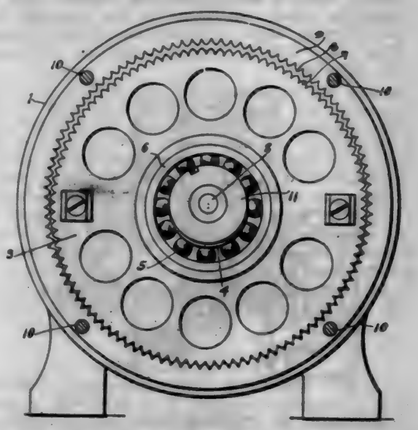
5. A process for purifying saccharine juice which consists in adding a water soluble alginate to the mass to be purified, and adding barium formate thereby causing a double decomposition with the alginate in order to form a precipitate of an insoluble alginate in the mass to be purified.

1,538,005. MACHINE FOR AND METHOD OF SETTING BLIND AND INVISIBLE EYELETS. FRED A. RUMNEY, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 21, 1921. Serial No. 471,847. 25 Claims. (Cl. 218—14.1.)



1. An eyeleting machine having a combined punching and setting tool comprising a tubular punching portion and a clenching shoulder formed and arranged to go through one layer of an article of multi-ply work so as to clench an eyelet between two of the layers, a solid punch block arranged to cooperate with the punching end of said tool, and means arranged to force the inner surface of said layer of the work past said clenching shoulder while said punching end and punch block are in cooperative relation.

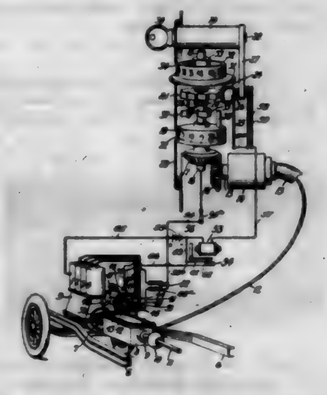
1,538,006. FOUNTAIN PEN. EISABURO SAKABAI, Tokyo, Japan. Filed July 20, 1922. Serial No. 576,340. 6 Claims. (Cl. 120—46.)



1. A fountain-pen comprising a pen section, a rubber tube or reservoir provided within a barrel and secured at one end to the rear end of the said pen section, a pressure bar provided in parallel with the said reservoir, a lever projectingly arranged at the middle portion of the said bar and a slide connected to the said lever, the said rubber reservoir being adapted to be collapsed by the said pressure bar in accordance with the sliding movement of the said slide; characterized by this that the lever being connected with the slide by means of a pair of fixing members secured at the top end to the slide and bent down on to the inner wall of the said barrel at the lower end so as to be adapted to support the slide and the barrel wall with the said two curved ends, in order to move the slide steadily along the barrel without any involuntary slipping.

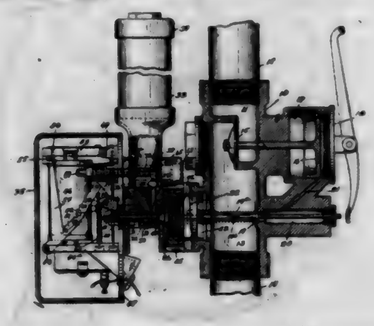
1,538,007. VACUUM-HOSE COUPLING AND MENDER. JOHN C. SCHELLIN, Wooster, Ohio. Filed Nov. 23, 1923. Serial No. 676,642. 1 Claim. (Cl. 285—163.)

In a device of the character described, the combination of male and female members in telescopic relation, a pair of yieldable gaskets spaced apart from each other within the female member, and held from shifting laterally therein, and a circumferential rib around the male section, adapted to engage the inner side of one gasket when pressed therethru, and the extended inner end of the male member adapted to abut snugly against the adjacent side of the other gasket, when said members are coupled together.



1,538,008. REDUCTION GEARING. WILLIAM E. SHARKEY, Middletown, Ohio. Original application filed Oct. 10, 1921, Serial No. 506,592. Divided and this application filed Apr. 18, 1923. Serial No. 632,834. 2 Claims. (Cl. 74—34.)

1. In a reduction gearing, the combination with a stationary gear having internal teeth, of a rotatable gear having exterior teeth, the depth of all of said teeth being substantially one half that of the width of the base, said teeth having their faces laid out on an arc described about a point on a plane passing through the

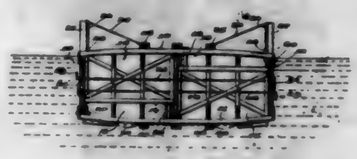


junction line between the teeth and a distance from the junction line of the teeth approximately one half the width of the base of the teeth and so arranged that the blunt nose of a tooth on one gear will lie in the space formed by the junction of two teeth on the other gear.

1,538,009. SPEED-CONTROLLING DEVICE FOR MOTOR VEHICLES. LELAND V. SLAIGHT, Cleveland Heights Village, Ohio. Filed May 1, 1920. Serial No. 378,134. 19 Claims. (Cl. 175—355.)

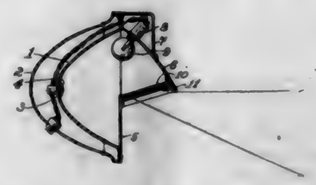
1. In a speed controlling device for motor vehicles, the combination with an operating electric circuit of the motor of said vehicle of a rotatable member provided with indicating means and adapted to be set to correspond with a predetermined speed of the vehicle, a yieldable member disposed adjacent said settable member and forming with the latter a pair of switch contacts controlling said electric circuit, and a speed responsive member having a movement proportional to the speed of the vehicle and adapted to effect relative movement of said switch contacts at the predetermined speed.

1,538,010. SIGNAL-DEVICE-OPERATING MECHANISM. HARRY S. SMITH, Needham Heights, Mass., assignor, by mesne assignments, to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed Dec. 19, 1919. Serial No. 346,023. 33 Claims. (Cl. 137—139.)



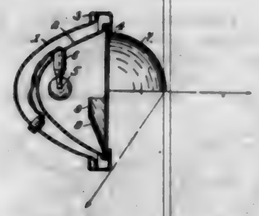
1. Signal device operating mechanism including, in combination with a piston and a cylinder in which it operates having provision for the restricted flow of fluid from one to the other end thereof, a timing chamber, and means controllable by said piston to govern fluid communication between said cylinder and timing chamber.

1,538,011. CONNECTING AND LOCKING DEVICE FOR TIRE CHAINS. HENRY ST. PIERRE, Worcester, Mass., assignor to St. Pierre Chain Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1924. Serial No. 732,018. 6 Claims. (Cl. 24—241.)



1. As an article of manufacture, a locking device for a tire chain comprising a frame for connection with one end of the chain, a latch or hook member slidably pivoted thereon for receiving a link at the other end of the chain, and having a reverse bend at the opposite end to constitute a hook proper, the frame having a cross bar for receiving the end of the hook under it.

1,538,012. SELF-DUMPING SCOW. PHILIP VINCENT, Olympia, Wash. Filed Nov. 4, 1924. Serial No. 747,856. 3 Claims. (Cl. 114—38.)

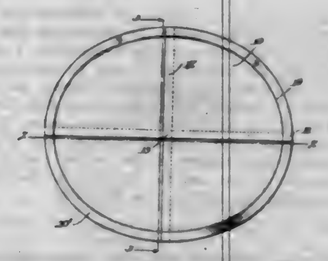


3. A self-dumping scow including a hull having two decks opposite one another and a central longitudinal partition wall dividing the same into similar side compartments, each compartment being located adjacent to one of the decks and having a false bottom spaced from the other deck, and each compartment having a valved water inlet and outlet port located in the outer side wall thereof adjacent to its said false bottom.

1,538,013. COMBINATION HEADLIGHT REFLECTOR. ED WHITAKER, Waterloo, Iowa, assignor, by direct and mesne assignments, of one-third to Ireta L. Escher, Chicago, Ill. Filed Feb. 5, 1924. Serial No. 690,747. 1 Claim. (Cl. 240—41.)

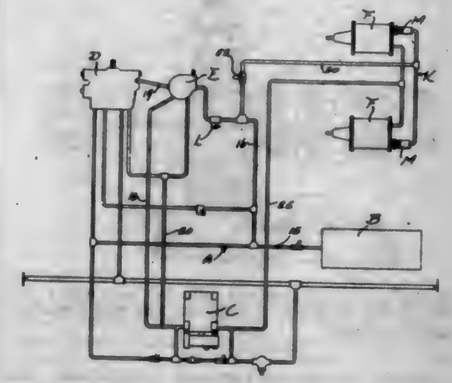
A device of the character described, comprising a concave reflector, a curvate hood positioned across the upper front part of the reflector and having an inner reflecting face, a source of illumination adjacent the said reflecting face above the focal point of the concave reflector, and a flat reflector screen positioned across the lower front part of said concave reflector and with a horizontal upper edge spaced vertically from the lower edge of said upper hood, the hood and screen cooperating in directing light emitted between them within certain vertical limits and emitting light laterally between the hood and screen.

1,538,014. VEHICLE HEADLIGHT. ED WHITAKER, Waterloo, Iowa, assignor, by direct and mesne assignments, of one-third to Ireta L. Escher, Chicago, Ill. Filed Mar. 3, 1924. Serial No. 696,627. 3 Claims. (Cl. 240—48.4.)



1. In combination, differently sized nested concave reflectors, a concave reflecting screen projecting forwardly of the upper part of the reflectors to limit upward dispersion of light therefrom, and a segmental truncated conical reflecting screen supported across the forward lower part of said reflectors and apically directed interiorly to limit and concentrate downward dispersion of light therefrom, the adjacent transverse edges of said screens being separated vertically to permit sidewise dispersion of light from the reflectors.

1,538,015. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 8, 1924. Serial No. 697,938. 8 Claims. (Cl. 24—90.)



1. A button composed of a body including a head and a hub, the latter being provided with a fastener-receiving chamber therein, and a cap mounted upon said head, the head and cap being of irregular and ornamental configuration and with the cap provided with a rim extending around the head of the button and forming a continuation of the under side of the head.

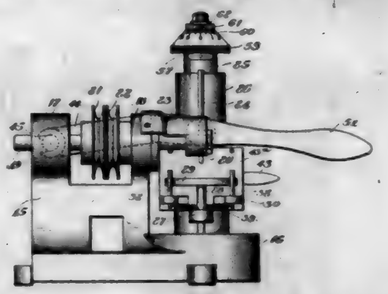
1,538,016. PAPER BASIN. CHARLES H. WINDSOR, Palmyra, N. J. Filed Jan. 31, 1924. Serial No. 689,716. 13 Claims. (Cl. 229—1.5.)

1. As an article of manufacture a blank for a paper receptacle having a marginal supporting portion and a continuous pleat extending entirely across the blank, the ends of the pleat being adapted to be held folded and substantially the remainder of the pleat being adapted to be opened to depress the center of the blank.

1,538,017. QUICK-RELEASE APPARATUS FOR AIR-BRAKE CYLINDERS. WALTER C. WRIGHT, Youngstown, Ohio. Filed Mar. 24, 1924. Serial No. 701,525. 7 Claims. (Cl. 303—69.)

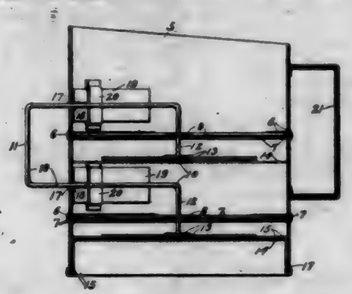
1. The combination with an air brake cylinder, quick release exhaust valve means for the brake cylinder, air pressure means normally retaining the exhaust valve seated, and means for lowering the air pressure in said last mentioned means to open the exhaust valve for discharge of air from the brake cylinder for releasing a brake application.

1,538,018. GATE. JESSE ADAMS, Nilwood, Ill. Filed Apr. 23, 1924. Serial No. 708,446. 1 Claim. (Cl. 39—22.)



In a structure of the class described, a gate provided at its forward edge with a retaining bolt, a pair of arms pivoted on the gate and extending outwardly therefrom on opposite sides of said bolt, the inner ends of said arms being provided with crank extensions, a longitudinally movable operating rod having a fork formed at its outer end, the arms of said fork being connected at their free ends to said crank extensions, a pivotally mounted bell crank at the inner end of said rod, the short arm of said bell crank being pivotally connected with said rod, and an operating lever pivoted on said gate and adapted for engagement with the free end of said bell crank for actuating the same and said rod, whereby to control said arms.

1,538,019. LENS-GRINDING MACHINE. CARL L. BAUSCH, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 1, 1921. Serial No. 497,560. 17 Claims. (Cl. 51—96.)

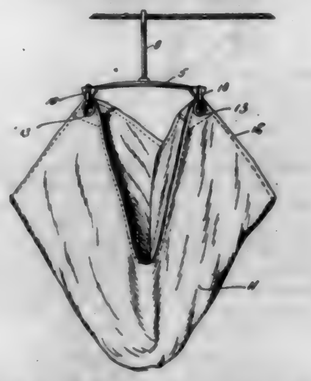


16. In a machine for forming a thickness indicating guide mark in a lens blank, the combination of a thin cutting disk, a slidably mounted lens carried device including a holder and an anvil thereon arranged to sup-

port a lens in a plane at substantially right angles to the plane of the disk, said holder having arms slidably mounted therein and provided with spring pressed means

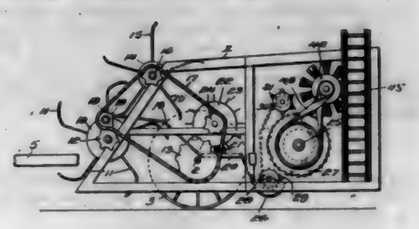
having gripping engagement with the lens, and a lever for moving the holder to bring the lens into engagement with the disk.

1,538,020. FLOUR SIFTER AND LIGHTENER. MARCELLA BEVERLY, Dallas, Tex. Filed Jan. 8, 1923. Serial No. 611,469. 3 Claims. (Cl. 83—60.)



1. In a sifter, the combination of a cylindrical shell having an annular groove or track in its wall, a ring seated in the groove for circumferential movement and held against axial movement, a bar or beater secured to the ring, an operating handle provided with means to secure it to the beater, a screen below the beater, and a sifter member immediately above the screen and provided with means securing it to the operating handle.

1,538,021. SPRAYER-PUMP STRUCTURE. HENRY E. BRANDT, North St. Paul, Minn. Filed Mar. 26, 1923. Serial No. 627,567. 13 Claims. (Cl. 299—96.)

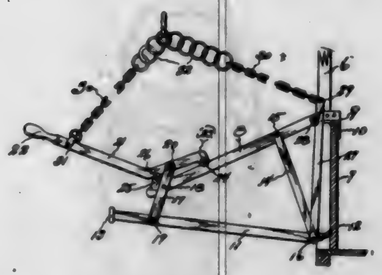


1. A sprayer having in combination a receptacle having a threaded opening therein with an inwardly extending annular flange at the bottom of said opening, a pump cylinder adapted to be disposed in said receptacle and passed through said opening, a closure member having two portions with threaded exteriors of different diameters forming a shoulder therebetween and adapted to be screwed respectively in said threaded opening and pump cylinder, a plunger rod reciprocable through said closure member, means on said rod for engaging said closure member to turn the same into or out of both said threaded opening and pump cylinder, and a single packing ring disposed on said annular flange and engaged by said shoulder on said closure member.

1,538,022. CLOTHESPIN CARRIER. HERMAN M. BREKKE, Virginia, Minn. Filed Nov. 13, 1923. Serial No. 674,524. 1 Claim. (Cl. 66—11.)

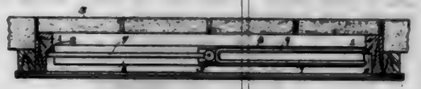
In a clothes pin carrier of the class described, a plate element, attachment members formed at the corners of said plate member, a strip of cloth of relatively greater dimension than said plate member and formed at its corners with openings for engagement with said attachment members at the corners of said plate.

1,538,023. COTTON HARVESTER. ROBERT BRUTON, Hale Center, Tex. Filed June 10, 1924. Serial No. 719,169. 1 Claim. (Cl. 19—36.)



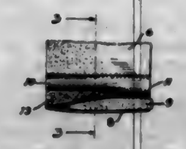
In a cotton harvester, means for receiving the cotton and breaking the hulls, means for separating the cotton from the hulls and for elevating the cotton, a gang of saws journaled for rotation above and to the rear of the last mentioned means and adapted to receive the cotton, a drum journaled above the gang of saws and forwardly of the axis of the saws, and having a series of longitudinally disposed ribs adapted to break the fragments of the hulls which adhere to the cotton and a doffing rotary member above and to the rear of the gang of saws for doffing the cotton from the saws.

1,538,024. GRAIN-DOOR PULLER. ADELBERT CHANDLER, Avondale, Mo. Filed Jan. 21, 1925. Serial No. 3,760. 9 Claims. (Cl. 294—86.)



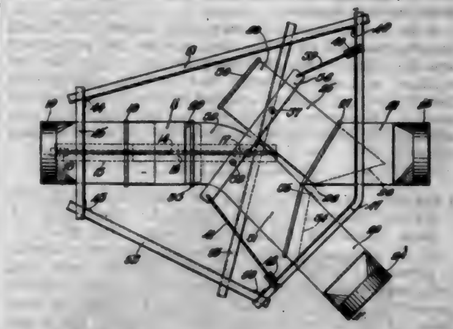
5. A grain door puller comprising, in combination, means for gripping the upper edge of the grain door, said means having a depending flange for bearing against the rear surface of said door, means for engaging the front surface of said door including a spur adapted to

be forced into said door at a point below and in vertical alinement with said gripping means, links connecting said gripping and engaging means one of said links having its one end pivotally mounted adjacent said spur,



the other end thereof projecting beyond and slidably mounted between said upper edge gripping means and a transverse pin carried thereby, and means for applying power to said links.

1,538,025. REVERSIBLE WINDOW. MICHAEL PATRICK COMERFORD and HENRY B. PARRETT, Ottawa, Ontario, Canada. Filed Nov. 11, 1922. Serial No. 600,302. 3 Claims. (Cl. 20—53.)

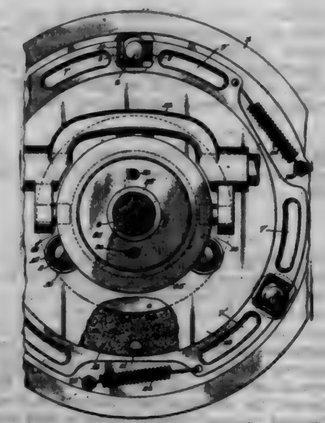


1. In a reversible window, a frame having a continuous chamfered recess adjacent its inner edge, a sash in said frame pivoted so as to swing therein on an arc of 180°, a cleat mounted over one-half of the edge of the frame on one side of the pivots, and a packing strip mounted on the opposite half thereof.

1,538,026. ADJUSTABLE ARCH SUPPORT. ALBERT L. CRAMER, Denver, Colo. Filed Oct. 31, 1924. Serial No. 747,001. 1 Claim. (Cl. 36—71.)

An arch support comprising, in combination, an elastic band adapted to encircle the foot, said band being adapted to exert a contracting force on the foot, a pocket, formed in part of non-elastic material, on the underside of said band, said pocket being open towards the front and adapted to receive a felt pad, a second pocket, also formed in part of non-elastic material, located directly over the first pocket, on the inside of the band, said second pocket having an opening thereinto from the rear of the band, whereby hair may be inserted thereinto and distributed therein.

1,538,027. PNEUMATIC-CONVEYER SWITCH. JOSEPH L. CUSHING, Lowell, Mass. Filed June 21, 1924. Serial No. 721,474. 6 Claims. (Cl. 302—28.)



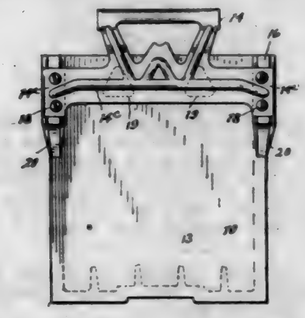
1. A pneumatic conveyer switch having, in combination, a supply pipe, a plurality of discharge pipes, a hinged switch pipe for each discharge pipe supported to swing into position in line with the supply pipe, and a sliding sleeve pipe for connecting the supply pipe with the hinged pipe located in operative position.

1,538,028. COMPOSITE CUTTER BLADE AND PROCESS OF MAKING THE SAME. ALVIN W. DAVIS, North Leominster, Mass., assignor to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Jan. 30, 1923. Serial No. 615,827. 20 Claims. (Cl. 76—101.)

1. That process of making cutters of the kind having a facing of high speed steel and a backing of softer metal which comprises as a step integrally uniting the respective metals in a welding operation completed within the critical range of temperature corresponding to the permissible ductility ratios for union of the metals involving a single elongation of the metals.

1,538,029. CLUTCH. ANTHONY J. DETLAFF, Detroit, Mich. Filed June 17, 1922. Serial No. 568,988. 5 Claims. (Cl. 192—69.)

1. In a clutch wherein a series of disks have peripheral portions engaging studs on a member, said disks having peripheral portions provided with recesses, and coiled



springs maintaining contact between said disks and studs, said springs being disposed at intervals about said disks and in the recesses of said disks, and connecting said disks to said member.

5. In a clutch, a disk having a perforation formed therein, the portion of the disk between the perforation and the edge of the disk being severed to provide two sections, said sections being bent to form substantially parallel bearing surfaces adapted to receive an abutment member therebetween, and ribs formed upon the disk adjacent to said bearing surfaces to provide increased rigidity.

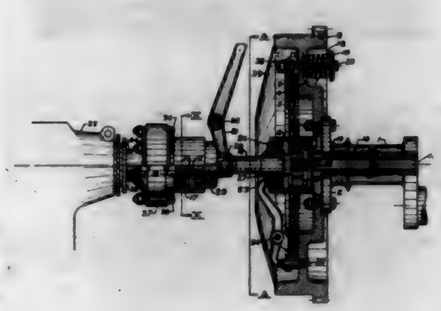
1,538,030. MANUFACTURE OF TEXTILE FABRICS. HENRY DREYFUS, London, England. Filed Aug. 13, 1923. Serial No. 657,222. 22 Claims. (Cl. 28—1.)

16. In a process for the manufacture of fabric presenting a permanent crêpe effect, weaving a fabric with high twist weft yarns of cellulose acetate having an elasticity preserving coating of colloid substance applied to them prior to receiving the high twist, treating the woven fabric with a hot aqueous liquid whereby said coating is at least partially removed from said coated high twist cellulose acetate yarns, said treatment likewise serving as wetting treatment for the crêping, and drying the fabric.

1,538,031. STORAGE-BATTERY CONTAINER. CARL J. DUNZWEILER, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Aug. 3, 1923. Serial No. 655,451. 4 Claims. (Cl. 136—29.)

1. A storage battery container having end walls of hard rubber and provided near the top with corner lugs or projecting portions constituting buffers and metal handles extending across the ends of the container and each having its ends secured to said lugs and held in spaced relation with respect to the hard rubber end wall.

1,538,032. SURGICAL INJECTOR. HANS FISCHER, Lucerne, Switzerland. Filed Dec. 3, 1921. Serial No. 519,576. 2 Claims. (Cl. 128—261.)



1. A surgical appliance for the purpose set forth comprising a rod having a longitudinal channel therein, a second rod in said channel, of a cross section filling the width but not the depth of said channel, a handle fixed to said second rod and links connecting said second rod to said first rod, allowing said second rod to be raised and lowered in said channel, substantially parallel with the floor thereof, by pushing and pulling said handle.

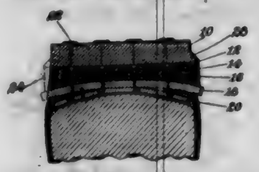
1,538,033. PADLOCK. SAMUEL R. FRAIM, Lancaster, Pa. Filed June 17, 1924. Serial No. 720,656. 7 Claims. (Cl. 70—105.)

1. A padlock comprising, in combination, a casing, a shackle pivotally mounted therein, a sliding bolt lever, a locking bolt also pivotally mounted in said casing and adapted to be actuated by said bolt lever to engage and disengage said shackle, a master lever, and a plurality of change levers mounted on a common axis and adapted to regulate the movement of said locking bolt, said change levers being operable independently of said master lever, the latter being operable alone to actuate all of said change levers.

1,538,034. CLUTCH. ALBERT ERNEST FEBY, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Sept. 7, 1922. Serial No. 586,746. 10 Claims. (Cl. 192—68.)

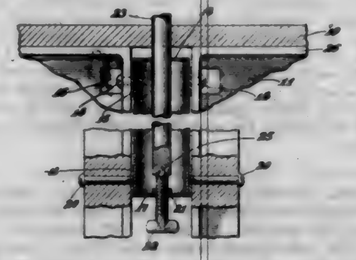
1. In a device of the class described, a fly wheel, a ring, a disc interposed between said fly wheel and said ring, means supported by said ring to cause frictional engagement of said disc with said fly wheel and said ring, and means to release said disc from engagement with said fly wheel and said ring, said means comprising a shifter member, a member having a spherical seat operatively connected with said shifter member, a washer seated on said member, and clutch releasing members having their inner ends resting on said washer.

1,538,035. LOCK FOR BRAKE LEVERS. FORREST W. GILLETTE, Hoboken, N. J. Filed June 24, 1922. Serial No. 570,739. Renewed Nov. 1, 1924. 1 Claim. (Cl. 70—132.)



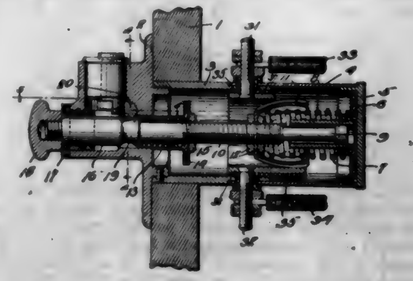
In a device of the character set forth, a pivotally mounted brake-lever, a pawl pivotally mounted thereon, a toothed segment, a member disposed parallel therewith and having cavities corresponding to and arranged

by the side of said teeth, said pawl being cooperable with said teeth, a locking rod movably mounted on said lever for cooperation with said cavities, a lock, a member of



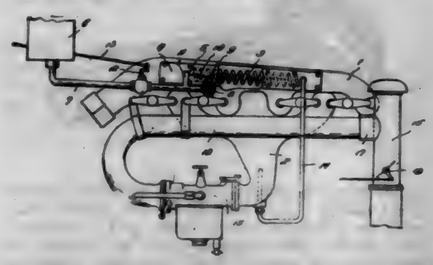
which is connected with said locking rod to throw it in one direction, and a spring acting on said rod to assist in its movement in the opposite direction.

1,538,036. CUSHION-HEEL BLANK. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 18, 1922. Serial No. 607,601. 4 Claims. (Cl. 36—35.)



1. As an article of manufacture, an unattached cushion heel blank having a tread portion of resilient material of a fixed size and shape desired in the finished shoe, and a body portion integral with the tread portion, of indeterminate size and shape enough larger than said tread portion to permit the body portion of the heel, after attachment to a shoe of indeterminate size and shape, to be trimmed to a size and shape determined by the heel end of the shoe and said fixed tread portion of the heel blank.

1,538,037. TABLE. FRANK HAGEMANN, Cisco, Tex. Filed June 16, 1924. Serial No. 720,171. 1 Claim. (Cl. 45—111.)



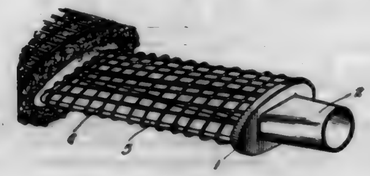
A compound table comprising a non-tiltable main plate, an auxiliary plate rotatable thereabove, supports on which the main plate loosely rests in a fixed plane, said supports diverging at their lower portions, a tubular member rigidly bolted between said supports, a conically pointed screw extending axially upward into said member, the head of said screw being accessible between said supports, and a spindle carrying the auxiliary plate, said spindle being guided in said tubular member and seated on the point of said screw whereby said auxiliary plate may be raised or lowered relative to the main plate.

1,538,038. STORAGE-BATTERY-SWITCH LOCK. GEORGE J. HARRIS, Leonardville, Kans. Filed Mar. 20, 1922. Serial No. 545,179. 3 Claims. (Cl. 200—44.)

1. In an electric switch, the combination with two separate conducting contact studs of a conducting member mounted upon a longitudinally movable shaft, an engaging means disposed on said shaft, said conducting member normally connecting the two contact studs, the conducting member being movable away from one of the contact studs, means engaging said shaft to move said conducting member into engagement with the contact studs, means for locking said conducting member in its inoperative position, said means comprising a locking-bar engaging said engaging means on said shaft and a locking-plug co-operating with the locking bar for locking said bar and shaft when the conducting member is disconnected.

1,538,039. STEAM AND AIR INJECTOR FOR INTERNAL-COMBUSTION ENGINES. MICHAEL R. HARNAY, Havre de Grace, Md. Filed June 11, 1924. Serial No. 719,398. 1 Claim. (Cl. 123—25.)

In an air and steam injector for internal combustion engines, a closing plate adapted to be mounted upon the engine exhaust manifold, said plate being provided adjacent its ends with openings, a steam coil disposed upon the inside of said plate, the ends of the coil terminating opposite and being in alignment with said openings, a water tank adapted to be supported adjacent said plate, a conduit connected at one end to and leading from said tank and extending into proximity to said plate, a valve in said conduit said conduit having its other end fashioned to provide an air intake valve and being provided between the valves with a branch extending through the adjacent one of the aforesaid openings in



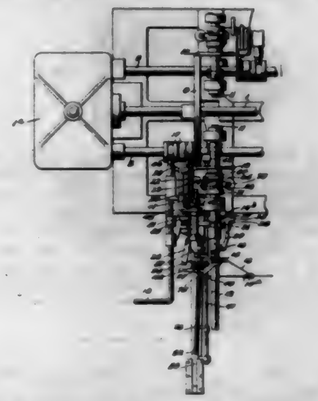
the plate and connected with the intake end of said coil, and a steam conducting pipe extending through the remaining opening and connected with the discharge end of said coil, the discharge end of said pipe being adapted to be connected with the engine intake manifold.

1,538,040. LONGITUDINAL AND TRANSVERSE ARCH SUPPORT. OSCAR HEITZMANN, St. Louis, Mo., assignor of one-half to Deidrich H. Steineke, St. Louis, Mo. Filed July 14, 1923. Serial No. 651,454. 1 Claim. (Cl. 36—71.)

In a shoe, a support located in the shank thereof, said support including an upper plate having a rear end portion, an intermediate portion concaved longitudinally and transversely, and a front end portion connected to the intermediate portion by a hump, and a second plate applied to the under side of the first mentioned plate and extending under the intermediate portion thereof and partially under the forward end thereof, the said second plate being humped similarly to the first mentioned plate and having its upper surface in close contact with the lower surface of the first mentioned plate, the second mentioned plate being secured at its rear end to the first mentioned plate at the concaved intermediate portion thereof, the forward ends of said plates being disconnected from each other, whereby the plates may flex with relation to each other, in the manner and for the purpose specified.

1,538,041. AIR FILTER. PATRICK H. HORTON and CHARLES E. HOSE, Kansas City, Mo. Filed May 1, 1924. Serial No. 710,419. 1 Claim. (Cl. 183—44.)

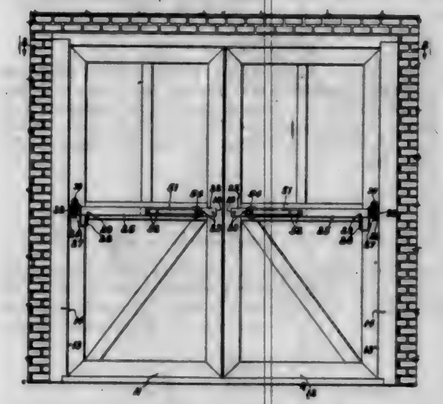
An air filter comprising a cage-like form of reticulated material having a solid head at one end with a tubular opening for attachment to the intake of a carburetor, a bag-like envelope fitting over the cage, the envelope consisting of porous material and a reticulated screen embracing the envelope and co-operating with the cage to clamp the envelope in position.



1,538,042. THERMOMETER. EDWARD N. HURLBURT, Rochester, N. Y., assignor to Taylor Instrument Cos., Rochester, N. Y., a Corporation of New York. Filed June 20, 1923. Serial No. 646,506. 2 Claims. (Cl. 73—52.)

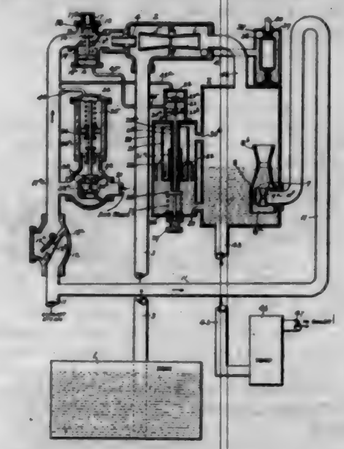
1. A thermometer comprising a glass tube having a scale portion and an elongated stem portion terminating in a bulb of substantially the same diameter as the stem and provided with a pointed end for piercing material to be tested, a reinforcing metal sheath electrolytically deposited on the surface of said bulb and stem portion and a protective metal casing for said scale

portion extending at one end into overlapping relation with said sheath and having a sight opening through which the scale is visible.



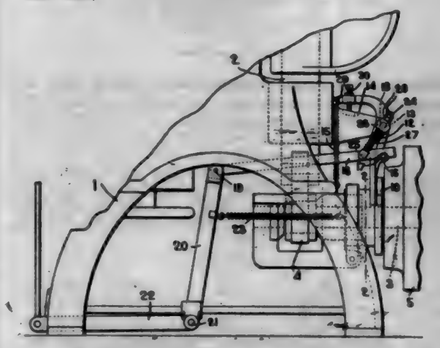
1,538,043. WINDING MACHINE. JAMES D. JOYCE, Philadelphia, Pa. Filed Jan. 25, 1924. Serial No. 688,502. 16 Claims. (Cl. 242—29.)

1. In combination, in a winding machine, a frame, a plurality of spindles rotatably mounted in said frame, means for rotating said spindles, a traversing thread guide for each spindle, means for traversing said thread guides longitudinally of said spindles, and means manually operable to throw any of said spindles and its traversing thread guide simultaneously out of operation while permitting the operation of the remainder of said spindles.



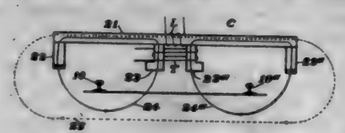
1,538,044. DOOR-CONTROLLING MEANS. WILLIAM J. KEMPER, Covington, Ky. Filed June 22, 1923. Serial No. 647,157. 3 Claims. (Cl. 292—267.)

1. The combination, with a door and a wall of the door-opening, of a brace-rod pivoted at one end to said wall, a guide-strip secured to said door and provided with holes, the swinging end of said brace-rod provided with flanges about said guide-strip for sliding connection therewith and with an outward bulge intermediate between said flanges, said outward bulge provided with a hole, a spring-bar, means rigidly securing one end of said spring-bar to said brace-rod in manner to permit swinging of the other end of said spring-bar on said brace-rod, the swinging end of said spring-bar formed with a handle, and a bolt fixed to the swinging end of



said spring-bar and operating in said hole in said bulge and arranged to be received in said holes in said guide-strip, said bolt arranged to wedge against the wall of said hole in said outward bulge for limiting the outward swinging movement of said swinging end of said spring-bar for constituting said handle as a handle for moving said door.

1,538,045. FEED-WATER HEATING AND DELIVERING APPARATUS. JOHN J. KING, Boston, Mass. Filed Sept. 14, 1923. Serial No. 662,753. 10 Claims. (Cl. 261—76.)

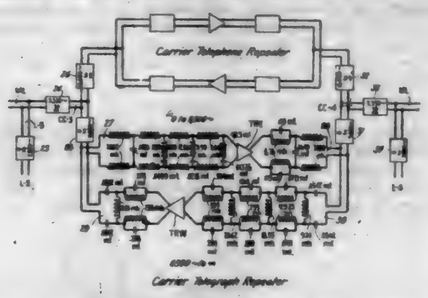


1. An apparatus of the character stated comprising, in combination, a heater tank having an inlet and an outlet, a suction pipe; an ejector communicating with the suction pipe and with the tank inlet, and including means operable by exhaust steam to cause a flow of feed water through the suction pipe and into the heater tank, a heater within the tank, including means operable by exhaust steam to circulate, in the tank, water heated by the exhaust steam, an exhaust steam conduit communicating with the ejector and the heater, and a force pump communicating with the heater tank outlet, the arrangement being such that exhaust steam supplied to the ejector causes the ejector to draw feed water through the suction pipe and deliver it to the heater tank, while exhaust steam supplied to the heater causes the latter to circulate and heat the water delivered by the ejector, so that the force pump draws heated water from the heater tank.

1,538,046. CLUTCH-CONTROLLING DEVICE FOR PRESSES AND THE LIKE. JOHN J. KIRWIN, Boston, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Nov. 8, 1923. Serial No. 673,536. 3 Claims. (Cl. 192—82.)

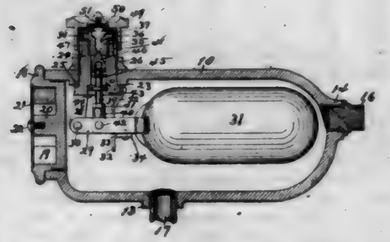
1. The combination with an operating shaft, of a clutch by which the shaft is rotated, a spring-actuated swinging arm having a projection and a clutch-disengaging portion, means for moving the arm into inoperative position, said means including a treadle, a link connected thereto and having a notch normally engaging said projection, a rocking member, a radius arm pivotally connected at one end to the link and slidable through the rocking member, and a spring encircling the radius rod and confined between the rocking member and the link, whereby when the treadle is depressed the turning movement of the rocking arm will disengage the link from the projection and when the treadle is released the spring will cause a re-engagement of the link with said projection.

1,538,047. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 11, 1920, Serial No. 409,705. Renewed May 6, 1922. Serial No. 559,057. 15 Claims. (Cl. 246—63.)



13. Vehicle carried receiving apparatus comprising a magnetizable core and two windings mounted thereon in non-inductive relation to each other.

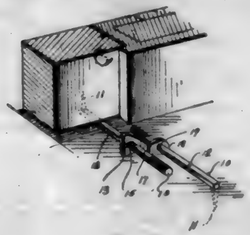
1,538,048. MULTIPLEX SIGNALING SYSTEM. MAURICE B. LONG, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1924. Serial No. 693,998. 8 Claims. (Cl. 179—15.)



1. In a multiplex signaling system, a transmission line, stations thereon, a grouping filter at one station,

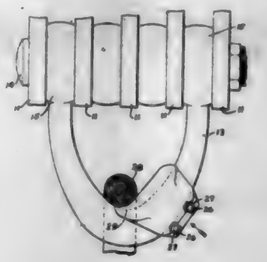
a grouping filter at another station, and a repeater connected in said line and comprising an input filter identical to one of said grouping filters and an output filter

identical to the other of said grouping filters, said output filter having a different transmission efficiency for large currents than said input filter.



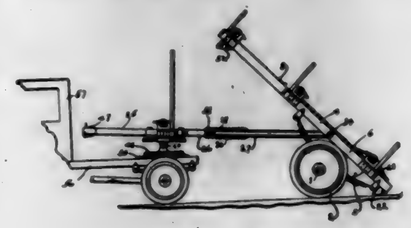
1,538,049. AUTOMATIC AIR VALVE FOR HOT-WATER RADIATION. EDWIN Z. MACK, Marshalltown, Iowa. Filed Apr. 11, 1921. Serial No. 460,598. 14 Claims. (Cl. 137—122.)

6. In a device of the class described, a casing, a valve chamber on and extending within said casing, a seat member threaded therein and formed with a downwardly opening seat, a float lever within but independent of said casing and pivoted on said chamber, a valve stem adjustably mounted on said lever and pivoted thereto, and a self-centering valve on said stem adapted to engage said seat.



14. In a device of the class described, a float lever, a trigger adjustably mounted thereon, and a spring formed with a lug adapted to engage said trigger.

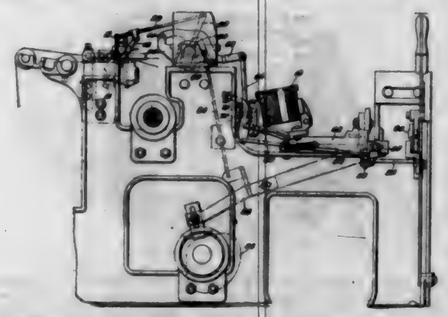
1,538,050. PORTABLE LOCK. JAMES A. MARK, Madison, Kans. Filed Apr. 14, 1923. Serial No. 632,075. 2 Claims. (Cl. 292—291.)



1. In a lock of the type described, a stem provided at one end with a spike disposed at right-angles thereto, the stem being screw-threaded and being flattened from a point adjacent the opposite end to the spike bearing end thereof, and an elongated locking plate associated with said stem having an opening formed therein adjacent one end edge thereof, the opening being provided with multiated threads engageable with the threads of the stem and alignable with the flattened portions thereof, the threads of said opening being aligned with the longitudinal axis of the plate and at one end of the plate.

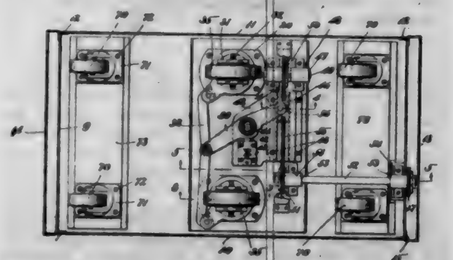
1,538,051. BALANCING DEVICE FOR SHEAVE BLOCKS. BURT STANLEY MINOR, Los Angeles, Calif., assignor to Regan Forge & Engineering Company, San Pedro, Calif., a Corporation of California. Filed Apr. 14, 1924. Serial No. 706,324. 5 Claims. (Cl. 254—192.)

1. In combination with a sheave block provided with a clevis for sustaining a load, a block balancing device formed with a seat for receiving the load sustaining cable, and means for adjustably mounting said device on the clevis of said block, whereby said seat may be positioned at either side of the vertical axis of said block.



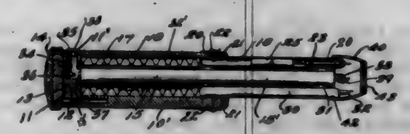
1,538,052. TRAILER. CHARLES H. MUELLER, Milwaukee, Wis. Filed Jan. 23, 1922. Serial No. 531,293. 10 Claims. (Cl. 298—17.)

1. In a trailer, the combination with a supporting axle and wheels, of a trailer frame supported from said axle, a sub-frame pivotally connected to said trailer frame and providing a longitudinal sliding bearing, and a reach having a portion slidably adjustable through said bearing.



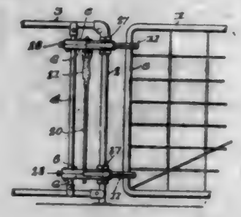
1,538,053. STOP MOTION FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1923. Serial No. 615,358. 6 Claims. (Cl. 139—367.)

1. A warp stop motion for looms having, in combination, drop wires, a detector, a detector lever adapted to oscillate the detector beneath the warps, a rock lever connected with the detector lever and provided with a slabbed bearing surface, an actuator lever having a slabbed surface aligning with the slabbed surface of the rock lever, a dog adapted to be normally maintained stationary on the actuator lever and having a surface en-



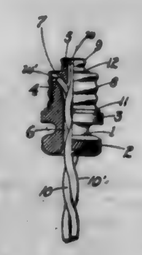
gaging the slabbed surfaces of the rock lever and actuator lever, means for oscillating the actuator lever, and a knock-off mechanism having a trip lever in normal inoperative engagement with the dog.

1,538,054. TRUCK. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Apr. 12, 1922. Serial No. 551,957. 8 Claims. (Cl. 280—48.)



1. A truck having a pair of guide members pivoted therebeneath, a lever pivoted to the bottom of the truck, links connecting said members to said lever and arranged to maintain said members in substantially parallel relation, and means including a reciprocable slide connected to said lever for actuating the latter to change the angular disposition of said members.

1,538,055. COMBINED PENCIL, PEN, AND FLASH LIGHT. ARNT OLSEN, New York, N. Y. Filed May 31, 1924. Serial No. 717,020. 4 Claims. (Cl. 240—8.4.)

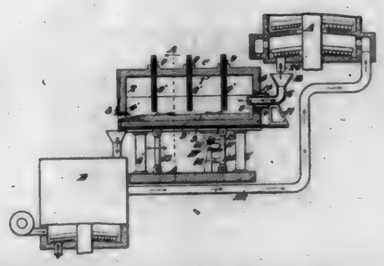


1. A device of the character described comprising a casing member, an electric light battery mounted in the central portion of said casing, a pencil slidably mounted within the said casing, a pen slidably mounted within the said casing, means for preventing displacement of the said pen and pencil, an electric light bulb secured to the extremity of the said battery, and a cap removably mounted upon the extremity of the said pen and pencil.

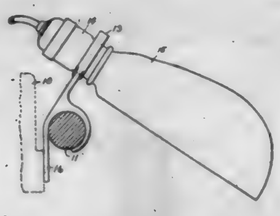
1,538,056. GATE LATCH. JOHN B. OLSON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed May 12, 1921. Serial No. 468,018. 9 Claims. (Cl. 292—216.)

1. In a device of the character described, a gate latch comprising a supporting member, a pivotally mounted hub element having a gate engaging portion and provided with laterally projecting shoulders, a pair of dogs independently pivoted to said member and positioned for engagement with said shoulders, and a single spring acting upon both of said dogs and urging them toward said hub to positions for engagement with the shoulders to which they are respectively adjacent.

1,538,057. ELECTRIC ATTACHMENT PLUG. RAYMOND V. OWEN, St. Louis, Mo., assignor to St. Louis Brass Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 20, 1920. Serial No. 411,376. 1 Claim. (Cl. 173—359.)



An electrical attachment plug comprising a body portion channeled through its center to receive the current carrying wires, a branch of said channel leading to the side of the plug for carrying a terminal of one of the wires; a projection on the end of the body portion, a channel extending through the said projection, the outer periphery of the body portion being screw-threaded and also the projection on the body portion being screw-threaded; a shell for securing the plug to the socket, orificed to fit over the projection on the end of the body portion and screw-threaded to engage the screw threads on the periphery of the body portion, secured to the said body portion; a second shell to cover the projection and screw-threaded to engage the screw threads on the said projection, substantially as shown and described.

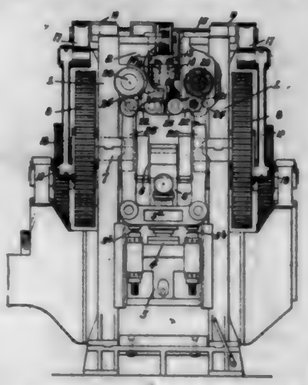


1,538,058. CLINKERING APPARATUS. ROBERT D. PIKE, San Francisco, Calif. Filed June 18, 1923. Serial No. 645,168. 2 Claims. (Cl. 222—7.)

1. A clinkering apparatus, the same comprising an insulated stationary elongated open-bottomed furnace structure provided with an inlet for calcined material and an outlet for the discharge of the clinkers, elec-

trodes extended into the furnace for maintaining therein a temperature sufficient for the clinkering of calcined material, a vibratory hearth associated with the furnace for receiving and advancing material to be clinkered therethrough, and means for imparting vibratory movement to said hearth in a direction corresponding to the line of travel of the material from the inlet to the discharge opening.

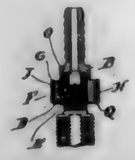
1,538,059. LAMP BRACKET. THOMAS W. ROBISON, Hillsdale, Oreg. Filed Sept. 24, 1923. Serial No. 664,603. 1 Claim. (Cl. 240—52.)



A lamp bracket consisting of a frame having an upstanding forked member adapted to receive a lamp socket, a pendant foot adapted to bear against a vertical wall, and a malleable arm projecting from the middle of said frame and adapted to be curled downwardly around and slide on a round rod mounted in front of said vertical wall.

1,538,060. MANUFACTURE OF RUBBER. PHILIP SCHIDROWITZ, WILLIAM FELDENHEIMER, and WALTER WILLIAM PLOWMAN, London, England. Original application filed May 13, 1920, Serial No. 381,179. Divided and this application filed Sept. 3, 1921. Serial No. 498,450. 35 Claims. (Cl. 106—23.)

34. A vulcanized rubber composition containing an initially deflocculated clay.



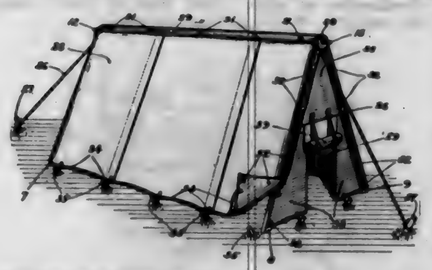
1,538,061. TOGGLE PRESS. ARTHUR H. SCHLOS, Toledo, Ohio, assignor to The Toledo Machine & Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 18, 1924. Serial No. 732,793. 7 Claims. (Cl. 113—38.)

1. In a toggle press, a frame, a blank-holder and a slide mounted for reciprocatory movements therein, one above the other, a shaft mounted in the frame with bearings at opposite sides of the slide, means for rocking said shaft, operating connections between the shaft and slide, rock-shafts mounted at opposite sides of the slide at right angles to the first shaft, connection between the slide and central portions of the respective rock-shafts to impart predetermined rocking movements thereto from reciprocatory movements of the slide, and

connections between the ends of the rock-shafts and the blank holder for reciprocating the latter from rocking movements of the former.

1,538,062. PUMP COUPLING OR THE LIKE. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y. Filed Oct. 9, 1920. Serial No. 415,883. 3 Claims. (Cl. 285,170.)

1. A pump coupling or the like having a tiltable dog, a circular band surrounding the dog and adapted to cam the dog, said dog having a body portion extending substantially parallel to the axis of the coupling and a projection at one end of the dog movable in a recess in the circular band.

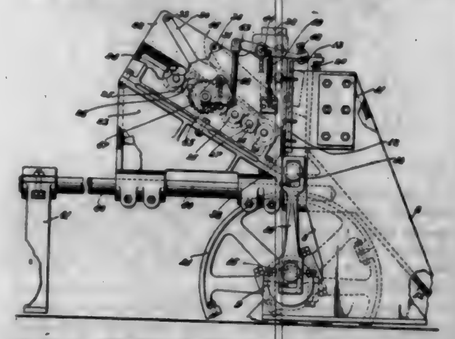


1,538,063. CUSHION HEEL. JOHN C. SHERRY, Seattle, Wash. Filed Apr. 30, 1923. Serial No. 635,496. 1 Claim. (Cl. 36—35.)

In a cushion for heels, a small cylindrical casing having a ridge at one end and the opposite end closed, a disk having sections stamped outward and bent slightly over to engage the ridge of the cylinder, and a spring between the casing and disk, said device being adaptable to be inserted in an opening in a heel.

1,538,064. TENT. AUGUST W. SKOG, Minneapolis, Minn. Filed Mar. 26, 1923. Serial No. 627,688. 7 Claims. (Cl. 135—1.)

1. A tent comprising rafters arranged in pairs, a ridge pole having a sliding connection at its ends with the pairs of rafters respectively, a cover composed of sections having abutting longitudinal edges folded together over said ridge pole, and secured to said pole and rafters at their points of intersection, said covers extending down on each side of the tent and having

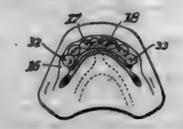


means for attachment to said rafters and guy ropes connected with said rafters for drawing them apart and putting said cover under tension.

1,538,065. FLOOR AND DROP PAN SUPPORT FOR POULTRY-FEEDING BATTERIES. WILLIAM J. STEWART, Clinton, Iowa. Filed Jan. 26, 1924. Serial No. 688,686. 3 Claims. (Cl. 119—17.)

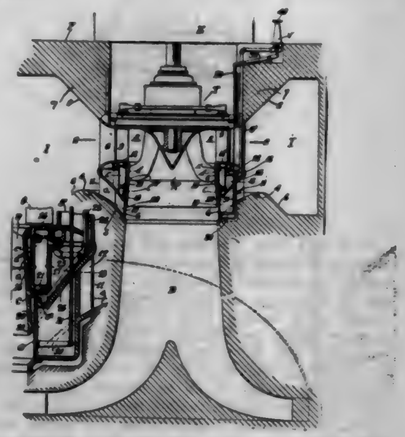
3. The combination with a poultry feeding battery having vertical partitions, of a combined floor and drop pan support comprising a two pronged fork the loop of which is hinged to the vertical partition of the battery, the upper prong having a recess formed therein to receive the floor, the lower being adapted to hold the drop pan, hooks formed at the ends of the prongs, members carried by the battery engaged by said hooks, means which secures two of said forks to said partition, comprising two members each of which is provided with a U drop adjacent one end in which the loop of the fork is mounted, a bolt and nut which secure the said hings to the said partition.

1,538,066. PULPWOOD-CHIPPING MACHINE. LOUIS H. STERRY, Olean, N. Y. Filed Apr. 8, 1921. Serial No. 459,768. 15 Claims. (Cl. 83—75.)



1. In a chipping machine, the combination with a feed trough, of a reciprocating knife frame, adjustable knives fitted in said frame, fixed guide-ways for said knife frame, adjustable wedges for said guide-ways, and means for reciprocating said knife frame.

1,538,067. RUST-PREVENTING COMPOSITION. ATKINS STOKES, Portsmouth, Va. Filed Aug. 30, 1924. Serial No. 735,202. 2 Claims. (Cl. 134—1.)

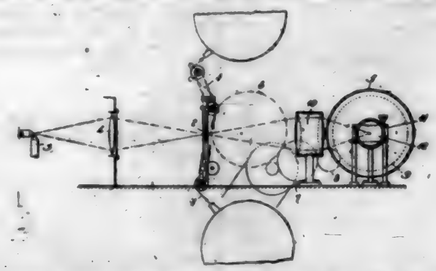


1. A composition of matter for coating iron and steel whereby to prevent rusting thereof, consisting of white lead, petroleum jelly, and lubricating oil, the proportion of white lead being substantially four times the quantity of petroleum jelly and lubricating oil combined.

1,538,068. LINGUAL BAR PATTERN. FELIX TAVI, New York, N. Y. Filed Nov. 14, 1924. Serial No. 749,844. 9 Claims. (Cl. 32—4.)

1. A lingual bar pattern of pliable material having a low melting point comprising a body portion moldable to conform to a reproduction model of the gums of a patient.

1,538,069. FLUID-OPERATED HEAD INCREASER. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Filed June 23, 1920. Serial No. 391,036. 15 Claims. (Cl. 253—17.)

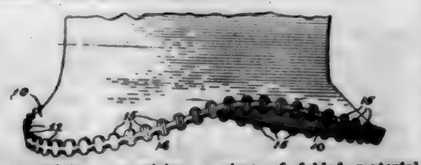


1. In a hydraulic turbine the combination with an intake and draft tube and a turbine runner between said intake and tube, of a by-pass from said intake to said draft tube below said runner, an axially movable gate for said by-pass, and operating means for said gate contained within the annular space bounded by the inner wall of the intake, the upper wall of said by-pass and the axially directed portion of the turbine conduit at the upper end of the draft tube.

1,538,070. APPARATUS FOR PROJECTING CINEMATOGRAPH PICTURES. OLOF ARVID AXELSSON TRNOW, Stockholm, Sweden, assignor of one-half to Gustaf Viktor Leonard Rose, Uppsala, Sweden. Filed Mar. 5, 1924. Serial No. 696,935. 1 Claim. (Cl. 88—16.8.)

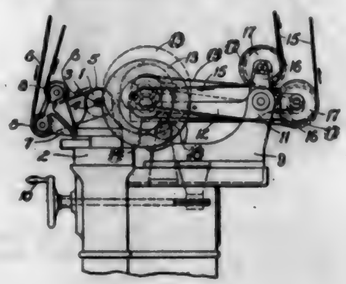
An apparatus for projecting cinematograph pictures comprising, in combination, a film, means for moving said film with a constant speed, a rotating wheel of aplanatic lenses for compensating the wandering of the pictures, and a projecting system disposed between the film and the lens-wheel, the power and position of said

system being chosen in such a manner than it alone projects the film upon the point of intersection between the optical axis of the said projection system and the outermost part of the path of the exterior aplanatic



points, while the enlargement is such that the movement caused by the motion of the film-image thus projected has the same speed as the outer aplanatic points have by virtue of the rotation of the lens-wheel.

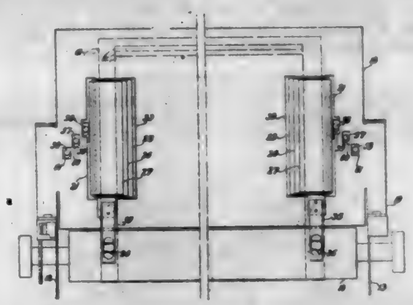
1,538,071. MEANS FOR INCLOSING AND READILY DISPLAYING WHEN REQUIRED A RECORD OF INFORMATION. REES GORDON THOMAS and BLANCHE ELLIOTT, London, England. Filed May 8, 1924. Serial No. 711,796. 5 Claims. (Cl. 40—10.5.)



1. A device for inclosing and readily displaying when required a record of telephone addresses or other information, comprising a protective casing having a slit in one of its walls for the passage into and out of the casing of a flexible strip for the record, a rotatable member within the casing, a tongue of flexible material secured at one end to the rotatable member and capable of extending therefrom at the other end through the slit in the casing so as to provide a means of conveniently connecting a flexible record strip to the rotatable member without dismembering the casing, means for automatically rotating said rotatable member so as to wind thereon the record strip and locking means for temporarily preventing the free end of the tongue from passing into the casing while the record strip is being attached to it.

1,538,072. FELT HAT AND THE LIKE. RALPH S. TOMPKINS, Newburgh, N. Y. Filed June 6, 1923. Serial No. 643,675. 7 Claims. (Cl. 2—175.)

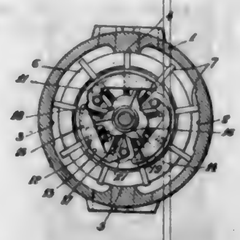
7. An edging comprising a piece of folded material having inherent elasticity, and a series of tongues cut in said folded material and having their bases in the fold thereof, said tongues projecting out of the plane of the material.



1,538,073. GRINDING MACHINE AND PROCESS. HERBERT VANDERBERG, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed June 2, 1923. Serial No. 642,979. 7 Claims. (Cl. 51—33.)

1. In a machine for grinding the bearing surface of rollers for roller bearings and the like, means for rotatably holding a roller, a grinding wheel, and means for moving said grinding wheel in a substantially tangential path with respect to the bearing surface of the roller.

4. A grinding machine for grinding the bearing surface of rollers for roller bearings, comprising means for rotatably holding a roller, a pivoted arm, a grinding wheel rotatably mounted at the end of said arm, and means for raising said grinding wheel and permitting it to lower to grind the roller, said means including a cam and permitting the grinding wheel to drop below the straight line passing through the axis of the work and the pivot of said arm.

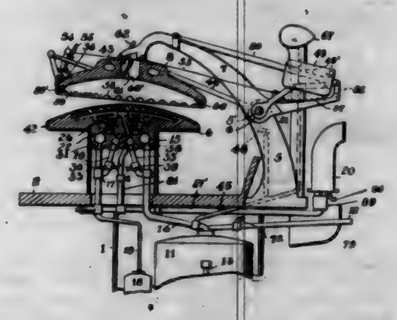


1,538,074. TYPEWRITING MACHINE. JOHN A. WHERRY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 19, 1921. Serial No. 453,804. 23 Claims. (Cl. 197—127.)

1. A collating device including a table, and superimposed sheet-clamping and aligning members arranged on the sheet-guiding side of the table, and movable away therefrom, said members having their inner edges beveled so as to facilitate the insertion of the side edges of work-sheets.

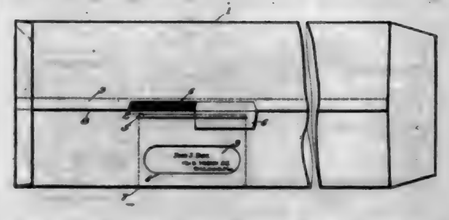
1,538,075. VANE PUMP. SVEN GUSTAF WINQUIST, Gottenborg, Sweden. Filed Feb. 27, 1923. Serial No. 621,573. 6 Claims. (Cl. 103—136.)

1. In a vane pump comprising a stator and a rotor and working vanes movable radially or substantially radially in one of said parts, the other part being provided with one or more working surfaces co-operating with said radially movable vanes, and means comprising springs and one or more movable weights acted on



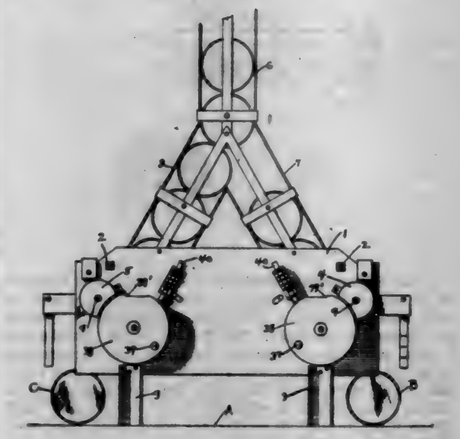
by said springs and by centrifugal force for positively limiting the radial movement of said vanes in the direction towards the said working surfaces.

1,538,076. VULCANIZATION OF RUBBER. JOHN YOUNG, Caldwell, N. J., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed July 8, 1922. Serial No. 573,743. 15 Claims. (Cl. 18—53.)



1. The method of promoting the vulcanization of rubber which comprises incorporating with the rubber a small amount of a mixture of ditolyl substituted guanidines including di-orthotolylguanidine and diparatolylguanidine in which the orthotolylguanidine predominates together with other compounding ingredients and vulcanising the resulting mixture.

1,538,077. PRESSING AND CLEANING APPARATUS. JOHN J. ZUBUK-ZUBINSKY, McKeesport, Pa. Filed Jan. 23, 1923. Serial No. 614,412. 2 Claims. (Cl. 68—9.)

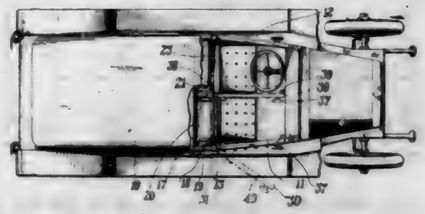


1. An apparatus for the purpose set forth comprising a support, a pressing buck mounted thereon, a rocking frame arranged over the buck and pivotally supported intermediate its ends on said support and with the pivot therefor rearwardly of the buck, a press head carried by the forward end of the frame and co-acting with said buck, a bar connected to and extending from near the forward end to the rear end of the frame, and a weight slidably mounted on said bar and means for shifting the same forwardly thereon to provide a pressure applying means for the head when co-acting with the buck and rearwardly thereon to form a counter-balance to hold the frame upwardly when the head is shifted by the frame from co-acting position, said bar being arranged at the longitudinal center of the frame.

1,538,078. ENVELOPE. STEPHEN S. ADAMS, St. Louis, Mo. Filed May 9, 1922. Serial No. 559,528. 5 Claims. (Cl. 229—72.)

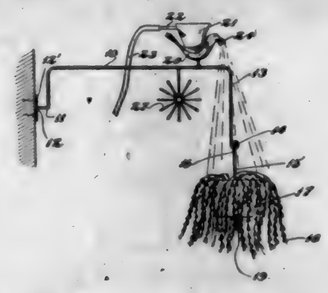
1. In combination, an envelope having in one face a relatively short slit parallel with and spaced from one folding line of the envelope, a removable plane enclosure substantially smaller than the envelope, extending through the slit and having one edge seated in said folding line, and means on said face for engaging the opposite edge of said enclosure to hold the latter against movement from the fold through the slit.

1,538,079. CAN-MARKING MACHINE. JOHN ALBERTOLI, San Francisco, Calif. Filed Jan. 19, 1924. Serial No. 687,319. 9 Claims. (Cl. 101—35.)



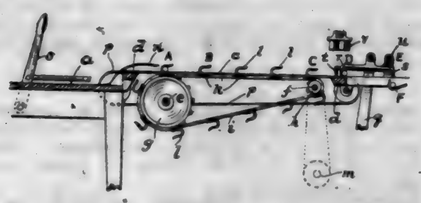
1. A mechanism for making marks on cans comprising a frame, a plurality of marking rollers mounted on the frame, means for rotating the rollers, means for conducting cans to the frame, means on the frame between which and the rollers the cans engage and which guide the cans downwardly when the rollers are rotated and means for selectively moving any one of the several rollers into and out of position to engage and mark the cans.

1,538,080. MOTOR VEHICLE. JOSEPH A. ANGLADA, Jenkintown, Pa., assignor to Electrocar Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 16, 1922. Serial No. 544,847. 1 Claim. (Cl. 296—37.)



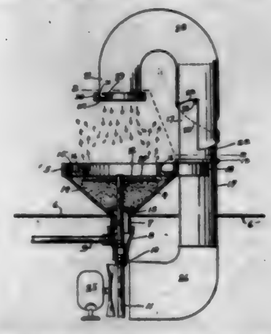
In a motor vehicle, a body, hinge members thereon, a door having complementary hinge members adapted to engage and coact with the body hinge members, said hinge members being so constructed and arranged that the door can be lifted out of the body hinge members when the door is swung on its hinges to open position, a front compartment in the vehicle, a driver's seat in said

compartment and extending across a portion thereof, a folding seat disposed in the remaining portion of the compartment and arranged to swing rearwardly into the rear wall of the compartment, and hinge members cor-



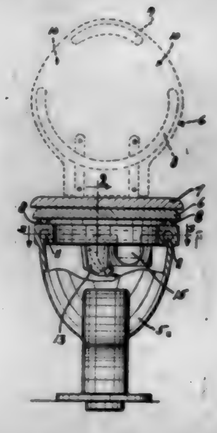
responding to the body hinge members within the vehicle and disposed in the front vehicle compartment adjacent the driver's seat, for supporting the door when detached from the body.

1,538,081. SUSPENSION FLOWERPOT. ALBERT BANE, Glenavon, Saskatchewan, Canada. Filed May 18, 1923. Serial No. 639,822. 1 Claim. (Cl. 47—35.)



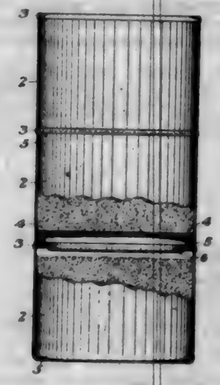
A suspension flower pot, comprising a support adapted to be secured to and project outwardly from a fixture, said support having a depending outer terminal formed into a hook, a receptacle for flowers or the like having a stem projecting vertically therefrom and terminating in an eye to removably and swingingly engage said hook, and means carried by and rigid with said support to receive water from a suitable source of supply, said means being formed to deliver the water onto the flower in the pot.

1,538,082. CIGAR MACHINE. MEYER BAYUK, Jenkintown, Pa. Filed Oct. 17, 1921. Serial No. 508,095. 6 Claims. (Cl. 131—39.)



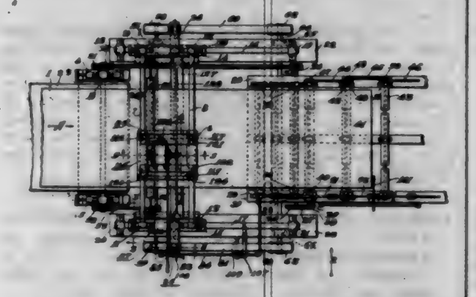
1. In a cigar making machine, the combination with bunch transferring devices, of a bunch maker's table, a conveyor extending from the table to the transferring devices having a plurality of spaced sets of bunch holding hooks, the hooks of each set being spaced apart to permit the transferring devices to engage the bunches between the hooks to withdraw the bunches from the hooks and feed them forward, and means for moving the conveyor.

1,538,083. OIL BURNER. THOMAS A. BIGGS, Sioux City, Iowa. Filed Nov. 3, 1923. Serial No. 672,678. 8 Claims. (Cl. 158—96.)



7. In an oil burner, a container, and an air flue including a rotatable vertical section at the side of the container, a return-bend section having one end portion telescoping the vertical section and the other end directed toward the enclosure, the telescoping end of one of said sections being helical, and a projection on the telescoping end portion of the other section engaging said helical end, whereby rotation of the vertical section raises and lowers the return-bend section.

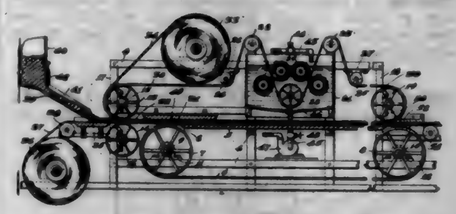
1,538,084. VENTILATED CLOSET BOWL. LOUIS ARTHUR BIRCH, Minneapolis, Minn. Filed Aug. 20, 1924. Serial No. 733,097. 1 Claim. (Cl. 4—72.)



A closet bowl having a perforated water-flushing passage extended in and around its rim portion and provided with an air outlet port opening into the rear portion of the bowl immediately below said flushing passage and at one side of the longitudinal axis of the bowl, said bowl further having a water-flushing nozzle with a discharge passage, the delivery portion of which is located lower down than said air outlet port approximately on the longitudinal axis of the bowl and is obliquely extended so as to direct a flushing stream under the said air outlet port.

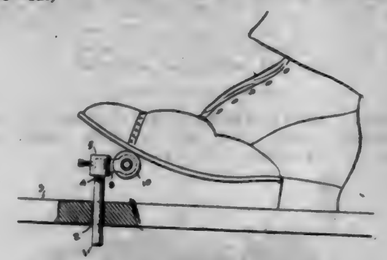
1,538,085. CONTAINER. LEWIS C. BROOKS, Milwaukee, Wis., assignor to The National Paper Can Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 18, 1923. Serial No. 632,840. 3 Claims. (Cl. 220—4.)

1. A container adapted to be stacked with similar containers of the same size, having one face provided with a closure retainer and an opposite face provided with a ridge adapted to lie in the closure retainer of an adjacent container, substantially as described.



1,538,086. MACHINE FOR CUTTING PLASTER BOARD. GEORGE A. BUTTRESS, Los Angeles, Calif., assignor to Buttress Manufacturing Company, a Corporation of California. Filed Nov. 21, 1921. Serial No. 516,768. 8 Claims. (Cl. 143—47.)

1. In a machine for cutting plaster board, means for cutting a strip of plaster board into lengths while in motion, means for feeding the plaster board to the cutting means, means whereby said means for cutting the plaster board into lengths will be caused to move at the same speed at which the plaster board is traveling which includes an element engaging the front edge of the advancing plaster board, and means for accelerating movement of a length of plaster board severed from the main body of said plaster board to permit said element to engage with the front edge of said board.



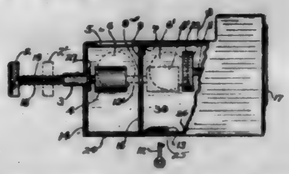
8. In a machine for cutting plaster board, means for advancing a strip of plaster board, means for severing the plaster board transversely, means for advancing the severing means in unison with the plaster board, and means engageable with the front edge of the advancing board cooperating with the means for advancing the severing means to cause said severing means to advance with the board a predetermined distance from the front edge of the board.

1,538,087. PROCESS OF MAKING PLASTER BOARD. GEORGE A. BUTTRESS, Los Angeles, Calif. Filed Dec. 1, 1922. Serial No. 604,283. 14 Claims. (Cl. 154—2.)

1. The process of making plaster board consisting in placing plastic material on an imperforate backing sheet of paper, laying a facing sheet of paper thereover having perforations, advancing the sheets and plastic material between moving endless belts and spaced forming rolls, maintaining a pressure on the formed plaster board after it has passed between said forming rolls so that said plastic material squeezed into said perforations will adhere to one of said belts that is in contact with said perforated facing sheet, further advancing said formed plaster board, and thereafter breaking the contact between said plaster adhering to said belt so as to produce a roughened and uneven surface on said plaster filling said perforations of said facing sheet.

1,538,088. ANTIFRICTION ACCELERATOR PEDAL. EMERSON B. CAMPBELL, Long Beach, Calif. Filed Sept. 11, 1923. Serial No. 662,063. 2 Claims. (Cl. 74—81.)

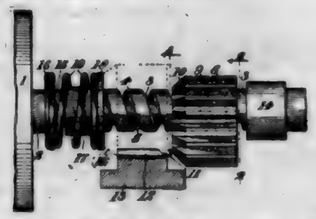
1. An improved pedal for automobile accelerators comprising a body portion provided with means for removably attaching the same to the pedal stem of an accelerator, and means carried by the body portion for supporting a pair of rollers with the upper surface of said rollers disposed above the plane of the body portion.



1,538,089. PROCESS FOR THE PURIFICATION OF PHOSPHORIC ACID. JOHN N. CAROTHERS and ARTHUR B. GERBER, Anniston, Ala., assignors to Federal Phosphorous Company, Birmingham, Ala., a Corporation of Alabama. Filed Mar. 23, 1922. Serial No. 546,162. 2 Claims. (Cl. 23—165.)

1. The herein described method of purifying phosphoric acid in highly concentrated form, which consists in chemically treating the acid to remove the major portion of the impurities contained therein, then aerating the treated acid while at a temperature of approximately 50° C. to remove volatile impurities, then separating the treated acid from the suspended and precipitated solids, then cooling the acid to a temperature at which crystals of phosphoric acid will form, and separating the crystals from the remaining liquids.

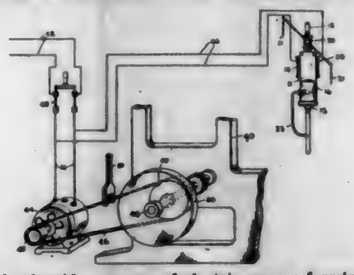
2. A method of purifying phosphoric acid produced in highly concentrated form from smelting operations, which consists in employing chemical treatment to re-



move a portion of the arsenic, lead, lime and fluorine impurities contained therein, then passing air through the acid to remove a portion of the volatile impurities, then removing the suspended solids, then cooling to a temperature at which crystals of phosphoric acid form, and then separating the solid phosphoric acid from the remaining liquid.

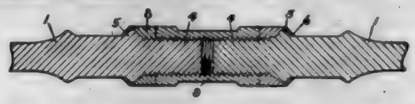
1,538,090. SAVINGS BANK. MENEFEE R. CLEMENTS, South Bend, Ind. Filed July 16, 1923. Serial No. 651,992. 2 Claims. (Cl. 194—84.)

1. In a combination, a base, a housing mounted thereon, a partition forming a deposit chamber, a coin tripping aperture and slot contained in said partition, means for locking and unlocking said deposit chamber, a twenty-four hour clock movement mounted in said housing, an extended winding shaft provided for said clock movement, a cylindrical shaped disk, a slot milled through said disc, said disc being mounted on end of said extending winding shaft, a bushing mounted in back portion of said housing, a small shaft passing therethrough, a slotted cylinder being mounted on inner end of said shaft, a spring being placed on outward end of shaft opposite outward end of said bushing, a winding key mounted upon said shaft holding said spring on said shaft between said bushing and said winding key, said shaft being free to move in a horizontal plane, always remaining at rest in an outward position from said clock movement by the compressed state of said spring mounted between said key and bushing on said shaft.



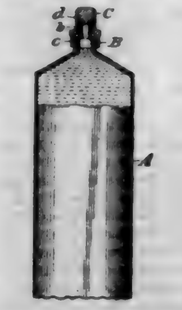
1,538,091. DRIVE MECHANISM. WILLIAM R. COBB, Berkeley, Calif. Filed Mar. 8, 1924. Serial No. 697,751. 12 Claims. (Cl. 74—7.)

1. In combination with a toothed driven member, a rotatable toothed driving member axially movable into and out of engagement therewith, said toothed driving member having a limited radial movement substantially equal to the depth of the teeth of the driving member when disengaged from the driven member to facilitate its engagement therewith.



1,538,092. VALVE. HERBERT COHEN (now by judicial change of name Herbert Cole), New York, N. Y. Filed June 21, 1922. Serial No. 569,798. 2 Claims. (Cl. 84—18.)

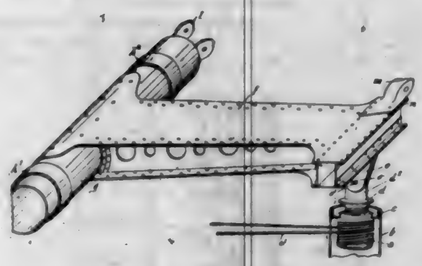
2. The combination with operative mechanism, a power shaft, a belt operatively connecting said power shaft with said mechanism, a fixed pulley and an idle pulley on said mechanism adapted to receive said belt, means adapted to shift said belt from one of said pulleys to the other, and a fluid delivery device; of an automatic control for said fluid delivery device comprising in combination a fluid chamber, an inlet pipe into said chamber, an outlet pipe leading from said chamber to said fluid delivery device, a valve located in said chamber controlling the outlet therefrom and adapted to close said outlet by gravity, a solenoid, a plunger in said solenoid operatively connected with said valve and adapted when said solenoid is energized to be raised and thereby open said valve and when said solenoid is deenergized to fall by gravity and close said valve, an electric circuit leading



to said solenoid, a source of electric energy forming part of said circuit, a switch in said circuit, and devices operatively connecting said switch with said belt-shifting devices so that, when said belt is running upon said fixed pulley said switch shall be closed and said solenoid energized, but when said belt is running upon said idle pulley said switch shall be open and said solenoid deenergized.

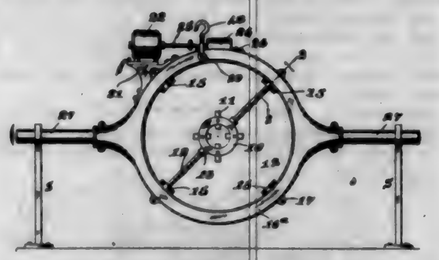
1,538,093. SUCKER ROD. DUDLEY R. DALE, Toledo, Ohio, assignor to The S. M. Jones Company, Toledo, Ohio, a Corporation of Ohio. Filed May 26, 1923. Serial No. 641,862. 2 Claims. (Cl. 287—117.)

1. In an oil well jointed sucker rod, each section of the sucker rod having threaded pins, and enlarged portions forming shoulders, sleeves surrounding the base of the pins and having feathered edges crimped down over the shoulders to prevent rotation of the sleeves relative to the pins, means for connecting the sections together, the said sleeves having a diameter greater than the other parts of the sucker rod and forming bearing parts for the sucker rod.



1,538,094. CONTAINER AND CLOSURE THEREFOR. WALTER T. DAVIS, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Apr. 4, 1923. Serial No. 629,846. 2 Claims. (Cl. 221—60.)

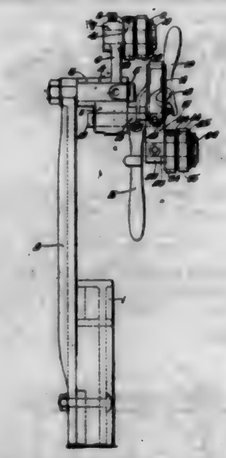
2. A container provided with an integral discharge neck having a screw-threaded end portion adapted to be secured directly into an opening through which it may



be desired to discharge the contents of the container and having a screw-threaded portion adjacent thereto of greater diameter, and a cap internally screw-threaded for cooperation with said screw-threaded neck-portion of greater diameter and constructed to cover said end portion without engaging the threads thereof, substantially as described.

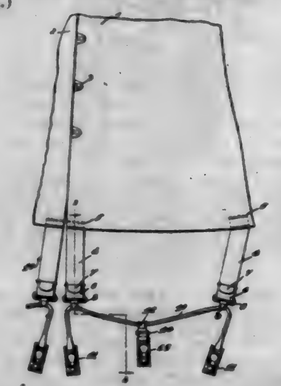
1,538,095. CONTROLLING DEVICE FOR VARYING THE INCIDENCE OF AEROPLANE STABILIZERS. EMILE DEWOITINE, Toulouse, France. Filed July 8, 1924. Serial No. 724,854. 4 Claims. (Cl. 244—29.)

1. A controlling device for varying the incidence of the stabilising planes in aviation apparatus, comprising a nut revoluble in the frame of the apparatus, means for controlling the rotation of the said nut, a screw disposed within the said nut, a lever pivoted at one end to the aviation apparatus, means connecting the other end of the said lever with the said screw, and means securing the said lever to the stabilizing planes.



1,538,096. PORTABLE POWER ATTACHMENT FOR HAND STOCKS AND PIPE DIES. STEPHEN CORNELIUS DOBBRING, Houston, Tex. Filed July 1, 1922. Serial No. 572,244. 2 Claims. (Cl. 10—89.)

2. In combination, a ring gear, means on the inner periphery of said gear to which spoke-like members may be secured, a housing within which said gear is mounted, said gear having inwardly directed opposed ledges which are received within annular grooves in the sides of the gear, means for driving said ring gear including a gear meshing with the ring gear, and extending through the housing, said housing having radial arms by means of which the same may be supported.

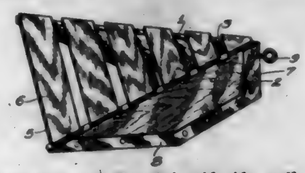


1,538,097. HARNESS MECHANISM FOR LOOMS. CLARE H. DRAPER, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed June 3, 1924. Serial No. 717,527. 4 Claims. (Cl. 139—87.)

2. A harness mechanism for looms having, in combination, a support, a main lever pivotally mounted on the support, one arm of which carries a plurality of harness strap attaching means, another lever pivotally mounted on the arm of the main lever and carrying a plurality

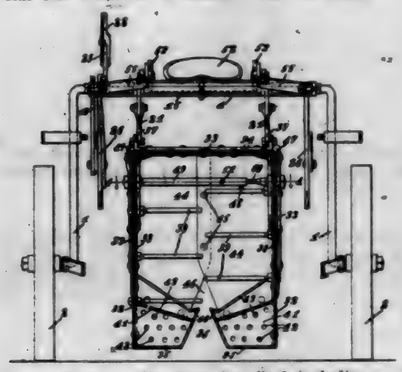
of harness strap attaching means, one of said levers having means by which it may be broken for leveling the harnesses.

1,538,098. HOSE SUPPORTER. ELWOOD P. DUFFY, Arvada, Colo. Substitute for application Serial No. 178,619, filed July 5, 1917. This application filed Mar. 13, 1923. Serial No. 624,751. 1 Claim. (Cl. 241—1.)



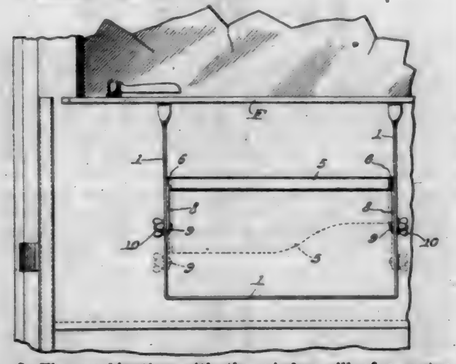
The combination with a corset; of depending elastic straps attached to the lower edge of the corset near the front and at a point spaced rearwardly therefrom on both sides of the corset, guides carried by the lower ends of said straps, two flexible elements freely slidable longitudinally in said guides and arranged at opposite sides of the corset, hose engaging means carried by the ends of said flexible elements to engage the stockings at the front and rear thereof, a rider slidable on each flexible element between said guides, and hose engaging means carried by the riders to engage the sides of the stockings.

1,538,099. DITCHING PLOW. FLOYD E. DUNCAN, Escondido, Calif. Filed Sept. 28, 1922. Serial No. 591,091. 5 Claims. (Cl. 37—98.)



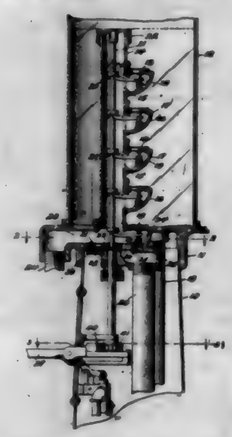
1. A ditching plow, including side wall members secured together at their head end and forming a substantially acute angle with each other, said side wall

members being cut away at an angle at their lower rear portion forming upwardly inclined rear lower scraping edges whereby said ditching plow is supported entirely



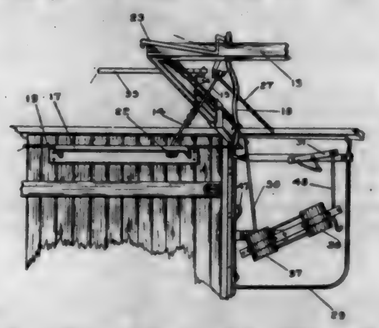
on the front lower portions of said side wall members, and a platform secured to said side walls at their upper portions.

1,538,100. BOLL-WEEVIL CATCHER. JOHN H. DYKES, Donalsonville, Ga. Filed Sept. 26, 1924. Serial No. 740,074. 2 Claims. (Cl. 43—133.)



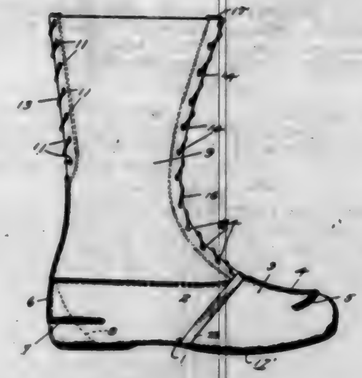
1. A device of the class described including a wheel supported frame, a vertically adjustable housing top supported from the frame, side walls hingedly connected to the sides of the top and depending therefrom, a telescopic connection between the upper portions of the walls for holding said walls fixed relative to each other at predetermined angles, troughs extending longitudinally along the inner sides of the side walls forming a plant receiving space therebetween, and agitating fingers extending toward each other from the side walls and above the respective troughs.

1,538,101. ARMREST. WEIR B. EBBELY, Mechanicsburg, Pa. Filed June 20, 1924. Serial No. 721,333. 2 Claims. (Cl. 296—1.)



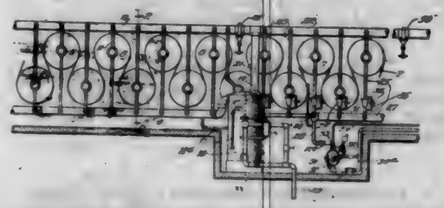
2. The combination with the window sill of a motor vehicle and a finishing strip mounted thereon, of a frame having out-turned terminals clamped between and concealed by the window sill of the finishing strip, an arm rest pivotally mounted between the sides of the frame and foldable downwardly between said ends and substantially flush therewith, each of said ends having a longitudinal slot provided, at its upper end, with a downwardly inclined extension, links pivotally connected to the ends of the arm rest, and clamping means carried by the links and slidable within the slot, said means being movable downwardly within the extension to support the arm rest in active position, said links being movable downwardly to position between the sides of the frame and the ends of the arm rest when said arm rest is folded into the frame.

1,538,102. GASOLINE-DISPENSING DEVICE. CHARLES S. FAIR, Fort Wayne, Ind. Filed Oct. 23, 1922. Serial No. 596,471. 7 Claims. (Cl. 221—100.)



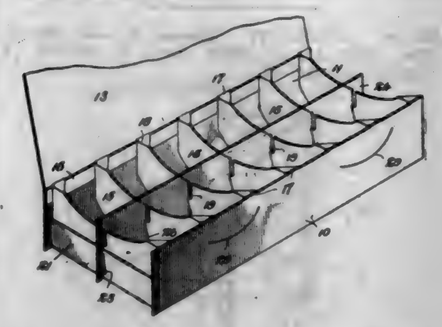
1. In a liquid dispensing apparatus, in combination, a container, a dispensing pipe, a vertical conduit within said container having its lower end in communication with said dispensing pipe, a series of vertically opening poppet valves supported by and controlling openings in said conduit, and single means for successively opening said valves.

1,538,103. AUTOMATIC DOOR OR GATE. MARTEN FANDERS, Diller, Nebr. Filed Apr. 20, 1923. Serial No. 633,491. 18 Claims. (Cl. 268—9.)



1. In combination with a swinging garage door having a latch for holding the door latched in closed position, a spring secured to the outside of the door and to the garage and normally exerting its tension in a door closing direction, a second spring secured to the door and to means for tensioning it to open the door, and means whereby the pressure of the automobile on the outside of the door first unlatches said latch and then actuates said tensioning means to cause said second spring to open the door.

1,538,104. MOCCASIN. JOSEPH F. FOSTER, Jackman, Me. Filed Mar. 20, 1923. Serial No. 626,827. 1 Claim. (Cl. 36—11.)

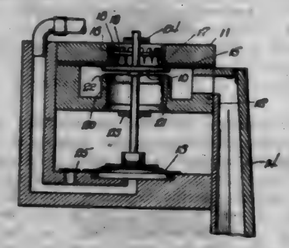


A moccasin of the class described having a sole and upper formed of a single blank of material, cut and stitched together to provide a T-shaped seam in the rear above the heel portion and a longitudinal and two lateral oppositely disposed seams on the vamp portion thereof, quarters having their lower edges stitched to the top edge of the upper of said moccasin, said quarters having their rear edges secured together for a short distance upwardly from the upper of the moccasin, the remaining portions of the rear edges and the front edges of said quarters being open, means for connecting the opened back and rear edges of said quarters, and a strip encircling the sole and upper portions of said moccasin and extending over the vamp portion thereof, as and for the purposes described.

1,538,105. HEATING AND DRYING APPARATUS. WILLIAM B. FULTON, Middletown, Ohio. Filed May 6, 1921. Serial No. 467,343. 13 Claims. (Cl. 34—48.)

13. A drier system, comprising a primary group of driers, a secondary group of driers, means for supplying steam under pressure to the secondary group, means for discharging water of condensation from the secondary group and for conducting steam and air from the secondary group to the primary group, a receiver connected to said means, and a valve so located that steam is supplied to all of the secondary driers before it reaches said valve and that it controls the pressure of the steam passing to all of the driers of the primary group, thus being adapted to maintain a difference in pressure between the secondary group and the primary group.

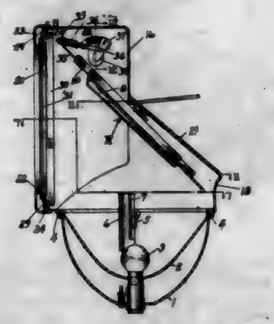
1,538,106. EGG CARTON. GEORGE S. GAYLORD, Menasha, Wis., assignor to Menasha Printing & Carton Co., Menasha, Wis., a Corporation of Wisconsin. Filed Dec. 21, 1923. Serial No. 681,910. 5 Claims. (Cl. 229—29.)



1. A carton including sides, a bottom, a plurality of transverse partitions and an end extension on the bottom all formed from a single blank, a separately formed longitudinal partition interfitting with said transverse partitions to divide the carton into cells, and a single means on said longitudinal partition having interlocking engagement with one of said transverse partitions and with said end extension.

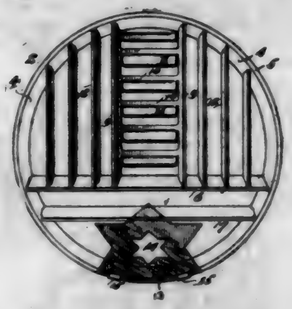
1,538,107. PISTON RING AND METHOD OF MAKING THE SAME. HUGO A. GILLES, Elmhurst, N. Y. Filed Dec. 31, 1921. Serial No. 526,139. 13 Claims. (Cl. 74—109.)

5. A unitary concentric piston ring split to permit expansion having an eccentric groove in the inner surface thereof, and a relatively soft metallic packing which is forced into said groove in such manner that it is frictionally held therein throughout its length.



1,538,108. VALVE-SEAT CONSTRUCTION. JAMES CLARKE HAGEY, Chicago, Ill., assignor to The Cable Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1923. Serial No. 612,255. 7 Claims. (Cl. 251—167.)

2. A valve-seat construction comprising a port-member having a valve-port therein, a facing of sheet material secured to said port-member, said facing having a valve-seat portion outside and surrounding said valve-port and a plurality of tongues extending from said



valve-seat portion into said valve-port, and means for holding said tongues pressed against the wall of said valve-port, said means comprising a member having an annular portion for engaging said tongues.

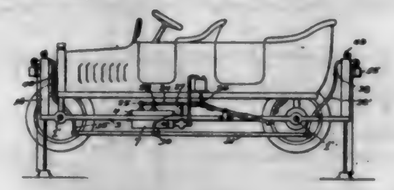
1,538,109. HEADLIGHT. BERNARD HANSON, Martin, Ohio. Filed Apr. 11, 1923. Serial No. 631,277. 6 Claims. (Cl. 240—41.)

6. In a headlight, a source of light, a main reflector for vertically projecting light rays from said source and a second reflector over the main reflector and including a substantially elliptical member having a flat faced marginal portion to receive and project the outer light rays received from the main reflector in a horisontal beam and having a central portion the opposite sides of which are curved outwardly and meet in a line disposed along the longitudinal axis of the second reflector to divide the central rays received from the main reflector and to spread same laterally to opposite sides of the headlight, the ends of the line of the curved portions terminating at the ends of the central portion.

1,538,110. AUTO HEADLIGHT-DEFLECTOR DEVICE. CHARLES A. HARTMANN, Newark, N. J. Filed Feb. 16, 1924. Serial No. 693,278. 2 Claims. (Cl. 240—48.4.)

1. In a headlight deflector construction, a ring-like body, horizontal deflecting strips extending across said body in spaced relation to the lower point thereof and disposed forwardly at a downward incline, vertically disposed deflecting strips extending upwardly from the upper one of said horizontal strips and having their upper ends anchored to said body, the last-mentioned horizontal strip being positioned below the center of the space enclosed by the ring-like body, and horizontal deflector strips extending between certain of said vertical strips and disposed in spaced relation to each other from a point adjacent the upper point of said body to a point adjacent the upper horizontal strip.

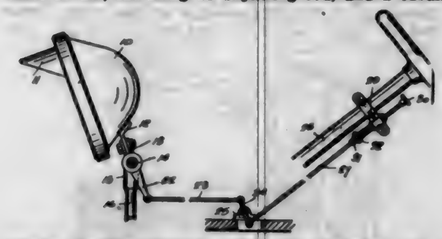
1,538,111. ABRASIVE ARTICLE. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Sept. 29, 1923. Serial No. 665,724. 3 Claims. (Cl. 51—279.)



1. An abrasive article consisting of abrasive grains united by alumina cement composed substantially of mono-calcic aluminate.

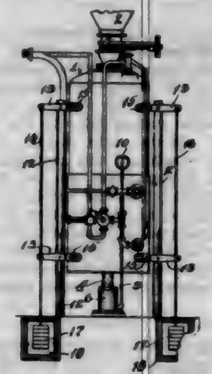
1,538,112. CARRYING CASE FOR MACHINE-GUN BARRELS. WERNER CHRISTIAN LARSEN HAUBROE, Copenhagen, Denmark. Filed Sept. 8, 1924. Serial No. 735,549. 1 Claim. (Cl. 150—52.)

Carrying case for barrels for machine guns with exchangeable barrel, characterised by a case *a* of leather or other suitable material into which there is inserted a metal tube *b* fitted at both ends with an outwardly directed flange *c* with holes *d*, each flange being fitted with a collar *e* attached to the case *a*, in the bottom of which several holes *f* are provided, air being free to circulate by way of the holes *d* and *f* whereby the heated barrel inserted in the tube *b* will be cooled.



1,538,113. APPARATUS FOR RAISING VEHICLES. TIRSO GONZÁLES Y HERNANDEZ, Sagua la Grande, Cuba. Filed June 1, 1922. Serial No. 565,173. 5 Claims. (Cl. 138—9.)

1. An automobile jack comprising a frame arranged for attachment to an automobile chassis to be carried thereby, a pneumatic jack mounted on said frame and means including an automobile wheel actuated mechanism to compress air and supply compressed air to the jack.

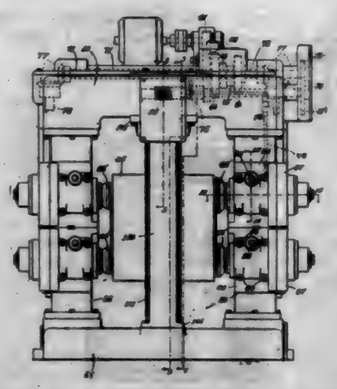


1,538,114. AUTOMOBILE HEADLIGHT. ALFONSO HOFFMAN, Columbus, Ohio. Filed Oct. 13, 1924. Serial No. 743,336. 1 Claim. (Cl. 240—61.)

A device of the character described including a pair of lamp casings, a shaft, means for adjustably clamping the said lamp castings upon the shaft, a pair of supporting uprights having upper heads through which the ends of the shaft are journaled, coacting means carried by the shaft and the said standards to limit rocking movement of the shaft, and connections for rocking the shaft in use, including an adjusting rod, and a tubular

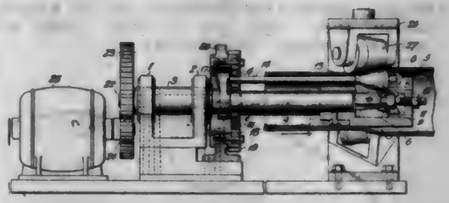
bearing member through which the adjusting rod is extended, having manually regulated means for frictionally gripping the rod to hold the same and the lamp supporting shaft in adjusted position.

1,538,115. WEIGHING APPARATUS FOR POWDERED FUEL. FRITZ HOVING, Chicago, Ill., assignor, by mesne assignments, to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed May 22, 1922. Serial No. 562,854. 5 Claims. (Cl. 265—47.)



1. In a device of the class described, a tank, a series of uprights surrounding said tank levers pivoted upon said uprights, one end of each of said levers being pivotally connected to the tank, weights connected to the other ends of said levers and counterbalancing said tank, and a weighing apparatus for indicating the difference between said counterbalancing and the weight of said tank and contents.

1,538,116. HEATING FURNACE. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 1, 1922. Serial No. 540,217. 13 Claims. (Cl. 263—15.)



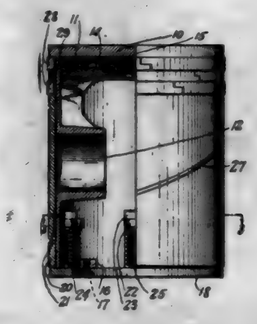
1. The combination, with a heating furnace having uni-directional flow of combustion products therethrough, of means extending transversely thereof for regeneratively heating the air used to support combustion of fuel in said furnace.

1,538,117. DRUM TYPE MILLING MACHINE. JOHN R. JOHNSON, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 10, 1924. Serial No. 698,053. 30 Claims. (Cl. 90—20.)

1. In a milling machine, in combination, a rotary work-carrying drum, cutter spindles located for milling work on opposite ends of the drum, a worm wheel fixed to the drum intermediate its ends and circumscribing its work-carrying portion, a driving worm meshing with the worm wheel, and a protective housing for the worm wheel serving also for taking side thrust thereof.

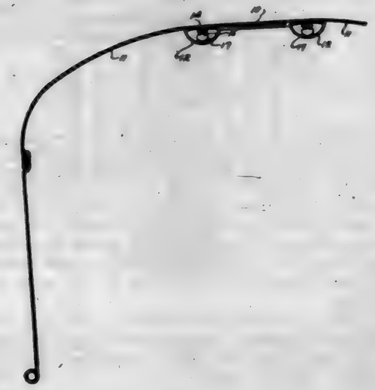
1,538,118. APPARATUS FOR MAKING SEAMLESS TUBES. MORRIS W. KELLOGG, Brookville, N. Y., and EMIL F. HOLINGER, Jersey City, N. J., assignors to The M. W. Kellogg Company, a Corporation of Delaware. Filed Apr. 6, 1923. Serial No. 630,288. 5 Claims. (Cl. 80—13.)

5. Apparatus for making seamless tubes comprising inner and outer rolls for operating upon opposite adjacent surfaces of the wall of a cylindrical blank, and means for positively rotating the inner roll about a stationary axis which is oblique to that of the blank, said rolls having portions of progressively varying diameters, adapted to simultaneously reduce the thickness of said wall and to bend the same to change the inner and outer diameters of the blank in the same radial directions.



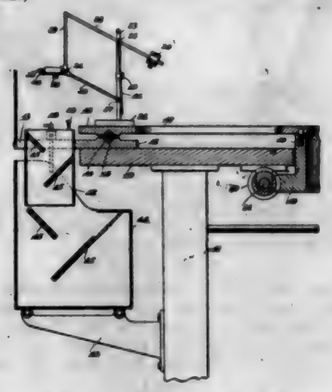
1,538,119. BROOCH. CLIFFORD G. KING, Providence, R. I. Filed June 26, 1924. Serial No. 722,577. 15 Claims. (Cl. 24—150.)

1. A blank for use in the manufacture of pins comprising a member having a portion thereof adapted to be shaped so as to form pin tongue pivoting means, a portion thereof adapted to be shaped so as to form



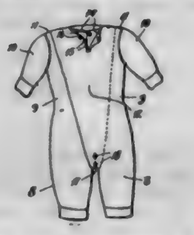
pin tongue point retaining means, and a portion thereof adapted to be shaped to form bridge means adapted to cooperate with the pin tongue to firmly retain the pin to the fabric, when the pin is assembled.

1,538,120. PISTON AND PISTON RING. HERMAN KIETNER, Elizabeth, N. J. Filed June 1, 1920. Serial No. 385,699. 5 Claims. (Cl. 74—108.)



1. A piston including a hollow cylindrical body having slots opening through one end thereof and a head formed at the opposite end having an extended annular flange, a sleeve slidable on said body exteriorly thereof and overlying said slots, packing rings disposed between adjacent surfaces of said flange and the end of said sleeve, a ring secured to the end of said body opposite the head and closing the open ends of said slots, and means arranged in said slots between said sleeve and said ring to press said sleeve toward said flange.

1,538,121. HINGED CONNECTION. ROY W. KUMLER, Detroit, Mich. Filed Apr. 11, 1923. Serial No. 631,278. 7 Claims. (Cl. 16—128.)

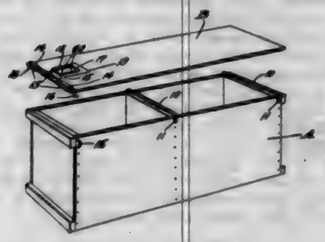


1. In a hinged connection, in combination, two panels hinged together to permit swinging movement of one panel relative the other, said panels having in-turned edges adjacent the hinge joint, and yieldable means engaging said panels at the joint to exert pressure thereon to hold them apart.

1,538,122. WEIGHING AND SORTING MACHINE. JOHN C. KURTZ and JOSEPH J. MCCABE, Rochester, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 2, 1922. Serial No. 533,565. 7 Claims. (Cl. 130—32.)

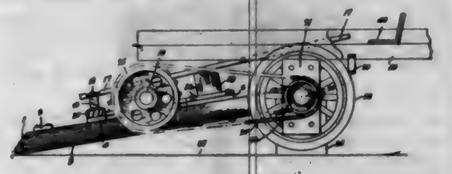
1. In a weighing and sorting machine, the combination of weighing means comprising a material holder, a plurality of pivotally connected links permanently secured at each point of connection and carrying said holder and provided with means for resisting movement of the latter in proportion substantially to the weight of material supported thereby, said linkage being arranged to transmit the weight of the material uniformly in all portions of the material on the holder, a plurality of receptacles provided with means arranged differentially relative to one another for transferring material to said receptacles from said holders in different positions of the latter, and mechanism for moving said weighing means past said receptacles to bring said parts into selective cooperation with said holders.

1,538,123. COMBINATION UNDERGARMENT. MATHILD K. LAMPING, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,475. 2 Claims. (Cl. 2—78.)



2. A combination garment composed of two separate units, each unit comprising a body portion extending partly around the body and over both shoulders and an arm opening and a leg portion, the shoulder portion in each unit having a substantially complete neck opening therein, the front margins of each body portion extending diagonally from the shoulder adjacent the arm opening in the other unit to the crotch.

1,538,124. CRATE-TOP-HOLDING MEANS. CHRISTIAN LARSON, Santa Rosa, Fla. Filed Jan. 15, 1924. Serial No. 686,880. Renewed Feb. 10, 1925. 8 Claims. (Cl. 217—56.)



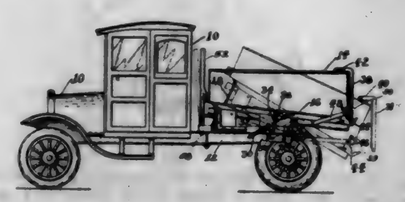
1. Means for holding a cover upon a crate, consisting of retaining members carried by the crate and beneath

which the cover is slidably engaged, staples projecting from the sides of the crate at one end thereof, and a

locking rod journaled transversely of one end of the cover and terminating in hooks engageable within said staples.

1,538,125. WINDING DEVICE. JOHN E. LONG, Havelock, Nebr. Filed Dec. 17, 1923. Serial No. 681,200. 2 Claims. (Cl. 242—85.)

1. In a device of the class described, a frame, a shaft journaled on the frame intermediate the ends of the frame, clutches carried by the shaft, drums journaled on the shaft and having clutches adapted to engage with the clutches of the shaft, the drums being movable on the shaft longitudinally thereof, the drums being adapted to have flexible elements wound about them, an arched support carried by the frame, pairs of rollers journaled in the support, the rollers of the pairs being adapted to have flexible elements extended between them, levers fulcrumed on the frame and extended through the support, and means carried by the levers for shifting the drums longitudinally of the shaft.



1,538,126. TAPPET VALVE. JOHN P. LORENZ, St. Paul, Minn. Filed Apr. 20, 1923. Serial No. 633,436. 7 Claims. (Cl. 123—188.)

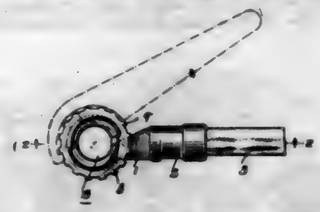
1. In a valve having a stem and a beveled head on said stem, a bearing adapted to cover the beveled surface of said head and a flange formed on said head to surround and engage the outer edge of said bearing.

1,538,127. DUMP TRUCK. ANDREW B. MCKINLEY and ALBERT HURLEY, Louisville, Ky., assignors to Continental Car Company of America, Louisville, Ky., a Corporation of Kentucky. Filed Feb. 16, 1924. Serial No. 693,357. 2 Claims. (Cl. 298—10.)

1. The combination with a motor vehicle having side frame members; of a pair of angle irons supported above said side frame members each with one leg vertical and the other projecting horizontally inward to form guide rails, a dump body having a floor and a pair of supporting sills beneath the floor and running longitudinally of the body, and a pair of supporting and rocker rails each having an upturned forward end se-

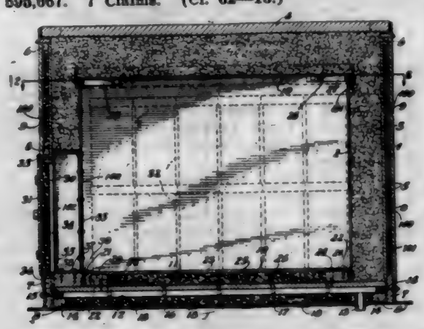
cured to the forward part of a respective sill and an upwardly curved rear rocker portion secured at its extremity to said sill, the intermediate portion of each rocker rail being rectilinear and normally resting flat on the horizontal flange of a respective guide rail.

1,538,128. POWER-CONTROL DEVICE FOR PNEUMATIC-DISPATCH SYSTEMS. JAMES G. MACLAREN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Jan. 28, 1925. Serial No. 5,829. 22 Claims. (Cl. 243—20.)



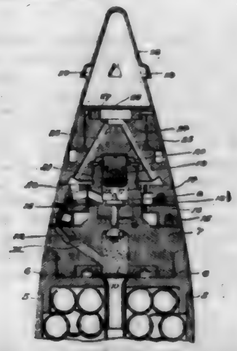
1. Pneumatic dispatch apparatus comprising a conduit and an exhauster connected therewith, a controlling valve located in the conduit, a minimum flow of air through the conduit being permitted when the valve is in closed position, a pneumatic exposed at one side to the pressure obtaining in the conduit and permanently exposed at the opposite side to atmosphere pressure, said pneumatic being adapted to open the air controlling valve when the pressure within the conduit is reduced due to the checking of said minimum flow by introducing a carrier into the conduit, and means responsive to increased flow of air through the conduit such as occurs when the carrier is discharged for equalizing the pressure upon opposite sides of the pneumatic to permit the valve to close.

1,538,129. BATTERY TERMINAL. THEODORE CARL MASTERS, New York, N. Y. Filed Jan. 12, 1922. Serial No. 528,784. 8 Claims. (Cl. 173—269.)



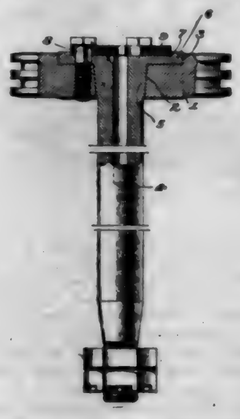
1. A battery terminal which comprises a split sleeve to be placed over a battery post, cam-shaped outer walls

on said sleeve, a collar, and cam-shaped inner walls on the collar to engage with the walls of the sleeve when



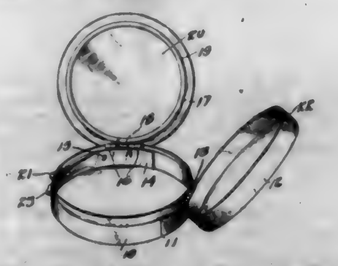
the collar is placed thereon to clamp the sleeve on the post when the collar is moved on the sleeve in a given direction.

1,538,130. REFRIGERATING TANK. FREDERICK MEYER, Buffalo, N. Y. Filed Oct. 19, 1922. Serial No. 595,667. 7 Claims. (Cl. 62—13.)



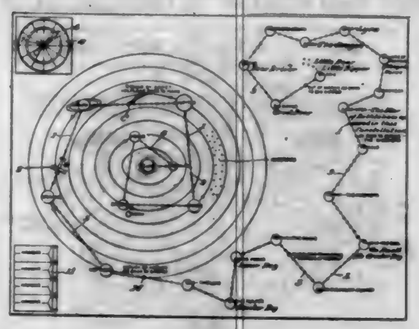
1. A refrigerating tank comprising a casing, an ice cream receptacle enclosed therein, an ice chamber being formed by the walls of said casing and receptacle, said ice chamber having a perforate bottom which provides support for said receptacle, a supporting element secured to said casing, a drip pan arranged below said bottom, and a frame secured to said supporting element and serving for the attachment of said drip pan and the support of said bottom.

1,538,131. TIME FUSE. ALTEN S. MILLER, Baltimore, Md. Filed June 25, 1924. Serial No. 722,369. 6 Claims. (Cl. 102—36.)



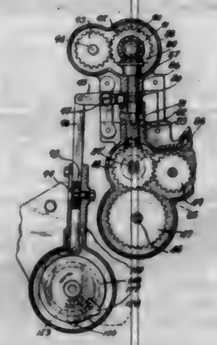
5. The combination of a shell having an explosive charge; a body member swiveled on said shell; a time powder train mounted to turn with said body member; a concussion primer mounted in said body member and arranged to ignite the powder at the beginning of said train; and a second timing member including a second time powder train adjustable relatively to said shell and to said body member, and serving in a given adjustment relatively to the shell to transmit flame to said charge directly from chosen points in the length of the first train according to the concurrent relative adjustment of the body member thereto, and serving in a given adjustment relatively to said body member to transmit flame to said charge from the end of said first train through chosen lengths of the second train according to the concurrent adjusement of the second timing member relatively to the shell; and pressure regulating means controlling the discharge of the gases evolved by the trains when burning.

1,538,132. PISTON. BLYTHE J. MINNIS, Watertown, N. Y., assignor to The New York Airbrake Company, a Corporation of New Jersey. Filed Jan. 16, 1925. Serial No. 2,823. 3 Claims. (Cl. 74—108.)



1. In combination, a piston head having an axially disposed tapered opening extending therethrough, and likewise having a recess formed in that face adjacent the larger portion of said tapered opening; a piston rod having a tapered neck fitting within said tapered opening, and a laterally extending head seated within the recess; and means for securing the said heads together.

1,538,133. VANITY CASE. SIMON MORRISON, Brooklyn, N. Y. Filed Mar. 8, 1924. Serial No. 697,840. 6 Claims. (Cl. 132—83.)

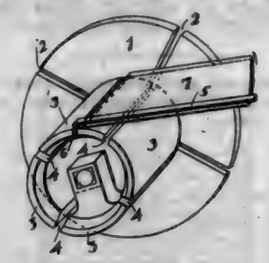


1. In a vanity case, a box having a cylindrical wall, a cover hinged to one side of the box, an arcuate support lying against a part of said wall, an annulus hinged to the support approximately 90° from said cover, and a mirror on said annulus, substantially as set forth.

1,538,134. GAME. CHARLES S. MUIR, Chevy Chase, Md. Filed Dec. 23, 1922. Serial No. 608,720. 4 Claims. (Cl. 273—134.)

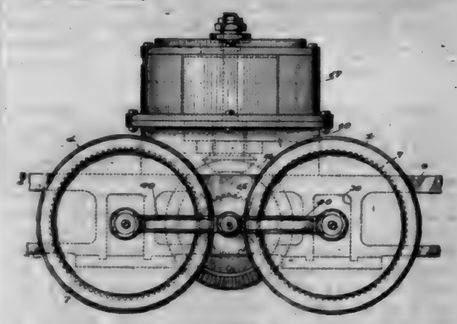
2. A game including a diagram of celestial bodies extending continuously from the celestial body nearest the starting-point, as the sun, thence to the next nearest celestial body, and finally to the most remote body, means for indicating the player's move, and a movable object adapted to be moved to the place defined by the indicating device.

1,538,135. CONVEYING MACHINE. CHARLES H. NITSCH, Logan, and THEODORE A. FEDERWITZ, Nicetown, Pa., assignors to Stokes & Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Dec. 2, 1921, Serial No. 519,418. Divided and this application filed July 9, 1923. Serial No. 650,200. 16 Claims. (Cl. 198—76.)



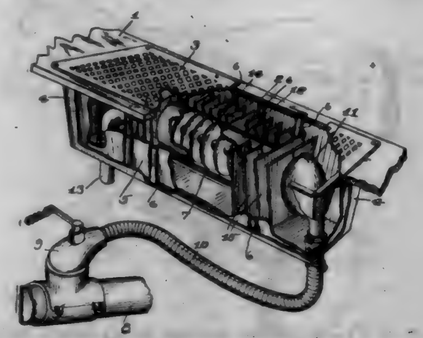
1. In an apparatus of the class described, means for conveying articles from an article receiving to an article delivering station, means for intermittently operating the conveying means to provide therein periods of rest or dwell and periods of activity or motion, and means to inversely vary the duration of the periods of dwell with respect to the duration of the periods of motion.

16. In apparatus of the class described, a conveyer, means to move the conveyer with alternating periods of movement and rest, means to inversely vary the relative duration of such periods, and means to drive the conveyor moving means at varying speeds.



1,538,136. METHOD OF WINDING A COIL OF WIRE. WILLIAM A. PRENTISS and HUGO POSTSCH, Holyoke, Mass. Filed Nov. 25, 1924. Serial No. 752,252. 9 Claims. (Cl. 242—25.)

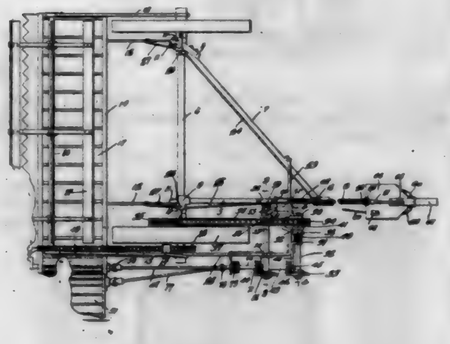
1. The method of forming a coil of wire which consists in temporarily connecting the inner end of the coil to the hub of a winding spool, then inserting a flexible member beneath the inner end, then rotating the spool to wind the coil onto the spool and simultaneously



wrap the flexible member about the hub of the winding spool, hereby the opening of the finished coil is provided with a lining.

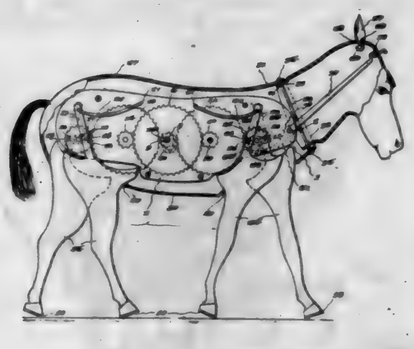
1,538,137. ELECTRIC LOCOMOTIVE. JOHN PAUL SHAMBERGER and CLARENCE H. SLATTON, Omaha, Nebr. Filed Nov. 20, 1923. Serial No. 675,856. 8 Claims. (Cl. 105—109.)

1. In an electric locomotive, a truck including driving axles and a jack shaft located therebetween, a vertically disposed motor on said truck, a train of gearing connecting the armature shaft with one or more of the driving axles, and driving rods connecting the driving axles with the truck frame.



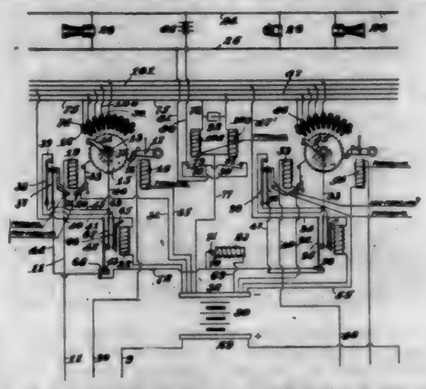
1,538,138. AUTOMOBILE HEATER. CARL SLOOP, Akron, Ohio. Filed June 23, 1923. Serial No. 647,274. 2 Claims. (Cl. 257—136.)

2. An automobile heater, including a double casing having spaced walls, means for drawing air through the space between the walls and into the interior of the



inner casing, a tubular member arranged within the inner casing, radiating fins carried by the tubular member and supporting the same, a spiral baffle centrally arranged in the tubular member, and means for causing the exhaust gases to pass through the tubular member.

1,538,139. HEADER ATTACHMENT. JAMES ARTHUR SPEER, Rosel, Kans. Filed Aug. 24, 1923. Serial No. 659,135. 2 Claims. (Cl. 56—187.)

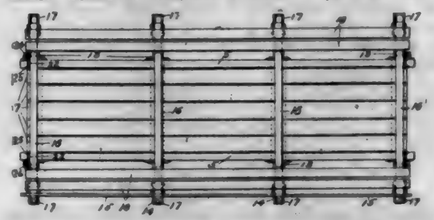


1. In a harvesting machine, a frame, a cutter bar, a conveyor operating at the rear of the cutter bar, a laterally extended conveyor to receive material from the first mentioned conveyor, shafts for imparting rotary movement to the laterally extended conveyor, shafts operating to transmit rotary motion to the first mentioned shafts, sprockets on the last mentioned shafts, clutch members operating to clutch the sprockets to the shaft, a steering wheel for the frame, and means controlled by the steering wheel and having connection with the clutch members for moving the clutch members to their inactive positions when the steering wheel is turned.

1,538,140. WALKING ANIMAL. JOHN SPELLING, Walla Walla, Wash. Filed Nov. 27, 1923. Serial No. 677,283. 10 Claims. (Cl. 46—40.)

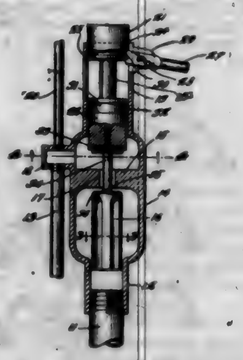
7. In a toy of the class described having limbs, a frame, resilient means for yieldingly and pivotally attaching said limbs to said frame, and means independent of said resilient means for actuating said limbs.

1,538,141. TELEPHONE SYSTEM. ALTON E. STEVENS, Providence, R. I., and MAUDE L. STEVENS administratrix of said Alton E. Stevens, deceased. Filed May 28, 1921. Serial No. 473,469. 18 Claims. (Cl. 179—18.)



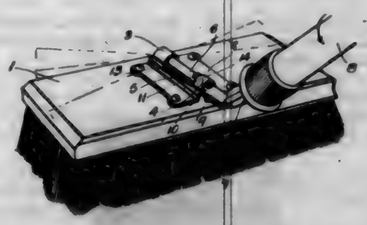
1. In a telephone system, a plurality of substations; means whereby any substation may become connected with any other substation for the purpose of communication; an auxiliary signalling circuit; an auxiliary answering circuit; and means of telephonic communication between said signalling and answering auxiliary circuits.

1,538,142. APPARATUS FOR SUPPORTING AND MANIPULATING POWER DRILLS. MICHAEL P. STRETAUSKY, Wilkes-Barre, Pa. Filed Aug. 14, 1924. Serial No. 732,106. 6 Claims. (Cl. 255—51.)



1. The combination of means for supporting an air drill including a table on which the drill is adapted to be supported, said table having at one end a member adapted to be shifted longitudinally thereof, and means for shifting said member, comprising a lever pivoted thereto and extending transversely of the table.

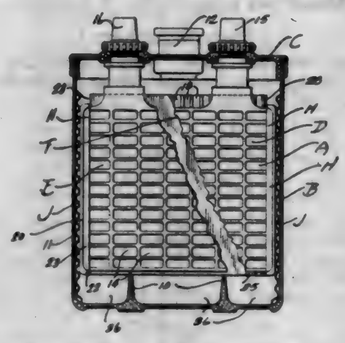
1,538,143. COMBINATION STOCK AND HAY RACK. JULIUS J. STROMBERG, Buffalo, Minn. Filed June 30, 1923. Serial No. 648,793. 5 Claims. (Cl. 296—6.)



1. The combination with the side boards of a rack and stake pockets arranged thereon, of an auxiliary rack having transverse cross members adapted to rest on said side boards, and means for detachably securing said cross members to said stake pockets.

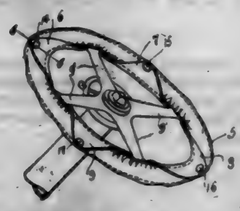
1,538,144. VALVE. STEPHEN STUCKY, Anniston, Ala., assignor of five-eighths to Joseph Saks, Anniston, Ala. Filed Apr. 12, 1924. Serial No. 706,150. 2 Claims. (Cl. 137—104.)

1. In combination, a valve casing having an enlarged central portion, a partition arranged therein and dividing said casing into upper and lower compartments, said partition having a central opening, a hollow extension projecting laterally from the casing and communicating with the compartment arranged above the partition, a pipe depending from said extension, an afterfill pipe rising from said extension, a float actuated valve operating within the casing above the partition, a pressure operated valve operating within the casing beneath the partition, and capable of being automatically seated against the partition when the float operated valve has been removed from the casing, and a connection between said valves whereby the latter are reciprocated in unison.



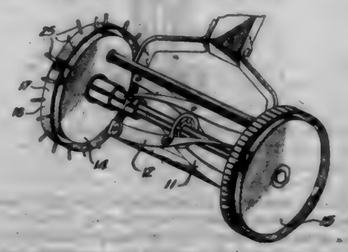
1,538,145. HANDLE CONNECTION. HERBERT M. STURGIS, Kansas City, Mo. Filed Dec. 8, 1923. Serial No. 679,842. 1 Claim. (Cl. 300—3.)

A brush handle connection comprising a socket plate having two end arcuate loops and a center arcuate loop, the latter loop being curved in a direction opposite to the first named loops and spaced from the first named loops to provide slots and a handle member consisting of a stem insertable through an end loop from either end of the plate, and having abutment lugs engaging the outer edge of an end loop upon insertion of said stem therein, and a locking lug engaging the inner edge of said loop to lock the handle and socket plate against axial separation, said slots being provided to receive the locking lug upon insertion of the stem and to permit free relative rotation of the stem and plate.



1,538,146. STORAGE BATTERY. DAVID R. TOOMAY, Braymer, Mo. Filed June 4, 1921. Serial No. 475,053. 8 Claims. (Cl. 136—29.)

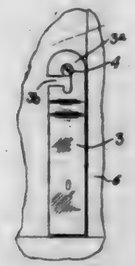
4. A storage battery comprising in combination a cell, a plurality of positive and negative plates, separators of insulating material adapted for interposition between adjacent positive and negative plates and each having vertically disposed ribs to provide passageways between the separators and certain of said plates, and insulating holders to be disposed at the ends of a bank of plates, said holders having upper and lower flanges and longitudinally extending ribs between the flanges and providing



longitudinal pockets, said pockets adapted to receive the vertical edges of said plates, the ribs of said holders adapted to contact with the vertical side edges of said separators to retain the separators against individual movement and effectively partition adjacent plates from each other.

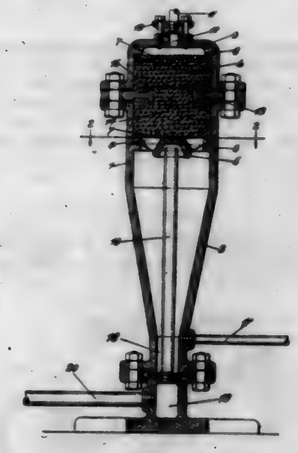
1,538,147. COVERING FOR AUTOMOBILE STEERING WHEELS. HARRY G. TRENCH and WALTER C. OSBORN, Hartford, Conn. Filed Dec. 8, 1923. Serial No. 679,418. 8 Claims. (Cl. 74—33.)

1. A covering device for a steering wheel comprising a piece of fabric material formed with a turned over edge, a strip of elastic material within the turned over part, the opposite edge of the piece having a plurality of substantially V-shaped portions for insertion between the spokes of the steering wheel, and detachable devices for securing the V-shaped portions to the body part of the fabric after being wrapped around the rim of the wheel as described.



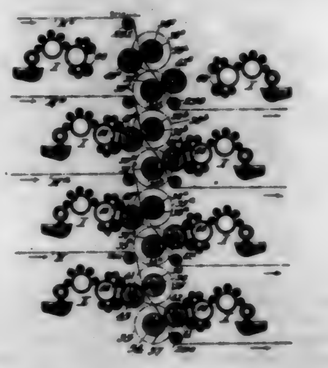
1,538,148. EMERGENCY TIRE. RALPH TRULLINGER, Los Angeles, Calif. Filed Apr. 30, 1923. Serial No. 635,560. 2 Claims. (Cl. 301—44.)

1. In an attachment for a lawn mower wheel, the combination of: a band adapted to be clamped around the periphery of a lawn mower wheel, said band con-



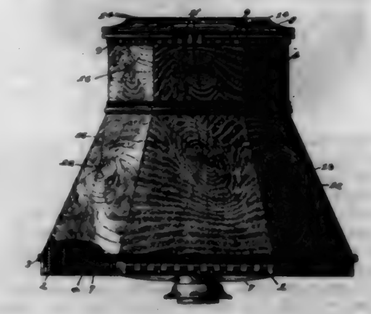
sisting of two overlapping portions adjustably secured together and having a plurality of holes therein, said portions having outwardly turned flanges through which bolts are extensible to constrict the band upon said wheel; and engagement members projecting radially outwardly through said holes.

1,538,149. WINDOW LOCK. FRANK A. WAHLIN, Chicago, Ill. Filed Feb. 9, 1924. Serial No. 691,612. 1 Claim. (Cl. 292—343.)



The combination with a window comprising a pair of relatively slidable sections and a frame therefor, of a stud upon one section spaced a distance from the side of said frame, and a locking device for said sections having a bayonet slot for receiving said stud, and an arcuate upper end of a radius corresponding to the said distance of the said stud from the side of said frame.

1,538,150. OIL SEPARATOR. EDWARD WILSON, St. Louis, Mo., assignor to Wilson Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 12, 1923, Serial No. 624,589. Renewed Apr. 8, 1925. 13 Claims. (Cl. 183—45.)

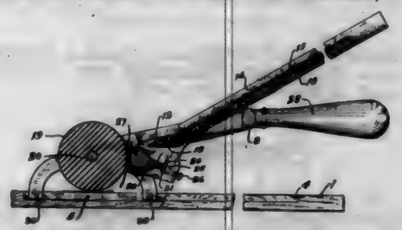


1. An oil separator, comprising a filtering chamber, a compressed fibrous filter in the filtering chamber, a baffle device extending into the filtering chamber, an oil reservoir below the filtering chamber, a pipe extending some distance into the oil reservoir, and means within the oil reservoir preventing oil from entering said pipe.

1,538,151. WEB-PRINTING PRESS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Feb. 7, 1912, Patent No. 1,327,580, dated Jan. 6, 1920. Divided and this application filed Nov. 5, 1917, Serial No. 200,313. Renewed Mar. 20, 1924. 8 Claims. (Cl. 101—224.)

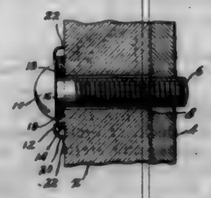
1. In a perfecting printing press, the combination of two printing couples each comprising an impression and a printing cylinder having the plate margins of the printing plates in position to simultaneously pass their respective points of impression, whereby twice in every revolution the web will be free of any impression and at liberty to move longitudinally, said perfecting printing couples being so located that the web passes directly from contact with one impression cylinder to contact with the next impression cylinder in a straight line without deviation therefrom.

1,538,152. LAMP SHADE. HENRY J. YORK, San Francisco, Calif. Filed Apr. 7, 1924. Serial No. 704,792. 4 Claims. (Cl. 240—108.)



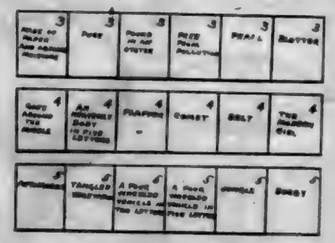
1. As an article of manufacture, a lamp shade comprising a plurality of panels connected together and adapted for mounting around a lighting element, said panel being made from very thin sections of wood cut transversely to a knot, the wood and knot being illuminated to varying degrees throughout the panel in accordance with the density and character of the wood to delineate a design formed by the natural grain of the wood; and an opaque filler applied in checks and cracks occurring in the knot to add to the design.

1,538,153. CIRCUIT CONTROLLER. WILLIAM ZABEL, deceased, late of Swissvale, Pa., by Bertha Zabel, executrix, Albany, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Feb. 3, 1920, Serial No. 356,112, Patent No. 1,484,048, dated Feb. 19, 1924. Divided and this application filed Jan. 31, 1924. Serial No. 689,852. 1 Claim. (Cl. 246—253.)



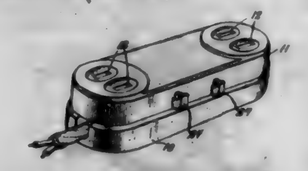
In a circuit controller for operation with a railway switch, a shaft operably connected with said switch, a hub rigidly secured to said shaft and provided with a rack on its periphery, a cam rotatable on said hub, a spindle on said cam, a gear on said spindle meshing with said rack, and means for locking said gear with respect to said spindle.

1,538,154. HECTOGRAPH. JULIAN D. ALEXANDER, Englewood, Colo., assignor to Alexander Film Company, a Corporation of Colorado. Filed Apr. 11, 1924. Serial No. 705,837. 9 Claims. (Cl. 101—133.)



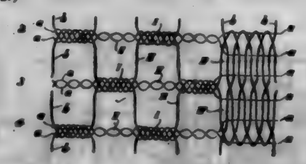
1. A duplicator comprising, in combination, a frame having two substantially parallel arms spaced from each other and connected at one end by means of a transverse member, a roller pivotally connected to the other ends of said arms, the adjacent sides of the arms being each provided with an elongated slot, the plane of the axis of which intersects the roller, a bearing block slidable in each of said slots, a second roller rotatably mounted in said blocks, means comprising a spring operatively associated with each block for producing a force tending to move the last-named roller toward the first-named roller, and a paper support operatively attached to said frame.

1,538,155. PADDED WASHER. LEON J. BARWOOD, Brookline, Mass. Filed Nov. 5, 1923. Serial No. 672,888. 4 Claims. (Cl. 85—50.)



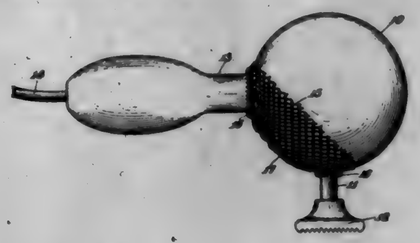
2. A padded ring washer comprising a ring element constituted of relatively hard material and a ring element constituted of relatively soft material, the ring element constituted of relatively hard material having a portion along its opening extending part way only into the opening of the ring element constituted of relatively soft material and embedded in the wall of the said opening of the ring element constituted of relatively soft material, whereby the ring elements are rigidly assembled together side by side in a unitary structure so as to be manipulated as a unit.

1,538,156. CARD GAME. VERNON D. BEATTY, Detroit, Mich. Filed Feb. 19, 1925. Serial No. 10,225. 5 Claims. (Cl. 273—152.)



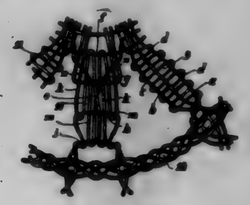
1. A card game, consisting of a selected number of cards, bearing diverse series markings, each series consisting of a plurality of pairs of cards, one of which contains a phrase and the other of which contains a single word synonymous with such phrase.

1,538,157. TABLE-SWITCH RECEPTACLE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1924. Serial No. 707,848. 4 Claims. (Cl. 200—51.)



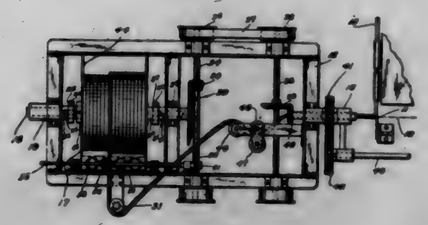
1. A table switch receptacle construction comprising an insulating pedestal having a flat portion for resting on the table, a pair of receptacle contacts for engaging a pair of cooperating contact blades, a pair of binding terminals, switch mechanism for controlling the circuit between said binding terminals and receptacle contacts, and a flat insulating cover for said receptacle contacts above said pedestal having a pair of entrance openings therein affording access to said contacts, said switch mechanism comprising a horizontally slidable manually operable push bar underneath and extending transversely of said cover and projecting therebeyond on both sides.

1,538,158. LACE WITH NETLIKE GROUNDWORK. EMIL BENTE and PAUL STUHLMANN, Barmen, Germany, assignors to MAX HENKELS, New York, N. Y. Filed Dec. 27, 1922. Serial No. 609,267. 4 Claims. (Cl. 96—24.)



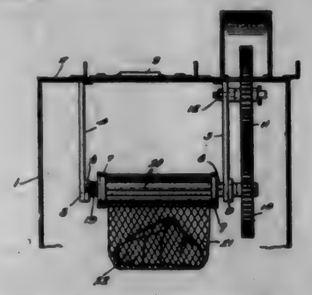
1. The method of producing braided lace with square meshes, which comprises forming spaced warp pillars, connecting said pillars at intervals by transversal bars, the latter consisting of but one thread, meandering between the adjacent pillars and interbraided with the pillar threads and the opposed meander threads at the overlapping sections, and the filling-in of meshes to form spots and various patterns by interlacing the pillar threads in a weftlike manner with a plurality of closely assembled transverse bars.

1,538,159. COOLING DEVICE. ROBERT S. BLAIR, Stamford, Conn. Filed Aug. 19, 1922. Serial No. 582,991. 7 Claims. (Cl. 172—36.)



1. In a device of the class described, in combination, an electrical device adapted to be manipulated by hand, and means detachably secured about the surface thereof adapted to facilitate radiation of heat therefrom.

1,538,160. MACHINE-BRAIDED LACE. EMIL BÖSENBECK, Barmen, Germany, assignor to MAX HENKELS, New York, N. Y. Filed June 5, 1924. Serial No. 718,026. 6 Claims. (Cl. 66—24.)

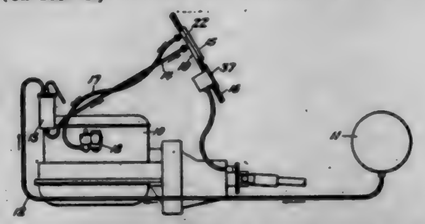


1. Method of producing braided lace wherein open spaces are filled with leaf-like patterns, the leaves extending in a direction substantially perpendicular to the longitudinal axis of the lace, which method comprises the arranging of sets of threads with arch-shaped sections within said open spaces, entering and leaving the leaves at one and the same end, and interbraiding said arch sections in a weft-like manner with transversal threads, the latter running substantially at right angles thereto.

1,538,161. TUBULAR ARMORING MACHINE. STEPHEN W. BOURN, Providence, R. I. Filed Nov. 8, 1923. Serial No. 672,660. 10 Claims. (Cl. 113—35.)

1. In a tubular armoring machine, means for helically winding a metal strip into tubular form, a rotatable reel frame, a reel mounted in said frame to rotate on the rotating axis of said frame, and means for driving said reel to wind the armored tubing thereon.

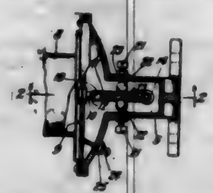
1,538,162. MACHINE FOR DYEING ARTICLES. FRANKLIN BROWN and GEORGE SMITH, Philadelphia, Pa. Filed Mar. 17, 1924. Serial No. 699,901. 1 Claim. (Cl. 8—19.)



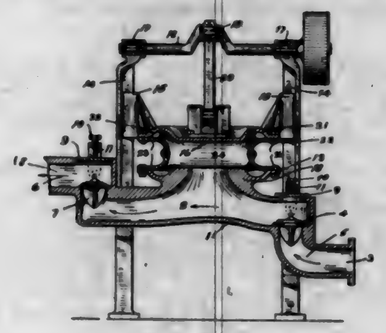
In a dyeing machine the combination of a rotatable member, rods held thereon, containers held on said rods and adapted to receive articles to be dyed, a flange on each end of said rotatable member, said rods being held in said flanges, and a spring pressed plate retaining said rods in said flanges.

1,538,163. INFLATABLE BALL. FRANK A. BURCHNER, Battle Creek, Mich. Filed Jan. 8, 1925. Serial No. 1,242. 5 Claims. (Cl. 273—65.)

1. In a device of the character set forth, comprising two unequal elliptical rubber sections uniformly spaced apart about their margins when the one is placed upon the other, the extended edge of the larger section being doubled upon the edge of the smaller section and the contacting edges of the two sections vulcanized together and an inflating valve operative through one of said sections.



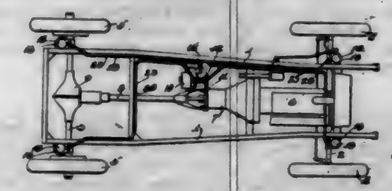
1,538,164. FLOW METER. ROY D. BUELL, Chicago, Ill. Filed Feb. 15, 1921. Serial No. 445,077. 9 Claims. (Cl. 235—1.)



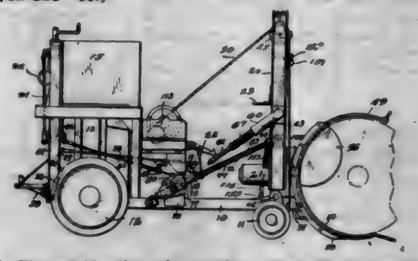
1. The combination with a fuel supply system for the motor of a motor vehicle, of continuously operating fuel-flow indicating means; and stationary means representing various rates of vehicle speed and cooperable with said indicating means whereby the observer, knowing the rate of speed of the vehicle, may ascertain the distance of vehicle travel per unit of fuel-flow.

1,538,165. ALARM OR SIGNAL DEVICE. ROY D. BUELL, Chicago, Ill. Filed Dec. 30, 1921. Serial No. 526,025. 9 Claims. (Cl. 116—138.)

1. In a device of the character described, a housing; a diaphragm mounted therein; a rotor having axial depressions; oppositely disposed adjusting means mounted in said housing; means cooperable with said adjusting means and said depressions for supporting said rotor; a pressure fluid jet mounted in said housing; a plurality of teeth associated with said rotor for vibrating said diaphragm and provided on one face with cup-like depressions for receiving fluid from said jet, and on the opposite face with grooves for permitting the unobstructed passage of said fluid to said cup-like depressions; and means for adjusting said diaphragm with respect to said teeth.

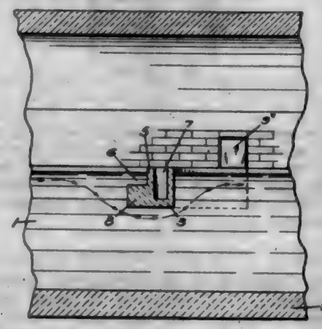


1,538,166. FORCE PUMP. FRED S. CASS, Denver, Colo., assignor to The Rex Iron Works Company, a Corporation of Colorado. Filed Feb. 23, 1924. Serial No. 694,487. 3 Claims. (Cl. 103—150.)



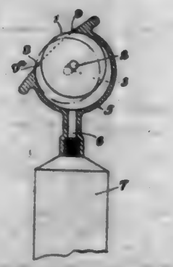
1. A flexible member for pumps comprising a flexible ringlike member of fabric and rubber having a U-shaped cross-section, and provided intermediate its edges with a nonelastic reinforming member.

1,538,167. HYDRAULIC-JACK SYSTEM. WILLIAM G. CHAPPELL, RICHARD S. CHAPPELL, and SYDNEY C. SMITH, Detroit, Mich. Filed Mar. 11, 1922. Serial No. 542,839. 7 Claims. (Cl. 138—9.)



6. The combination with a vehicle, of a plurality of cylinders secured to the axles thereof, a piston in each cylinder, a rod including a base at its outer end secured to each piston and extending through the lower end of its cylinder, means on the vehicle for forcing a fluid into each cylinder to cause the pistons therein to move in either direction, and a single means for controlling the flow of fluid to permit simultaneous or selective operation of the jacks.

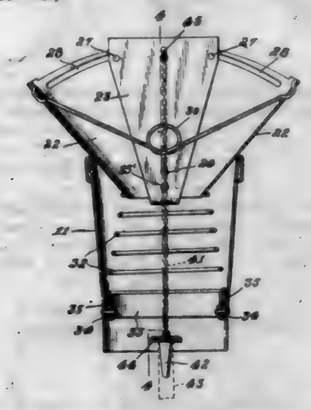
1,538,168. TRUCK FOR HANDLING PAPER ROLLS AND OTHER ARTICLES. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 19, 1921. Serial No. 493,703. 41 Claims. (Cl. 214—65.)



1. The combination of a truck, a substantially vertical boom pivotally connected therewith, power operated means for tipping the boom inwardly and raising a load pivotally supported thereon, and means for rotating the load about an inclined axis into a different position.

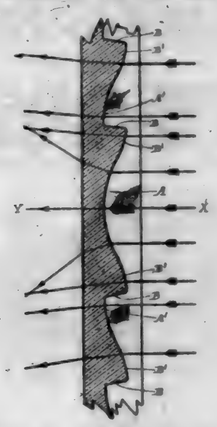
1,538,169. FLOATER FOR GLASS FURNACES. HARRY S. CONKLIN, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,648. 5 Claims. (Cl. 49—61.)

1. A refractory floater for use in a glass tank, the floater having a glass retaining ledge along one side below the glass level.



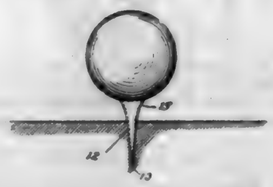
1,538,170. INSTRUMENT FOR THE APPLICATION OF SHAVING CREAM OR THE LIKE. RICHARD CRAMP, London, England, assignor to John Knight Limited, London, England. Filed June 9, 1924. Serial No. 718,824. 1 Claim. (Cl. 91—62.5.)

A device for the application of shaving cream comprising a casing, a slotted bearing in the casing, means for attaching the casing to a collapsible tube, said casing having a passage communicating with the tube, a



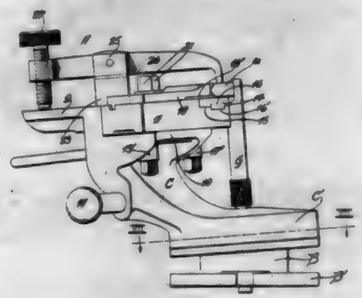
roller provided with trunnions adapted to bear in said slotted bearings, said roller projecting from the face of the casing and adapted to alternately bear against the upper and lower edges of the slot so as to permit the said edges scraping the cream from the periphery of the said roller and alternately leaving a space between the opposite edge of the casing and said roller through which the shaving cream may be ejected to spread on to the periphery of the said roller according to the direction in which the roller is moved over the skin.

1,538,171. FUNNEL. EDWARD L. DAILEY, Berg, N. Dak. Filed May 20, 1924. Serial No. 714,719. 5 Claims. (Cl. 226—38.)



1. In combination, a collapsible funnel adapted to be normally housed within the filling tube of a radiator, yieldable means for automatically projecting the funnel above the tube for use, and a cover for holding the funnel within the tube against the influence of the aforementioned means.

1,538,172. LENS FOR HEADLIGHTS. CHARLES W. DAKE, Chicago, Ill. Filed Feb. 23, 1923. Serial No. 620,562. 2 Claims. (Cl. 240—48.4.)



1. In a lens for headlights and the like, a series of refracting ridges of saw-toothed cross section having a flat wall extending in substantially the same direction as the line of approach of the rays, and a curved wall extending from the top of one flat wall to the base of the adjacent one, the curve of said wall being compounded of arcs having centers on opposite sides of the lens, said curves being flattened at the intersection of the flat walls to approximate perpendicularity thereto.

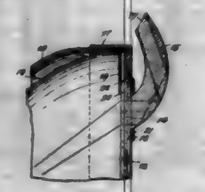
1,538,173. GOLF TEE. FRANK P. DAUGHADAY, Chartley, Mass., assignor to Freeman-Daughaday Co., Chartley, Mass., a Corporation of Massachusetts; also doing business as Providence Collar Button Company, Providence, R. I. Filed Dec. 5, 1924. Serial No. 754,149. 2 Claims. (Cl. 273—33.)

1. A golf tee comprising a tubular sheet metal pin having a shank pointed at one end to be readily forced into the ground, and flaring at its opposite end to provide a relatively-broad seat for the ball.

1,538,174. HOLDING DEVICE. EMERY E. DAVIS, St. Louis, Mo., assignor to Davis Boring Tool Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 4, 1922. Serial No. 592,357. 12 Claims. (Cl. 51—218.)

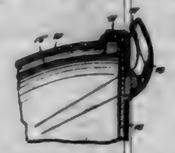
1. A holding device comprising a stationary base, a revoluble work support, an axis about which said work support rotates, an adjustable work-receiving seat on said work support, said work-support being provided with an elongated slot, and a clamping member associated with said work-receiving seat and passing through said elongated slot, said adjustable work-receiving seat being arranged at an oblique angle relative to said axis.

1,538,175. LAMP STRUCTURE. DANIEL H. DEERY, Bridgeport, Conn., assignor to The D. & H. Lamp Co., Bridgeport, Conn., a Copartnership composed of Daniel H. Deery and William Hennessey. Filed June 19, 1923. Serial No. 646,356. 3 Claims. (Cl. 240—7.)



1. In a lamp, a cylindrical cup shaped casing, a lamp socket supported in the rear wall of said casing, a fragile cylinder in said casing substantially equla to the length of the casing, resilient means interposed between the inner end of said cylinder and said rear wall of the casing to cause the projection of a portion of the forward end of said cylinder forwardly of the forward edge of the casing, a lens at the forward end of the cylinder, resilient means interposed between the forward

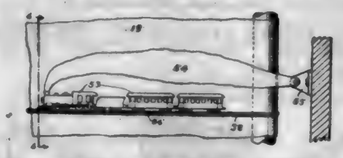
projecting end of said cylinder and said lens, a flanged rim engaged upon the forward end of said casing and over the margin of the lens, and means for securing the



rim on the casing and to compress the resilient means at the rear of said cylinder, the two resilient means maintaining the rim in secured relation and compensating each other, whereby as one gives the other follows.

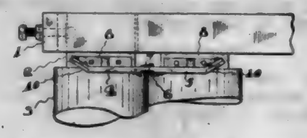
1,538,176. INDICATOR FOR AUTOMOBILE LAMPS. DANIEL H. DEERY, Bridgeport, Conn., assignor to The D. & H. Lamp Co., Bridgeport, Conn., a Copartnership composed of Daniel H. Deery and William Hennessey. Filed Mar. 29, 1924. Serial No. 702,891. 3 Claims. (Cl. 240—46.)

1. As an article of manufacture, a light indicator device provided with means to attach it to a vehicle lamp in front of the lamp closure, comprising an elongated column of solid light conducting material having a light receiving surface at one end contiguous to the lamp closure and a light emitting surface at the other end disposed reversely to the direction of the light rays and beyond the periphery of the lamp closure, said column being continuously curved between its ends.



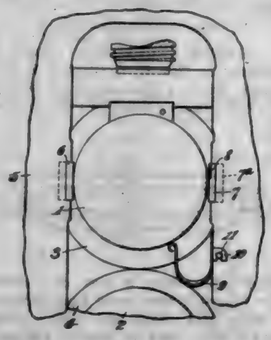
1,538,177. LIGHT INDICATOR FOR AUTOMOBILE LAMPS. DANIEL H. DEERY, Bridgeport, Conn., assignor to The D. & H. Lamp Co., Bridgeport, Conn., a Copartnership composed of Daniel H. Deery and William Hennessey, both of Bridgeport, Conn. Original application filed Mar. 29, 1924, Serial No. 702,891. Divided and this application filed Nov. 5, 1924. Serial No. 747,976. 2 Claims. (Cl. 240—46.)

1. As an article of manufacture, a lamp lens having an integral light indicator device consisting of a light conducting column extending from the front surface of said lens and having a light emitting end surface disposed outside the periphery of the lens and reversely to the front surface of the lens, said column being continuously curved between its ends.



1,538,178. ADVERTISING APPARATUS. NORBERT CHARLES DEIGHAN, Cleveland, Ohio. Filed May 12, 1923. Serial No. 638,526. 3 Claims. (Cl. 40—82.)

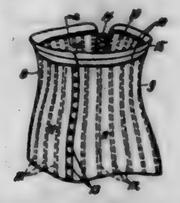
3. In apparatus of the class described, the combination of a frame, vertically arranged shafts in said frame, an endless fabric arranged on said shafts, relatively fixed means for supporting said fabric intermediate said shafts to prevent sagging of the fabric, said fabric having scenery thereon representing space to be traversed by a vehicle, a representation of a vehicle supported in front of said scenery, by means invisible from out-



side the apparatus, in position to produce the illusion of traversing said space, flexible guiding means secured on said fabric, and means on said representation of a vehicle engaging said guiding means to produce vertical movements in the vehicle.

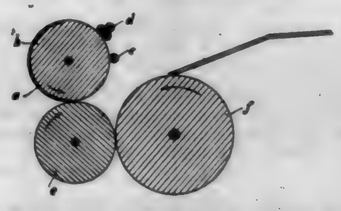
1,538,179. STOCK GUIDE FOR THE ROLLS OF MIXING MACHINES AND THE LIKE. LEONARD V. DIXON, Toronto, Ontario, Canada, assignor to Dunlop Tire & Rubber Goods Co. Limited, Toronto, Ontario, Canada. Filed Aug. 15, 1923. Serial No. 657,561. 7 Claims. (Cl. 18—2.)

2. In a machine for rolling plastic material the combination with a pair of rolls one of which is provided with adjustable bearings whereby it may be adjusted to and from the other roll, of a stock guide formed in two overlapping parts fitted to the contours of the rolls, said parts being secured to the bearings of the rolls, so that each part maintains a fixed relationship to the roll to which it is fitted.



1,538,180. SIDE BEARING FOR ROLL NECKS. WILLIAM EVANS and ADDISON BARR, Martins Ferry, Ohio, assignors of one-tenth to Joseph L. Christmyer, Bellaire, Ohio, and three-tenths to George Cooke, Martins Ferry, Ohio. Filed Aug. 15, 1925. Serial No. 657,635. 4 Claims. (Cl. 80—1.)

4. A side bearing comprising, in combination with a roll neck, a substantially rectangular plate for seating in bearing relation to a side of said neck, said plate having in its inner face a recess of substantially triangular form, two sides of said triangular recess being coincident with the planes of the top edge and the outer end, respectively, of said plate, and the third side or bottom of said recess being inclined downwardly and

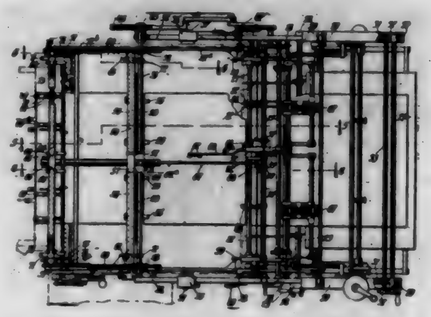


outwardly for directing outward water which enters said recess from the roll neck, and a trough disposed on the housing for receiving water directed outward from said recess and for conveying said water away from the housing.

1,538,181. CORSET ATTACHMENT. NORINE FAHEY, St. Paul, Minn. Filed May 24, 1923. Serial No. 641,215. 2 Claims. (Cl. 2—40.)

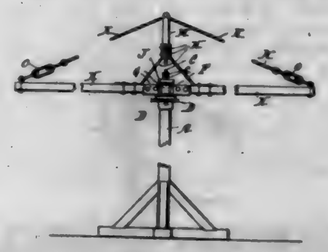
1. A corset shield made of moisture proof material and composed of two laterally curved members each with an inverted groove to cover the upper edge of one half of the corset, and two comparatively thin flaps depending downwardly one outside and the other inside the corset, the grooved top portion of each member being thicker than the depending flaps.

1,538,182. BENDABLE PRINTING PLATE. PAUL FOCKE, Barmen, Germany. Filed Aug. 16, 1920. Serial No. 404,038. 2 Claims. (Cl. 101—130.)



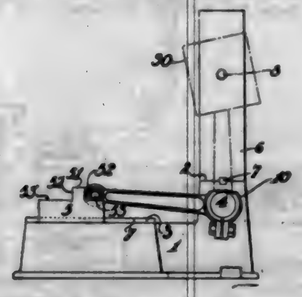
1. A planographic printing plate for reproducing typewritten matter, which consists of a relatively thin sheet presenting a hard metallic surface and being pliable to an extent sufficient to be introduced into typewriting machines and to receive the typescript to be printed from the sheet.

1,538,183. BUMPER. CHRISTIAN GIRL, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed July 23, 1923. Serial No. 653,144. 7 Claims. (Cl. 293—55.)



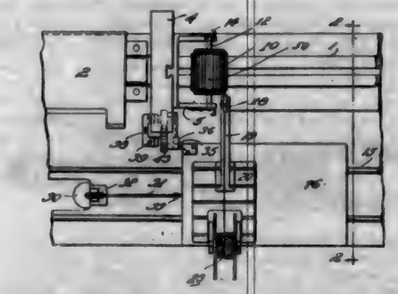
1. A bumper comprising a rear or auxiliary section having a bar provided with ends bent forwardly toward and spaced from each other and with a forwardly projected central portion, and an impact section comprising symmetrical external upper and lower bars each having a central portion extending substantially parallel with and vertically spaced from the auxiliary bar and projecting respectively above and below such bar, each of the impact bars having ends directed toward the ends of the other impact bar, and intermediate upper and lower impact bars interposed between the first mentioned bars and located respectively above and below the auxiliary bar and each having a central portion spaced from and extending substantially parallel with the central portion of its adjacent external bar and each having also end portions that are presented toward the end portions of the opposed intermediate bar, the end portions of the intermediate bars being substantially parallel with the end portions of their respective adjacent external bars, means connecting the ends of the impact bars to the ends of the auxiliary bar, and means connecting the central portions of the said bars.

1,538,184. SHEET-FEEDING MACHINE. JACKSON TIPTON HALE, Atlanta, Ga., assignor, by direct and mesne assignments, to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 16, 1918, Serial No. 266,912. Renewed Apr. 2, 1925. 29 Claims. (Cl. 271—54.)



1. In a paper feeding mechanism, a press feed board divided transversely into front and back wings, a reciprocating carriage mounted on said press feed board, means to actuate said carriage mounted on the frame of the machine above the carriage, and means to separate said carriage actuating mechanism to permit the tilting of one of said wings.

1,538,185. CLOTHES-DRYING FRAME. FREDERICK GRANVILLE HARVEY, Sydney, Australia, and CHARLES OCONNOR, Auckland, New Zealand. Filed Aug. 31, 1921. Serial No. 497,156. 1 Claim. (Cl. 68—3.)



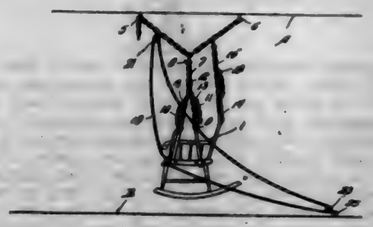
In clothes drying frames of the class herein described, the combination with a central pillar, of a horizontal plate fixed to the top of the pillar and having a journal pin projecting upward from its centre, a rotating frame having radiating arms mounted to rotate on said journal pin, means for retaining it in position on the pin, a bar vertically disposed above the top of the said pin and secured by brackets to the several arms of the rotating frame, and a stay wire extending from the outer end of each of such arms to the top end of the said vertical bar, substantially as specified.

1,538,186. TESTING JIG FOR ENGINE CONNECTING RODS. JOHN J. HENDRICKS, Seattle, Wash. Filed Nov. 7, 1921. Serial No. 513,495. 4 Claims. (Cl. 33—180.)

1. A connecting rod testing jig comprising a base having a connecting-rod-pivoting shaft and two sets of guide ways, a slide movable upon each set of guideways, one slide having a piston trueing surface disposed in a plane perpendicular to the axis of said shaft and the other slide having a pair of trueing surfaces disposed in a plane parallel to the axis of said shaft and adapted to engage with the sides of the wrist pin of a connecting rod when it is pivoted upon said shaft.

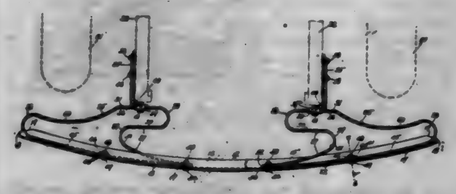
1,538,187. METHOD AND APPARATUS FOR PLACING WINDINGS IN MOTOR STATORS. ALBERT B. HERRICK, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 27, 1923. Serial No. 628,162. 12 Claims. (Cl. 29—84.)

1. A method of placing windings in inwardly faced slots of motor field frames or the like, including the steps of forming the windings into coils of a predetermined number of turns and upon a form from the outside thereof, the winding coils being longer and narrower than the slots which are to be occupied but having approximately the given lineal distance in each turn as though originally placed in the slots to be occupied and thereafter causing such windings to register with those slots, and moving them outwardly radially into the slots of the field frame or the like, all such movements simultaneously causing the turns to change shape and conform to their eventual positions.



1,538,188. SHOCK ABSORBER. JOHN H. HOPPER and ERNEST O. HUGG, Jonesboro, Ark., assignors of one-fourth to said Hugg, one-fourth to George L. Minton, and one-half to John B. Hinson, all of Jonesboro, Ark. Filed Jan. 15, 1924. Serial No. 686,456. 1 Claim. (Cl. 267—45.)

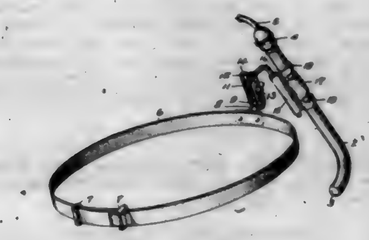
A vehicle spring comprising a body portion formed from a series of superposed curved abutting leaves, one of the intermediate leaves of said body portion of a greater length than any one of the other leaves thereof, the leaves opposing one face of said intermediate leaf progressively increasing in length towards said face and abutting each other throughout, the leaves opposing the other face of said leaf progressively increasing in length from said face and abutting each other throughout, said leaf projected laterally to provide end terminal portions having the major part thereof spaced from and opposing



the leaves which progressively increase in length therefrom, each of said end terminal portions inturned at its free end to slidably engage another intermediate leaf arranged in proximity to one of the outer leaves of the body portion, and means integral with said inturned free ends and opposing the side edges of a plurality of leaves of the body portion to prevent transverse shifting of said ends.

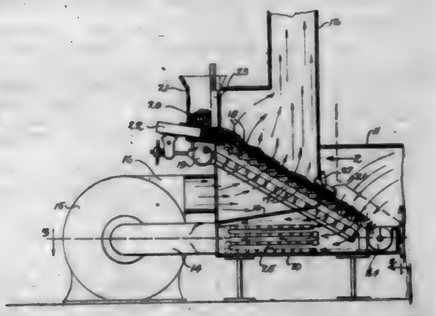
1,538,189. SWING. JACOB KILCHER, Mount Pleasant, Iowa. Filed Sept. 30, 1924. Serial No. 740,772. 1 Claim. (Cl. 155—65.)

In a swing, a pair of chains anchored to a support so as to be slack, a second pair of chains attached to the first pair of chains intermediate the ends of the first mentioned chain so as to be suspended therefrom, a seat structure supported by the second mentioned pair of chains, a pair of pulleys one mounted on each of the first mentioned chains, a second pair of pulleys anchored at a point remote from the seat structure, and a pair of cables trained through the alining pulleys and attached at its ends to the seat structure.



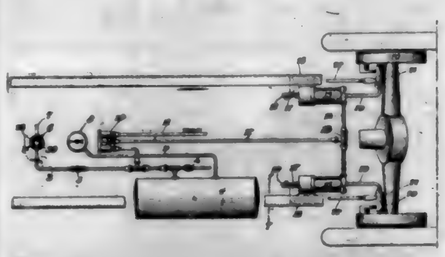
1,538,190. BUMPER FOR MOTOR VEHICLES. GEORGE F. KOLB, Fairfield, Conn., assignor to The Bullard Machine Tool Co., Bridgeport, Conn., a Corporation of Connecticut. Filed May 8, 1923. Serial No. 637,543. 18 Claims. (Cl. 293—55.)

1. In a vehicle bumper, an impact bar of pressed sheet metal, of a length sufficient to span the front end of a motor-vehicle, having a vertically wide front web, and having wide rearwardly-directed top and bottom flanges, the front web having spaced apertures, with shallow, rear-



wardly-directed flanges around their edges, and independent spring supports, each consisting of a single strip of flat spring-metal formed with a single outer bend and an inner S-bend, and with its ends brought together and secured against the inner face of said front web of the impact bar at a point substantially outside the center line of the vehicle, portions of the two spring supports between their single and S-bends being adapted to be secured to brackets or frame members of the vehicle near the opposite sides thereof.

1,538,191. CORNEAL ILLUMINATOR. MILTON E. LANDO, Oakland, Calif., assignor of one-half to Henry M. Marsh, Los Angeles, Calif. Filed Oct. 2, 1922. Serial No. 591,702. Renewed Mar. 31, 1925. 1 Claim. (Cl. 240—59.)



A corneal illuminator comprising a tubular lamp having a curved portion adjacent the illuminating end, a bracket, a spring clip for slidably mounting said lamp, an adjustable head band, a ball on said head band, a ball on the bracket, plates engaging opposite sides of said balls and a screw for adjusting the pressure of the plate upon the balls, said head band being adapted to surround the head of the patient with the illuminating end of the lamp positioned to direct the rays of the light away from the operator and upon the area under examination.

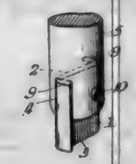
1,538,192. APPARATUS FOR CONDITIONING CRUSHED MATERIAL. VERNON GARDE LEACH, Chicago, Ill. Filed Mar. 21, 1924. Serial No. 700,787. 4 Claims. (Cl. 34—33.)

4. An apparatus for conditioning crushed material comprising a casing, a support within said casing, means for passing a stream of material over said support, a partition within the casing intermediate the ends of said support, and means for passing currents of gases through said stream of material on either side of said partition.

1,538,193. FLUID OR SAFETY GAS BRAKE FOR AUTOMOBILES. IRVIN D. LENGEL, Reading, Pa., assignor, by mesne assignments, to Safety Air Brake Company, a Corporation of Delaware. Filed Dec. 19, 1922. Serial No. 607,770. 7 Claims. (Cl. 303—48.)

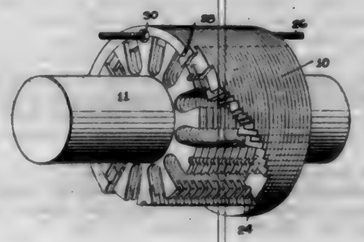
1. In a device of the character described, a reservoir, a pipe for conveying thereto the semiburned gases from the combustion chamber of an internal combustion engine, a check valve in said pipe, carbon arresting means located intermediate of said check valve and the source of said gases, a brake actuating mechanism, a pipe for conveying the carbon-free gases from said reservoir to said brake actuating mechanism, and a fluid pressure controlling valve intermediate said reservoir and said brake actuating mechanism.

1,538,194. PNEUMATIC TOOL. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed July 30, 1919. Serial No. 314,374. 2 Claims. (Cl. 121—35.)



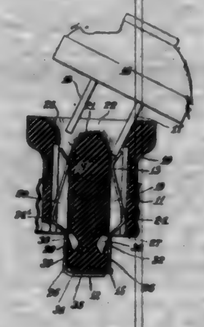
1. A throttle valve, comprising a substantially straight tubular casing having a substantially straight live air passage extending longitudinally therethrough, a bushing in said casing intermediate the ends thereof and extending across said passage at an inclination thereto, said bushing having ports opening into said passage on opposite sides of said bushing and being aligned with each other and with the longitudinal axis of said passage, a valve seat in said bushing between said ports, a self closing valve in said bushing, and a pivoted lever on the outside of said casing and engaging said valve for opening the same upon moving said lever toward said casing.

1,538,195. SCREW-DRIVING BIT. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 24, 1923. Serial No. 670,403. 5 Claims. (Cl. 145—50.)



2. In combination with a cylindrical holder having a longitudinal slot in its lower end, of a screw driving bit having a flat middle portion of a width and thickness to be secured at its upper end in the slot in said holder and to fit at its lower end in the slot or kerf of a screw-

head, said middle portion having integral flanges along its opposite longitudinal edges to engage the outside of the

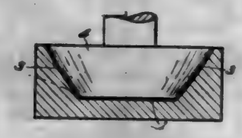


holder and screw-head, respectively, at the ends of the slots therein, said flanges being curved to conform to the curvature of the holder and screw-head.

1,538,196. CONSTRUCTION FOR DYNAMO-ELECTRIC MACHINES. ALAN VARLEY LIVINGSTON, New Haven, Conn., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Dec. 6, 1921. Serial No. 520,213. 14 Claims. (Cl. 171—252.)

14. In a dynamo, in combination, a member provided with a plurality of outwardly opening recesses spaced about its circumference, coils taped throughout and mounted in said recesses, a member surrounding said first member and closing the open ends of said coil-receiving recesses, one of said members being formed of a plurality of sheet metal stampings, and common means for holding said last-mentioned member in recess-closing position and for clamping said stampings together.

1,538,197. ATTACHMENT PLUG. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1920. Serial No. 407,627. 9 Claims. (Cl. 173—343.)

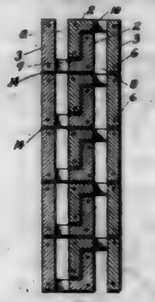


1. In an attachment plug, an insulating base, a screw shell on the base, a center contact, a spring contact having a forked foot embracing a portion of said base, lugs on said foot portion passing through a part of said screw shell into said base, and a second spring contact connected to said center contact.

1,538,198. COMBINED ADJUSTABLE READING DESK AND LAMP. JOHN S. MANCHESTER, St. Louis, Mo. Filed Feb. 4, 1924. Serial No. 690,637. 3 Claims. (Cl. 240—4.)

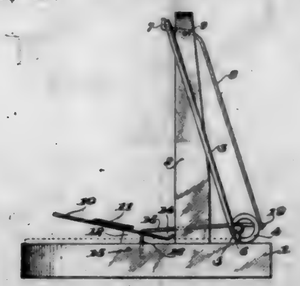
1. A combined reading desk and lamp comprising a base, a tubular member carried thereby, a reading desk capable of being vertically adjusted rotatably carried by said standard and having inclined book supports, a lamp carried by said desk, and a book support carried by said lamp and rotatable independently of the rotation of the desk.

1,538,199. METHOD OF MAKING PAPER DISHES. ETHEL GRACE MAXWELL, Wheeling, W. Va. Filed Feb. 15, 1923. Serial No. 619,320. 2 Claims. (Cl. 18—56.)



1. The herein described method of making a rectangular paper dish having its ends of greater height than its sides, which consists in steam heating and paraffining a paper blank, then in subjecting the blank to pressure to shape the dish and to form the ends thereof of a thickness exceeding that of the sides, the excess paper stock in the sides of the blank being displaced under the pressure and caused to flow inwardly across said ends and supplementing the stock in the latter.

1,538,200. BUILDING BLOCK. CLEMSON A. MELTON, Kansas City, Mo. Filed Dec. 26, 1922. Serial No. 608,850. 2 Claims. (Cl. 72—41.)

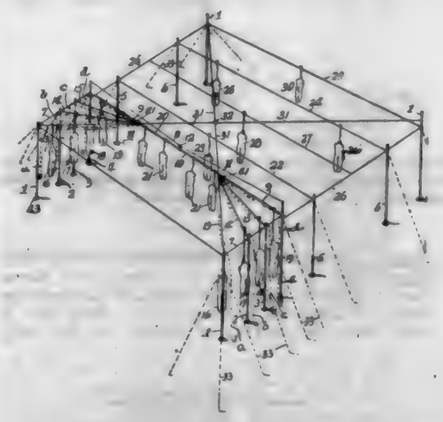


1. A wall comprising tile arranged in courses in parallel rows, the parallel rows in each course con-

sisting of blocks substantially U-shaped in cross section, each having a long leg and a short leg, the short leg of

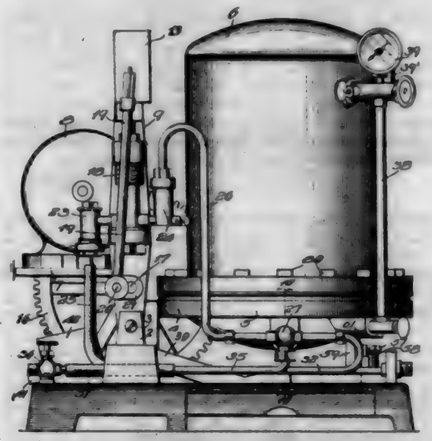
adjacent complementary tile in each row overlapping one another to prevent lateral movement between the tile.

1,538,201. RAT TRAP. JAMES D. MOXIE, Scranton, Pa. Filed Aug. 7, 1924. Serial No. 730,642. 1 Claim. (Cl. 43—81.)



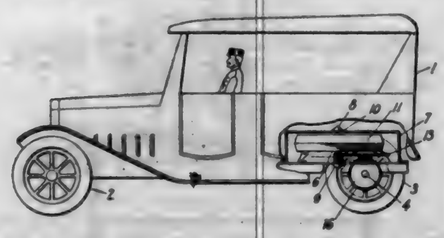
In a rat trap, the combination of a base and a standard supported thereby, of a pivoted resiliently tensioned striker positioned on one side of said standard, a pivoted detent for holding said striker in said position, a pivoted trigger for engaging a free end of said detent while the same is holding said striker in said position, a cooperating pivoted pan disposed on the opposite side of said standard and having a cam shoulder formed on its end adjacent said standard adapted to release said trigger thereby releasing said striker when weight is applied to said pan.

1,538,202. INNER ARCH FOR PNEUMATIC TIRES. WILLIAM J. P. MOORE, New York, N. Y. Filed Apr. 9, 1924. Serial No. 705,304. 5 Claims. (Cl. 152—20.)



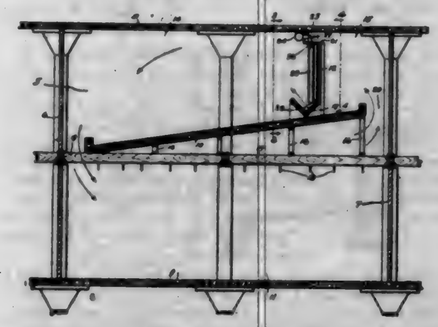
1. In a pneumatic tire, the combination with a casing and an inner tube of an arching flap interposed between the heavier basal portions of the shoe and the tube, and initially pressing one side of the tube inwardly before inflation and acting after inflation to impart lateral stability to the tire.

1,538,203. FOOTBALL APPARATUS. CHARLES B. MORAN, Horse Cave, Ky. Filed Oct. 30, 1922. Serial No. 597,725. 12 Claims. (Cl. 273—55.)



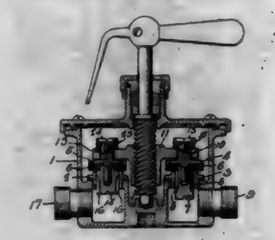
1. An apparatus for the practice of football, comprising a plurality of tackling dummies, and a plurality of cooperative guiding means for distributing said dummies to various playing positions over a playing field.

1,538,204. APPARATUS FOR CARBONATING LIQUIDS. RUDOLPH MUELLER, Chicago, Ill. Filed July 26, 1920. Serial No. 399,093. 8 Claims. (Cl. 103—25.)



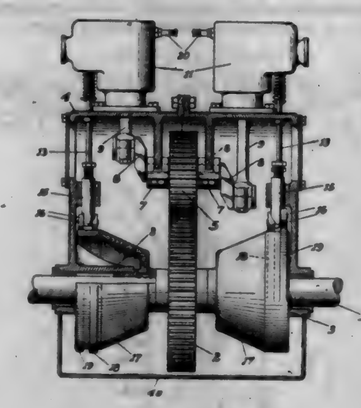
1. In a machine for carbonating liquid, a carbonating receptacle mounted for movement up and down, a counterbalancing lever pivotally mounted between its ends and having one end disposed in relation to the receptacle to be effected by the weight thereof, means arranged between the lever and the receptacle for transmitting the weight of the receptacle to the lever, said transmission means arranged to cause a sudden effective lengthening of the end of the lever associated with the receptacle upon an increase in the total weight thereof above a predetermined amount and a like sudden decrease upon a decrease in weight below a predetermined amount, and means under the control of said lever for starting and stopping the supply of water to said receptacle.

1,538,205. FRICTION TOY. RICHARD B. MUNDAY, Dayton, Ohio, assignor to The Dayton Friction Toy Company, Dayton, Ohio, a Corporation of Ohio. Filed June 12, 1922. Serial No. 567,665. 1 Claim. (Cl. 46—48.)



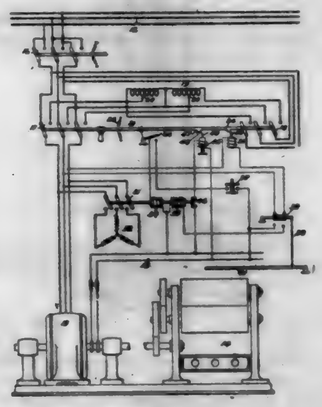
In a toy of the type described, driving wheels, an axle to which said wheels are fixedly secured, a body portion having a bottom supported at its rear end by said axle, a separate, horizontal housing mounted on said bottom over said axle, a vertical shaft journaled in said housing, a horizontal inertia wheel fast on said shaft, a pinion also fast on said shaft below the inertia wheel, a second shaft vertically mounted in said housing, a horizontal gear on the second shaft in mesh with said pinion, a downwardly projecting pinion secured to the horizontal gear, and a crown gear fast on said axle in mesh with the second pinion.

1,538,206. REFRIGERATING DEVICE. ROBERT BRUCE MUSSEN, Seattle, Wash. Filed May 19, 1924. Serial No. 714,286. 8 Claims. (Cl. 261—116.)



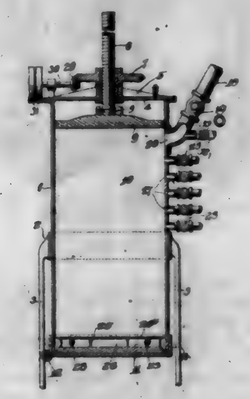
4. A vertical tube spray refrigerating device embodying a compartment; a partition horizontally disposed in said compartment in spaced relation to oppositely disposed walls of said compartment, dividing said compartment into an upper (loft) chamber and lower (cooler) chamber, said spaced relation providing air passages from said loft to said cooler on one side of said partition and an air passage from said cooler to said loft on the other side of said partition; a second partition dividing said loft into a forward loft and a back loft; one of more vertically disposed cylinders in said loft, said cylinder or cylinders having perforations in the upper portion thereof; a sleeve disposed in spaced relation to said cylinder or cylinders adjacent said perforations; a nozzle disposed in the upper end portion of said cylinder or cylinders, whereby refrigerating fluid may be jetted into said cylinder or cylinders, and a portion thereof caused to flow down the outside of said cylinder or cylinders, as well as down the inside of said cylinders or cylinders; and a collecting means at the bottom of said cylinder or cylinders, whereby a refrigerating fluid may be collected in said collecting means, and whereby the air in said compartment may be cooled and discharged from said forward loft into said cooler, through the cooler and from said cooler into said back loft and down said cylinder or cylinders.

1,538,207. VALVE. EDWARD F. NIEDECKEN, Milwaukee, Wis. Filed Nov. 8, 1924. Serial No. 748,510. 4 Claims. (Cl. 277—18.)



1. The combination with a valve having a stem, and an actuating member therefor, said stem loosely fitting said member, of means arranged and adapted to cause said valve to follow exactly the opening and closing movements of said member while permitting lateral freedom of movement of said valve with respect to said member.

1,538,208. INTERNAL-COMBUSTION MOTOR. HENRY A. NORDWICK and PAUL J. MARCHETTI, Stockton, Calif. Filed Oct. 19, 1923. Serial No. 669,461. 2 Claims. (Cl. 123—55.)

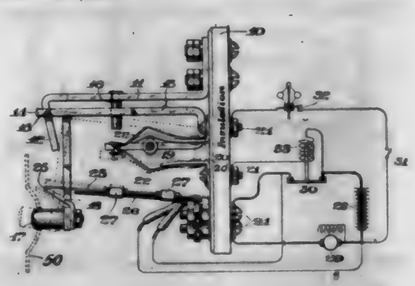


1. A gas engine comprising a casing, a shaft projecting therethrough, cylinders mounted on the casing and extending in parallel alinement to the shaft, a member mounted on the shaft in a plane between the cylinders, pistons in the cylinders, connecting means between said piston and shaft member to cause rotation of the shaft with the reciprocation of the pistons, valves for the cylinders, located in the sides thereof farthest from the connecting means, tappets for the valves disposed in the casing and extending toward the shaft, cylindrical members with the outer faces of which the tappets engage and having connection with the shaft adjacent the first named member thereon, and bearings for the shaft projecting inwardly from the casing toward the inner ends of the cylindrical members.

1,538,209. MOTOR-CONTROL SYSTEM. HENRY V. NYE, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 9, 1922. Serial No. 593,208. 14 Claims. (Cl. 172—239.)

1. In combination, a motor operative to drive a load, circuit-controlling means between said motor and a supply line, means for holding said circuit-controlling means in operative position, an electrical load element, a switching device between the armature of said motor and said electrical load element for braking purposes and operable independently of said circuit-controlling means, means for maintaining said circuit-controlling means in inoperative position while the armature of said motor is connected to said electrical load, and means for causing the actuation of said switching device to inoperative position and the release of said maintaining means.

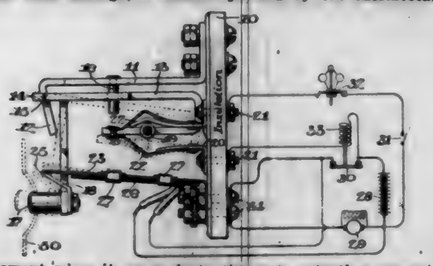
1,538,210. APPARATUS FOR COOKING AND PRESSING. CHRISTOPHER OFFENHAUSER, Philadelphia, Pa. Filed Dec. 19, 1923. Serial No. 681,547. 2 Claims. (Cl. 87—13.)



1. In a combined cooker and press, a casing having its bore of uniform diameter and its lower end open, a removable closure for the lower end of said casing, a perforated false bottom secured to and spaced from said closure and of less diameter than that of said bore to form a steam receiving chamber with an annular outlet, valve controlled steam pipes communicating with said chamber, valve controlled discharge pipes communicating with said steam pipes, a plunger to compress the material and eject it through said open end, and a controllable conduit to introduce the material to be treated into said casing.

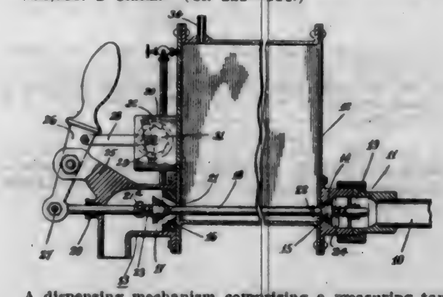
1,538,211. COLLAPSIBLE CRATE. EDWARD E. PINKERTON, Chicago, Ill. Filed Jan. 25, 1924. Serial No. 688,428. 6 Claims. (Cl. 217—12.)

1. A construction of the class described comprising a foldable body of comparatively weak material arranged to constitute the side walls of a crate; re-enforcing angular channel members fitting over the corners of said body; removable top and bottom members of comparatively strong material and having re-enforcing members fitting over said side walls; and means for securing said top and bottom members in place on said walls, substantially as described.



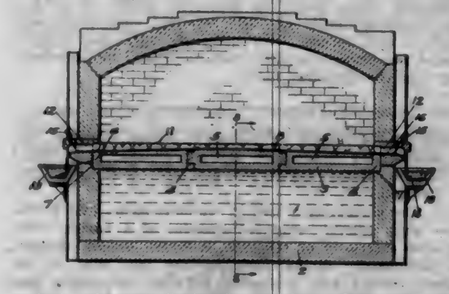
1,538,212. THERMOSTATIC CUT-OUT SWITCH. RAYMOND W. RANDALL, Toledo, Ohio, assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Sept. 30, 1920. Serial No. 413,782. 8 Claims. (Cl. 200—122.)

8. In a thermal cut-out switch, a base, a drop frame pivotally mounted thereon, a thermal element mounted on the base and engaging the drop frame for holding it in its raised position consisting of a bifurcated strip of bi-metallic thermal metal having current passing therethrough for heating it to cause its deflection to release the drop frame, and a supplemental heating element having current passing therethrough attached to the thermal element, and a switch operated by the fall of the drop frame for interrupting said current.



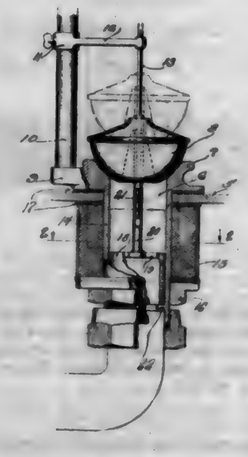
1,538,213. CUT-OUT SWITCH. RAYMOND W. RANDALL, Toledo, Ohio, assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Original application filed Sept. 30, 1920, Serial No. 413,782. Divided and this application filed Apr. 7, 1922. Serial No. 550,470. 3 Claims. (Cl. 200—38.)

1. In a cut-out switch for a gas engine operated electric light and power plant having a starting motor for starting the gas engine, a motor circuit including the starting motor, a solenoid switch controlling the motor circuit, a thermostat element included in the motor circuit and capable of slowly responding to the current flow therethrough, a switch operated by the thermostat



element when it responds to the motor starting current, and a control circuit including said switch and the solenoid of the solenoid switch.

1,538,214. LIQUID-MEASURING DEVICE. JOHN RATH, Bayonne, N. J. Filed July 17, 1920. Serial No. 396,952. 1 Claim. (Cl. 221—114.)

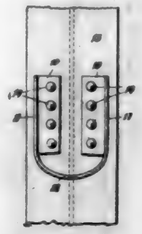


A dispensing mechanism comprising a measuring tank having oppositely disposed inlet and outlet ports, a valve actuating rod extending through said ports, oppositely disposed valves slidably mounted on said rod outwardly of said tank for controlling the ports, resilient means secured to said actuating rod for continuously exerting pressure inwardly against each of the valves, means secured to the actuating rod for actuating the alternate opening of the valves, a handle lever pivotally secured to the actuating rod, and a registering mechanism operatively connected to the lever.

1,538,215. GLASS FURNACE. JOSEPH A. REECE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,615. 8 Claims. (Cl. 49—61.)

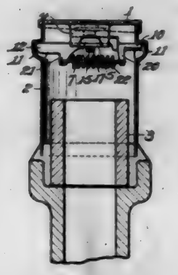
4. A refractory floater for use in a glass tank, comprising a main glass obstructing portion, and a glass collecting trough in the top of the floater, one side wall of the trough being normally slightly below the glass level so that surface glass may flow into the trough.

1,538,216. PLUMBING FIXTURE. HERMAN ROTH, Milwaukee, Wis. Filed May 8, 1922. Serial No. 559,303. 7 Claims. (Cl. 4—67.)



1. In a device of the character described, an outlet pipe, a magnet coil wound thereuround, the outlet pipe forming a tubular core for the coil, a valve member controlling the flow of fluid through the pipe, an armature slidable in the pipe, a guide carried by the armature, and a guide carried by the valve member and engaged with the armature carried guide, said guides forming a connection between the armature and valve member whereby energization of the magnet coil will cause the armature to actuate the valve member.

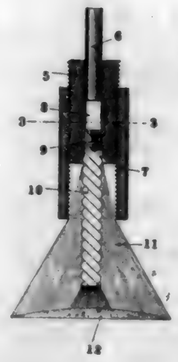
1,538,217. GRAVITATIONAL TOY. WILLIAM E. SEARS, Eureka, Kans. Filed June 6, 1924. Serial No. 718,369. 2 Claims. (Cl. 46—40.)



1. A gravitational toy adapted to be used on and in conjunction with an inclined string; the said toy comprising a body, limbs pivoted thereto and having string-engaging hooks at their upper ends, one of said limbs also having an abutment at its heel, a spring strip carried by the body and acting against the abutment of said limb, a stop on the body and in front of said limb, and a stop on the body and back of the other limb.

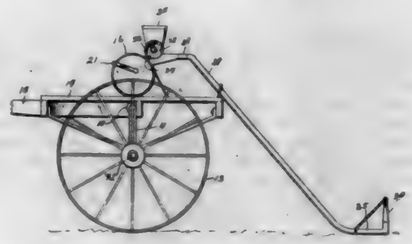
1,538,218. SEAT FOR CONCRETE BEAMS. ELWYN EGGLESTON SEELYE, White Plains, N. Y. Filed Dec. 29, 1923. Serial No. 683,271. 4 Claims. (Cl. 72—108.)

4. A hanger for concrete beams including a substantially U-shaped member with the bend of the U substantially in the form of a catenary curve and the side members of the U having inturned flanges for the attachment to a support.



1,538,219. COVER FOR SERVICE BOXES AND THE LIKE. STEPHEN SHANAHAN, Charleston, W. Va., assignor of one-fourth to J. B. Prairie and one-fourth to J. B. Crowley, both of Charleston, W. Va. Filed May 16, 1923. Serial No. 639,282. 2 Claims. (Cl. 70—14.)

1. In a cover for curb boxes and the like, a casing having internal sockets in diametrically opposite sides thereof, a cap for seating upon said casing, a fixed support suspended from the under side of said cap, an apertured plate slidable upon said support, a locking bolt formed on said plate and shiftable with movements of the latter into and out of one of said sockets, a fixed member carried by said support for seating within the opposite socket, resilient means normally holding said plate retracted, a pin projected downward through said cap and rotatable in the latter, and a cam carried by said pin within the aperture of said plate, said pin being adapted to be actuated by rotation of said pin to effect shifting movement of said plate against the tension of said resilient means.

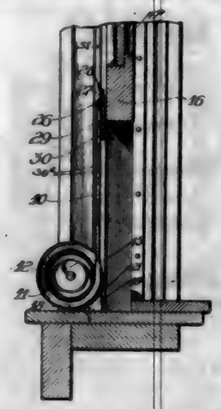


1,538,220. ROTARY ABRADING BRUSH. LLEWELLYN B. SHULTS, St. Louis, Mo., assignor to Pilley Packing & Flue Brush Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 15, 1922. Serial No. 568,409. 3 Claims. (Cl. 15—198.)

3. In a rotary abrading brush, the combination with a plug having a central opening and threading exteriorly, of a conical wire brush provided with a stem secured in the central opening of said plug, an interiorly threaded sleeve adjustable along said plug and

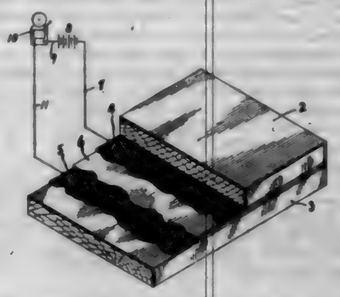
bearing upon the brush to vary its conical angle, and a shank carried by said plug securing the device in a driving chuck.

1,538,221. INSECT DESTROYER. EMIL SMAJSTRLA, Victoria, Tex. Filed Jan. 3, 1924. Serial No. 684,239. 1 Claim. (Cl. 43—148.)



A poison distributing machine comprising a wheeled supported frame, a hopper mounted upon the frame, discharge pipes extending downward from the hopper, the discharge pipes at their terminal ends being bent upward and formed with upwardly extending nozzles, and a fan blower mounted upon the frame and discharging into the discharge pipes.

1,538,222. SCREEN. CHARLES S. SMITH, Chicago, Ill., assignor to Frances S. Rollins, Chicago, Ill. Filed Oct. 4, 1922. Serial No. 592,190. 2 Claims. (Cl. 156—39.)

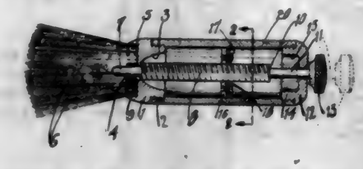


1. The combination with a window casing and a window sash slidably mounted therein, of a spring roller located exteriorly of the sash, a screen section thereon, a downwardly facing hook on the free edge of the screen section and projecting towards the outside face of the window sash, an upwardly reaching hook member on the lower portion of the outside face of the window sash, adapted to engage with the downwardly facing hook of the screen section when the window sash is raised, and a downwardly depending pedestal in con-

junction with the upper edge of the screen section, adapted to rest upon and be supported by the window sill when the window sash is lowered and thereby

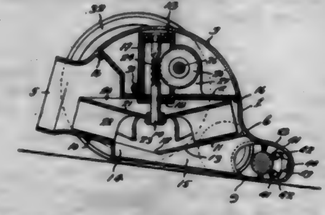
sustain the hook portion of the screen disengaged from the hook of the window sash when the window sash is fully lowered, substantially as described.

1,538,223. BURGLARPROOF WALL. BERTRAND H. SMYERS, Jr., Bellvue, and MARK H. JACKSON, Swissvale, Pa. Filed May 31, 1922. Serial No. 564,990. 1 Claim. (Cl. 177—314.)



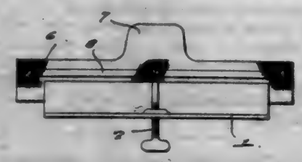
A wall structure comprising back and front layers of comparatively thick nonconducting material, at least two layers of comparatively thin, fine wire mesh having more than thirty-six mesh to the square inch, interposed between said back and front layers of comparatively thick material, and a comparatively thin layer of readily combustible insulating material interposed between said layers of wire mesh.

1,538,224. AUTOMATICALLY THREADING SHUTTLE FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 19, 1923. Serial No. 633,310. 13 Claims. (Cl. 139—223.)



6. As an article of manufacture, a threading block for automatically threading loom shuttles formed of cast iron and having the thread engaging portions of the block overlaid by a smooth rust-proof covering which offers no objectionable resistance to the movement of the thread thereover.

1,538,225. BRUSH-FEEDING DEVICE. GEORGE E. STOCKBRIDGE, Chicago, Ill. Filed Sept. 24, 1923. Serial No. 664,350. 1 Claim. (Cl. 15—187.)

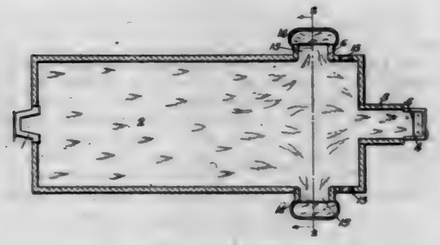


An ejector for brushes and the like, comprising a head, a material-carrying tube secured to said head and forming a handle therefor, a rotatable screw rod within said tube, a piston on said rod adapted to be shifted longitudinally in said tube by the rotation of said rod, and a valve forming a continuation of said screw rod and adapted to open and close a discharge passage in said head, a rotation of said screw rod in one direction initially unseating said valve and then moving said piston forward to feed the material through said discharge passage, its reverse rotation closing said valve.

1,538,226. SUCTION SWEEPER. FREDERICK W. STRAEHLE, Cleveland, and WALKER DE HAVEN LEE, East Cleveland, Ohio, assignors to James M. Davis, Columbus, Ohio, and Wilbert B. McCoy, Cleveland, Ohio. Filed Jan. 31, 1923. Serial No. 616,105. 2 Claims. (Cl. 230—11.)

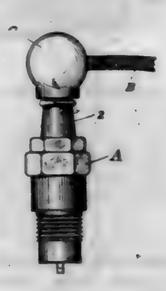
1. A sweeper comprising a casing divided into upper and lower chambers, the base of the lower chamber sloping inwardly and downwardly toward the center thereof, a fan shaft extending from the upper into the lower chamber, a fan on said shaft shaped in conformity with the base of the lower chamber, and gearing between said shaft and traction wheels whereby the fan is driven.

1,538,227. CROSSCUT-SAW JOINTER. JACOB THUNBONG, Hayden Lake, Idaho. Filed Apr. 22, 1924. Serial No. 708,205. 1 Claim. (Cl. 26—46.)



A saw jointer comprising a frame having spaced clamp members, a file adapted to be received within the clamp members and arcuately curved longitudinally, the file being provided at one side with an outstanding rib and provided at its edge with an outstanding lug adapted to serve as a handle grip.

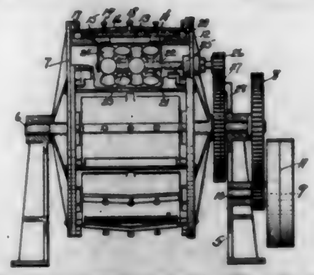
1,538,228. THERMAL INSULATING MATERIAL. JUSTIN KAY TOLES, Berkeley, Calif., assignor to American Hair Felt Co., a Corporation of Delaware. Filed Jan. 27, 1923. Serial No. 615,390. 3 Claims. (Cl. 154—44.)



1. The hereindescribed thermal insulating material comprising a waterproofed mixture of fiberized lignocellulose material and hair, the hair being partly embedded in the fiberized material and partly projecting therefrom.

1,538,229. GLASS FURNACE. JAMES P. WEAVER, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,612. 6 Claims. (Cl. 49—54.)

1. The process of supplying molten glass to a glass-working machine, consisting in melting the glass, flowing the molten glass through a tank to the machine, and at an intermediate point along the side of the flowing stream allowing a portion of the surface glass to flow out and form cullet.

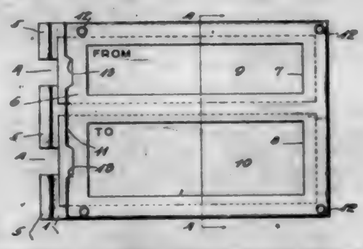


1,538,230. INSULATED SPARK-PLUG CONNECTER. ERNEST F. WIEDERHOLDT, St. Louis, Mo. Filed Dec. 5, 1921. Serial No. 519,980. 5 Claims. (Cl. 123—169.)

1. A spark plug connecter consisting of an insulator, a metallic means in said insulator provided with a spark gap and adapted to have a supply wire connected to same, and a metallic member in said insulator connected to said means and provided with a spring-pressed element for frictionally connecting said member to the electrode of a spark plug.

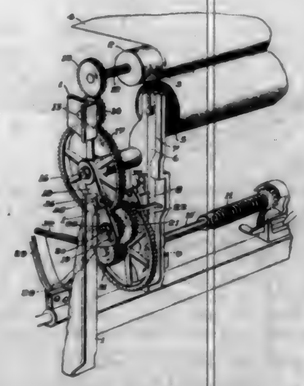
1,538,231. BURNISHING BARREL. GEORGE E. ABBOTT, West Hartford, Conn., assignor to The Abbott Ball Company, West Hartford, Conn., a Corporation of Connecticut. Filed Apr. 18, 1922. Serial No. 555,210. 8 Claims. (Cl. 51—164.)

1. A receptacle having an opening therein for the reception of articles to be burnished, a work holder support closing said opening, a work holder mounted upon said support within the receptacle, means for causing relative movement between said holder and said



receptacle and burnishing material within the receptacle, said holder including means to removably receive articles to be burnished.

1,538,232. INKWELL. WALTER A. BASS, Brundidge, Ala. Filed July 19, 1924. Serial No. 727,024. 2 Claims. (Cl. 120—69.)



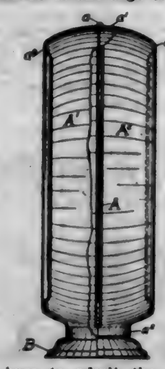
2. An ink well apparatus comprising a plurality of base sections arranged in end to end relation, said base sections being provided upon their lower side with longitudinal grooves adapted to form in effect a continuous groove, means for detachably connecting the base sections, ink wells mounted upon the several base sections, a plurality of conduit sections arranged within said grooves beneath the base sections and corresponding in number with relation to said base section, means for detachably connecting the ends of the conduit sections, means for detachably connecting the conduit sections with the corresponding ink wells, a reservoir carried by one base section and disposed at an elevation above the said ink wells, and having connection with one conduit section, a float chamber connected with the conduit section which is connected with said reservoir, a valve connected in the last named conduit section, and means connecting the float and valve.

1,538,233. TAG HOLDER. BENJAMIN F. BASTIAN, Sunbury, Pa. Filed Nov. 22, 1922. Serial No. 602,620. 1 Claim. (Cl. 40—17.)

A tag holder comprising a rear and front plate adapted to have tags inserted between them, said plates being held in spaced relation by means of longitudinal and perpendicular ribbed parts on the rear plate which form partitions and retainers for the tags, parts of the edge of the rear plate opposite the perpendicular retainer curved or rolled to form a locking device for the tags, and openings in the front plate to display said tags.

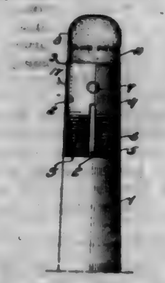
1,538,234. TAKE-UP MECHANISM FOR LOOMS. WILLIAM E. BRADLEY, Greenville, S. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 17, 1922. Serial No. 601,598. 11 Claims. (Cl. 139—311.)

1. In a take-up mechanism for looms, the combination of the cloth take-up roll for taking up the cloth as it is woven, a controller gear operatively connected to the take-up roll for actuating the latter, an actuator, a transmission gear constantly driven therefrom, a give way gear meshing with the controller gear and normally engaged with the transmission gear, and means for yieldingly supporting the give way gear that it may move about the controller gear and out of engagement with the transmission gear due to its rotation thereby when the controller gear is arrested by undue strain upon the cloth during weaving.



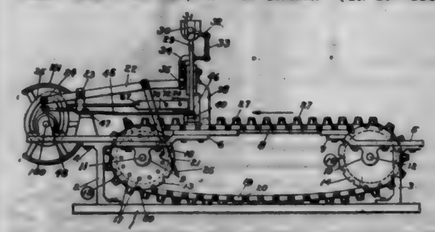
1,538,235. DEVICE FOR FASTENING ROOFING SHINGLES. ANDREW L. BELL, Buffalo, N. Y., and FRANK A. BROWNE, Wayne, Pa., assignors to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 23, 1923. Serial No. 620,711. 2 Claims. (Cl. 108—33.)

1. As a new article of manufacture, a shingle fastening device comprising a horizontal cross-bar adapted to overlie the butt end of a diagonally placed shingle, declined flanks extending laterally beyond the ends of said cross-bar to compensate for the thickness of the shingle; and said flanks terminating with vertically directed prongs adapted to be secured to the supporting structure.



1,538,236. ILLUMINATED SIGN FOR DISPENSING APPARATUS. WILLIAM F. BRANDT, Fort Wayne, Ind., assignor to Wayne Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed May 15, 1923. Serial No. 561,198. 2 Claims. (Cl. 40—133.)

1. A sign structure adapted to enclose a source of light, said structure having in combination two similar dish shaped metal halves, means for interlocking the connecting edges of said halves to form a globe, a supporting base secured to one edge of said globe, an open-

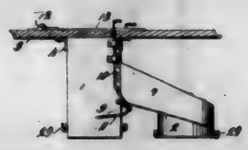


ing thru said base to admit the source of light, and perforations through said metal halves arranged in such manner as to convey the information desired.

1,538,237. CUE. GEORGE K. CANIAS, Philadelphia, Pa. Filed Aug. 20, 1923. Serial No. 659,864. 3 Claims. (Cl. 273—70.)

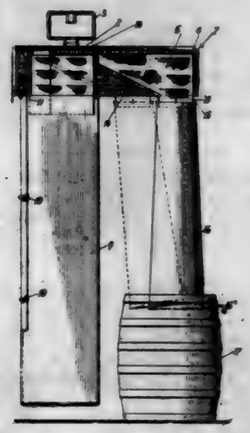
3. The combination in a cue; a reinforcing sleeve secured to the outer side adjacent the end of the cue and having a castellated inner end threaded on its outer side, the castellated end being expanded by the cue to provide a tapering thread; a tip abutting the end of the cue, and a holding sleeve threaded on its inner side at one end for screwing onto the tapering threads of the reinforcing sleeve and castellated at the other end to provide spring fingers for gripping the tip to hold it in position.

1,538,238. MACHINE FOR ASSEMBLING INSULATOR KNOBS. ALEXANDER CARPENTER, Carey, Ohio, assignor to The C. A. C. Automatic Machine Company, Carey, Ohio, a Corporation of Ohio. Filed Aug. 9, 1920. Serial No. 402,424. 42 Claims. (Cl. 10—158.)



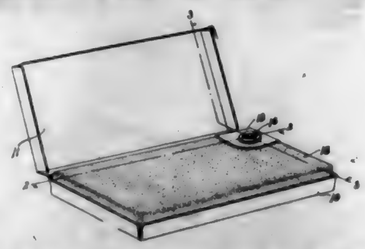
1. A machine for assembling insulator knobs comprising a means for conducting superimposed knob portions to an assembling station, means for placing a

washer above each knob as it reaches assembly position, means for placing a nail in position and driving it down through the openings in said washer and knob, and means for lipping the nail.



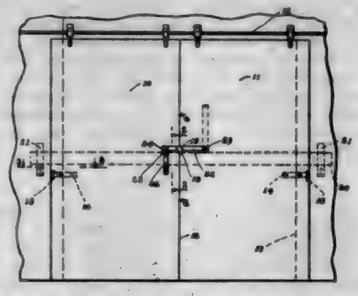
38. A machine for assembling insulator knobs comprising an assembly station, means for presenting knob portions to said station, a magnet for transferring fastening articles to said station, and means for permanently assembling said parts.

1,538,239. KITCHEN CHUTE. JOSEPH C. CLAUDEPIERRE, Akron, Ohio. Filed Jan. 25, 1921, Serial No. 439,887. Renewed Sept. 15, 1924. 8 Claims. (Cl. 173—31.)



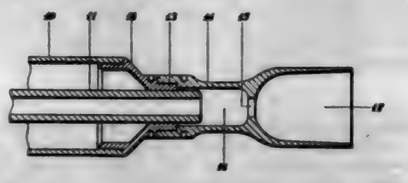
1. In a household appliance, the combination with a floor having an opening therein, of a straight primary chute depending from the floor having its upper end communicating with the opening in the floor and its lower end open to permit the passage of trash and the like through the floor opening directly through the chute, brackets connecting the straight primary chute to the floor, a cover for the chute carried by the floor, the primary chute having an opening formed therein intermediate its ends, an inclined secondary chute communicating with the opening in the primary chute, a combined closure and guide plate for the secondary chute arranged in the primary chute and adapted to swing across the primary chute for directing trash and the like into the secondary chute and for swinging movement across the opening for preventing the passage of trash and the like into the secondary chute, and means disposed above the floor for operating the combined closure and guide plate.

1,538,240. WASTE-DISPOSAL CHUTE. JOSEPH C. CLAUDEPIERRE, Akron, Ohio. Filed June 24, 1924. Serial No. 722,068. 13 Claims. (Cl. 193—31.)



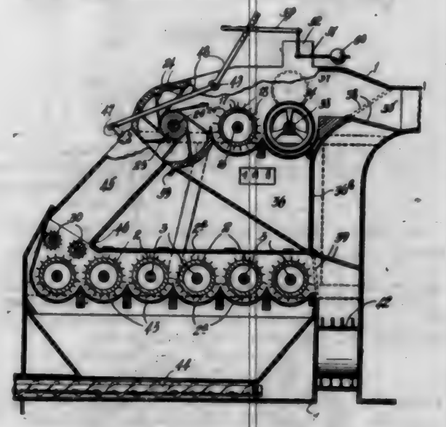
1. In a device for receiving and sorting waste material, a chute discharging by gravity into one receptacle, and a secondary chute movable into position within the first said chute and adapted to deflect waste material into a second receptacle and means exterior to the first named chute to operate the secondary chute.

1,538,241. SELF-INKING STAMP PAD. ELMER COVILLE, Jr., Pittsburgh, Pa. Filed Feb. 2, 1924. Serial No. 690,258. 2 Claims. (Cl. 91—54.5.)



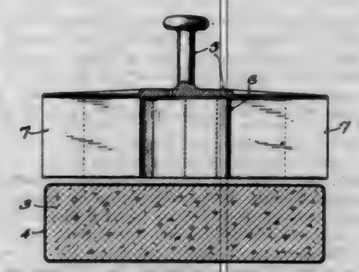
1. A device of the character described comprising a box like case having a cover, a reservoir within the case having a perforated top and provided with filling means, a pad of absorbent material upon the top of the reservoir, the pad including a plurality of layers of absorbent material, and a fabric covering disposed over the layers of absorbent material and extending against the sides and ends of the reservoir and secured between the same and the bottom of the casing.

1,538,242. SECURING AND LOCKING SLIDING DOORS. LOUIS COUNARD, Brussels, Wis., assignor of one-third to Felix J. Counard and one-third to John J. Neville, both of Green Bay, Wis. Filed Feb. 4, 1922. Serial No. 534,117. 4 Claims. (Cl. 292—205.)



1. The combination with a pair of sliding doors supported to slide across the door opening, a latch pivoted to one of said doors and a keeper member supported independently of said doors adjacent the abutting ends of said doors and arranged to receive said latch, a hook on the other door arranged to receive said latch and a lug on said latch for preventing the withdrawal thereof from said hook.

1,538,243. COMBINED BARREL SUPPORT AND FLASH HIDER FOR GUNS. WALTER T. GORTON, U. S. Army. Filed July 12, 1922. Serial No. 574,559. 1 Claim. (Cl. 89—42.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



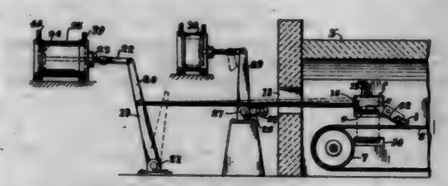
A combined barrel support and flash hider for machine guns having a barrel jacket, embodying a member attachable to the jacket having a reduced portion adapted to encircle the muzzle end of the barrel of the gun and support the same, and an element attachable to said reduced portion formed with an apertured wall dividing the element into a gas chamber surrounding the muzzle of the barrel and a substantially cylindrical unobstructed chamber adapted to hide the flash.

1,538,244. COTTON CLEANER. SAMUEL E. HOPKINS, Corsicana, Tex. Filed Sept. 6, 1921, Serial No. 498,893. Renewed Mar. 12, 1925. 2 Claims. (Cl. 19—93.)

1. A machine of the character described, comprising the combination of a housing, an upper and lower arrangement of rotating members, a screened chamber between the upper and lower rotating members for air suction, and a conduit between the rotating members, said conduit having an arrangement of bars and weights operatively connected to valve shutters upon the upper part of the housing and arranged in such a manner that when the cotton in the conduit becomes impeded the conduit will move and cut off and on the air suction.

1,538,245. PACKAGING CHEESE. EDWIN F. HULBERT, Milwaukee, Wis., assignor to Master Package Corporation, Owen, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1922. Serial No. 609,685. 3 Claims. (Cl. 99—8.)

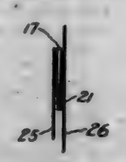
3. A method of packaging cheese, which consists in cutting a covered cylindrical bulk cheese into a cylindrical and a plurality of segmental sections of predetermined size by a knife heated to sear over the surface it cuts to seal the individual pieces against impurities and prevent evaporation and then enclosing each section in a sealed wrapper for shipment in a suitable container.



1,538,246. METALLIC COMPOSITION. EDWIN F. KINGSBURY, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1923. Serial No. 657,435. 8 Claims. (Cl. 75—1.)

1. A metallic composition comprising as the essential elements thereof the following metals in substantially the following proportions, silver 10 to 50 per cent, tin 1½ to 5 per cent, and copper 45 to 88 per cent.

1,538,247. TREATING GLAUCONITE. HEINRICH KRIEGSHEIM, New York, and WILLIAM VAUGHAN, Brooklyn, N. Y., assignors to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 27, 1922. Serial No. 547,842. 8 Claims. (Cl. 23—111.)

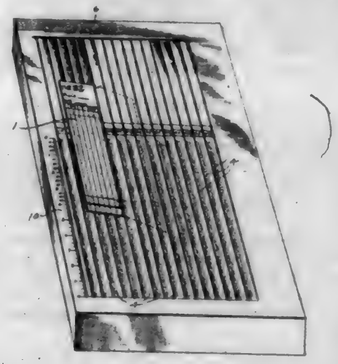


1. The process of treating glauconite which comprises submitting a bed of natural glauconite to a plurality of alternating washings with water and with a solution containing an electrolyte, with collection and removal of fine material separated by and produced in such washings.

1,538,248. MEANS FOR TRANSFERRING WARE TO LEERS. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 15, 1923. Serial No. 625,178. 4 Claims. (Cl. 198—31.)

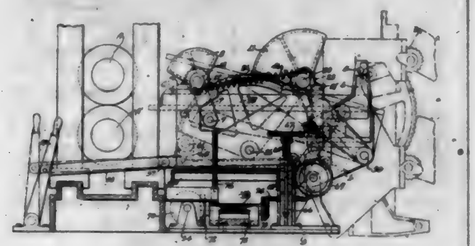
1. The combination of a horizontally traveling conveyor, a pusher extending lengthwise thereof, a motor having connections with said pusher and operable to move it back and forth over the conveyor, a second motor, connections between said second motor and the pusher for lifting and lowering the pusher, and controlling mechanism operable to effect periodic operations of the motors in a predetermined time relation.

1,538,249. PAPER HINGE. WILLIAM A. LORENZ, Hartford, Conn. Filed Apr. 17, 1924. Serial No. 707,309. 11 Claims. (Cl. 24—67.)



1. A paper hinge made in the form of a tube having adhesive applied to its surface at both sides near one edge thereof.

1,538,250. MEANS AND METHOD OF CALCULATING MONETARY VALUE OF ELAPSED TIME. WILLIAM J. LOVE, Jr., Piqua, Ohio. Filed Apr. 7, 1922. Serial No. 550,859. 5 Claims. (Cl. 235—89.)



1. In an elapsed time calculator, a series of scale members, relatively fixed in relation with each other and extending longitudinally in spaced parallel and transversely inclined relation, the outer edge portions of the members having monetary scales thereon terminating in

spaced relation with the extremities of the members, and a record sheet having time records to be measured by said scales in units of monetary value, the sheet be-

ing insertable in the space between adjacent scale members, and movable to and fro in relation therewith to register different portions of the sheet with the zero indications of the scales.

1,538,251. PLATE-LIFTING MECHANISM FOR ROLLING MILLS. THOMAS MCCABE, Yorkville, Ohio. Filed June 3, 1922. Serial No. 565,730. 30 Claims. (Cl. 80—47.)

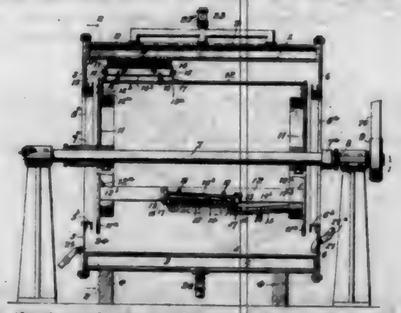
28. A plate lifting mechanism for rolling mills, comprising a receiving table arranged at the rear of the rolls of the mill, vertically-movable plate lifters arranged at opposite sides of said table for moving a plate upwardly into position to be grasped by the operator standing at the front of the mill, a counterweighted operating mechanism for raising and lowering said plate lifters, a rockable frame that carries said table, plate lifters and operating mechanism for the plate lifters, means for tilting said table to discharge a plate therefrom, and means for enabling said frame to be moved bodily into a position where it does not interfere with workmen engaged in repairing or removing the rolls of the mill.

1,538,252. SUPPORTING BRACKET. ENRIQUE MARTINEZ, Gettysburg, Pa. Filed Aug. 14, 1923. Serial No. 657,841. 2 Claims. (Cl. 45—58.)

1. A supporting bracket of the class described comprising a horizontal rack, a pair of upwardly extending parallel spaced bars having their lower ends pivotally connected to said rack, a vertically adjustable frame comprising upper and lower horizontal bars provided at their outer ends with guide eyes slidably receiving the first named bars, the lower bar of said frame being provided with a central guide, a spider having its arms connected with the frame bars, the inner ends of said arms converging toward each other and being equipped with a clamp, a ratchet bar pivotally connected at its lower

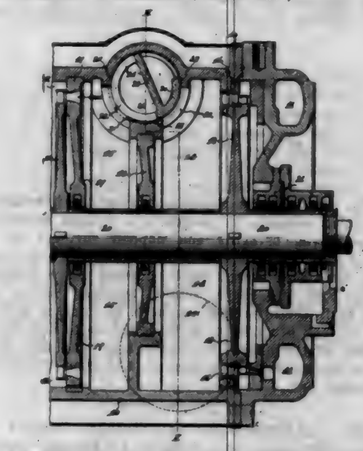
end to the intermediate portion of said rack and extending upwardly through the guide in said lower frame bar, and a pawl carried by said last named bar for engagement with the teeth of said ratchet bar.

1,538,253. SUMP NET. JOHN J. MATZ, Ketchikan, Alaska. Filed Oct. 22, 1924. Serial No. 745,225. 5 Claims. (Cl. 43—102.)



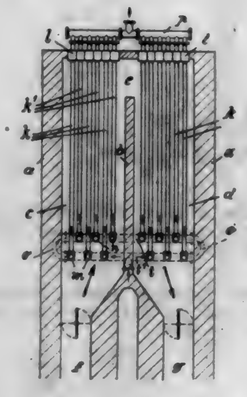
1. A sump net comprising a body portion, means for independently raising and lowering the forward and after ends of said body portion, a chute leading from said body, and a sump portion at the juncture of said chute and body disposed continually below the water level when the net is in operation substantially as described.

1,538,254. EVAPORATING APPARATUS. HOWARD S. MELLOTT, Morenci, Mich., assignor to By-Products Recovery Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 19, 1915. Serial No. 22,510. 5 Claims. (Cl. 139—6.)



1. In an evaporating apparatus, the combination of a stationary cylindrical container, means for heating the wall thereof, means for introducing material to be treated into the container, a rotatable conveyor mechanism positioned within the container, said conveyor mechanism having a brushing surface extending longitudinally at an angle, and movable into contact with the surface of the container, and means for rotating the conveyor mechanism at a high speed, whereby to impart continuous

and simultaneous circumferential and endwise movement to a layer of material in contact with the heating wall of the container, while maintaining a central quiet zone



for the inward escape of vapors from said layer, and said container having a free discharge at its end for said vapors.

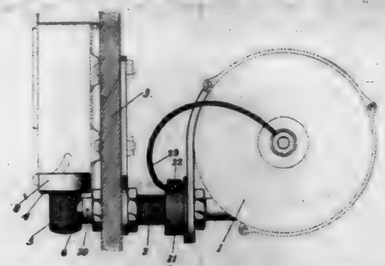
1,538,255. TURBINE BLEEDER VALVE. JAMES LEONARD MOORE, Wellsville, N. Y., assignor to The Moore Steam Turbine Corporation, Wellsville, N. Y., a Corporation of New York. Filed Mar. 16, 1922. Serial No. 544,148. 5 Claims. (Cl. 60—67.)

1. A multi-stage expansion steam turbine comprising a casing having a live steam or high pressure inlet and final low pressure outlet, means for effecting a plurality of stages of expansion within said casing and interposed between said inlet and outlet, a diaphragm within the casing separating one stage of expansion from a succeeding stage of expansion and provided with an opening for the passage of the steam from one stage to the adjacent succeeding stage of expansion, an intermediate steam pressure outlet communicating with a stage ahead of the diaphragm and receiving expanded steam and exterior of the casing, a rotary cylindrical bleeder valve disposed in said opening and solely supported at its ends and having ports, arranged and adapted to control the passage of the expanded steam through said opening from one stage to a succeeding stage or into the intermediate fluid pressure outlet, said bleeder valve provided with a clearance between its seat and valve body whereby said valve will not rust or stick to its seat or turbine casing and also permit a small volume of expanded steam to constantly pass through said clearance to the other stages of expansion between said diaphragm and final low pressure outlet when said bleeder valve is in its closed position.

1,538,256. FUEL ECONOMIZER. FRIEDRICH MÜNZINGER, Berlin, Germany, assignor to the Firm Allgemeine Elektricitäts-Gesellschaft, Berlin, Germany. Filed Sept. 3, 1921. Serial No. 498,526. 2 Claims. (Cl. 122—44.)

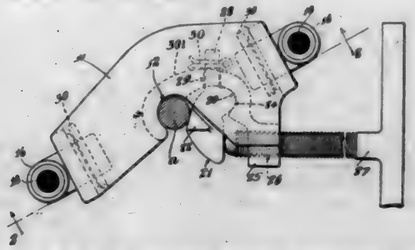
1. Fuel economizer comprising in combination, juxtaposed rows of substantially vertical circulating tubes, the tubes in alternating rows differing in length, the upper ends of all the tubes being disposed at the same level, juxtaposed upper headers arranged in close contact with one another connecting the upper ends of said rows of tubes, lower headers connecting the lower ends and being disposed at two different levels and means for causing heating gases to travel lengthwise of said tubes and to enter and leave between the lower headers.

1,538,257. BUFFER FOR AUTOMOBILES. NORBERT L. OBRECHT, Mount Clemens, Mich. Filed Sept. 22, 1921. Serial No. 502,331. 4 Claims. (Cl. 293—55.)



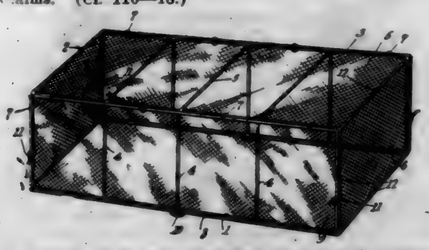
4. An end bumper for vehicles comprising an angular spring metal side member for each side of the vehicle attachable at one end thereto and extending forwardly and outwardly thereof and then turned inwardly to meet the opposite side member at a point substantially midway the width of the vehicle and forward thereof, a front spring metal member angularly shaped to fit over the meeting angle of the inwardly extending portion of the side members and secured to said side members so that the front member and side members comprise a unitary resilient structure.

1,538,258. IGNITION HEAD FOR CIGAR AND CIGARETTE LIGHTERS. LEWIS PENGILLY, Stockton, Calif. Filed Mar. 4, 1924. Serial No. 696,767. 11 Claims. (Cl. 219—82.)



1. An ignition head for cigar and cigarette lighters comprising an open-topped body member, a disc adapted

to rest on the rim of the body, a heating element carried by the disc, means independent of the disc for removably



holding said disc in place, and contact means in the body with which the heating element is then automatically engaged.

1,538,259. GRIP. JAMES P. RATIGAN, Huntington Park, Calif. Filed June 21, 1924. Serial No. 721,607. 12 Claims. (Cl. 24—249.)

1. A grip of the character described comprising a body having a recess in one side and a slot opposite to the recess, the rear wall portion of the slot being concave, a pressure block projecting into the recess and provided with a convex face fulcrumed against the concave wall portion, and means on the body to force the block about its fulcrum toward the wall of the recess.

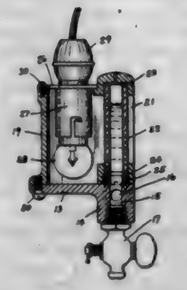
1,538,260. TOBACCO-FIRING DEVICE. BENJAMIN SEYMOUR STREET and SELDON R. GLENN, Louisville, Ky. Filed Oct. 31, 1923. Serial No. 671,999. 2 Claims. (Cl. 110—18.)

1. A device of the class described including top, bottom and end frames, door frames hingedly connected to and adapted to swing freely relative to the respective side portions of the top frame, said door frames being foldable onto the top frame and adapted to swing by gravity to position across the space between the end frames and foraminous coverings upon the top, end and door frames.

1,538,261. HAT-BLEACHING COMPOSITION. MIKE N. TERPINAS, Frankfort, Ind. Filed Sept. 1, 1923. Serial No. 660,044. 3 Claims. (Cl. 8—2.)

3. A hat bleach compound including aproximately one pound of gum arabic, one and one-half pounds of whiting, one pound of zinc oxalate, three pounds of white sulphur, and one half pint of alcohol.

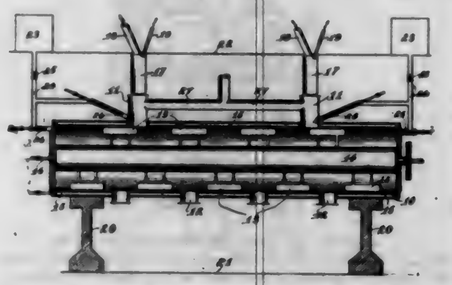
1,538,262. GLOVE. ALBERT C. ACKERMAN, Ballston Spa, N. Y. Filed Oct. 10, 1924. Serial No. 742,795. 1 Claim. (Cl. 2—169.)



A glove blank made of knit fabric having the fingers and thumb in one piece of material with the hand and formed on one side with a cut extended inwardly between the thumb and the forefinger toward the middle of the blank and formed on the opposite side with an edge portion extending diagonally from the base of the little finger inwardly toward the wrist.

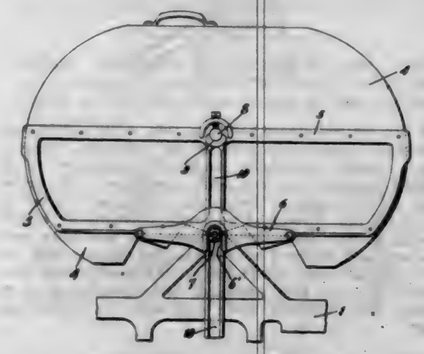
1,538,263. METHOD OF MAKING GLOVES. ALBERT C. ACKERMAN, Ballston Spa, N. Y. Filed Oct. 17, 1924. Serial No. 744,218. 5 Claims. (Cl. 2—169.)

1. The hereinbefore described method of making a glove which consists in producing a napped surface on suitable fabric, bringing the napped surfaces of two layers of said fabric together and causing them to adhere, cutting from said layers while adhering glove blanks of the same size and shape, sewing together two of such blanks with their napped surfaces in contact and adhering to each other by a continuous line of stitching at the edges of the blanks extending from one side of the wrist to the opposite side thereof, and then turning the glove inside out.



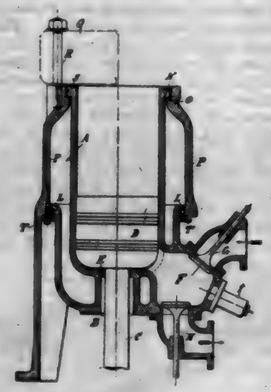
1,538,264. ILLUMINATED OIL GAUGE. NEIL T. ALBRIGHT, Kokomo, Ind., assignor to Kokomo Automotive Mfg. Co., Kokomo, Ind., a Corporation. Filed Mar. 28, 1924. Serial No. 702,580. 3 Claims. (Cl. 73—54.)

1. An oil gauge comprising a supporting base plate, a hollow casting opened at its top and bottom adapted to be mounted on and detachably secured to said base plate, said casting being provided with sockets for receiving



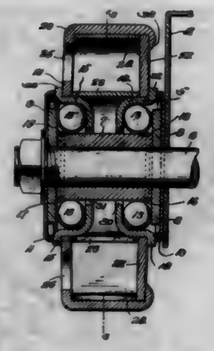
a glass gauge tube and with a slot formed therein to expose one side of a glass tube when mounted in said sockets, and a lamp supporting plate mounted on and detachably secured to the upper edge of said casting for closing its upper opening and forming an enclosed illuminating chamber for said gauge tube.

1,538,265. PROCESS FOR RECOVERING NICOTINE FROM TOBACCO. ROBERT B. ARNOLD, St. Louis, Mo., assignor to Hall Tobacco Chemical Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1922. Serial No. 538,250. 11 Claims. (Cl. 167—4.)



5. The process of recovering nicotine from tobacco material which consists in mixing the material with a dry alkali and with an amount of water substantially equal only to that necessary for generating the minimum quantity of steam capable of extracting and carrying off all the nicotine present in the tobacco material and in heating the mixture to transform the water into steam for carrying off the extracted nicotine.

1,538,266. WASHING MACHINE. THOMAS W. BEHAN and HERMAN W. DOUGHTY, Binghamton, N. Y., assignors to The Nineteen Hundred Washer Company, Binghamton, N. Y., a Corporation of New York. Filed Aug. 19, 1924. Serial No. 732,920. 6 Claims. (Cl. 259—75.)

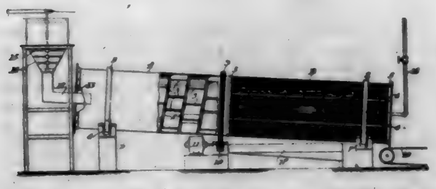


1. In a washing machine of the oscillating type, a tub, a pair of oscillating levers provided at the top with slots within which the tub is detachably supported, and a spring for retaining the tub on said levers and for cushioning all reversal of movement of the tub upon the oscillations of said levers.

1,538,267. DOUBLE-ACTING FOUR-STROKE DIESEL MOTOR. HANS HENRIK BLACHE, Hellerup, near Copenhagen, Denmark. Filed Apr. 27, 1923. Serial No. 635,113. 3 Claims. (Cl. 123—63.)

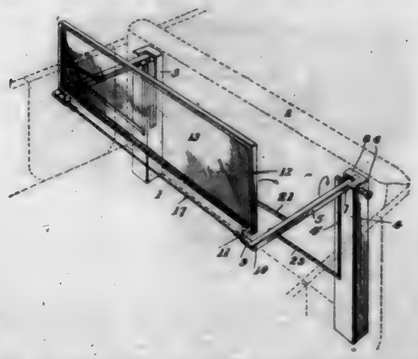
1. In a double-acting four-stroke Diesel engine having its cylinder liner suspended at its top so as to be free to expand downwardly, in combination, a cylinder liner, a bottom cover formed integrally with the cylinder liner and formed to receive a piston rod, a valve chamber integral with the combined cylinder liner and bottom cover, all necessary valves being fitted in the valve chamber, a flanged cooling jacket formed of a plurality of pieces and constituting a part of the engine frame and so connected to the cylinder bottom as to permit free expansion downwardly of the cylinder liner and valve casing relative to the cooling jacket.

1,538,268. SKATE WHEEL. HERMAN CASLER, Canastota, N. Y., assignor to Production Engineering Corporation, Canastota, N. Y. Filed Feb. 11, 1924. Serial No. 692,111. 2 Claims. (Cl. 208—181.)



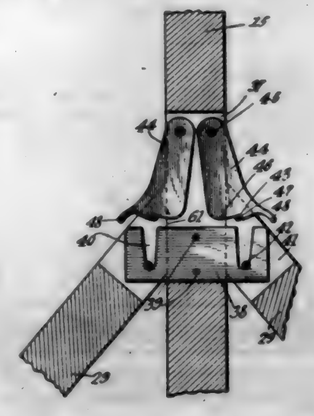
1. A wheel comprising a hub having circumferential grooves therein, bearing cups and ball bearings therefor mounted on the hub, split wire coils in said grooves to prevent displacement of said ball bearings, a tread member having a side wall resting upon one of said cups, a disk resting upon the other of said cups and engaging the tread member, inner and outer spaced split bands extending between said side wall and said disk, said inner band spanning and resting upon the said cups, and the said outer band snugly seated within the tread member.

1,538,269. TREATING BLACK LIQUORS FROM THE CAUSTIC-SODA TREATMENT OF CELLULOSIC SUBSTANCES. LOUIS JEAN BAPTISTE AUGUSTIN COLAS, Paris, France, assignor to himself and Andre Paul Joseph Colas, Paris, France, and Société l'Alfa, Société Anonyme pour la Fabrication des Pâtes de Cellulose, Paris, France, a Company of France. Filed Apr. 30, 1923. Serial No. 635,774. 4 Claims. (Cl. 252—7.)



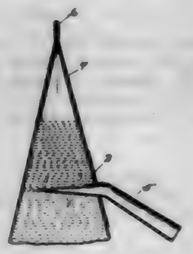
1. A process of treating the black liquors obtained from the lixiviation of vegetable matter with caustic soda for the purpose of extracting the substances contained therein, comprising the steps of subjecting the liquor to the action of a flocculating agent to coagulate the fine particles of material; extracting the coagulated particles and the larger particles in suspension in the interstitiary liquid; subjecting the residual liquid to the action of a base to separate the remaining fine particles and a portion of the substances in solution; and then freeing the liquid from said separated particles and substances.

1,538,270. METHOD FOR AGITATING, WASHING, AND DRYING. DAVID C. COLLIER, Santa Fe, N. Mex. Filed Jan. 15, 1921. Serial No. 437,570. 6 Claims. (Cl. 83—85.)



1. The method of separating constituents of a pulverulent material, which consists in mixing the material with a liquid comprising a constituent having the property of selectively agglomerating particles of one of said constituents and then repeatedly bringing portions of the mixture into impacting contact with each other to promote agglomeration and removing the particles of another constituent together with the residual liquid.

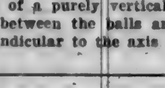
1,538,271. WINDSHIELD FOR AUTOMOBILES. HARRISON W. CONNER, Boston, Mass. Filed Sept. 25, 1919. Serial No. 326,301. 14 Claims. (Cl. 296—85.)



1. A tonneau wind shield comprising supports, arms pivotally and slidably mounted in said supports, detachable pins upon which said arms are pivotally mounted, said arms being capable of sliding in said supports when the detachable pins are removed and a wind shield frame pivotally mounted on the free ends of said arms.

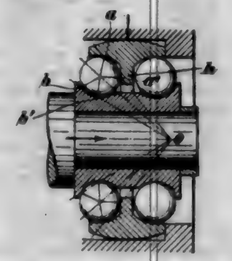
1,538,272. PLAYGROUND APPARATUS. JAY COOK, Coldwater, Mich. Filed Mar. 18, 1924. Serial No. 700,095. 4 Claims. (Cl. 272—62.)

2. In a device of the class described, a frame comprising a standard, an inclined brace cooperating with the standard, a hanger mounted on the standard and having a seat, a projection carried by the brace and received in the seat, a keeper on the brace, and a latch pivoted to the standard and engaged with the keeper.



1,538,273. TAP FOR LIQUID CONTAINERS. MARY A. DARROW, Miami, Fla. Filed July 13, 1923. Serial No. 651,407. 1 Claim. (Cl. 221—23.)

A tap for containers having a thin easily puncturable side wall angularly inclined to the horizontal, comprising a pointed, conically shaped tube adapted to be pushed through said side wall, apertures in the upper wall of said tube, a flange on said tube inclined to the axial line thereof at an angle substantially supplemental to the angle of inclination of said side wall, whereby said flange is adapted to abut against said side wall for maintaining said tube in the substantially horizontal position, said apertures being positioned to be within said container when said stop abuts said side wall.

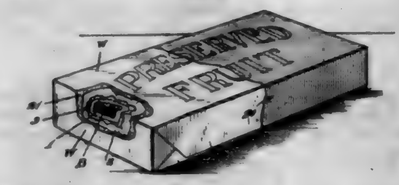


1,538,274. SWITCH MOUNTING. VICTOR R. DESPARD, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Apr. 27, 1922. Serial No. 556,997. 10 Claims. (Cl. 200—168.)

1. In a device of the character described, a housing comprising a hollow body portion and a cap member, said body portion having a cut out portion in the edge thereof and said cap member having an interrupted flange embracing said body portion, an interruption in

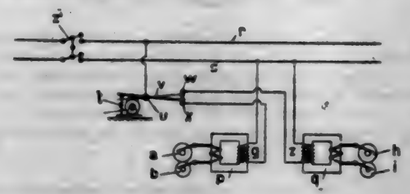
said flange lying opposite said cut out portion, the end wall portion of said cap having a cut out portion adjacent said interruption in said flange.

1,538,275. BALL BEARING. ADOLF DOWALD, Bremen, Germany. Filed Jan. 26, 1924. Serial No. 688,786. 1 Claim. (Cl. 308—230.)



A ball bearing having inner and outer rings, each with double races for double sets of balls, said rings being arranged concentrically about a horizontal axis, and double sets of balls interposed in said race between the two rings, the inner and the outer rings having curved faces for taking up the radial thrust which faces are of larger curvatures than that of the balls and lateral faces normally out of contact with the balls for taking up the axial thrust and arranged so as to act in opposite directions to each other, the relative positions of the points of contact between the balls and the rings and their lateral faces in cases of combined horizontal and vertical stresses being such that the lines connecting two points of contact between the balls and the inner ring and those connecting the two points of contact between the balls and the outer ring lie on imaginary cones having a common apex at the axis of the bearing, whilst in the case of a purely vertical thrust the only points of contact between the balls and the two rings lie in planes perpendicular to the axis of the bearing.

1,538,276. BOLL-WEEVIL EXTERMINATOR. JEROME J. B. DEBEERN, Jefferson, Tex. Filed Oct. 29, 1923. Serial No. 671,429. Renewed Apr. 4, 1925. 2 Claims. (Cl. 43—144.)

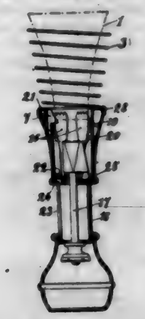


1. In a boll weevil exterminator of the character described, an inverted substantially U-shaped frame having outturned end members forming co-axial axles, supporting wheels journalled upon said axles, a pair of handles having their rear ends secured upon the outer ends of said axles, brace rods connecting the upper intermediate portion of the frame with each of said handles, supply tanks supported by and arranged in the upper corners of said frame, fuel supply pipes rigid with and depending rearwardly from each of said tanks and equipped with burners upon the lower ends thereof, normally arranged in close proximity to the ground, means supported by said handles forwardly of the tanks and burners for removing insects from standing plants upon forward travel of the device, the braces between the frame and the handles being adjustable for tilting the frame and varying the distance between the burners and the insect removing means.

1,538,277. ART OF PACKING AND PRESERVING FRUITS AND OTHER FOOD PRODUCTS AND COMMODITIES. CALEB C. DULA, Yonkers, N. Y. Filed Feb. 8, 1924. Serial No. 691,381. 2 Claims. (Cl. 99—8.)

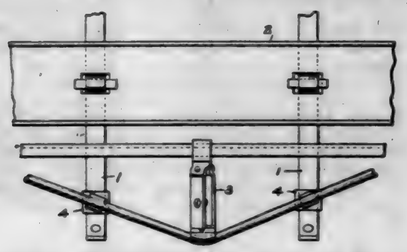
1. The method of preserving commodities which includes enclosing the same in a wrapper composed of superimposed layers of foil and paper connected throughout by a waxy material between the foil and paper, completely enclosing the embryo package in an outer wrapper of paper and treating the outer wrapper with a waxy substance in a fluid state, thereby to thoroughly impregnate the outer wrapper and seal it to the inner wrapper.

1,538,278. ELECTRIC WELDING. SVEND DYHR, Berlin-Charlottenburg, Germany, assignor to Deutsche-Schweissmaschinen-Fabrik, Becker & Co., A. G., Berlin-Schoneberg, Germany. Filed Aug. 26, 1921. Serial No. 495,770. 5 Claims. (Cl. 219—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



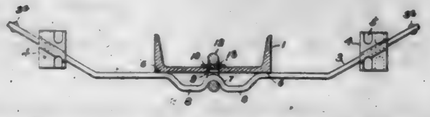
1. The method of electric resistance welding which comprises supplying current from the same mains to two pairs of continuously advancing disc-shaped roller electrodes, causing such electrodes to weld separate seams spot by spot, in such manner that a current impulse for welding a spot is sent alternately through one and the other pair of electrodes, and keeping the duration of the impulses and intervals approximately equal.

1,538,279. TOILET BRUSH. MARGUERITE FAUCON, née Berger, St. Mande, France. Filed May 3, 1920. Serial No. 378,599. 2 Claims. (Cl. 15—194.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a toilet brush, the combination of a hollow handle, a brush element removably secured to said handle, binding means surrounding said brush element for securing the bristles thereof, resilient clamps car-

ried by said handle, a slidable sleeve carried by said handle and surrounding said clamps and adapted to tighten the latter on the tuft when the sleeve is

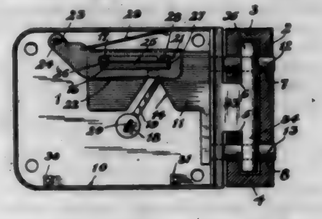


slid over the same, and a knife member disposed within the sleeve and adapted to cut the said binding means upon the insertion of the brush element between the clamps.

1,538,280. SHOE FOR BRAKE-BEAM SUPPORTS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,559. 3 Claims. (Cl. 188—213.)

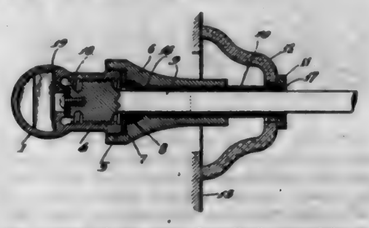
3. A shoe for a supplemental support of a brake beam consisting of a body portion slotted for the reception of a supporting rail and provided on opposite sides with open-ended saddles for the reception of the tension member of a brake beam, said saddles being arranged at an angle to each other and to the axis of the body portion.

1,538,281. SECURING BRAKE-BEAM SUPPORTS TO SPRING PLANKS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed July 8, 1924. Serial No. 724,808. 3 Claims. (Cl. 188—213.)



2. The combination of a spring plank of a car truck having an opening therethrough, a supporting rail having spaced points of bearing on the underside of the plank, a link surrounding the rail at a point intermediate the points of bearing on the plank and projecting through the opening in the plank and means passing through the portion of the link projecting through the opening and bearing on the plank for supporting the link.

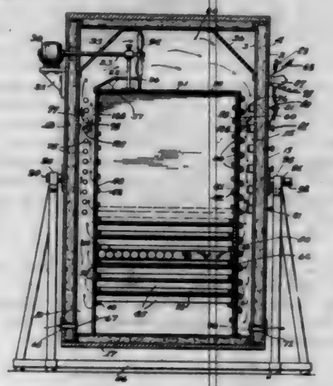
1,538,282. GUARD AND LEDGER PLATE FOR MOWERS. VIRGIL W. FRY, Sandborn, Ind. Filed July 23, 1923. Serial No. 653,252. 1 Claim. (Cl. 56—311.)



In a cutter mechanism the combination with a finger bar and guard having an opening, of a ledger plate with an opening and adapted to be inserted in said guard, a projection on the end of said ledger plate adapted to be inserted in the guard opening, a lug on said guard adapted to extend through the ledger plate opening, said lug having a recess formed thereunder, a removable key having an upwardly curved head thereon adapted to extend through the opening in said ledger plate, bearing firmly against the lower edge thereof and extending into said recess, and means for clamping said guard and finger bar to each other so as to cause said finger bar to engage the rear end of said key and force it downwardly against the lower edge of said ledger plate thereby causing said head to be forced upwardly and wedged in the recess in said guard so as to draw said ledger plate downwardly and hold it firmly therein.

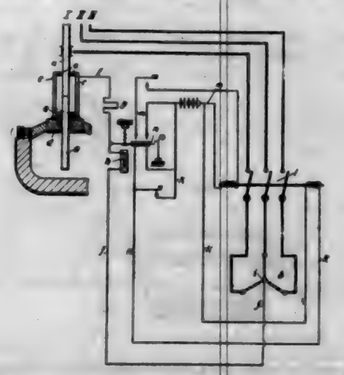
1,538,283. LOCK. ABRAHAM GERTSFELD, New York, N. Y. Filed May 6, 1924. Serial No. 711,324. 3 Claims. (Cl. 70—46.)

1. A lock having a pair of bolts, an extension projecting from the lock between the bolts, said extension having lateral projections at its end extending in front of the bolts and provided with bolt openings through which said bolts may project, a keeper having portions adapted to lie on both sides of said lateral portions of the lock and having portions adapted to extend around the ends thereof, said kepeer being provided with bolt openings located on both sides of said lateral portions, said bolt openings being located in alignment with the bolt openings in said lateral portions and adapted to receive the bolts when the same are projected out of the lock.



1,538,284. PARTITION VALVE. MYRON J. GLAUBER, Los Angeles, Calif. Filed June 25, 1924. Serial No. 722,284. 9 Claims. (Cl. 137—111.)

1. An article of the class described comprising a valve body having a relatively short tubular branch, a tapered extension cap screw threaded to the said short branch,

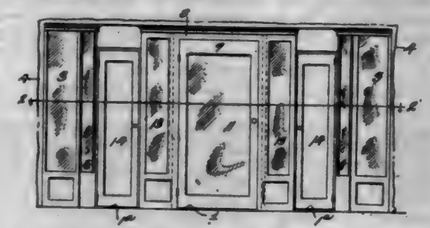


said extension cap having a plurality of sides, and an escutcheon and means adapted to be secured to the said extension cap for maintaining the said escutcheon in position.

1,538,285. INCUBATOR. BEN JOHNSON, New Orleans, La., assignor of two-thirds to Victor C. Smith and one-third to William W. Wall, both of New Orleans, La. Filed May 17, 1924. Serial No. 714,003. 9 Claims. (Cl. 119—37.)

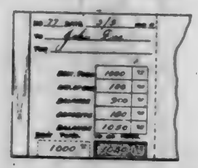
1. In an incubator adapted to receive and hatch eggs, the combination of a closed chamber adapted to be oscillated; a frame within said chamber provided with trays closely fitting said frame and forming separate tray compartments therein; said frame being further provided with oppositely disposed perforated sides whereby air may pass through said tray compartments; a passage around three sides of said frame connecting said oppositely disposed perforations; means to circulate air through said passage and through said tray compartments; means to control the circulation of said air; means to heat said air; automatic means to regulate the temperature of said air; and means to oscillate said chamber whereby the position of the eggs may be changed.

1,538,286. PROTECTING DEVICE FOR THE COOLING CYLINDERS OF THE ELECTRODES OF FURNACES HEATED BY ARCS. EDMUND KRAUSE, Henigsdorf, near Berlin, Germany. Filed Apr. 17, 1924. Serial No. 707,252. 6 Claims. (Cl. 204—64.)



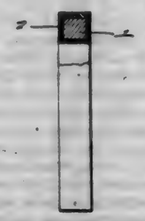
1. A protecting device for the cooling cylinder of the electrodes of furnaces heated by arcs, characterized in that not only are the electrodes insulated from the cooling cylinders or rings, but the cooling cylinders or rings are themselves insulated from the body of the furnace and are connected by an electrically conducting path to the furnace transformer or current generator, a switch device, which becomes effective in case of an electrode breaking, being interposed.

1,538,287. PROCESS OF DEODORIZING KEROSENE. WOLF KRITCHEVSKY and HAROLD C. PRUTSMAN, Chicago, Ill., assignors to William Citron, trustee, Chicago, Ill. Filed July 2, 1924. Serial No. 723,649. 3 Claims. (Cl. 196—39.)



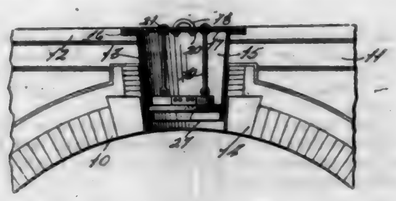
1. The method of deodorizing kerosene which consists in treating the same with chlorsulphonic acid, then washing, then treating with an alkali, and then treating with a solid absorbent colloid.

1,538,288. STORE FRONT. PAUL O. KUEHN, South Bend, Ind. Filed Jan. 29, 1923. Serial No. 615,502 4 Claims. (Cl. 20—40.)



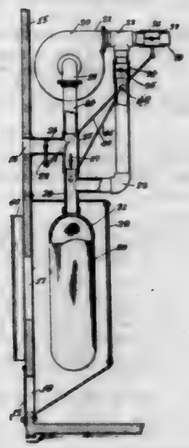
1. The combination with a vestibule entrance of a store front, said vestibule having a passage therethrough and a door at its outer end, of means for closing the inner end of the vestibule whereby the vestibule may be entirely closed and used as a display window.

1,538,289. CHECK BOOK. THOMAS C. LARTER, Los Angeles, Calif. Filed Mar. 29, 1924. Serial No. 702,758. 7 Claims. (Cl. 283—58.)



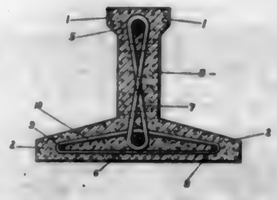
1. In a check book, a series of superimposed blanks comprising stubs, each provided with means permitting a balance going forward to be written therethrough and directly upon a succeeding stub.

1,538,290. PACKING RING. JULES A. LE BLANC, Port Arthur, Tex. Filed Mar. 20, 1924. Serial No. 700,738. 1 Claim. (Cl. 288—1.)



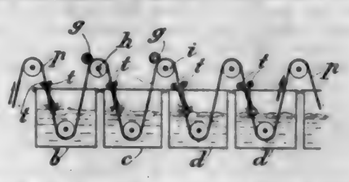
A packing ring structure including as an element an annular ring formed from the wood of tupelo root.

1,538,291. CHARGING-HOLE CLOSURE FOR INCINERATORS. Gus F. Lenk, Dallas, Tex., assignor to Superior Incinerator Company of Texas, Dallas, Tex., a Corporation of Delaware. Filed Sept. 29, 1923. Serial No. 665,614. 3 Claims. (Cl. 110—1.)



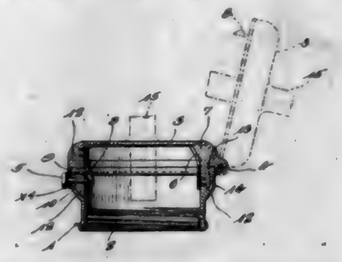
1. In a charging hole closure for furnaces, an annular fire resisting tile having a boss on its upper side and a circumferential groove, an annular split metal hanger surrounding the boss and having an inwardly directed flange engaging in the groove of the tile, splice plates connecting the parts of the hanger, the tile extending radially beyond the hanger and plates and means for supporting the hanger in a charging hole.

1,538,292. DUST ERADICATOR FOR MOVING VEHICLES OR BUILDINGS. Lycurgus Lindsay, Los Angeles, Calif. Filed Aug. 24, 1923. Serial No. 659,142. 3 Claims. (Cl. 183—39.)



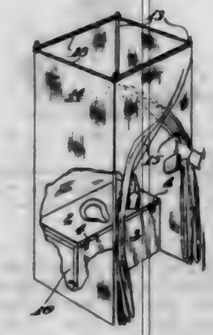
1. The combination with a wall having an upper opening and a lower opening, of a housing covering the lower opening, a blower mounted above the housing and having an intake pipe extending into the housing, an air filter in the housing connected to the intake pipe, a side branch leading from the upper opening into the intake pipe, a branch pipe leading from the outlet of the blower to the intake pipe, a discharge pipe leading from the blower, a valve in the intake pipe below the branch, a valve in the branch of the intake pipe, a valve in the branch of the discharge pipe, and a valve in the discharge pipe, so that when the valve in the intake pipe and the valve in the discharge pipe are open and the other valves closed and the blower operating, air will be drawn through the lower opening through the filter and blower and discharged through the discharge pipe, and so that when these valves are closed and the other valves open, air will be drawn through the blower and passed backwardly through the filter to remove the dust upon the filter.

1,538,293. REENFORCED-CONCRETE BEAM. Pedro Bernardo Loyeau, Buenos Aires, Argentina. Filed Feb. 21, 1924. Serial No. 694,835. 1 Claim. (Cl. 72—62.)



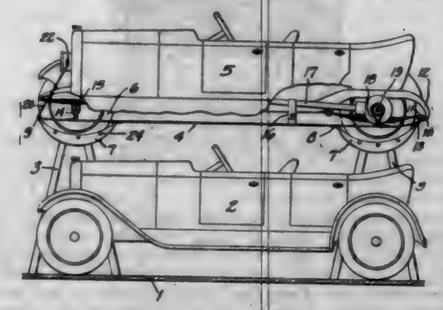
A reenforced concrete beam comprising a duoble T-shaped concrete structure having upper arms and lower arms, said upper and lower arms being connected together by a web portion having a series of openings formed transversely therethrough; an iron bar arranged longitudinally in the web portion between said upper arms; an iron bar arranged longitudinally in the portion between said lower arms; a plurality of vertically arranged S-shaped rods in the web portion for securing said bars together; a longitudinally arranged bar for each lower arm; and a plurality of looped horizontal rods separate from the first-named rods arranged around and connecting said last-named bars together, said looped rods having their upper members resting on the iron bar in the web portion of the lower arms.

1,538,294. PROCESS OF NITRATING REGENERATED CELLULOSE FILMS OR PAPER. Louis Lumière, Lyon, France, assignor to Societe Anonyme "Union Photographique Industrielle, Etablissements Lumiere & Jougla Reunis," Lyon, France. Filed Apr. 4, 1924. Serial No. 704,254. 4 Claims. (Cl. 18—57.)



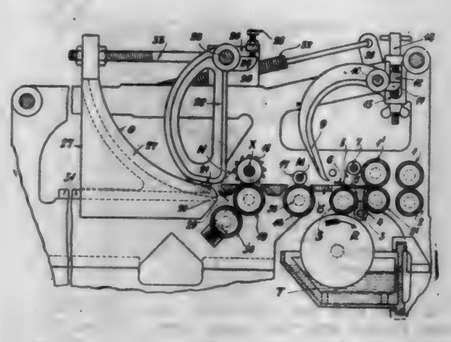
3. Process of nitrating regenerated cellulose films consisting in subjecting the film to successive and alternate washings of nitric and sulphuric acids, then washing the film in water and drying same.

1,538,295. SELF-OPENING CAP. John C. Lyman and John W. Jones, Salt Lake City, Utah. Filed Dec. 11, 1922. Serial No. 606,211. 1 Claim. (Cl. 220—35.)



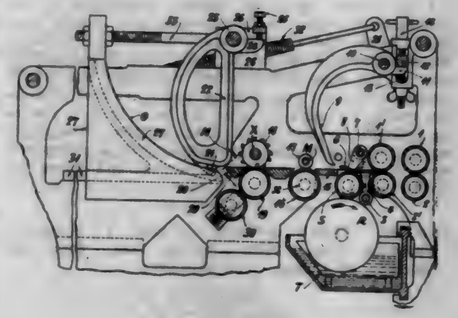
A device of the class described comprising an open ended body member, the lower end of which is internally threaded, a lid member hinged at one edge to the upper end of said body member, a spring secured at one end to the inside of the upper end portion of said body member and having its other end bearing against the inside of said lid member to urge said lid member to open position, a spring latch secured at its upper end to the inside of said lid member at a point diametrically opposite from said spring and having its lower end projecting below the lower side of said lid member, a lug formed upon the inside of the upper end portion of said body member and positioned for engagement by the lower end of said latch to hold said lid member closed, a push button slidably mounted transversely through the wall of said lid member and having its inner end positioned to engage and move the lower end of said latch out of engagement with said lug, a head upon the outer end of said push button, said head being disposed upon the outside of said body member so as to be readily depressed, and a spring confined between said head and the outside of said body member.

1,538,296. AUTOMOBILE COMFORT STATION. David D. McDonald, Ontario, Calif. Filed June 15, 1923. Serial No. 645,556. 3 Claims. (Cl. 135—1.)



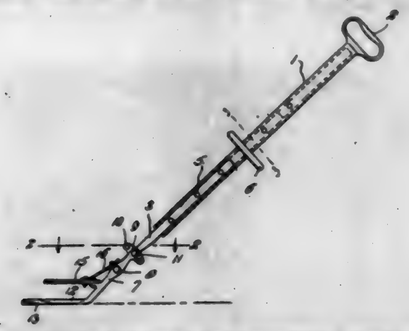
1. In a collapsible comfort station, adapted to receive a box, tent poles to be set up at the corners of the box, the poles having hollow tops, and a tent sheet attached to the pole tops so as to enclose the box, the sheet having hooks to enter the pole tops and hanging loose on the poles.

1,538,297. PROTECTING SHIELD FOR USE IN SHIPPING AUTOMOBILES. William Ledyard Mitchell, Grossepointe Farms, Mich. Filed Dec. 30, 1924. Serial No. 758,958. 4 Claims. (Cl. 45—105.)



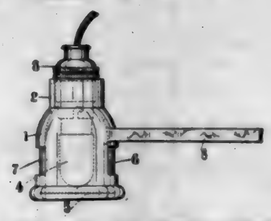
1. A device for use in shipping automobiles, wherein one automobile is placed over another, consisting of a canvas disposed between the two automobiles and pockets in said canvas adapted to receive the wheels of the top automobile whereby liquids dripping from the top automobile or the wheels thereof may be collected and the bottom automobile protected.

1,538,298. APPARATUS FOR FOLDING OF CARTON BLANKS. John W. Nasmith, Manchester, England. Filed Apr. 21, 1924. Serial No. 707,990. 5 Claims. (Cl. 93—49.)



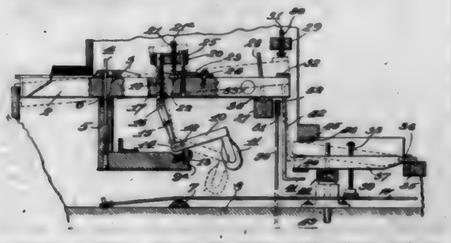
1. Apparatus for folding carton blanks, comprising feed rollers, traversing rollers for the carton blank, inclined blades upon which the foremost flap of the carton blank ascends, yielding levers to check momentarily the foremost edge of said flap to turn it over upon the blank centre, toothed or like wheels under which the blank with its foremost flap folded may pass, and yieldable levers to check the folded edge momentarily to allow the toothed or like wheels to raise the outer edge of the rear flap, in the direction of traverse of the blank, and on their return movement to discharge the now collapsed carton blank to press rollers in a delivery chute.

1,538,299. PROCESS FOR THE FOLDING OF CARTON BLANKS. John W. Nasmith, Manchester, England. Filed Apr. 21, 1924. Serial No. 707,991. 2 Claims. (Cl. 93—49.)



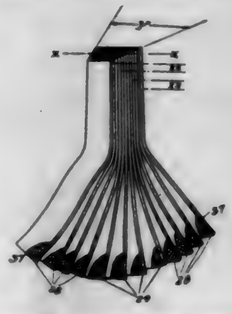
1. As a step in the preparation of a carton after the carton blank has been creased on the lines on which it is to be folded, folding the side flaps over upon the blank body by traversing the blank through an apparatus in a direction at right angles to the creases of the said blank by means of a series of rollers, raising the outer edge of the foremost flap by fixed means within the apparatus and pressing same against members which fold it over backwards upon the blank body, and raising the rear flap of the blank to collapse the latter by means operating in the direction of traverse of the blank co-acting with means against which the folded over junction of the foremost flap and blank body presses.

1,538,300. BRIAR KNIFE AND BRUSH HOOK. JOSEPH C. RANEY, Chadwick, Mo. Filed Feb. 28, 1924. Serial No. 695,762. 1 Claim. (Cl. 30—9.)



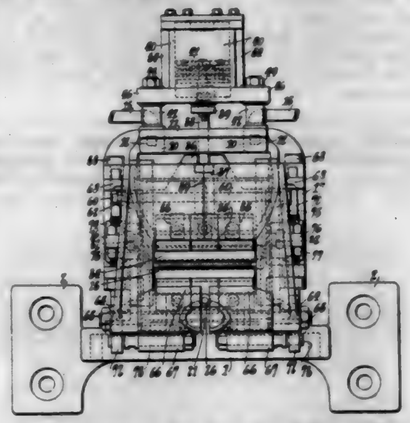
A briar knife and brush hook comprising a shank, an arm pivoted upon the shank, means for securing the arm at an adjusted position with relation to the shank, a blade carried by the arm, a guard pivoted upon the arm at a point above the blade, and means for adjustably securing the guard with relation to the arm.

1,538,301. LAMP FOR MOTOR ROAD VEHICLES. WILLIAM FRANCIS MERKAN ROSS, Hammersmith, London, England. Filed July 22, 1924. Serial No. 727,563. 7 Claims. (Cl. 240—7.)



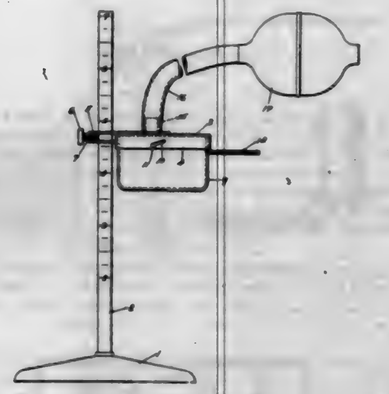
1. An electric lamp for vehicles comprising a body part made of rubber or like material stiff enough to be indeformable, and a supporting arm made of rubber or like material stiff enough to stand up and support the body of the lamp under normal conditions but flexible enough to be bent out of shape under external pressure and resilient enough to cause the body part to resume its original position when such external pressure is removed, said body part being fitted with a transparent element and so shaped as to enclose and house the electric bulb.

1,538,302. PIANO ACTION. HENRY F. SCHENUIT, Pasadena, Calif. Filed Apr. 18, 1922. Serial No. 555,105. 20 Claims. (Cl. 84—238.)



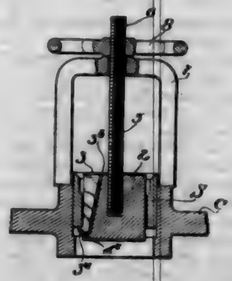
11. In a piano, the combination with piano strings, of a piano action mounted above the strings and including hammers, a key for each hammer, a yieldable fulcrum for each key, and an actuating connection between each key and its hammer arranged to cause downward swinging of the hammer to strike its string when the key is struck, and subsequent elevation of the hammer from its string upon continued depression of the key so as to cause yielding of said fulcrum.

1,538,303. TRANSMISSION BELT. CHARLES R. SHORT, Dayton, Ohio, assignor, by direct and mesne assignments, of three-fourths to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware, and one-fourth to The Dayton Rubber Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 28, 1921. Serial No. 525,356. 16 Claims. (Cl. 74—63.)



1. A V-shaped side-driving transmission belt having circumferential layers of fabric whose edges lie in the side surfaces of the belt; and vulcanized rubber uniting said layers.

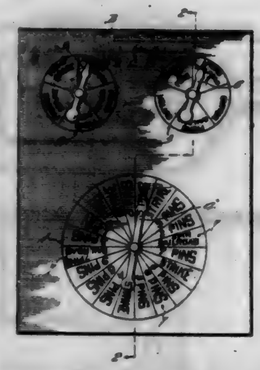
1,538,304. DEVICE FOR REMOVING SCALE AND SURFACE DEFECTS FROM STEEL WHILE BEING ROLLED HOT. JOHN L. SMITH, Hamilton, Ontario, Canada. Filed May 25, 1923. Serial No. 641,453. 31 Claims. (Cl. 29—81.)



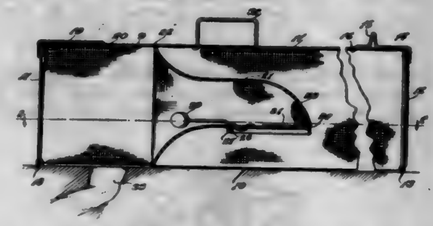
1. An apparatus of the class described comprising a lower stationary scraping means consisting of a pair of scrapers spaced apart in the direction of movement of the work, an upper scraping means consisting of a corresponding pair of scraping elements associated with the lower scraping elements, means for moving the upper scraping elements toward and from the lower scraping elements and means operated by the upward movement of such upper scraping elements for raising the approaching work clear of the lower scraping elements whereby the advance end of the work will be prevented from engaging the lower scraper, thereby preventing cobbles forming in the bar.

1,538,305. SKIRT MARKER. LETHA B. SMITH, Portland, Oreg. Filed Dec. 19, 1921. Serial No. 523,487. 5 Claims. (Cl. 33—9.)

1. In a device of the kind described, the combination with a closed receptacle having a discharge mouthpiece, of means for loading the atmosphere within the receptacle with powder in suspension only, and for ejecting said powder-laden atmosphere through the mouthpiece.



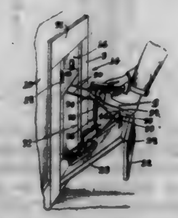
1,538,306. PUMP-VALVE SEAT AND LINER PULLER. HENRY W. STEWART, Long Beach, Calif. Filed Oct. 8, 1923. Serial No. 667,255. 5 Claims. (Cl. 29—86.3.)



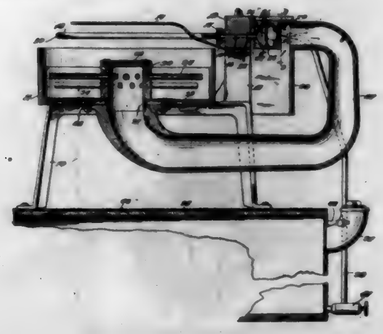
1. A valve seat and liner puller comprising a body having a shank with a threaded portion, a bridge-forming element slidably mounted on the shank and adapted to bear on a primary supporting part in which the valve seat or liner is mounted, means on the upper end of the shank to engage the said bridge-forming element and operative to pull the said body, and hook devices slidably mounted on the outside of said body and adapted to automatically move to an effective position below the end of a valve seat or liner to be pulled.

1,538,307. GAME. GUSTAV STREHLOW, Chicago, Ill. Filed Nov. 10, 1923. Serial No. 675,630. 4 Claims. (Cl. 273—87.)

1. A game for simulating bowling comprising a chance device for indicating the supposed number of pins knocked down by the first mythical ball rolled, and a second chance device entirely independent of and operable after said first device for determining the success of the second imaginary ball rolled, said first named chance device being adapted to retain its indicating position while operating the second chance device, whereby the results indicated by the two devices may be jointly read.

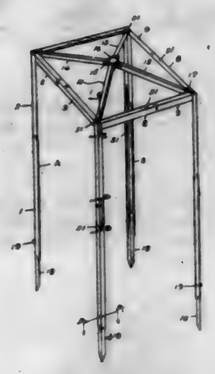


1,538,308. RAT TRAP. MARK TAYLOR and HUGH G. SOWARD, Cleveland, Tenn. Filed June 10, 1924. Serial No. 719,148. 3 Claims. (Cl. 43—58.)



1. A rat trap including a receptacle having end and bottom ingress openings and a single door movable to operative position to close either opening.

1,538,309. DISAPPEARING SHOE STAND. FREDERICK W. THACKERAY and JOHN ROY MILLIKEN, Los Angeles, Calif. Filed Nov. 9, 1923. Serial No. 673,718. 6 Claims. (Cl. 15—265.)

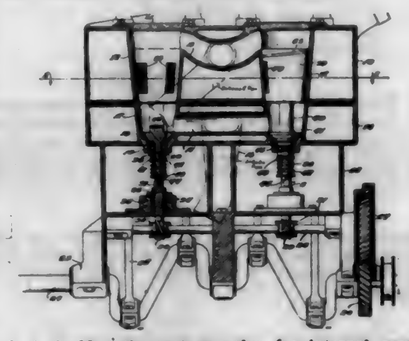


1. A disappearing shoe stand comprising in combination a wall cabinet, a front panel pivoted adjacent the base thereof, a foot rest, arms attached to the inside of the cabinet and engaging the toe portion of the foot rest, links engaging the upper end of the pivoted panel and connected to the foot rest, a standard between the foot rest and the pivoted panel, and means whereby the foot rest, arms, links and standard may be folded within the cabinet when the pivoted panel is closed.

1,538,310. HYDROCARBON BURNER. GEORGE W. WESCHE, Wellsville, N. Y. Filed May 20, 1924. Serial No. 714,689. 8 Claims. (Cl. 158—65.)

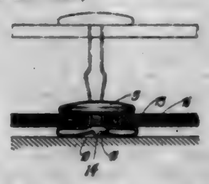
1. A hydrocarbon burner including a stand unit comprising a bowl and a bracket upstanding adjacent the bowl, a header block mounted upon said bracket, a gas generating tube mounted upon said block to extend over the bowl, a nozzle mounted upon the block to communicate with one end with said tube, an induction horn connected at one end to said unit and provided at its opposite end with a hood fitting over said nozzle, burner tubes mounted in the bowl to communicate with the former end of said horn, and a flame spreader clamped between the block and bracket to extend over the bowl.

1,538,311. COLLAPSIBLE BATHHOUSE. ALFRED ANTICKNAP, Toronto, Ontario, Canada. Filed June 2, 1921. Serial No. 474,415. 1 Claim. (Cl. 135—4.)



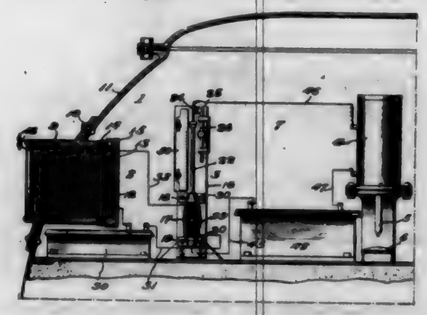
A collapsible bath house comprising a main frame having uprights in individual sections or right angle formation in cross section, the lower individual sections having flanges forming slideways for the upper individual sections, wedge members of right angle cross section adapted for wedging said upper and lower individual sections in their extended position, locking plates carried by said upper individual sections, cross members in telescopic sections connecting said uprights limiting the downward movement of said cross pieces, a cover frame adapted for interfitting engagement with said uprights and said cross pieces, and a flexible enclosing member carrying fasteners constituting auxiliary locking means for said cover frame and adapted for fastening said enclosing member to the various sections of said main frame.

1,538,312. GOLF CLUB. WILLIAM NEISH BEAT, Brooklyn, N. Y. Filed Feb. 21, 1925. Serial No. 10,903. 10 Claims. (Cl. 273—77.)



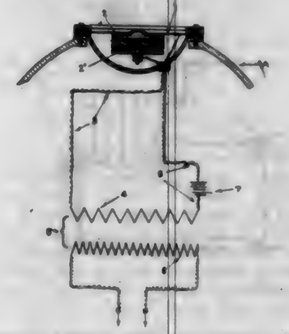
4. In a golf club, the combination of a head having a shallow groove in its bottom face and a plurality of contiguous apertures directed inwardly from the rear face thereof toward the center of the head, a plate countersunk in said groove, said plate having a weighted head adapted to lie flush with the rear face of the head and weighted members extending within the said apertures.

1,538,313. DOUBLE-ACTING ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. ALBERT J. BODKER, Ponchatoula, La. Filed May 1, 1924. Serial No. 710,350. 4 Claims. (Cl. 123—190.)



1. A double-acting rotary valve for internal combustion engines comprising a valve cage in the engine, one end of said valve cage having an opening connected with a fuel supply and the other end having an opening connected with an exhaust for spent fluid, a port being provided in the side of the cage opening into the working cylinder of the engine, a valve body revolubly mounted in said cage, the valve body having side ports adapted to register alternately with the cage port, the valve body having passages separated from each other, one of the passages registering with the exhaust opening and being connected with one of said side ports, the other of the passages registering with the fuel supply opening and being connected with the other of the side ports, a spindle extending downwardly from the valve body, and an adjusting plug around the spindle having threaded engagement with the cage.

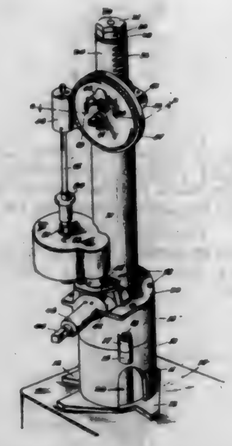
1,538,314. FASTENER. EDWARD J. DOONER, New York, N. Y. Filed Sept. 12, 1924. Serial No. 737,388. 3 Claims. (Cl. 24—153.)



1. A fastener of the class described comprising a head, a pair of complementary shanks formed from a single strip of metal bent intermediate their ends and attached to the head, said shanks being bowed outwardly whereby they may be collapsed as pressure is applied to said head.

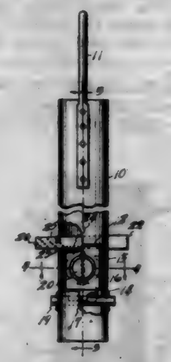
1,538,315. THERMOMICROPHONIC FIRING DEVICE FOR SUBMERGED MINES. JOHN J. DUFFIE, Berkeley, Calif., assignor to Government of the United States. Filed Aug. 9, 1917. Serial No. 185,245. 19 Claims. (Cl. 102—8.)

19. A submersible mine, comprising a sound-responsive device; a firing device; and a circuit closer located between said sound-responsive device and said firing device, and serving to close the circuit upon the lapse of a predetermined period of time beginning with the reception of sound waves by the sound-responsive device.



1,538,316. EXPLOSIVE MINE. JOHN J. DUFFIE, Berkeley, Calif., assignor to Government of the United States. Filed Feb. 8, 1918. Serial No. 215,970. 2 Claims. (Cl. 102—3.)

1. In combination with a mine and its discharging means; a sound-responsive device; and connections between the sound-responsive device and the discharging means, including a relay for building up energy initiated by the sound-responsive device, and a connection-completing device capable of being set to require a predetermined interval of time to effect completion of the connection with the discharging means.

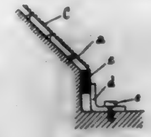


1,538,317. PORTABLE REBORING MACHINE FOR ENGINE CYLINDERS. FREDERICK T. FLINCHBAUGH, York, Pa., assignor to Wayne Tool Manufacturing Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1921, Serial No. 504,286. Renewed June 14, 1924. 18 Claims. (Cl. 77—2.)

1. In a cylinder reboring machine, a gear case having a bearing tube upstanding therefrom, a boring bar journaled in said tube extending through the gear case, means housed by the gear case coacting with the bar for rotating said bar, a sleeve upon the bar slidably fitting in said tube and provided with a rack, means upon the tube coacting with said sleeve holding the

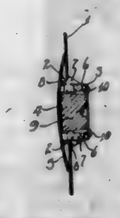
sleeve against rotation, and feed mechanism driven by said first mentioned means including a pinion coacting with said rack for advancing the bar.

1,538,318. SELF-ALIGNING PITMAN BEARING BOX. VALORIS L. FORSYTH, Fort Worth, Tex. Filed May 31, 1924. Serial No. 716,931. 3 Claims. (Cl. 64—34.)



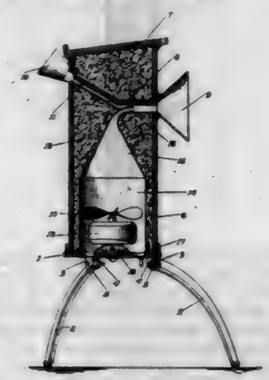
1. The combination with a pitman having openings in its opposite sides, of a wrist pin box extending through said openings, a fulcrum support for the lower portion of the box on which said box is mounted to rock, and means for confining said box on its fulcrum support and holding it in position in the pitman.

1,538,319. SOUND-PRODUCING APPARATUS OR ELECTROMAGNETIC RECEIVING OR EMITTING DEVICE. LÉON GAUMONT, Paris, France, assignor to Société des Etablissements Gaumont, Paris, France. Filed June 12, 1923. Serial No. 644,985. 10 Claims. (Cl. 179—115.)



1. In an apparatus for the emission and reception of sound constituted by a magnet having an air gap, a wire winding on a support, said wire having therein a

variable current produced by the acoustic displacements or being capable of producing such displacements, said winding representing at the same time a mechanical ele-

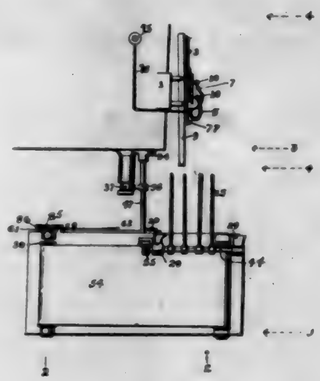


ment receiving or emitting vibrations and an electromagnetic element producing or receiving the variable current, rings of elastic material disposed upon the lower pole-piece of the magnet for supporting the wire winding.

1,538,320. PLATE LOCK. JACOB GULLONG, Chicago, Ill. Filed June 6, 1924. Serial No. 718,342. 3 Claims. (Cl. 40—20.)

1. A plate lock comprising a tubular member fixed to the plate and arranged for partial projection through an aperture provided in a supporting surface upon which said plate is to be fixed, and means carried by said tubular member for engaging with said supporting surface adjacent to said aperture at the rear wall thereof, thereby locking said plate upon said supporting surface, said means including diametrically opposed cam members, and resilient means for yieldably forcing said cam members outwardly from said tubular member.

1,538,321. VOICE-TRANSMITTING DEVICE. CHARLES H. GUNN, Oakland, Calif. Filed June 20, 1923. Serial No. 646,524. 1 Claim. (Cl. 181—27.)

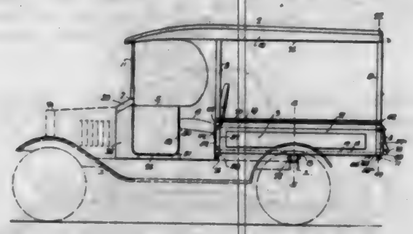


A live voice transmitting device comprising a tube having an enlarged transmitting end, and a receiving mouth-piece at its other end, said tube being freely open from end to end, and means for developing an air blast at a point removed from the tube and discharging it into the tube at a point intermediate the ends of the tube and in the direction of the transmitting end whereby sound waves of the voice will be drawn freely into and through the open tube and discharged forceably out of such transmitting end.

1,538,322. CUTTING AND STACKING SHEET-METAL BLANKS. JAMES EDW. GUNTER, Baltimore, Md., assignor to Southern Can Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 6, 1923. Serial No. 611,090. 8 Claims. (Cl. 214—6.)

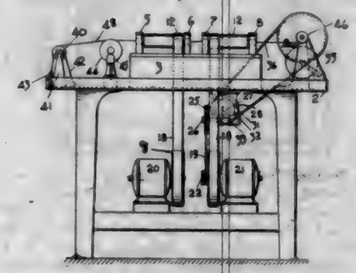
1. The combination with a partitioned receiving table, of a plurality of guide rolls, each guide roll having two parallel guiding surfaces one of greater diameter than the other for supporting the adjacent edges of two blanks in different planes.

1,538,323. PLATE-PRINTING PRESS. CHARLES J. GUTENKLET, Philadelphia, Pa. Filed Jan. 31, 1923. Serial 616,007. 10 Claims. (Cl. 101—287.)



1. In a conveyor for plate printing presses, the combination with a suction conveyor, travelling from a position in front of the plunger of the press, to a point removed therefrom and pressed upon the printed sheet when in front of the plunger, a suction mechanism rarefying the air in the suction conveyor while pressed upon the sheet and while travelling away from the plunger and then relieving the suction so produced, a fly turning between a position beneath the travelling carriage when the latter is away from the plunger and a position over the bed, said fly receiving the sheet from the carriage and turning it over and placing it on the bed, a moving bed moving between each delivery of the sheet upon it by the fly, and a mechanism for giving this motion to the bed.

1,538,324. KNOCKDOWN BODY FOR AUTOMOBILE TRUCKS. LEO I. HEINTZ, Philadelphia, Pa. Filed Oct. 25, 1921. Serial No. 510,274. 19 Claims. (Cl. 296—28.)

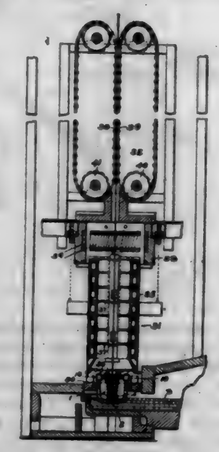


1. In vehicle body construction, the combination of two panel sections; a post socket at each end of each

panel section; a post adapted to each socket; a transverse member; a double flanged plate mounted between

the end of the socket and post; a U-shaped member located in the transverse member; and a vertical bolt securing the several parts together.

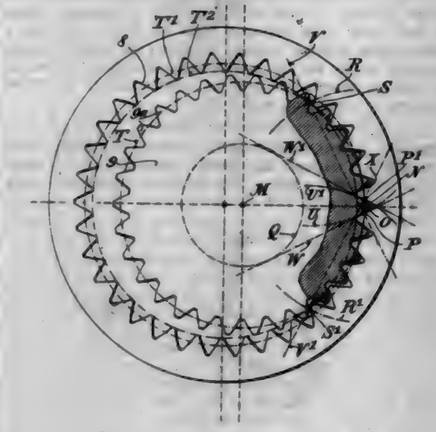
1,538,325. MACHINE FOR STRAIGHTENING WIRE. JOHN J. HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 14, 1920. Serial No. 430,591. 4 Claims. (Cl. 140—147.)



1. A machine for straightening wire comprising rotatable die holders, a plurality, of dies positioned in each holder, a source of power, means for connecting said dies with said power for rotation at a given rate of speed, a wire-receiving member connected with said source of power and means interposed between said member and said power for causing a rotation of said member at a different rate of speed than that of said dies.

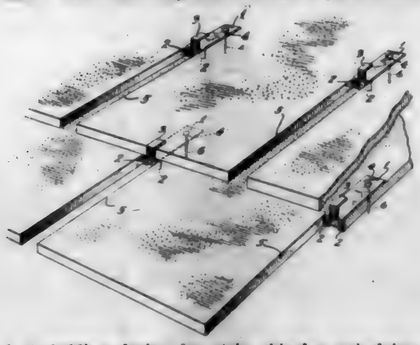
1,538,326. PROCESS OF MAKING A FRUIT-CAKE COMPOSITION. EDWARD A. HINES, San Francisco, Calif. Filed May 5, 1924. Serial No. 711,062. 2 Claims. (Cl. 99—11.)

1. The process of making a fruit cake composition which comprises the steps of mixing spices and fruits with water to form a soft paste and boiling the same, adding lard to the mixture while it is hot, and incorporating therewith flour and baking powder and soda after the lard has melted.



1,538,327. PROCESS AND APPARATUS FOR FORMING SHEET GLASS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor of one-half to Hitchcock Experiment Company, a Corporation of New Jersey. Filed June 17, 1922. Serial No. 569,000. 25 Claims. (Cl. 49—3.)

3. The process of forming sheet glass from a bath of molten glass which consists in extruding the glass through a hot slot and thereby imparting to it a shape similar to the finished sheet, subjecting said sheet immediately adjacent the slot to parallel traveling pressure on its opposite faces and for substantially its entire



width and thereby imparting more accurate dimensions thereto, artificially cooling said traveling pressure means, and pulling the sheet from said traveling pressure means.

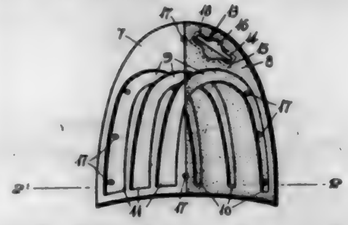
1,538,328. TOOTH FORMATION OF INTERNAL GEARS. SIMON HOLDENER, Wolfshausen, Switzerland. Original application filed Mar. 13, 1924, Serial No. 698,984. Divided and this application filed Dec. 15, 1924. Serial No. 756,023. 2 Claims. (Cl. 74—34.)

1. In an internal gearing two eccentric toothed rims, the flanks of the teeth of the outer and of the inner toothed rims comprising circular arcs of the same radius, which corresponds to the radius of the pitch circle of the inner rim, the centre of said arcs of the teeth of the inner rim being situated on its pitch circle and the centre of said arcs of the teeth of the outer rim being situated on an auxiliary circle which is concentric to the pitch circle and which passes through the centres of curvature of the flanks of that tooth of the smaller rim which is in maximum engagement.

1,538,329. RETAINER FOR STRIP SHINGLES. HARRY H. HONIGBAUM, Richmond Hill, N. Y. Filed June 27, 1923. Serial No. 648,188. 3 Claims. (Cl. 108—33.)

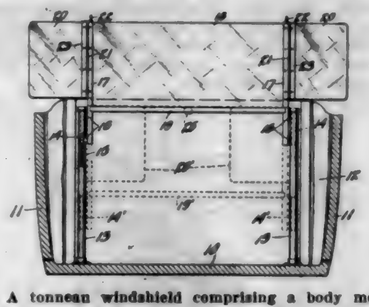
1. A holding device for strip shingles embodying a metallic strip provided at one of its ends with a downwardly extending tongue adapted to extend into the cut out of a strip shingle and to abut the blind end of said cut out and also provided at the same end of the metallic strip with an upstanding tongue adapted to receive beneath it a tab of the next course of strip shingles, said tongues being positioned at the same point in the length of the strip.

1,538,330. BALE REBANDER. ROBERT L. HORSLEY, Memphis, Tenn. Filed May 9, 1924. Serial No. 712,058. 1 Claim. (Cl. 254—79.)



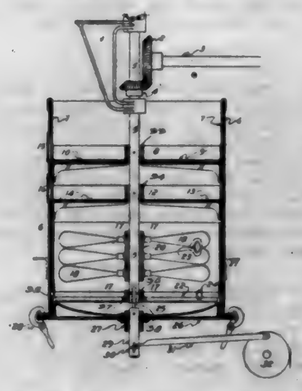
A device of the class described, comprising a lever with its lower end bifurcated and a block pivoted therein, two straps pivoted at one of their ends to opposite sides of said lever at a distance from its lower end and a second block secured between the free ends of said straps, the said blocks having grooves for receiving and means for holding therein the ends of a bale band to be drawn together by operating said lever.

1,538,331. COMBINED OPEN-BOOK HOLDER AND MARK. CHARLES H. JETT, Greenville, Ill. Filed Oct. 29, 1923. Serial No. 671,482. 1 Claim. (Cl. 281—42.)



A book holder and mark stamped from sheet material and provided with relatively wide top and bottom sections, and leg sections connecting the respective ends of said top and bottom sections to provide a rectangular opening, said bottom section being of sufficient width to form a hand hold, said top and bottom sections being inclined from the medial line in the same direction so as to provide a substantially V-shape in cross section and positioning the opening wholly to one side of the medial line so as to facilitate the supporting of a book in open position in a reader's hand.

1,538,332. RUBBER HEEL. LOUIS KAPLAN, New York, N. Y. Filed June 29, 1923. Serial No. 648,484. 2 Claims. (Cl. 36—75.)



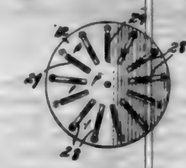
1. A heel, and an insert in the heel at the point where the most wear occurs and composed of pieces of relatively hard and soft metals.

1,538,333. WINDSHIELD. WILLIAM A. KING, Seattle, Wash. Filed May 24, 1923. Serial No. 641,201. 6 Claims. (Cl. 296—85.)

5. A tonneau windshield comprising a body member, wings pivoted at each end of said body member, a supporting element secured adjacent each end of the body member and extending below the same, a bracing element connecting said supporting elements, a pair of hollow guides spaced apart to permit the body member and the supporting elements to be positioned therebetween, plugs slidable in said guides, and means for securing the windshield in adjusted position, substantially as set forth.

1,538,334. METAL-EXTRACTING MACHINE. ALBERT KOCH, Ithaca, N. Y. Filed Sept. 17, 1923. Serial No. 663,187. 21 Claims. (Cl. 82—68.)

1. In a machine for extracting and separating metals in the free state from metal bearing earths, a series of separating screens adapted to separate out the larger particles of earth and metal from earth forced there-

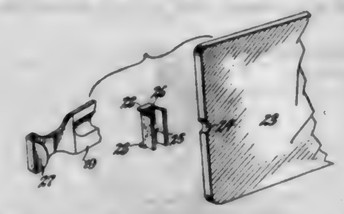


through, means embodying blades movable over said screens for forcing earth therethrough and for removing the separated particles therefrom, and means for extracting and separating the fine grains and particles of metal by amalgamation from the residue of earth after passage through said screens.

1,538,335. MEANS FOR WASHING GASES. ANTHONY J. KOEHLER, Chicago, Ill. Filed June 22, 1923. Serial No. 647,078. 3 Claims. (Cl. 261—92.)

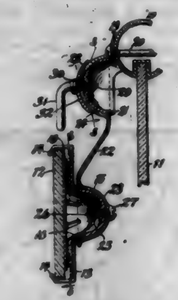
1. A device of the character described comprising a reservoir arranged to be connected with the exhaust manifold of an internal combustion engine and arranged to be partially filled with liquid solvent, a plurality of corrugated partitions disposed transversely in the upper portion of said reservoir, a plurality of perforated partitions disposed transversely to the lower portion of said reservoir, and means disposed in said reservoir between said partitions for agitating the water in said reservoir, said means being actuated by the impact of the exhaust gases and products of combustion projected through said exhaust manifold.

1,538,336. PITCH PIPE. WILLIAM KRATT, New Brunswick, N. J. Filed Jan. 10, 1921. Serial No. 436,171. Renewed Oct. 10, 1924. 4 Claims. (Cl. 84—456.)



2. A pitch pipe comprising a flat central plate, top and bottom plates having marginal flanges and having depressed central portions whereby they are in contact at the center and at the edges with the central plate, a disk embraced by the top plate and having radially arranged passages, the central plate having openings in register with said passages, reeds secured to the central plate and situated on said passages, the marginal flange of the top plate having openings in line with the outer ends of said passages, the bottom plate having openings therein to permit the escape of air, and fastening means passing through the depressed parts of the top and bottom plates and through the central plate whereby the members are clamped together.

1,538,337. ALLOY. LEROY S. KUHN, Cleveland, Ohio, assignor, by mesne assignments, to Ludlum Steel Co., Watervliet, N. Y., a Corporation of New Jersey. Filed Feb. 27, 1919. Serial No. 279,567. 7 Claims. (Cl. 75—1.)



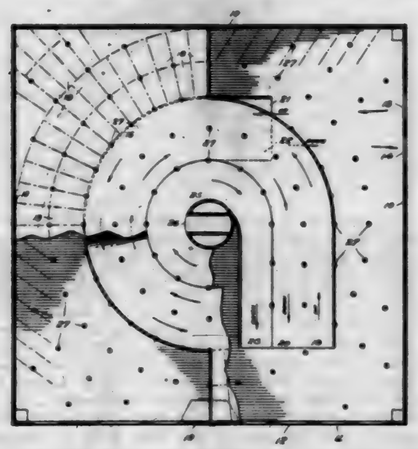
1. A malleable alloyed soft steel resistant to corrosion and to oxidation containing as its principal constituents iron, nickel, chromium and titanium, having at least 10% but less than 15% of chromium, nickel not in excess of 10% nor less than 1% and an appreciable quantity of titanium not in excess of 5%, the balance consisting principally of iron.

1,538,338. MOUNTING FOR MIRRORS AND THE LIKE. WILLIAM LA HODNY, Buffalo, N. Y., assignor to Otto Glass & Mirror Company, Buffalo, N. Y., a Corporation of New York. Filed May 11, 1921. Serial No. 468,504. 1 Claim. (Cl. 45—97.)

A plate provided in its edge with a notch, a protecting member having a body of U-form in cross section the channel of which receives the edge of said plate, an inward projection in the channel of said body engaging with said notch and outward projections at the ends of said body, and a bracket having a hook which engages the outer side of said body between the outward projections thereof.

1,538,339. WINDSHIELD-MIRROR BRACKET. WILLIAM LA HODNY, Buffalo, N. Y. Filed Aug. 11, 1923. Serial No. 656,963. 2 Claims. (Cl. 45—97.)

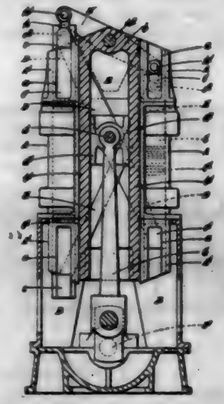
2. A bracket for supporting mirrors on wind shields comprising a supporting plate adapted to be attached to a mirror and provided with a rearwardly projecting spherical boss, a base plate adapted to be attached to a fixture and provided with a forwardly projecting spherical boss, a link provided at its ends with heads, each of which is of concavo-convex form and engages its concave surface with the convex surface of one of said bosses, a clamping screw engaging its thread with the boss of said supporting plate and bearing with its head against the outer side of the head in engagement therewith, a clamping disk engaging with the convex side of the link head engaging with the boss of the base plate, a clamping screw passing through said last-mentioned head and having its thread working in said boss of the base plate and provided with a shoulder bearing against the outer side of said clamping disk, and a follower having a hollow semispherical hub projecting into the concave side of the hollow boss on the supporting plate and engaging with the clamping screw which connects said last mentioned boss and the respective link head and said follower hub being provided at its edge with laterally projecting spring arms engaging with the rear side of the mirror.



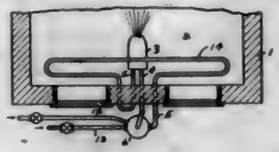
1,538,340. WINDSHIELD-MIRROR BRACKET. WILLIAM LA HODNY, Buffalo, N. Y. Filed Aug. 11, 1923. Serial No. 656,964. 1 Claim. (Cl. 45—97.)

A bracket for supporting a mirror on a windshield comprising a supporting plate upon the front side of

which the mirror is adapted to be mounted and which is provided at its upper edge with an upwardly projecting bracket which is integral with the plate and terminates at its upper end in an integral concavo-convex head having its concave side facing rearwardly, a hanger constructed of an integral sheet of metal and having its upper part forming a hook, the mouth of which opens downwardly and is adapted to engage over the upper edge of a windshield and its lower part forming a concavo-convex head the convex side of which faces forwardly and engages the concave rear side of the head on said supporting plate, and means frictionally and pivotally connecting said heads.



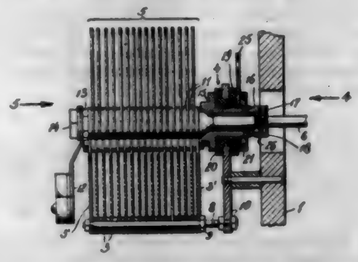
1,538,341. GARAGE OR STORAGE BUILDING. SAMUEL C. LANCASTER and CHRISTIAN Q. HJERMSTAD, Portland, Oreg., assignors to Autowhirl Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1920. Serial No. 427,097. 6 Claims. (Cl. 20—1.13.)



1. A building for the storage of automobiles and other vehicles, embodying a plurality of separate, continuous spiral floors having storage spaces thereon, an upward spiral driveway for each floor for incoming vehicles, and a spiral driveway for each floor for outgoing vehicles, the driveways communicating with their respective floors throughout their length.

1,538,342. RECIPROCATING ENGINE. JAMES MCKECHNIE, Barrow-in-Furness, England, assignor to Vickers Limited, Westminster, London, England, a British Company. Filed July 7, 1922. Serial No. 573,438. 3 Claims. (Cl. 121—117.)

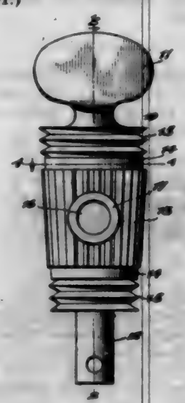
1. In a reciprocating engine, a pair of parallel cylinders, a pair of oppositely acting pistons in each cylinder, a rocking lever at one end only of the cylinders, connected to the two pistons at that end, a pair of diagonal links cross connecting the oppositely situated pistons of the two cylinders, a crank shaft and a connecting rod from one of the said diagonal links to the crank shaft.



1,538,343. SUPERHEATER FOR OIL BURNERS. CHARLES B. MEADOWS, Houston, Tex. Filed Nov. 27, 1923. Serial No. 677,241. 2 Claims. (Cl. 158—73.)

2. The combination with a combustion chamber and an oil burner therein, of a heater associated with the burner and embodying an oil line formed with an enlarged chamber, a steam line formed with a jacket which surrounds said chamber, and is spaced therefrom, said oil and steam lines terminating in said burner, and a loop into which one of said lines is formed said loop being located in the combustion chamber between the heater and burner.

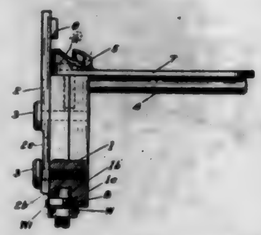
1,538,344. VARIABLE CONDENSER. ELLSWORTH S. MILLER, Philadelphia, Pa. Filed Feb. 1, 1923. Serial No. 616,300. 6 Claims. (Cl. 250—41.)



1. A variable electrostatic condenser comprising a set of fixed plates, means for supporting said fixed plates, a set of rotatable plates adapted to be variably interleaved with said fixed plates, a shaft for said rotatable plates, said rotatable plates and said shaft comprising a self-contained unit, a bearing for rotatably supporting said shaft, said bearing having a pair of opposed frustro-conical portions, said shaft having a frustro-conical portion registering with one of the said frustro-conical portions of said bearing, an apertured bushing having a frustro-conical exterior surface registering with the other frustro-conical portion of said bearing, said shaft extending through the aperture in said bushing, and a nut for adjustably securing said shaft in said bearing, said unit being adapted for removal from the condenser as a whole without disassembling said fixed plates or said means for supporting said fixed plates.

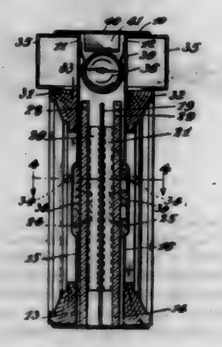
1,538,345. COTTON GIN. ZEPHANIAH J. MOORE and HENRY C. SMITH, Waco, Tex. Filed June 19, 1924. Serial No. 721,053. 6 Claims. (Cl. 19—39.)

5. An attachment for ginning mechanisms comprising a collector pipe adapted for communication with the main trash conveying suction pipe of a ginning mechanism, and being provided with inlet branches adjacent the several stands of the ginning mechanism, closures for said branches, and a flexible dust collecting hose adapted to be selectively connected to one of said branches.



1,538,346. VALVE MEMBER AND METHOD OF FORMING SAME. OSCAR B. MUELLER, Port Huron, Mich., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Jan. 18, 1921. Serial No. 438,209. 22 Claims. (Cl. 251—101.)

1. A valve member having a wall formed with a multiplicity of alternating ridges and grooves extending longitudinally of the member, and a multiplicity of substantially horizontal alternating ridges and grooves beyond both ends of the longitudinal ridges and grooves, the tops of all said ridges being flattened to provide an appreciable contact area.

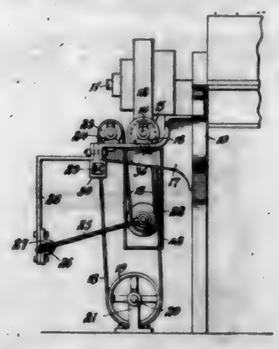


11. A key for cocks having a section of its wall provided with a multiplicity of substantially longitudinal alternating ridges and grooves, a multiplicity of substantially horizontal alternating ridges and grooves extending over another portion of its wall, and a substantially circumferential plain surface between said longitudinally and horizontally ridged and grooved sections, the ridges of said ridged and grooved sections being flattened to give an appreciable contact area and having the same contour as said plain surface.

1,538,347. COMBINATION LOCK-WASHER TOOL AND SOCKET WRENCH. HARVEY R. NEWQUIST, San Diego, Calif. Filed Apr. 3, 1924. Serial No. 703,919. 11 Claims. (Cl. 81—10.)

1. In a tool of the class described, a socket member provided at one end with a recess adapted to receive a bolt head or nut, and an actuating member shiftably mounted at one side thereof and provided at its lower portion with a wedge portion adapted to be inserted between the locking portion of a lock washer and said bolt head or nut.

1,538,348. ILLUMINATED SIGN. MORTIMER NORDEN, New York, N. Y. Filed Feb. 14, 1924. Serial No. 692,678. 2 Claims. (Cl. 40—133.)



1. An illuminated sign comprising a rectangular frame open on both sides, a reflector centrally arranged within the frame and secured thereto, spacers connected to said reflector at each end and forming sockets on each side thereof, a glass plate fitted within each of said sockets, letters fixed in relief upon the front surface of each plate, a molding fitted into said frame at each side thereof and provided with a hollow top member extending longitudinally thereof forming a housing above the top of said reflector and glass plates, and a source of light within said housing.

1,538,349. VARIABLE-SPEED MECHANISM. WILLIAM JAMES OATES, Griffin, Ga. Filed May 10, 1924. Serial No. 712,321. 5 Claims. (Cl. 74—21.)

1. In a device of the character described, the combination of a driving drum, a driven roll and an idle roll journaled above the drum, a swinging roll between the drum and first mentioned rolls, a gripping roll journaled beneath and proximate to the driven roll and at one

side of a plane through the axes of the driven roll and the drum, and a drive belt passing directly from the drum to the driven roll on the side nearest said gripping roll, thence about the driven roll and between it and the gripping roll, whereby the belt engages the surface of

the driven roll throughout the major portion of its circumference, said belt passing from the gripping roll underneath the swinging roll and constituting a floating support for the same, and passing thence over the idle roll and back to the drum.

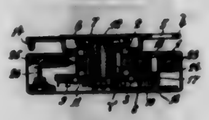
1,538,350. SNAP FASTENER. SUSAN CLARK PEARSON, New York, N. Y. Filed May 24, 1924. Serial No. 715,581. 3 Claims. (Cl. 24—218.)

1. A snap fastener comprising a stud button member, and a spring engaging member made of a single piece of wire bent into a plurality of spring engaging arcs and exterior twisted loops, all the loops being twisted in the same direction, and the said arcs bent transversely thereby presenting the spring arcs to contact with the stud button so that the points of contact will fall in a single plane.

1,538,351. COLORING PHOTOGRAPHS. CLARENCE RUDOLPH REIERSON, Havre, Mont. Filed Aug. 2, 1922, Serial No. 579,244. Renewed Apr. 1, 1925. 10 Claims. (Cl. 41—27.)

9. The process of treating photographic prints which process comprises applying to a photograph a mixture of an oil, a liquid drier, and ether.

1,538,352. SOLUTION FOR TREATING PHOTOGRAPHS AND PROCESS OF PREPARING THE SAME. CLARENCE RUDOLPH REIERSON, Havre, Mont. Original application filed Aug. 2, 1922, Serial No. 579,244. Divided and this application filed Oct. 25, 1923. Serial No. 670,715. 6 Claims. (Cl. 134—56.)

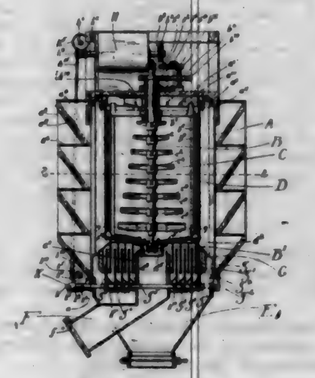


3. A liquid coating composition for treating photographic prints to prepare such prints for the reception of oil paints which composition consists entirely of a mixture of raw linseed oil, a liquid drier, and ether.

1,538,353. HIP-CONFINING CORSET. MICHAEL J. REYNOLDS, West Haven, Conn., assignor to Strouse Adler & Co., New Haven, Conn., a Firm composed of Isaac M. Ullman and Louis M. Ullman, New Haven, Conn., and George Meyer, New York, N. Y. Filed July 19, 1923. Serial No. 652,571. 1 Claim. (Cl. 2—43.)

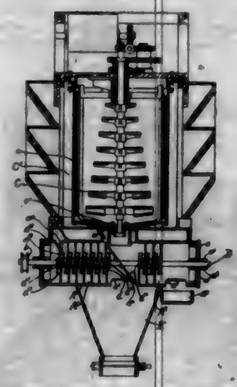
The combination with an open-front, hip-confining corset, the respective front edges of which are provided with fastening means, whereby it is fastened in front on the median line of the figure of the wearer; of a horizontally-arranged, diaphragm-reducing strap superimposed upon the upper portion of the front of the said corset, adjacent to the upper edge thereof and comprising a non-elastic center-piece, the upper and lower edges of which are inclined toward each other from its median line, which coincides with the median line of the corset, a non-elastic fastening-strip located adjacent to one end of the said center-piece, fastening means applied to the adjacent edges of the said center-piece and fastening-strip, whereby the said strap is fastened and unfastened independently of the corset proper, an elastic strap permanently attached to the opposite end of the center-piece and to the front section of the corset, and an elastic strap permanently attached to the opposite edge of the said fastening-strip, and the complementary front section of the corset, whereby the said strap exercises localized pressure upon the diaphragm of the wearer without substantially affecting the hip-reducing action of the corset proper.

1,538,354. ELECTRIC-IMPULSE-PRODUCING MECHANISM. MORTEN BALTHAZAR RICHTER, Copenhagen, Denmark. Filed July 5, 1923. Serial No. 649,539. 1 Claim. (Cl. 188—184.)



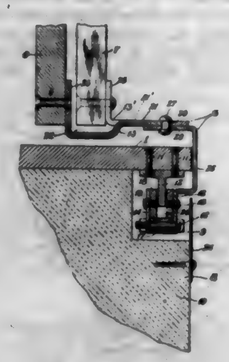
In an electric impulse producing mechanism a centrifugal braking mechanism, comprising a cage, three sector shaped blocks having a slot near their leading edge, a pin for each block in the said cage adapted to engage the said slots, and a cylindrical hollow drum adapted to be slidably engaged by the said blocks under influence of centrifugal force.

1,538,355. POWDER FOR THE AUTOGENOUS SOLDERING OR WELDING OF ALUMINUM. PIO ROSSI, Berne, Switzerland. Filed June 5, 1923. Serial No. 643,556. 2 Claims. (Cl. 148—23.)



1. A powder for the autogenous soldering or welding of aluminum, comprising a mixture of a small amount of chloride of sodium and a large amount of chloride of potassium, and a fluoride mixture consisting of equal parts of fluoride of aluminum and cryolite and representing at least 35% of the total mixture.

1,538,356. CENTRIFUGAL SIFTER. SIGMUND SCHIFF, Cincinnati, Ohio. Filed May 12, 1920. Serial No. 380,893. 29 Claims. (Cl. 83—51.)



1. In a sifting device the combination of a casing, a cylindrical screen within the casing and spaced therefrom, the screen having a discharge opening in its bottom, means to move a siftable substance thru the screen, a series of inclined slides mounted upon the casing adjacent to the screen and having their inclined upper surfaces exposed to the screen and covers adapted in combination with the slides and casing to enclose the screen.

1,538,357. DUST COLLECTOR. SIGMUND SCHIFF, Cincinnati, Ohio. Filed Mar. 11, 1921. Serial No. 451,517. 14 Claims. (Cl. 183—84.)

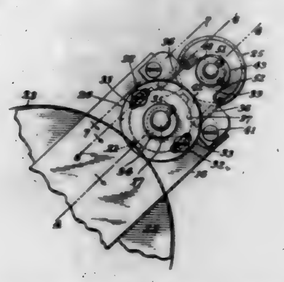
5. In a device of the class described the combination of a tube, a revoluble shaft extending thru the tube, disks mounted on the shaft and engaging the tube, the disks having a pushing edge and a mutilated edge, the immediately adjacent disks having their mutilated edges disposed upon opposite sides of the shaft, whereby a continuous sinuous aid passage is formed thru the tube, and whereby immediately adjacent disks successively move a substance thru the tube over the bottom thereof.

1,538,358. SLIDING-DOOR STRUCTURE. JOSEPH SCHULTE, Cleveland, Ohio. Filed Mar. 2, 1925. Serial No. 12,527. 7 Claims. (Cl. 20—19.)

1. In a sliding-door structure, the combination of an elevator-shaft door-way; a sliding-door suspended in such door-way and provided with a member extending into the elevator shaft; and means mounted below the plane of the door sill engaging said member and adapted to prevent movement thereof in a direction transverse with respect to the direction of sliding of said door.

1,538,359. PUZZLE. ALFRED JOHN SHEA, Holyoke, Mass. Filed Apr. 17, 1924. Serial No. 707,164. 4 Claims. (Cl. 273—159.)

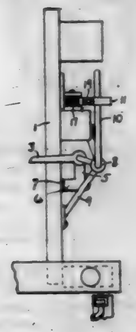
1. A puzzle comprising two separate pieces, each having three spaced holes therein, an endless cord formed into two strands threaded through said holes, and one or more elements mounted on said strands between said pieces.



1,538,360. MALLEABLE NONCORRODIBLE ALLOY. WILLIAM H. SMITH, Cleveland, Ohio, assignor to Ludlum Steel Co., Watervliet, N. Y., a Corporation of New Jersey. Filed Feb. 27, 1919. Serial No. 279,649. 15 Claims. (Cl. 75—1.)

1. A malleable alloyed soft steel resistant to corrosion and to oxidation containing iron in excess of 50%, chromium not less than 15% and not greater than 40%, together with nickel and titanium not greater than the chromium.

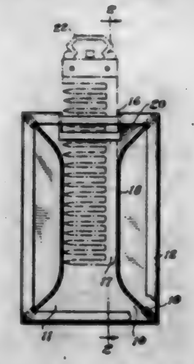
1,538,361. MACHINE FOR PRINTING TICKETS. THOMAS K. STAMATSON, Brooklyn, N. Y., assignor to Keller Printing Company, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1925. Serial No. 1,633. 21 Claims. (Cl. 101—219.)



1. In a machine of the class described, for printing successively upon the ticket units of a continuous ticket-strip, a revoluble shaft, printing media carried by said shaft and having printing characters operative in the revolution thereof, an impression platen or bed post-

tioned parallel to said revoluble shaft, a framework having an extension carried by said seat and turnably movable therein and having a longitudinal bore passing through said extension on a plane eccentric to the axis or center thereof in its turnable movement, said printing-media shaft having its revoluble bearing in said bore, a body member comprised in said bushing and carrying said extension, and means carried by the frame-work

and operative upon said body member to effect mechanical adjustment of said turnable eccentric-bore extension, whereby delicate adjustment of the plane of the printing-media shaft to compensate for variation in the thickness of the paper ticket-strips passing between the printing media and the platen may be effected by slight movement of said adjustment means to actuate the bushing member in its turnable movement in its seat.

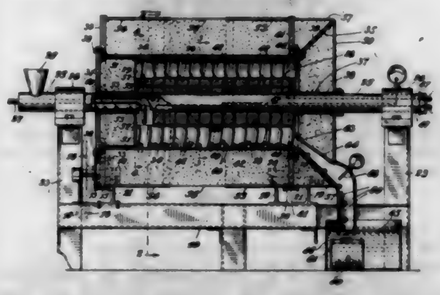


1,538,362. AUTOMATICALLY-RELEASING COTTON-PRESS LATCH. JOHN ARNOLD STREUN, Sherman, Tex., assignor to Hardwicke-Etter Company, Sherman, Tex., a Corporation of Texas. Filed Oct. 18, 1924. Serial No. 744,504. 8 Claims. (Cl. 100—30.)

1. In a device of the character described, a rotatable rod, dogs rotatable on said rod, means to prevent rotation upwardly of said dogs when they are in operative position, a lever arm on said rod, and a resilient latch adapted to engage said lever arm to retain said dogs in operative position, and to release said lever under a predetermined pressure on said dogs.

1,538,363. VANITY CASE. LOUIS TAMIS, New York, N. Y., assignor to Schanfein & Tamis, New York, N. Y., a Firm composed of Bernard Schanfein and Louis Tamis, also of New York, N. Y. Filed Oct. 27, 1924. Serial No. 746,001. 1 Claim. (Cl. 132—79.)

A vanity case comprising a receptacle having an opening at one end, a comb adapted to pass through the opening, and inwardly bowed springs located interiorly of the receptacle and disposed one at each end of the

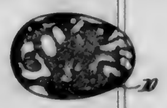


opening and adapted to receive the comb between them, the end portions of the springs being confined at the corner portions of the receptacle.

1,538,364. MOTOR-VEHICLE BODY. WALTER M. TROUT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,280. 13 Claims. (Cl. 296—28.)

1. In a sheet metal body structure for automobiles, a body panel curved longitudinally to conform to the contour of the body, in combination with a body sill of channel shape in cross section, said sill having its base portion disposed in a vertical plane, the lower edge portion of the panel extending across the open mouth and secured to the lower side of the side wall of the channel of the sill.

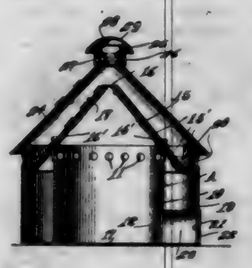
1,538,365. ELECTRIC FURNACE. EDWIN L. WILLSON, Farmington, Conn. Filed Oct. 16, 1922. Serial No. 594,831. 33 Claims. (Cl. 204—64.)



1. In an internally electrically heated rotary furnace, in combination, a revoluble furnace having an opening for the introduction of material and an opening for the removal of said material, means for revolving the furnace, wire carrying means within the furnace and a wire carried thereon and extended outwardly of the furnace.

1,538,366. MANUFACTURE OF YEAST PREPARATIONS FOR BAKING, DIETETIC, AND THERAPEUTIC PURPOSES. RICHARD WILLSTÄTTER and HARRY SOBOTKA, Munich, Germany. Filed Jan. 3, 1923. Serial No. 610,497. 10 Claims. (Cl. 99—11.)

7. The process of producing a yeast preparation rich in enzymes and vitamines, which consists in mixing yeast with sufficient sugar to prevent fermentation, kneading the mixture, heating it to about 55° C. in the course of about an hour, maintaining this temperature for about an hour, then heating it to about 100° C. in the course of about an hour, maintaining this temperature for about an hour, and finally cooling the mass.



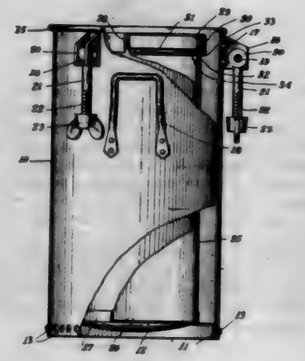
8. An article of manufacture for use as baking preparation consisting of yeast and sufficient sugar mixed therewith with application of heat to produce liquefaction but not fermentation.

1,538,367. METHOD OF COLORING EGGS OR THE LIKE. MARGARET YOUNG, Dubuque, Iowa. Filed Jan. 28, 1924. Serial No. 689,144. 9 Claims. (Cl. 8—5.)

8. The method of coloring an egg or the like consisting in arranging onion peelings about the same and securing them taut by a binder, to substantially necessitate passage of a liquid through said peelings to reach the shell of the egg, and in immersing the egg, onion peelings and binder in a heated dyeing liquid.

1,538,368. FIRELESS BROODER. IDA M. YOUNGBERG, Gothenburg, Nebr. Filed Nov. 16, 1922. Serial No. 601,353. 4 Claims. (Cl. 119—19.)

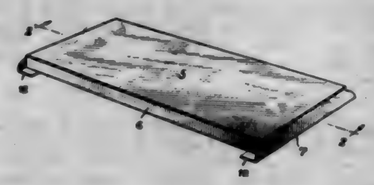
1. A brooder comprising an inner and an outer housing, each of the housings having a circular wall and a conical roof, the walls and roof having inlet and outlet openings, the latter openings of the outer roof being regulatable, light entrance means in the said roofs, aligned entrance openings in the walls of the housings, and a tunnel member connecting the entrance openings and extending between the walls of the housings.



1,538,369. METHOD OF PRESERVING MEATS, MILK, VEGETABLES, FRUITS, AND OTHER EDIBLES. BUICHI AKITAMA, Osaka-fu, Japan. Filed Feb. 11, 1924. Serial No. 692,194. 5 Claims. (Cl. 99—9.)

1. Method of preserving meats, milk, vegetables, fruits and other edibles, which comprises storing the same in an atmosphere consisting essentially of nitrous oxide and carbon dioxide in the proportion of 70% of nitrous oxide to 30% of carbon dioxide under superatmospheric pressure of about 300 pounds.

1,538,370. TREATMENT OF CELLULOSIC FIBERS AND FABRICS. FRANK LESLIE BARRETT and ROBINSON PERCY FOULDS, Manchester, England. Filed May 9, 1924. Serial No. 712,127. 7 Claims. (Cl. 8—20.)

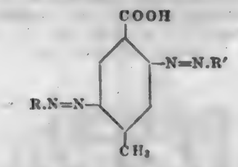


2. The process of treating cotton fabrics with sulphuric acid of not less than 1.55 spec. grav. in presence of formaldehyde added as such.

1,538,371. COMPRESSED-AIR TANK HAVING INTERCHANGEABLE PAINT CONTAINERS. WILLARD C. BEACH, Newark, N. J. Filed Oct. 21, 1922. Serial No. 595,915. 2 Claims. (Cl. 220—17.)

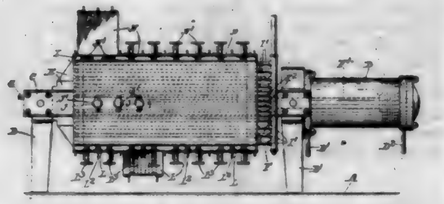
1. In an apparatus for spraying paint under pressure, a cylindrical tank adapted to withstand internal pressure, said tank having a closed concave bottom and being open at the top, a plurality of cover securing means adjacent the upper edge of said tank, handles fixed on opposite sides of said tank, interchangeable paint containing means spaced concentrically within the tank, a band circumjacent the lower edge of said paint containing means adapted to rest upon the bottom of said tank, said band being flanged upward from the bottom element, semi-circularly bent means forming a bail and a means fixed in the wall of said tank and extending into the paint containing means, adapted to support said bail when resting horizontally thereon, and a cover loosely fitting over said paint containing means below the plane of the upper edge of said tank.

1,538,372. PALLET. ANSON J. BENTLEY, Niles, Ohio. Filed Jan. 11, 1923. Serial No. 612,002. 9 Claims. (Cl. 84—17.)



4. A pallet presenting a plane upper face and having side and end reinforcements comprising angular members extending along the sides and ends respectively,

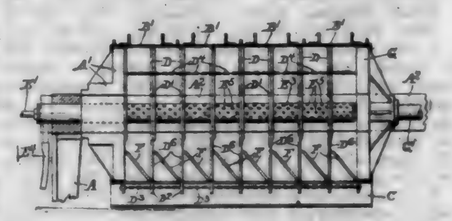
the side reinforcements projecting into the end reinforcements and the angular members of the end reinforcements embracing and extending beneath the ends of the side reinforcements and extending laterally beyond the sides of the pallet to provide spacing elements.



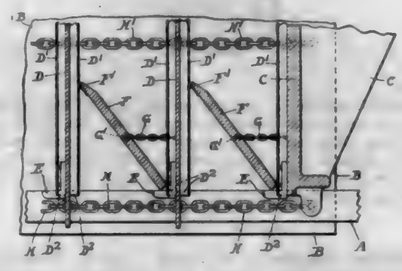
1,538,373. DISAZO DYESTUFF. WILHELM BERGDOLT and LUDWIG HAUCK, Leverkusen, near Cologne-on-the-Rhine, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed May 22, 1924. Serial No. 715,190. 2 Claims. (Cl. 260—84.)

1. The herein described new azodyestuffs having most probably the following general formula:

R meaning a residue of an aromatic compound, R' meaning a residue of an aromatic aminonaphthol compound, which are after being dried and pulverized in the shape of their alkali metal salts dark brown to black powders soluble in water with from a red to violet coloration and in concentrated sulfuric acid generally from a blue to reddish-blue coloration; yielding upon reduction with stannous chloride and hydrochloric acid 4-methyl-2.5-diaminobenzoic acid and aromatic amines; dyeing cotton directly generally from violet-red to blue pure clear shades fast to light, which after being after-treated on the fiber with a metal salt change into bluish-violet to violet-blue shades fast to light, substantially as described.



1,538,374. HYDRAULIC PRESS. JOHN J. BERRIGAN, Chicago, Ill., assignor of one-third to John B. Berrigan and one-third to Katheryne P. Malon, both of Chicago, Ill. Filed Nov. 12, 1923. Serial No. 674,123. 28 Claims. (Cl. 100—6.)

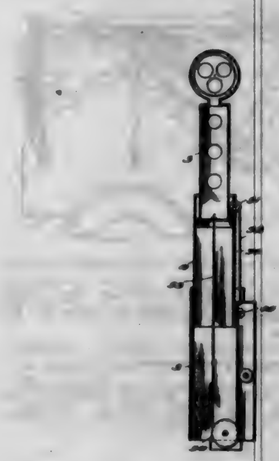


1. In a press, a plurality of platens and a pressure cylinder for compressing them together, and means for moving said platens together throughout a distance greater than the effective length of said compression cylinder.

1,538,375. HYDRAULIC PRESS. JOHN J. BERRIGAN, Chicago, Ill., assignor of one-third to John B. Berrigan and one-third to Katheryne P. Malon, both of Chicago, Ill. Filed Nov. 15, 1923. Serial No. 674,823. 19 Claims. (Cl. 100—50.)

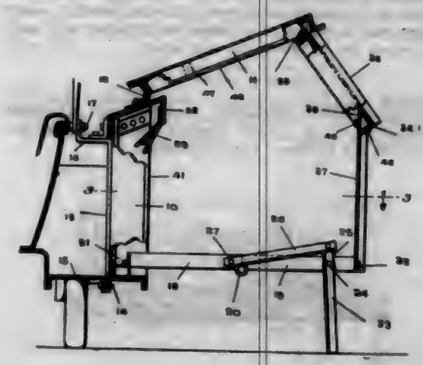
19. In a press means for closing the bottom of said press, including a plate adapted to retain the contents of the press extending laterally across the bottom of said press lying in a generally inclined plane, said plate adapted when closed to form a steeper angle of inclination and finally assume a vertical position, and in such vertical position to lie against a transverse wall of said press.

1,538,376. PRESS. JOHN J. BERRIGAN, Chicago, Ill., assignor of one-third to John B. Berrigan and one-third to Katheryne P. Malon, both of Chicago, Ill. Filed Aug. 28, 1924. Serial No. 734,557. 11 Claims. (Cl. 100—50.)



10. In a press, a movable plate adapted to support the contents of the press within the press, said plate being mounted between opposite pressing members of said press and adapted normally to lean with one edge against one of said members and the other edge against the other of said members and means for limiting the movement of the lower edge of said plate away from the pressing member which it normally contacts, said means including a member fixed to a part of said press and one side of said plate.

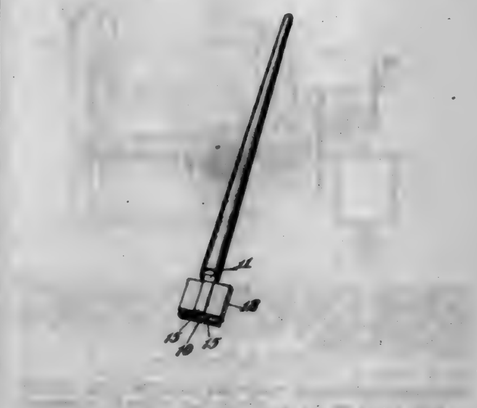
1,538,377. FISHING REEL. JOHN D. BLAGDEN, Memphis, Tenn. Filed Aug. 21, 1924. Serial No. 733,427. 2 Claims. (Cl. 43—20.)



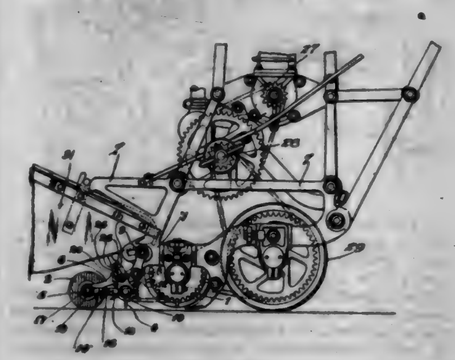
1. A fishing rod having a hollow handle, a shaft journaled in the handle transversely thereof, a reel carried by the shaft and disposed exteriorly of the handle, a double ratchet bar movable within the handle, said bar comprising an elongated frame with oppositely extending teeth upon the inner longitudinal edges thereof, a ratchet wheel fixed upon the shaft and in engaging relation to the teeth of said ratchet bar, a grip slidable upon the handle, a cross-head within the handle and movable with the grip, and links extending between the ratchet bar and cross-head, said links having pivot connection with the cross-head and ratchet bar.

1,538,378. SIGNAL. HERBERT R. BORCHARDT, Hollywood, Calif. Filed July 28, 1921. Serial No. 488,217. 10 Claims. (Cl. 116—50.)

1. In a direction signal, a plurality of slidable sections, and means operable by movement of an inner section for moving the next outer section at an increased rate of speed.



1,538,379. TOURIST BED. JAMES H. BOWLBY, Savonburg, Kans. Filed Nov. 20, 1923. Serial No. 675,827. 8 Claims. (Cl. 5—119.)

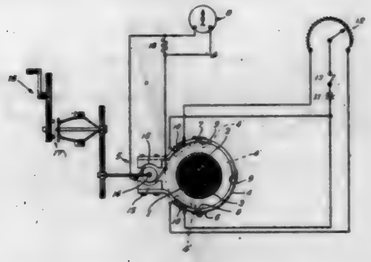


1. A bed comprising a casing and a foldable bed frame arranged to fold into the casing, said casing including foldable members arranged to be unfolded above the bed frame, when the bed frame is unfolded, to provide a gable roof.

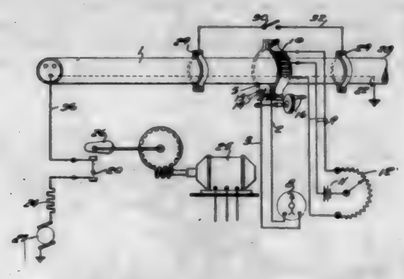
1,538,380. PAINTBRUSH. ARTHUR BRAUNSTEIN, Casper, Wyo. Filed Apr. 19, 1924. Serial No. 707,602. 1 Claim. (Cl. 15—210.)

In a brush, an absorbent pad, a T-shaped metal holder, the pad abutting the central portion of the holder, the stem of the metal holder having a reverted portion the extremity of which engages the pad to maintain the pad in position, the ends of the metal member having reverted portions overlying the pad and the end of such stem portion, said stem portion forming a shank for engagement with the holder.

1,538,381. LAWN MOWER. GEORGE FREDERICK BULL, Birmingham, England, assignor of one-half to Charles H. Pugh Limited, Birmingham, England. Filed Feb. 26, 1923. Serial No. 621,156. 5 Claims. (Cl. 56—251.)



1. In a lawn mower, a main frame, cutter blades, a rotatable rake mounted in front of the cutter blades, means for rotating the rake, means for adjusting the said rake in a horizontal direction, and means for adjusting the rake in a vertical direction.

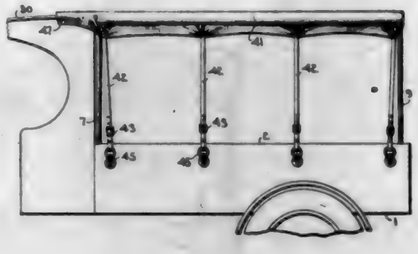


1,538,382. APPARATUS FOR MEASURING CURRENTS IN ELECTRICAL CABLE SYSTEMS. WILLIAM RALPH BULLARD, New York, N. Y. Filed Nov. 25, 1922. Serial No. 603,318. 19 Claims. (Cl. 175—183.)

1. An apparatus for measuring unidirectional current in a cable comprising an electric generator having a field circuit adapted to be positioned to encircle the cable, said field circuit being of substantially greater diameter than the cable and having portions of its path of low

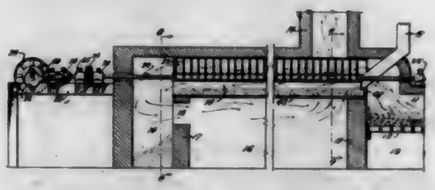
reluctance and having smaller sections of its path of greater reluctance, a measuring instrument connected to the armature of the generator, said measuring instrument being calibrated to give indications substantially proportional to the flux set up in the field circuit by the unidirectional current and means for rotating the generator armature.

1,538,383. METHOD AND APPARATUS FOR LOCATING FAULTS IN ELECTRICAL CABLE SYSTEMS. WILLIAM RALPH BULLARD, New York, N. Y. Original application filed Nov. 25, 1922, Serial No. 603,818. Divided and this application filed Nov. 14, 1923. Serial No. 674,624. 13 Claims. (Cl. 175—183.)



2. The method of locating faults in cables which consists in supplying intermittently through the cable at definite prolonged intervals a unidirectional current and causing it to pass out through the faulty portion of the cable and positioning an electric generator with its field magnetically associated with the cable at different points thereof for testing for the magnetic fields set up about the cable corresponding to the intermittent unidirectional current passing therethrough.

6. In a system for locating a fault in a cable, the combination of a magnetic path or circuit, means for opening and closing the magnetic circuit so as to surround a cable or conductor carrying direct current with said magnetic circuits, a revoluble armature adjacent to and in magnetic relation with said magnetic circuit, means for revolving said armature, a detecting device connected to said armature, means for circulating direct current through the cable or conductor to a fault existing in said cable or conductor, and means for periodically interrupting this direct current.



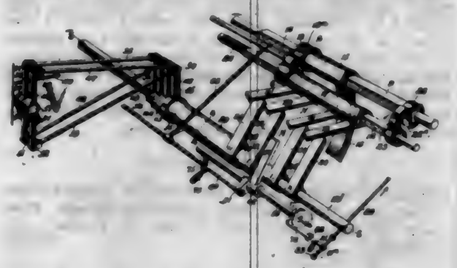
1,538,384. REMOVABLE COVER FOR TRUCK BODIES. QUINN M. CROCKETT and OLIVER DAY, Austin, Tex. Filed Sept. 11, 1922. Serial No. 587,406. 11 Claims. (Cl. 296—102.)

3. In a cover for truck bodies, the combination of a plurality of spaced corner posts, top end rails at each end of the frame, means connecting the corner posts to intermediate portions of the top end rails, and curtain

rails having their ends clamped between the corner posts and the top end rails and held in place by the said connecting means.

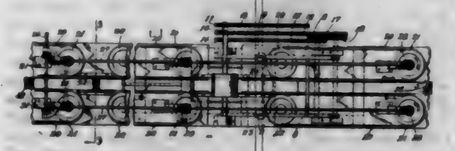
1,538,385. DRIER. ARTHUR C. DAMAN, Denver, Colo. Filed Apr. 24, 1923. Serial No. 634,345. 7 Claims. (Cl. 34—7.)

6. A drier comprising, a drum; a shaft passing longitudinally through said drum, said shaft being mounted so that it will move circumferentially and axially; scrapers secured to said shaft; means for rotating said shaft and means for reciprocating said shaft.



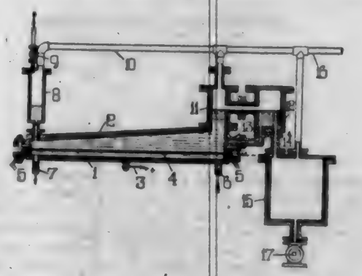
1,538,386. FORM HOLDER. ALFRED DE MEURISSE, Brooklyn, N. Y. Filed Dec. 9, 1924. Serial No. 754,788. 8 Claims. (Cl. 101—369.)

1. A holder of the character described comprising a body, a retainer of resilient material secured to one face of the body and including gripping flanges adapted to grip the opposite ends of the form, while leaving the longitudinal edges of the form free of attachment.



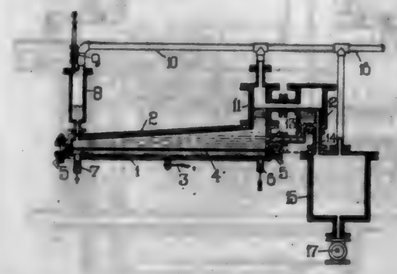
1,538,387. AUTOMATIC GEAR-SHIFTING DEVICE. HIRAM CLIFTON DOOLIN, Albany, Mo. Filed Sept. 7, 1921. Serial No. 499,019. 52 Claims. (Cl. 74—58.)

1. In a gear changing mechanism for automobiles, a clutch, means for operating the clutch, a plurality of gear shifting levers normally holding the gears in neutral position, plurality of gear releasing means for returning the gear shifting levers to neutral position, and



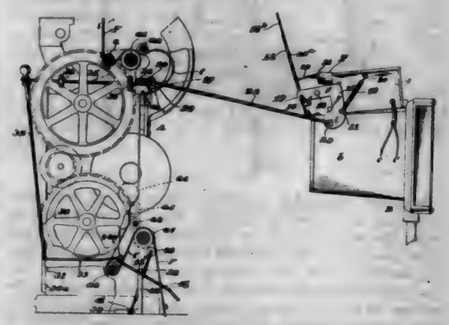
means operable upon the release of the clutch for operating one of the gear releasing means and the gear shifting levers.

1,538,388. LABEL-AFFIXING APPARATUS. GEORGE A. DOSTAL, New York, N. Y., assignor to Pictorial Soap Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 452,148. 5 Claims. (Cl. 216—9.)



1. In an apparatus of the character described, in combination, laterally engaging conveying means for moving forward successively soap cakes having labels applied to the center portions of one face thereof, ways supporting said soap cakes adjacent their side edges without contacting with the center face portions to which the labels are applied, and a smoothing device arranged to press against the labeled face of each cake as it travels past said device substantially as and for the purpose described.

1,538,389. MANUFACTURE OF ALKALI METALS. THOMAS EWAN, Glasgow, Scotland. Filed Mar. 31, 1924. Serial No. 703,102. 23 Claims. (Cl. 204—9.)

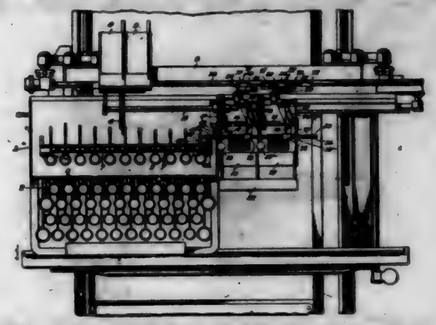


1. The process of removing alkali metal from an amalgam thereof which comprises passing a current from the alkali metal amalgam as anode to a cathode through a solution of an inert alkali metal salt in an inert volatile solvent such solution being of such concentration that when alkali metal is supplied thereto the solution forms two liquid layers of which the layer out of contact with the amalgam is relatively more concentrated in alkali metal and less concentrated in alkali metal salt than the layer in contact with the amalgam.

1,538,390. TREATMENT OF ALKALI-METAL AMALGAMS, ESPECIALLY FOR THE PRODUCTION OF ALKALI METALS. THOMAS EWAN, Glasgow, Scotland. Filed Mar. 31, 1924. Serial No. 703,103. 21 Claims. (Cl. 204—9.)

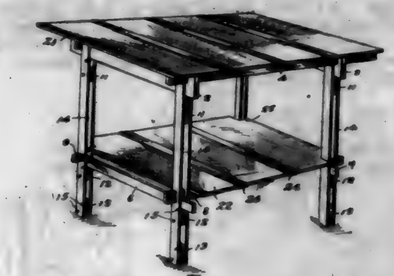
1. The process of treating alkali metal amalgam which comprises causing a very dilute amalgam to flow through a cell, electrolyzing a solution of an inert alkali metal salt in an inert liquid at a temperature much below 100° C. in contact with said amalgam as anode so as to remove alkali metal therefrom and isolating a useful product.

1,538,391. SAFETY ATTACHMENT FOR MOTION-PICTURE MACHINES. ROBERT FINK, Wilkes-Barre, Pa., assignor of one-fourth to John V. Kosek, Wilkes-Barre, Pa. Filed Nov. 8, 1922. Serial No. 599,693. 7 Claims. (Cl. 88—17.)



1. In a safety appliance for moving picture projecting apparatus comprising an electric motor, film feeding mechanism and a light projector; the combination of a circuit breaker having a bias to open position for controlling the motor circuit, a shutter adapted to be interposed in the path of the light beam, means on the shutter adapted to hold the circuit breaker closed when the shutter is out of the path of the light beam, and means adapted to be operated under abnormal feed conditions of the film to cause the shutter to intercept the light beam and release the circuit breaker.

1,538,392. WRITING ADDING MACHINE. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed July 19, 1921. Serial No. 485,804. 22 Claims. (Cl. 235—59.)

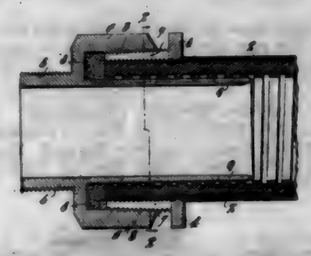


1. In a machine of the character described, the combination with a frame and carriage, of a plurality of computing devices mounted on the frame, a plurality of computing devices mounted on the carriage, and operating means common to all the said computing devices and mounted on the carriage.

17. In a machine of the character described, the combination with a plurality of computing mechanisms including denomination selecting devices, of a series of

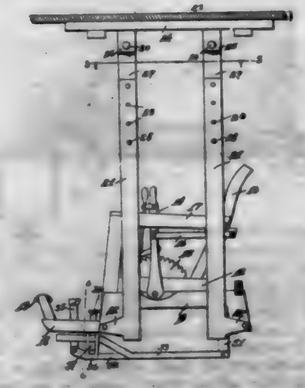
adding keys, key locking mechanism, and means for causing each denomination selecting device to operate the key locking mechanism.

1,538,393. CAMPER'S TABLE. MINNIE MARTIN FOWLER, Portland, Oreg. Filed Oct. 12, 1923. Serial No. 668,180. 1 Claim. (Cl. 45—31.)



A table comprising a frame composed of legs each consisting of a pair of parallel bars, spacer blocks between the bars of each leg to define a channel, top cross stiles inserted in the channels between the bars and having notches to fit over certain ones of the blocks, bottom cross stiles also inserted in the channels and having notches to fit over others of the blocks, top longitudinal stiles having notches to enter corresponding notches in the top cross stiles, longitudinal bottom stiles inserted through transverse openings in the bars to traverse said channels and seat in other notches in the bottom cross stiles and table tops for the top and bottom stiles respectively.

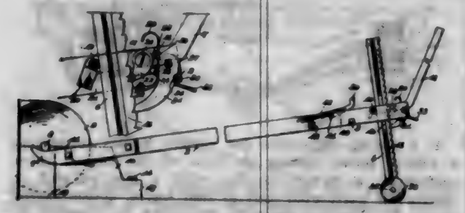
1,538,394. SELF-CLOSING VALVE. ALFRED FREBERG and CARL E. DOMBROWSKI, Norwich, Conn. Filed Dec. 3, 1921. Serial No. 519,673. 4 Claims. (Cl. 137—93.)



3. A valve comprising a body having an inlet and an outlet formed thereon, a channel communicating with the body formed on one side thereof, and a valve seat formed adjacent the outlet; a main valve slidably mounted in the body including a tubular sleeve formed at the lower extremity thereof, and a rod secured across the upper extremity; an auxiliary valve including a stem adapted to reciprocate within the tubular sleeve, a disc formed on the upper extremity of the said stem adapted to seat upon the upper edge of the said tubular sleeve; and an operating spindle rotatably mounted in the lower portion of the valve including a cam shaped body adapted to engage the lower portion of the auxiliary valve stem, and means for operating the said cam body.

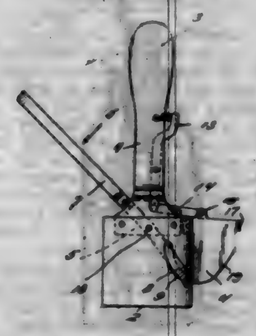
1,538,395. COUPLING CONNECTION TO HOSE PIPES. JOHN GANE, Vancouver, British Columbia, Canada. Filed Apr. 30, 1924. Serial No. 710,162. 3 Claims. (Cl. 285—86.)

1. A means for securing a coupling—connection to the end of an internally armored hose-pipe, said means comprising, the combination with a coupling member having at one end a male or female coupling connection and at the other end a portion internally tapered and screw-threaded, and concentric therewith a smooth and uniformly cylindrical tubular portion adapted to tightly fit the inside of the hose-pipe and extending from the inner end of the threaded recess to beyond the outer end of the same, a sleeve fitting the outside of the hose-pipe and threaded externally to fit the tapered and threaded portion of the coupling connection to a short distance from its inner end, the threaded portion of this sleeve being radially slit to divide it into a series of flexible segments.



1,538,396. PORCH SWING. ODESSA GARRETT, Clinchco, Va. Filed Nov. 13, 1924. Serial No. 749,688. 5 Claims. (Cl. 155—65.)

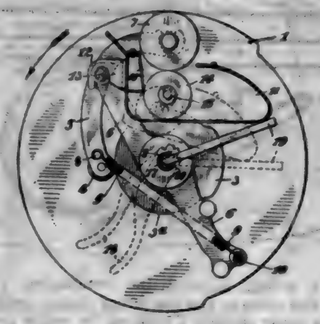
1. A swing comprising a suspending means, a plurality of elements connected with the suspending means, a foot operated element connected with one of the first



elements for imparting a swinging movement to the swing, and a manually foot operated element for moving the other of the first-named elements into frictional engagement with the swing to check the movement of the latter.

1,538,397. JACK. FREDERIC HARRISON GOODRICH, Greenville, Mich. Filed June 5, 1924. Serial No. 718,102. 9 Claims. (Cl. 254—108.)

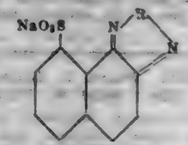
9. A lifting jack comprising a rack, a pair of rails slidably receiving at one end the rack, a lever pivoted to the jack end of the rails, a pawl pivoted on the lever and engaging the teeth of said rack, a pawl pivoted on the rail adjacent the rack and engageable with the teeth of the rack, a spring carried by the second pawl for causing the first pawl to engage the rack and at another time for causing the second pawl to engage said rack, manual means connected with the second pawl for releasing the same whereby the rails may be elevated or lowered near the jack end independently of the operating pawls and lever, and means for limiting the upward throw of the lever.



1,538,398. GRAPEFRUIT-CORING IMPLEMENT. JOHN B. GRAINGE, Orlando, Fla. Filed Oct. 24, 1924. Serial No. 746,649. 3 Claims. (Cl. 146—3.)

1. A coring implement of the class described comprising a cylinder having its lower edge sharpened to provide a cutting edge, said cylinder being provided in one side with an arcuate slot, a handle connected to the cylinder for manipulating it, a lever also pivotally mounted upon the cylinder, said lever being provided with an arcuate cutting blade projectable through said slot.

1,538,399. INKING DEVICE FOR DUPLICATING MACHINES. CHARLES FREDERICK GREEN, Romford, England, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1922. Serial No. 552,503. 7 Claims. (Cl. 101—120.)

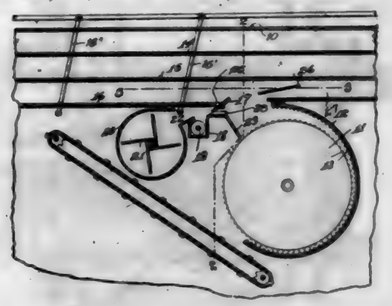


1. In a rotary duplicating machine, the combination with a rotary printing cylinder, of an ink container within the cylinder, fixed means pivotally supporting one end of said container at a place removed from the axis of said cylinder, and movable means including a member in engagement with said container at its other end,

whereby said container may be pivoted on its fixed pivot toward and from the surface of said cylinder, substantially as described.

1,538,400. HALOGENATED NAPHTHAZINE DYES. WILHELM HERZBERG, Berlin-Wilmersdorf, GERHARD HOPPE, Berlin-Treptow, and HEINRICH ORLENDORF, Berlin-Friedenau, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Aug. 22, 1924. Serial No. 733,658. 4 Claims. (Cl. 260—69.)

1. A halogenated product containing at most four halogen atoms derived from a compound made by fusing an S-sulphonic acid of a naphthazine of the general formula:

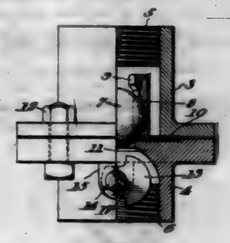


(R meaning an aryl residue) with an alkali.

1,538,401. FASTENER. RICHARD M. HOLMES, Davenport, Iowa. Filed May 17, 1922. Serial No. 561,731. 2 Claims. (Cl. 85—5.)

1. The combination with plates having registering elongated countersunk openings therethrough, of a rotatable fastener adapted to extend through said openings, the fastener having a relatively narrow head adapted to pass through the openings and having its ends inwardly beveled, and a relatively large inwardly beveled head adapted to engage the outer face of one plate, the heads when the fastener is rotated being received in the countersinks with their outer faces flush with the plates.

1,538,402. CLOVER AND ALFALFA HULLING MACHINE. FRANK H. JONES, Cassopolis, Mich. Filed Feb. 20, 1924. Serial No. 694,092. 4 Claims. (Cl. 130—2.)



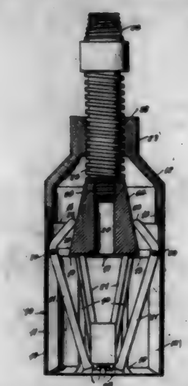
2. In a hulling machine, the combination with the cylinder and concave and the return shaker, said shaker having an outlet opening, a baffle on the shaker and forming a wall of said opening, a conveyor beneath the opening, and a blower disposed to discharge through said opening.

1,538,403. ADDRESSING-MACHINE PRINTING PLATE. JOSEPH KRELL, Berlin-Pankow, Germany. Filed Dec. 10, 1923. Serial No. 679,858. 1 Claim. (Cl. 101—369.)

A zinc printing plate for addressing or like machines having at least one of its surfaces matted to receive written matter.

1,538,404. VALVE. FRANK J. LAIRD, Butte, Mont. Filed Nov. 1, 1924. Serial No. 747,257. 3 Claims. (Cl. 251—131.)

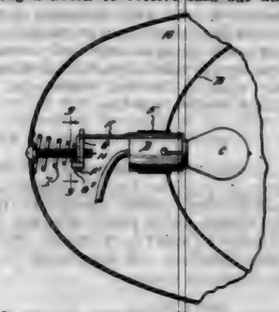
1. A valve comprising a pair of flanged pipe sections, each of said sections having a threaded portion spaced from the flanged end thereof, a ball in one of said sections, a cage integral with said section and limiting the range of movement of said ball, a metal plate between the flanged ends of said pipe sections and having a valve seat formed therein, a pair of bosses on the other of said pipe sections, a shaft mounted in said bosses, and a cam on said shaft and operable to force said ball from said valve seat.



3. In a valve, a cylinder having an inwardly and an outwardly directed flange, a metal plate on said inturned flange and having a valve seat formed therein, a second cylinder having an outwardly directed flange for clamping said plate to said first cylinder, a ball valve in the second cylinder, and a cam carried by the first cylinder for forcing said valve from said seat.

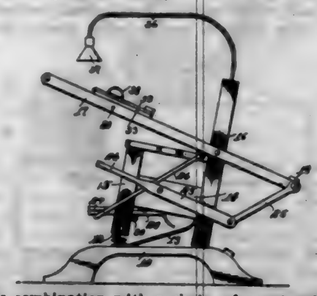
1,538,405. SPRING SUSPENSION FOR VEHICLES. RICHARD RAEBURN LOVE, Salt Lake City, Utah. Filed Dec. 9, 1924. Serial No. 754,820. 3 Claims. (Cl. 267—29.)

1. A spring suspension for vehicle frames comprising a vehicle spring having the ends of its longest leaves perforated, a socket provided with a slot adapted to receive the perforated ends of said leaves, bosses having internally threaded passages projecting in opposite directions from the sides of the sockets, a bolt screwed into the threaded passages in said bosses, and passing through the perforations in the leaves, the perforations in the ends of one leaf having a greater diameter than the bolt whereby the ends of one leaf are locked to the respective sockets, the end of the other leaf being permitted relative movement, brackets removably connected to the vehicle frame, a pair of coil springs, each spring receiving at its end a boss on the socket, the other end of one spring being held in place on the frame, the end of the other spring being held in place on the bracket.



1,538,406. WELL-FISHING TOOL. CHALMER D. MCCARTY and JOHN W. DRIGGS, Santa Paula, Calif. Filed June 19, 1924. Serial No. 721,041. 3 Claims. (Cl. 294—116.)

1. A fishing tool having a bowl made in separable sections, the end of one of the sections constituting a shoulder, the other section having a shoulder opposed to the first mentioned shoulder, a ring located intermediate the shoulders, fishing fingers carried by the ring, and means to actuate the fishing fingers.

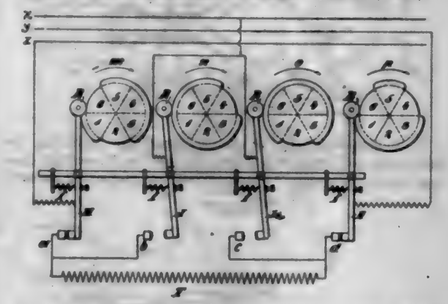


1,538,407. FOCUSING DEVICE FOR AUTOMOBILE LAMPS. CLARENCE A. MICHEL, Cleveland, Ohio, assignor to The Guide Motor Lamp Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 21, 1922. Serial No. 569,876. 3 Claims. (Cl. 240—44.)

1. In a device of the kind described, the combination with a casing having a reflector provided with a sleeve offset to form a guideway, a socket slidably mounted in said sleeve having an operating bar secured to the side thereof extending into said guideway, said operating bar being provided with an angled apertured rear end, a plate having a notch to receive said bar and oppositely

disposed fingers to embrace said bar, said plate being provided with a threaded bore and an adjusting screw carried by the casing working through said apertured bore for adjusting said socket.

1,538,408. CHAIR AND ATTACHMENT. ELIS REED, Decatur, Ill. Filed Aug. 28, 1923. Serial No. 659,810. 3 Claims. (Cl. 155—126.)

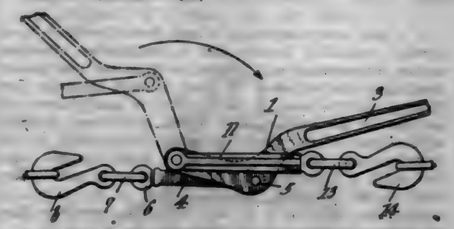


1. The combination with a chair, of a swingable frame including levers pivotally mounted on the back of the chair, a lever, on the side of the chair, connections between the lever and the frame for swinging the latter into vertical position above the back of the chair and in horizontal position in front of the chair, guides on the forward end of the frame, a slidable container and book holder mounted in the guides, and means on the container cooperable with the guides for retaining the container in adjusted position toward and away from the sitter.

1,538,409. SPOTLAMP. CHARLES D. RYDER, Cincinnati, Ohio, assignor, by mesne assignments, to The Thos. J. Corcoran Lamp Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 25, 1922. Serial No. 546,915. 1 Claim. (Cl. 240—41.)

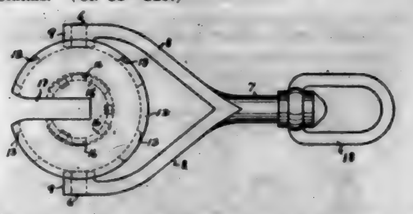
A spot lamp comprising a centrally apertured cup shaped casing and a base, said base consisting of a hollow body adapted to receive a lamp socket, the base having a cup-shaped end adapted to fit the outer surface of the casing around the central aperture thereof, a lip extending from the cup-shaped end concentrically with and in continuation of the socket-receiving hollow thereof, and an apertured casing reenforcement occupying the casing opposite the cup-shaped end of the base and in position upon the lip, the lip projecting beyond the reenforcement and clinched upon it.

1,538,410. MULTIPLE SWITCH FOR USE IN CONNECTION WITH ELECTRIC WELDING MACHINES. EDMUND SCHROEDER, Berlin, Germany. Filed June 20, 1923. Serial No. 646,663. 1 Claim. (Cl. 171—97.)



A multiple switch for use in connection with electric welding machines, comprising, in combination, a primary coil of a one-phase transformer, a plurality of contacts connected each with a phase of a multiple-phase net, and means to connect up alternately said coil with said contacts in a succession in which all phases are equally loaded during a period of time extending over several changes of the connections, as set forth.

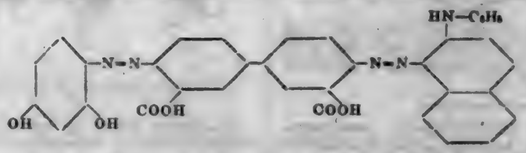
1,538,411. PROCESS OF TREATING STEEL. HIROSHI SHIOKAWA, Kobe, Japan. Filed Aug. 26, 1922. Serial No. 584,550. 4 Claims. (Cl. 148—12.)



1. A process of treating steel comprising the placing of a body of rolled or forged steel while it still retains an excess of heat remaining after the working operation, at a temperature below the transformation point in a hermetically sealed enclosure free of direct heating for said body, then allowing said body to remain in said enclosure for a predetermined period to utilize such excess heat at a uniform temperature to remove internal stresses and gases from said body to provide a uniform structure throughout, and further for the slow cooling of said body.

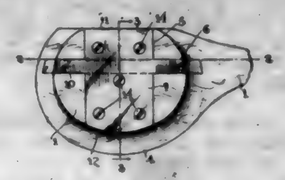
1,538,412. LOAD BINDER. EUGENE C. STACY, Tiffin, Ohio. Filed July 2, 1924. Serial No. 723,774. 4 Claims. (Cl. 254—78.)

4. A load binder including a lever with a forked end, said end being crooked to provide an angle portion, a yoke pivotally connected to the free end of the forked portion of the lever, a link pivotally mounted within and connecte dto the angle portion of the lever, means connected to the yoke and link respectively for engaging opposed portions of a load tying element, said lever being mounted to swing into the yoke about its points of connection with the yoke to bring the point of connection between the lever and link past the dead center, and cooperating means upon the yoke and lever for deflecting the ends of the yoke inwardly toward the lever when the binder is subjected to excessive strain.



1,538,413. COMBINATION SUCKER-ROD WRENCH AND ELEVATOR. GEORGE A. STAFFORD, Sourlake, Tex. Filed Apr. 17, 1923. Serial No. 632,630. 6 Claims. (Cl. 81—119.)

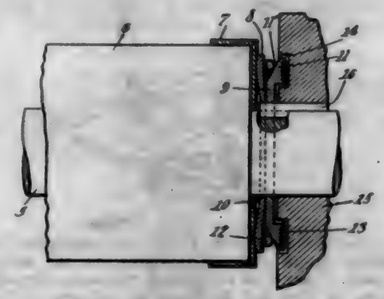
1. A device of the character described including two relatively rotatable members, one having a central opening and a side slot, a boss carried by the other member working in said opening, said last mentioned member having a radial slot, said slots coinciding when said members are in one position, relative to each other, a handle connected to the first mentioned member and provided to work in a common plane therewith to rotate the same, said handle being movable into vertical position to suspend the device, said handle interlocking with the other member when in vertical position to lock said members against relative rotation.



1,538,414. DIPHENYLDICARBOXYLIC ACID DISAZO DYES. RICHARD STÜSSER, Deutz, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Nov. 13, 1922. Serial No. 600,722. 2 Claims. (Cl. 260—78.)

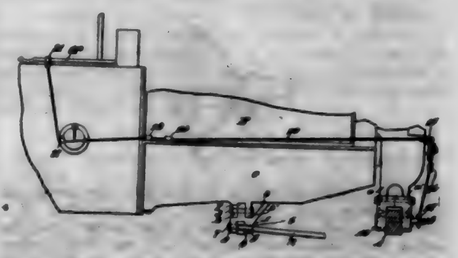
2. The herein described new azodyestuff, having most probably the structural formula:

the sodium salt of which, after being dried and pulverized, is a black powder, soluble in water with a blue-red and in concentrated sulphuric acid with a violet coloration; yielding upon reduction with stannous chloride and hydrochloric acid 4,4'-diaminodiphenyl-3,3'-dicarboxylic acid, an amino-phenylaminonaphthalene and aminoresorcine; said dyestuff dyeing cotton blue-red shades which, by an after-treatment with copper sulphate, change into reddish-violet shades fast to light and to washing, substantially as described.



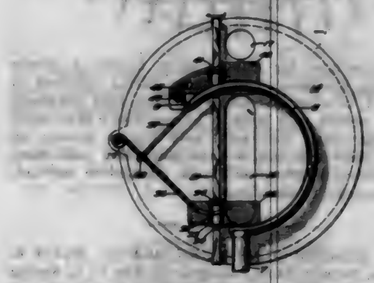
1,538,415. GOLF CLUB. MILTON TOOTLE, 3d, St. Joseph, Mo., and JACK T. PATTERSON, Homewood, Ill. Filed Mar. 14, 1924. Serial No. 699,243. 12 Claims. (Cl. 273—77.)

1. A golf club comprising a head formed with a transversely extending groove and a lengthwise extending socket intersecting said groove, said socket and groove opening at the bottom of the head, a shaft extended from the rear of the head, a plate seated in said groove and secured to the head, and a weight positioned medially with respect to the shaft, extending transversely of and integral with said plate and of a greater length than the width of the plate and further seated in said socket, said weight extending from each side of the plate and having the lower face of said extending portions flush with the outer face of the plate.



1,538,416. GREASE RETAINER. NICHOLAS W. TRAUTNER, St. Paul, Minn. Filed Jan. 3, 1924. Serial No. 684,270. 1 Claim. (Cl. 286—5.)

A grease retainer including a circular metallic body portion, an enlargement formed on the body portion and disposed adjacent to the periphery thereof, said enlargement having a cut out portion providing a washer seat, a washer in the washer seat and adapted to engage a hub section against which the device is positioned, said enlargement having a beveled inner surface, a washer of flexible material of a diameter to overlie the body portion, said last mentioned washer being secured to the metallic body portion, and a coiled spring positioned

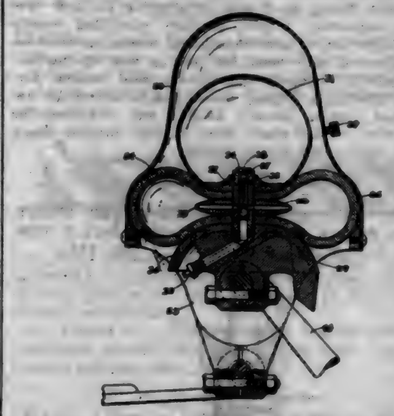


between the last mentioned washer and body portion and adapted to rest on the beveled surface of the body portion for normally urging the body portion away from the last mentioned washer.

1,538,417. AUTOMATIC CLUTCH RELEASE FOR TRACTORS. GEORGE HENRY TRIPTSHAUSER, Attica, N. Y. Filed Oct. 21, 1922. Serial No. 596,028. 2 Claims. (Cl. 180—82.)

1. The combination with an engine crank case having laterally spaced depending arms, a casting carried by said arms and composed of two members designed to straddle the front axle, said members being provided on their opposed inner faces with recesses having centrally disposed laterally extending nipples which fit in apertures in said depending arms and which operate to retain the casting from sliding downward when the tractor rises, the lower ends of said casting members being provided with longitudinally extending slots, a trunnion pin mounted in said slots, a clutch lever, a cable connected with said lever and with said pin whereby a pull is exerted on the cable on the rising of the front axle of the tractor and the clutch lever thereby released.

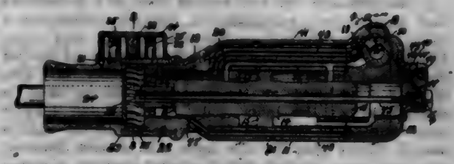
1,538,418. TEMPERATURE INDICATOR. MORRIS C. WHITE, San Francisco, Calif., assignor of one-fourth to Arthur C. Thoppe, Oakland, Calif. Filed Oct. 13, 1923. Serial No. 668,295. 12 Claims. (Cl. 116—114.)



8. A temperature indicating instrument comprising a disc provided with a vertically disposed elongated sight opening and a second opening above and spaced from the first opening, a guide arranged adjacent said openings, a flag slidably mounted on said guide and visible through the lower opening, a flag slidably mounted on said guide and normally concealed behind said disc below the second opening, means for supporting said second flag in position below said second opening and temperature responsive means connected to said first flag, an increasing temperature serving to cause upward movement of the first flag along said first opening into engagement with the second flag and movement of the second flag into position behind said second opening.

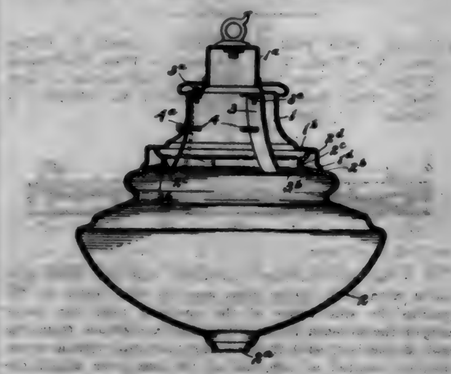
1,538,419. VAT DYESTUFF AND PROCESS OF MAKING SAME. KARL WILKE and JOSEF STOCK, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 16, 1924. Serial No. 706,988. 4 Claims. (Cl. 260—61.)

1. A process for the preparation of vat dyestuffs which consists in treating the nitrogen-containing bodies, obtainable by the action of nitrating agents upon such products as are formed by condensing 2 molecules of benzanthrone, with alkaline condensation means.



1,538,420. AIR SPRING. FRANK S. CHURCH, Cincinnati, Ohio, assignor of one-half to The Thos. J. Corcoran Lamp Co., Cincinnati, Ohio, a Corporation of Ohio. Original application filed May 31, 1921, Serial No. 473,873. Divided and this application filed Apr. 18, 1922, Serial No. 555,474. 2 Claims. (Cl. 267—65.)

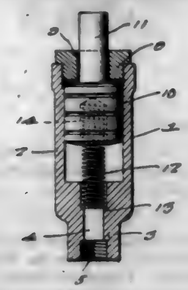
1. In combination within an air spring an outer shell like member, an air cushion located in one end of the outer member, a hollow inner member located within the outer member, communicating with the interior of the cushion and movable within the outer member, and a valve between the inner member and the cushion adapted to permit a discharge of air from the cushion to the inner member when the cushion is compressed in response to a shock impelled movement thereof, said valve having



a bleeder passage therein to permit restoration of air from the inner member to the cushion upon movement of the parts to normal position.

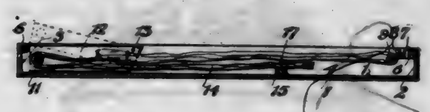
1,538,421. ROCK-DRILLING APPARATUS. OMAR E. CLARK, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 19, 1918. Serial No. 229,500. 23 Claims. (Cl. 121—6.)

1. In apparatus of the character set forth, the combination with a drilling motor, of means for continuously rotating a drill operated on by the drilling motor, in either of opposite directions.



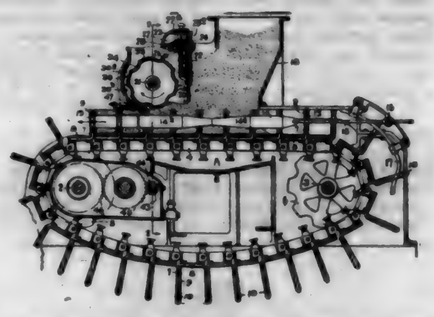
1,538,422. LIGHTING FIXTURE. WESLEY E. COCHRAN, Cleveland, Ohio. Filed Nov. 17, 1921. Serial No. 515,805. 2 Claims. (Cl. 240—133.)

1. A shade holder, including a downwardly flaring hood terminating in annular flanges forming an annular shade receiving seat, a shade bowl terminating in



reduced annular outwardly inclined neck and heel portions fitted in said annular seat, interior spring elements movably arranged within and spaced from said downwardly flaring hood and terminating at their free ends in horizontal tongue portions extending within said neck portion of said shade, and means operable on the exterior of said hood for moving said spring elements radially outward and causing said tongue portions to yieldingly engage beneath said outwardly inclined heel portion thereby holding and elevating the neck portion of said shade bowl in said annular shade receiving seat under spring tension.

1,538,423. INDICATOR FOR FEED-WATER PUMPS. CARTER S. COLE, Harrisburg, Pa. Filed Sept. 8, 1924. Serial No. 736,659. 5 Claims. (Cl. 116—114.)



2. An indicator for the suction line of a locomotive feed water pump comprising a cylinder embodying a piston chamber having an imperforate wall, said cylinder having a central bore extending through the bottom thereof and communicating with said chamber, said bore being counter-bored at its opposite ends to form a spring seat at the inner end, the remaining counter bore being screw threaded for connection to the suction line, a closure plug for the upper end of said chamber, said plug being formed with a central opening, a piston slidably mounted in said chamber, said piston including a head fitting snugly and slidably within said chamber, and a central stem projecting therefrom and extending slidably through the opening in said plug, said stem constituting an indicator, said head being formed in its bottom with a socket in alignment with the aforesaid spring seat, and a coiled spring having one end extending into said socket and the opposite end into said seat.

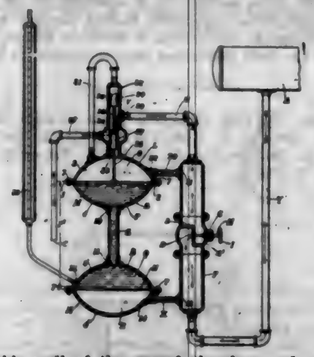
1,538,424. BOX FOR GARMENTS. ROBERT F. CUTHBERT, New York, N. Y., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1924. Serial No. 739,253. 4 Claims. (Cl. 206—7.)

1. A box for holding a garment, said box being provided with fixed spring clips near its side edges for engaging the side edges of the garment near the lower end of the same, a frame pivoted at a distance from one end of the box, said frame being provided with a cross-member located at one end of the box over which the garment is folded, and means at the opposite end of the box for detachably holding the upper end of the garment.

1,538,425. MACHINE FOR CORED BUILDING BLOCKS OF PLASTIC MATERIAL. GEORGE C. DERAY, Springdale, Pa. Filed Mar. 20, 1922. Serial No. 545,168. 9 Claims. (Cl. 25—99.)

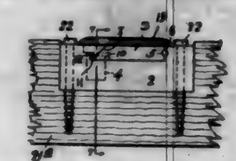
1. In a machine for making cored blocks of plastic material, the combination of a mold having openings in its walls, a core-bar extending through said openings, means for moving said mold, a hopper above said mold, and communicating therewith, said hopper having an opening at its lower end, a gate controlling said opening, and a device beyond said gate adapted to feed additional material to said mold.

1,538,426. BUMPER-SUPPORTING MEANS. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 689,008. 14 Claims. (Cl. 293—55.)



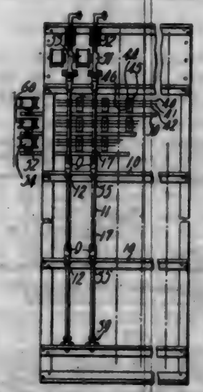
1. The combination, with a bumper bar, of a clamping device comprising a pair of members adapted to receive the said bar therebetween, a supporting arm having an eye at the outer end thereof, means carried by said arm for adjustably pivoting the said eye to the said member of the clamping device, and means carried by said clamping device and adjustable toward and adapted to engage the side or face of the bar which is opposite said eye.

1,538,427. MEANS AND METHOD FOR GOVERNING FLUID PRESSURES. GEORGE GOODELL EARL, New Orleans, La. Filed Aug. 27, 1918. Serial No. 251,662. 25 Claims. (Cl. 137—78.)



1. In a fluid system, the combination of a container containing a definite amount of fluid of a certain specific gravity, means containing a fluid of a different specific gravity than the fluid in said container, a valve controlling the pressure of fluid in said means, a movable fluid-tight division governing said valve, and means to cause the pressure of the fluids to act on said division and react against each other thereat.

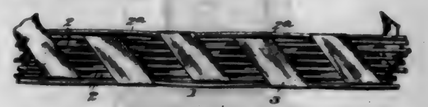
9. In a fluid distributing system, a source of fluid supply, a duct, said duct being divided into supply and exhaust portions by an intermediate portion of relatively high resistance to fluid flow, a valve in the said exhaust portion, an exhaust opening, said valve being located intermediate the said opening and the said intermediate portion, a pair of pressure chambers, one communicating with the said duct supply portion, the other with the said duct exhaust portion, a movable wall for each chamber, a third chamber intermediate the said movable walls, a fluid filling the said third chamber, and said valve being adapted to be operated under the control of



the movable wall of the second chamber, and said wall being responsive to the difference of pressure in the pair of chambers.

1,538,428. POLE-LINE INSULATOR. ALBERT F. EMMONS, Pittsburgh, Pa. Filed Aug. 27, 1920. Serial No. 406,312. 4 Claims. (Cl. 173—314.)

1. A pole-line insulator comprising a lock member provided with a recess having one squarely cut end and one beveled end, and provided also with an opening communicating with said recess, a wire-engaging pin received in said opening, a key member shaped to fit within the said recess and over the said pin, and a locking pin received in registering grooves in the said lock and key members.



1,538,429. SWITCHING MECHANISM. OSCAR F. FORSBERG, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1923. Serial No. 617,242. 4 Claims. (Cl. 179—27.5.)

1. The combination in a switch structure having a plurality of sections, an operating member for each section, means for loosely joining said operating members

to form a self-adjustable single operating unit, and a plurality of members apertured for permitting the removal of the single operating unit in sections.

1,538,430. BEAD CORE. JOHN R. GAMMETER, Akron, Ohio, assignor to The American Chain Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 5, 1923. Serial No. 616,934. 18 Claims. (Cl. 243—1.5.)

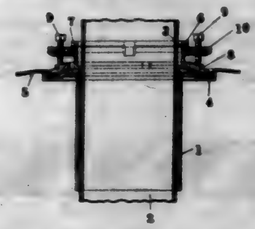
2. As an article of manufacture, an annular bead core comprising circumferential inextensible wires, and a fabric tape interwoven with the wires to hold them in parallel relationship.

16. A strip of material for use in forming a bead core, comprising parallel wire strands, and a flat tape woven through said strands.

1,538,431. COPPER-NICKEL ANODE AND METHOD OF PREPARING THE SAME. SIGURD GIERTSEN, Christianssands, Norway, assignor to Kristianssands Nikkelraffineringsverke, Christianssands-S., Norway, a Corporation of Norway. Filed Sept. 26, 1921. Serial No. 503,359. 7 Claims. (Cl. 204—4.)

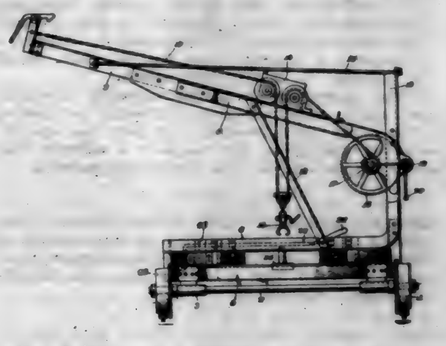
1. The improvement in the Bessemerising of copper-nickel matte, which comprises continuing the blowing of the charge after practically all iron has been removed and maintaining the charge at a sufficient temperature by the addition of heat producing material.

1,538,432. SHUTTLE FEED STEM HEAD. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Sept. 5, 1922. Serial No. 586,072. 17 Claims. (Cl. 49—2.)



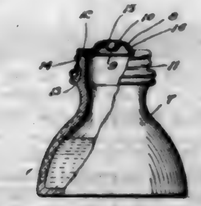
2. A stem head comprising a movable member axially disposed within said head, a work-part support carried by said member and means for moving said member axially of said head to locate said support in a position convenient for the disposition of said part on said support.

1,538,433. VENT-PIPE SLEEVE. JOSEPH HIRSHSTEIN, Cleveland, Ohio. Filed May 16, 1923. Serial No 639,286. 4 Claims. (Cl. 285—31.)



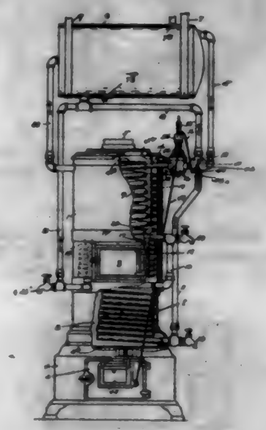
4. The combination of a pipe sleeve provided with a flashing flange and a locking flange, said locking flange having spaced openings therethrough, a clamping ring

cooperating with the flashing flange, a locking ring rotatable with respect to the sleeve and having inwardly projecting lugs adapted to pass through the openings in the locking flange and to be brought into opposition with



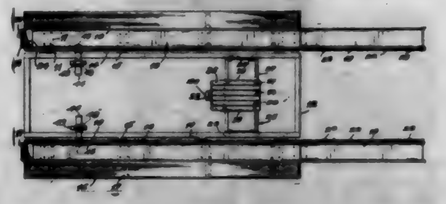
the under surface of said flange by rotative movement of the locking ring, and adjustable means extending from the locking ring to the clamping ring to force the latter into clamping position.

1,538,434. DERRICK TRUCK. HARRY C. HOLLOWAY, Glencoe, and RAY V. DAWNEY, Chicago, Ill. Filed Feb. 17, 1920. Serial No. 359,367. 1 Claim. (Cl. 212—65.)



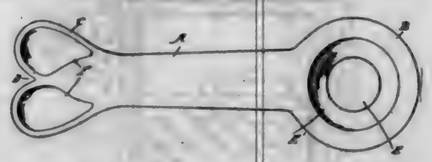
In a derrick truck, a circular angle iron track having an inwardly extending horizontal flange, rollers resting on said flange, arc-shaped bars on opposite sides of said rollers and carried thereby, a plurality of angle irons arranged transversely on said bars, plates secured to said bars and to said angle irons, additional rollers carried by said bars beneath said flange, guides carried by said angle irons, a longitudinally movable locking rod supported by said guides, and a handle for operating said locking rod.

1,538,435. DISPENSER FOR CLEANING AND OTHER FLUIDS. JOSEPH F. KASNICKA and GEORGE B. EFANTIS, Cicero, Ill.; said Efantis assignor to said Kasnicka. Filed Jan. 2, 1923. Serial No. 610,174. 5 Claims. (Cl. 15—138.)



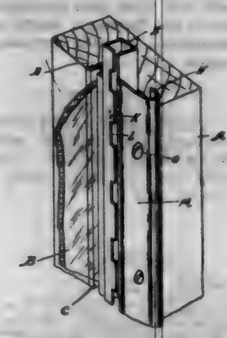
1. A device of the character described comprising, in combination, a receptacle open at its upper end, a member closing the upper end of the receptacle and having an aperture therein, a valve member normally seated over said aperture, and means for retaining the valve member in place adapted when the receptacle is inverted to permit the valve member to be unseated by the pressure of the fluid in the receptacle flowing through said aperture, said means comprising a sheet of fibrous material whereby the fluid discharged may be applied to the work.

1,538,436. WATER HEATER AND STEAM GENERATOR. AUGUST H. KOHLMEYER, Detroit, Mich. Filed June 6, 1919, Serial No. 302,181. Renewed Oct. 24, 1924. 5 Claims. (Cl. 236—32.)



2. In a combined water heater and steam generator, the combination with a vessel alternatively used for heating water and generating steam, of a thermostat subject to the temperature of the hot water or steam produced in said vessel, means for heating said vessel, mechanism actuable by said thermostat for automatically regulating said heating means, a valve controlling the water supply to said vessel and adapted to increase or diminish said supply according as the vessel is employed for heating water or generating steam, and means acting in unison with said valve for adjusting the thermostatic mechanism to increase the application of heat by said heating means to said vessel when the same is used as a steam generator.

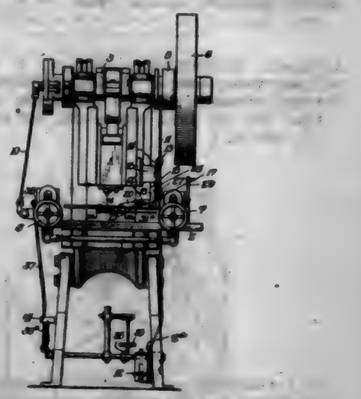
1,538,437. VEHICLE WORK RACK. ANDREW C. LARSEN, Minneapolis, Minn. Filed Jan. 23, 1924. Serial No. 687,962. 30 Claims. (Cl. 104—124.)



2. A rack of the kind described comprising a pair of laterally spaced supports, and a carriage mounted to travel longitudinally between and below the same, said carriage having a body mounted to travel transversely thereon.

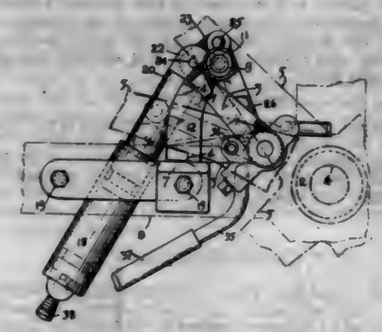
1,538,438. METHOD OF FORMING SHEET-METAL HANDLES. JOHN D. LAWRENCE and STANLEY W. NICHOLSON, Toledo, Ohio, assignors to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 11, 1920. Serial No. 416,246. 5 Claims. (Cl. 113—51.)

1. The method of forming a handle consisting in first forming a sheet metal blank having enlarged end portions, one of which is circular, producing by an initial stamping operation a cup-shaped recess in said circular end portion and a pair of symmetrical recesses at each side of the center line of the blank in the other enlarged end portion thereof, imparting a U-shape to the center portion of the blank by a second stamping operation and by the same operation bending the symmetrically recessed portions into opposed relation.



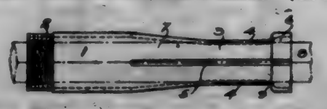
1,538,439. VEHICLE WINDOW CONSTRUCTION. JOHN D. LAWRENCE and STANLEY W. NICHOLSON, Toledo, Ohio, assignors to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Dec. 6, 1920. Serial No. 428,644. 4 Claims. (Cl. 296—44.5.)

1. In a window construction, the combination with a window frame upright, of a tubular sheet metal member longitudinally extending upon said upright within the window opening and formed with a slot in its outer wall in proximity to one of its side walls and a sheet metal trim stick bridged between the free edge of said side wall of the tubular member and the upright and formed with a shoulder adjacent its seat on said edge, laterally bearing against the wall terminating in said edge.



1,538,440. STOCK-CONTROLLED FEED FOR PRESSES. FREDERICK J. LITTELL and WILLIAM N. TWOMB, Chicago, Ill., assignors to F. J. Littell Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1923. Serial No. 629,821. 8 Claims. (Cl. 164—89.)

1. In a machine of the class described, a tool, driving mechanism for said tool, means responsive to the presence of stock in the machine, having a connection through which it controls said driving mechanism, and means interposed in said last-named connection through which to lock off the control thereof; said connection



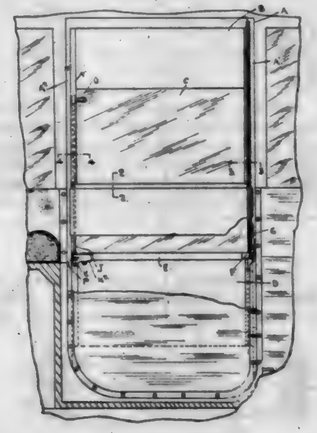
embodying a movable shoulder and a detent coacting therewith; and said locking off means comprising a cam movable to separate said shoulder and detent.

1,538,441. COMPRESSION STOP. HARRY DE FOREST MADDEN, Newark, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 2, 1921. Serial No. 474,391. 31 Claims. (Cl. 188—94.)

1. In a machine, the combination of a carrier for transporting fragile articles such as incandescent electric lamps or the like, a stop comprising a compression-member associated with said carrier, said member being movable transversely to and adapted to be positioned in the path of said carrier and means for removing said member from the path of said carrier.

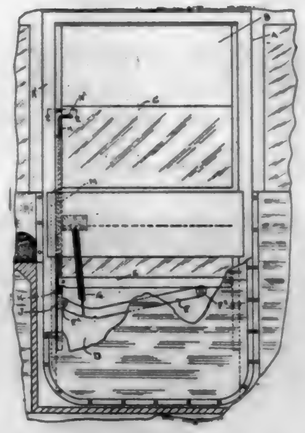
1,538,442. FEED COLLET. JACOB A. MANN, Detroit, Mich., assignor to Margaret Jane Mann. Filed May 31, 1924. Serial No. 717,162. 4 Claims. (Cl. 29—62.)

1. A feed collet comprising a tubular member threaded externally at one end which is circumferentially closed, a gradually tapered connection extending from said closed end to an intermediate body portion of reduced diameter, and an abrupt change of diameter between said inter-



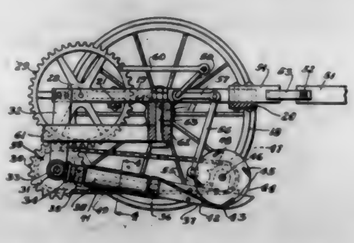
mediate body portion and a front collar, said intermediate body portion being pierced by a plurality of longitudinal slots, one of said slots also being extended through and splitting said collar.

1,538,443. WINDSHIELD. WILLIAM B. MURRAY, Ann Arbor, Mich., assignor to Motor Products Corporation (1923), Detroit, Mich., a Corporation of New York. Filed Oct. 30, 1922. Serial No. 597,972. 1 Claim. (Cl. 296—92.)



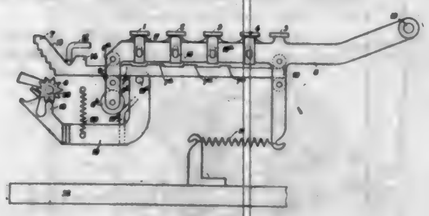
In a windshield pivot mounting, the combination with a windshield and a supporting standard therefor, of a trunnion having a shoulder abutting one side of the standard and having a socket portion extending transversely of the standard, a cap engaging the opposite side of said standard and having a socket portion abutting the socket portion of the trunnion, a headed element securing the trunnion to the windshield, the head of said element being located within the socket portion of said trunnion and the socket portion of said cap, a lock washer surrounding the headed element within the socket portion of said trunnion between the face of said socket portion and the head of said element, a friction band surrounding the socket portion of the trunnion between the shoulder thereof and the socket portion of said cap, and means carried by said standard for actuating said band.

1,538,444. WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed May 22, 1922. Serial No. 562,869. 10 Claims. (Cl. 296—48.)



4. The combination with a sliding window closure, of an elongated coiled counterbalance spring for said closure, and a tubular fibrous anti-rattler packing around said spring and in close proximity thereto.

1,538,445. WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed May 22, 1922. Serial No. 562,870. 10 Claims. (Cl. 292—202.)

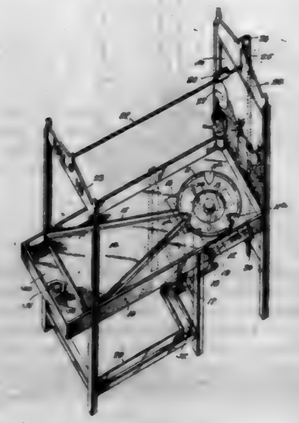


10. In a window control mechanism, the combination with a slidable window member, of a control rod extending upon said member in the direction of travel thereof, said rod having a transversely bent portion at one extremity forming a latch element and a transversely bent portion at the other extremity and spaced longitudinally of said rod from said first-mentioned transversely bent portion and forming a handle and stationary latch means engageable by said first-mentioned transversely bent portion.

1,538,446. VEGETABLE HARVESTER. HENRY C. NIEMEYER, Chicago, Ill. Original application filed Mar. 17, 1921, Serial No. 453,046. Divided and this application filed Nov. 21, 1921. Serial No. 516,683. 3 Claims. (Cl. 55—107.)

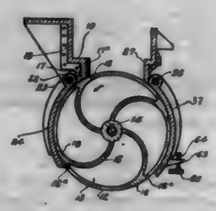
1. A top clipping machine of the class described, comprising a clipper frame mounted between the wheels of said machine to tilt on a rearward pivot; a pair of cross beams on said frame; a sheet metal platform extending forward from the front cross beam; a cutting edge on the front of said platform; a member rotating on a horizontal axis and provided with cutting blades co-operating with said edge; a pair of longitudinally extending rollers mounted between said cross beams; a continuous apron mounted on said rollers to convey tops to the side of the machine; driving means on a wheel; and transmission mechanism connecting said driving means with said rollers and said rotating member.

1,538,447. CALCULATING MACHINE. GUY BAZELEY PETTER, Ipswich, England. Filed May 21, 1923. Serial No. 640,580. 7 Claims. (Cl. 235—82.)



1. In calculating machines of the multi-bank type, a series of ordinal keys in each bank, a row of pivoted figure carrying elements, teeth on said figure carrying elements, and means actuated by said keys, said means engaging said teeth on the movement of said keys in the operative direction and disengaging them in the other direction of movement, said means comprising lever mechanisms carrying engaging elements adapted to engage said teeth, said lever mechanisms comprising pivoted rocking levers in combination with longitudinal members adapted to move longitudinally of the rocking lever, characterized in that the longitudinal movement takes place automatically during the movement of the levers in the operative direction by reason of the pressure of the teeth on the figure carrying elements against the longitudinal members.

1,538,448. SWITCH STAND. NEIL E. SALSICH, Bethlehem, Pa. Filed Dec. 4, 1924. Serial No. 753,784. 4 Claims. (Cl. 246—409.)



1. In a switch stand, the combination of a base member having an intermediate lower housing portion defined by the base member and by an upwardly extending wall integral therewith and having foot plate portions adapted to rest on adjacent ties, a lower bearing member carried by one side of the wall and spaced above the upper surface of the base member, an upper housing portion secured to the wall, an upper bearing member carried by the upper housing portion and mating with the lower bearing member, an actuating shaft fitting the bearing members, a lever connected to the shaft, said foot plates extending laterally beyond the outer ends of the bearing members and having spike-receiving openings adjacent to the ends thereof, integral latch posts carried by the lever side ends of the foot plates, and lever latching means carried by the latch posts.

1,538,449. GAME APPARATUS. FRANK SCHULZ, New York, N. Y. Filed Sept. 14, 1922. Serial No. 588,101. 6 Claims. (Cl. 273—125.)

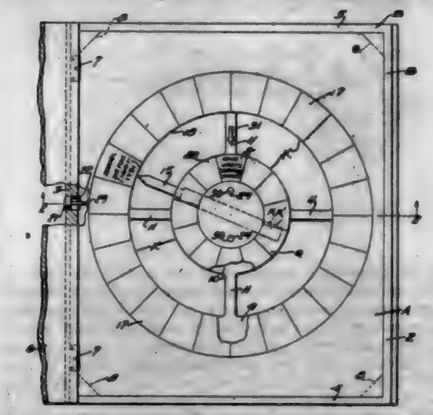
1. In a game apparatus, in combination, a target having an aperture to permit the passage of a missile launched from a playing position, a support on which the target is movably mounted whereby the aperture therein may be carried through a predetermined path, a movable prize-carrier, a support therefor, and means associated with the prize-carrier and located beyond a predetermined point in the path of said aperture in the target and controlled by the missile after passing through said aperture when the same is in said predetermined point in its path to cause the prize-carrier to move toward the playing position.

1,538,450. ASH-DISPOSAL APPARATUS. SAMUEL STEWART, Birmingham, Ala. Filed Jan. 27, 1923. Serial No. 615,402. 4 Claims. (Cl. 110—165.)

4. In an ash disposal apparatus, a chute, and a rotary ejector for discharging material therefrom, hinged air excluding guards for said ejector, said ejector having webs parallel with the axis of the ejector curved in transverse cross section from its hub outwardly to present concave load supporting bottom surfaces for the loaded pockets adapted to support the material out of contact with the air excluding guards.

1,538,451. WINDOW CONSTRUCTION. ALBERT STROBEL, Cleveland, Ohio. Filed Feb. 28, 1924. Serial No. 695,707. 2 Claims. (Cl. 20—53.)

1. The combination with a window frame having vertical inner and outer sash guide ways, and substantially centrally arranged parting strip grooves between the guide ways; or a supplemental frame arrangeable in the outer guide way, panels covering the inner guide way, and ribs integrally formed with the panels to fit in said parting strip grooves whereby to retain the supplemental frame in position.



1,538,452. RING CONSTRUCTION. JOHN A. SWEITZER, Providence, R. I., assignor to Powers & Mayer Manufacturing Corporation, New York, N. Y., a Corporation of Rhode Island. Filed July 7, 1922. Serial No. 573,315. 6 Claims. (Cl. 63—15.)

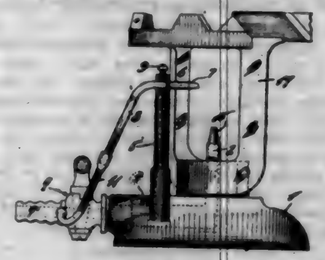
6. A ring construction comprising a shank having a recess therein, a head member mounted in said recess, said head member having a plurality of openings therethrough, a cap member mounted on said head member and having a plurality of projections passing through the openings in the head member and extending to a point adjacent the body member, whereby said projections can be secured to the body member thereby securing the head member in position.

1,538,453. MAGNETIC TOY OR GAME. ADOLPH ALEXANDER THOMAS, New York, N. Y. Filed June 15, 1923. Serial No. 645,504. 27 Claims. (Cl. 273—141.)

24. A magnetic toy or game comprising a box having a series of notations arranged in a circular path, a pivoted magnet associated with said notations, a second series of notations arranged in a circular path and bearing a certain relation to said first series of notations, a second pivoted magnet associated with said second series of notations and arranged to be influenced by the first magnet, a manually rotatable member for turning the first magnet to indicate the desired notation on the associated series, whereby the second magnet swings to indicate a notation on the other series, a device in said box for holding the second magnet against turning

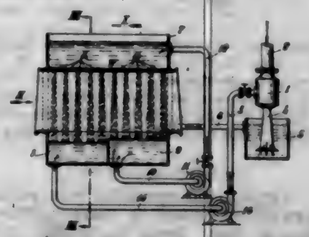
during adjustment of the first magnet, a finger piece projecting outside the box, and a connection between said device and said finger piece for moving said device into releasing position.

1,538,454. LACING MEANS. STEPHAN TRAWINSKI, Chicago, Ill. Filed June 12, 1924. Serial No. 719,588. 2 Claims. (Cl. 24—145.)



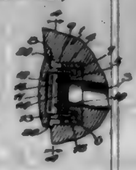
1. In a lacing mean sof the kind described, the combination with a sheet of material folded back upon itself and having a slit cut in the folded edge, the folded portion being secured to the body of the sheet, of an eyelet member formed of an integral sheet of metal bent back upon itself to form a base of superimposed layers and to form a closed eye, the eye projecting through said slit and the base having shoulders engaging the inner side of said folded material.

1,538,455. GAME DEVICE. LEON WINKEL, New York, N. Y. Filed Oct. 1, 1924. Serial No. 740,884. 1 Claim. (Cl. 273—145.)



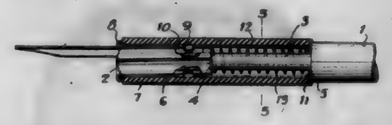
A game device comprising a liquid filled container, the body of the container being formed from a tubular member having threaded ends, transparent closures for the ends of the cotainer, gaskets between the ends of the container and the closures, and ring-like cups adapted to screw over the ends of said container and engage the closures to force the same towards the edges of the container whereby the device will be rendered leak proof, and floating game pieces in said container.

1,538,456. BURNER. JOHN H. ZIMMER, St. Louis, Mo. Filed June 17, 1922. Serial No. 568,955. 5 Claims. (Cl. 158—115.)



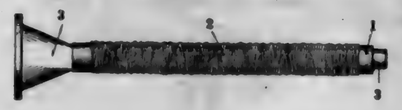
1. A burner comprising a tip, a conductor for conducting a combustible under pressure to said tip, said tip being provided with an orifice of such size that a stream of combustible issues from said tip at a velocity greater than the velocity of flame propagation, and a lighter above said tip and separated therefrom by an unconfined air gap, said lighter being located at a point along the stream of combustible where the velocity of the combustible is approximately equal to the velocity of flame propagation in the stream of combustible at which point the combustible is ignited to produce a flame.

1,538,457. WATER-COOLING DEVICE FOR CONDENSERS. HEINRICH ZOELLY, Zurich, Switzerland. Filed Mar. 14, 1921. Serial No. 452,170. 6 Claims. (Cl. 261—118.)



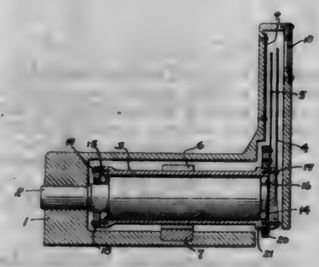
1. An apparatus for re-cooling the cooling water of steam condensing plants on vehicles, which comprises, means for dividing the water to be cooled into a plurality of jets, means for conducting a current of air through the apparatus and transversely to said jets, and means for regulating the relative quantity of water and the velocity of the cooling air to prevent the air from carrying particles of water from the apparatus.

1,538,458. TOBACCO PIPE. JOHN BACHMANN, Chicago, Ill. Filed Nov. 1, 1923. Serial No. 672,170. 7 Claims. (Cl. 131—12.)



1. A tobacco pipe, comprising a chambered bowl and a stem provided with a draft passage therethrough extending to the exterior of said bowl, and yieldable means closing said passage at the exterior of said bowl.

1,538,459. PENHOLDER. JAMES J. BOYLE, New York, N. Y., assignor of one-half to Daniel P. Boyle, New York, N. Y. Filed Apr. 12, 1923. Serial No. 631,786. 1 Claim. (Cl. 120—101.)

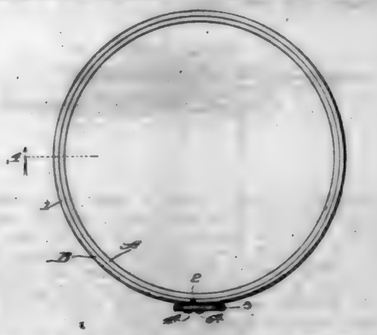


A penholder having a shaft, a filler and a reduced stem connecting the filler and shaft, a slidable ejecting grip tube normally enclosing the filler and stem and having an internal flange on its rear portion, there being a spring chamber between the tube and the stem, and a spring in said chamber acting between said flange and the shoulder at the back of the filler to urge the grip tube rearward against the shaft.

1,538,460. MEANS AND METHOD FOR HANDLING FOOD CASINGS. FRANK V. BRECHT, St. Louis, Mo. Filed Jan. 25, 1924. Serial No. 688,378. Renewed Nov. 14, 1924. 9 Claims. (Cl. 17—45.)

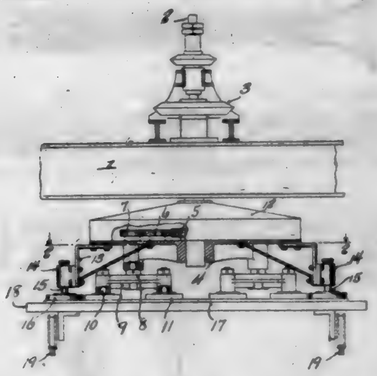
1. The combination of a tubular flexible container for meats and the like, and a hollow flexible container supporting member passing therethrough.

1,538,461. SCALE. HUGH M. CAMERON, Newark, N. J., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,584. 6 Claims. (Cl. 73—151.)



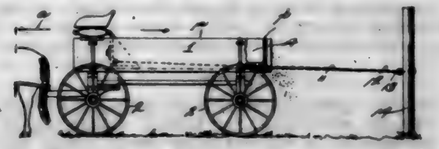
1. In a scale, a substantially counter balanced pivoted indicator having its support above the axis of rotation and utilizing the bearing looseness to provide a pendulum action and means for actuating said indicator.

1,538,462. EMBROIDERY HOOP. GUSTAF A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,867. 2 Claims. (Cl. 45—24.)



1. A device of the character set forth comprising a split ring having its meeting ends provided with hollow beads, wires secured within said beads at one end and

extending into the guides afforded by the beads at the other end, a pivot-stud secured to said ring between the beads at one end, a cam-stud secured to said ring

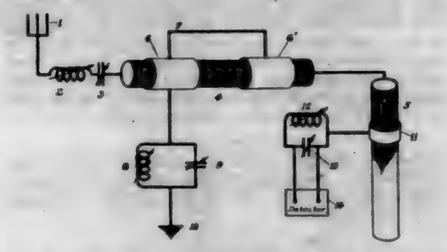


between the beads at the other end, and a disk journaled on said pivot-stud and provided with a cam-slot engaging said cam-stud.

1,538,463. MACHINE FOR GRINDING AND POLISHING SLABS. JAMES CARRIE, Butler, Pa., assignor to Plate Glass Machinery Co., Butler, Pa. Filed Mar. 10, 1924. Serial No. 698,066. 2 Claims. (Cl. 51—109.)

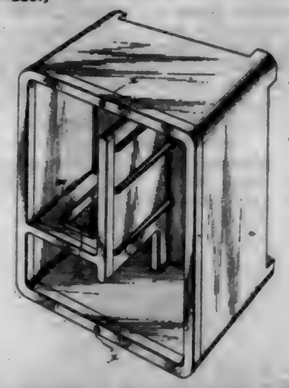
2. A grinding and polishing machine comprising a longitudinal traveling carriage adapted to receive a plate of glass, a rotary grinding mechanism fixedly positioned above the table and a series of groups of grinding and polishing shoes, means for imparting a planetary motion to the same and auxiliary grinding and polishing shoes interposed between the outer shoes of each group, the same being provided with means for imparting a rotary motion thereto.

1,538,464. WAGON-UNLOADING DEVICE. FRED W. CHICH, Weyauwega, Wis. Filed Mar. 16, 1923. Serial No. 625,642. 1 Claim. (Cl. 214—44.)



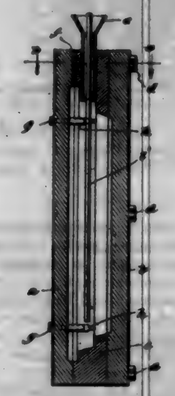
The combination with a wagon body having slidably mounted therein an unloading device for forcing material from the body through the rear end of the body, a flexible member connected to said slidable member and extending rearwardly through the open end of the body adjacent the bottom thereof, of a rearwardly movable and slidable end gate, said end gate comprising a vertically disposed portion, the lower end of said vertically disposed portion being provided with a horizontally disposed portion extending forwardly in the wagon body and resting on the flexible member, said end gate being held normally in position and against rearward movement by weight of the material on the horizontal portion thereof.

1,538,465. PROCESS OF MAKING FIBROUS MATERIAL. ALBERT L. CLAFF, Danvers, Mass. Filed Oct. 4, 1920. Serial No. 414,505. 5 Claims. (Cl. 92—8.)



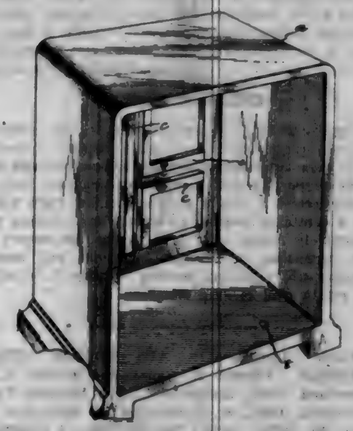
5. A process of making fibrous sheet material suitable for gun wads, which comprises beating or disintegrating approximately sixty parts by weight of cotton in sufficient water to permit circulation of the mass, then adding to and mixing therewith about forty parts by weight of animal hair, together with sufficient carbolic acid to prevent or retard decomposition of the hair, and finally forming the resultant fibrous mass into a sheet.

1,538,466. ELECTRICAL SIGNALING. LOUIS COHEN and JOSEPH O. MAUBORGNE, Washington, D. C. Filed Oct. 25, 1920. Serial No. 419,383. 14 Claims. (Cl. 250—20.)



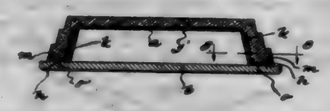
1. A system for radio signaling in which the received signals or other electrical effects acting on an ungrounded antenna system are caused to pass through a wave coil and produce a wave development on said wave coil, said wave coil being operatively associated with adjustable metal tubes and a suitable indicating instrument.

1,538,467. METHOD OF MOLDING THE SHELLS OF REFRIGERATORS. LLOYD G. COPEMAN, Flint, Mich. Filed June 25, 1923. Serial No. 647,599. 4 Claims. (Cl. 25—155.)



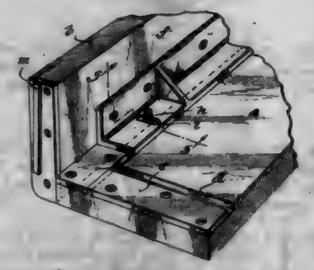
1. The method of making a refrigerator which comprises the casting of an inner plural chambered shell by the pouring of a semi-fluid cementitious composition material into suitable molding apparatus and permitting the same to set, the casting of an outer shell with the same material and in the same way, and the fastening of the two shells together in spaced relation to complete the refrigerator enclosure.

1,538,468. METHOD OF CASTING REFRIGERATOR DOORS. LLOYD G. COPEMAN, Flint, Mich. Filed June 25, 1923. Serial No. 647,600. 2 Claims. (Cl. 25—155)



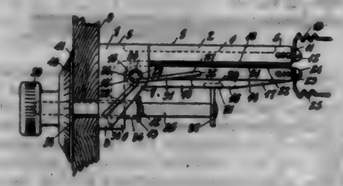
1. A method of casting and finishing stone-work sections in molds, which comprises the pouring the cementitious material into the mold at the center of the top of the same, and the inserting of a long thin removable core through the pour opening and removing the same to provide a hole in the work to receive an arbor, and the supporting of the same upon such arbor to complete the finishing operations.

1,538,469. REFRIGERATOR. LLOYD G. COPEMAN, Flint, Mich. Filed June 25, 1923. Serial No. 647,603. 14 Claims. (Cl. 217—7.)



1. In a refrigerator, the combination of an outer moulded shell, an inner moulded shell telescoping therein, and a back plate for carrying the inner moulded shell and holding it in spaced relation with respect to the other moulded shell.

1,538,470. REFRIGERATOR DOOR. LLOYD G. COPEMAN, Flint, Mich. Filed Dec. 20, 1923. Serial No. 681,001. 12 Claims. (Cl. 20—35.)

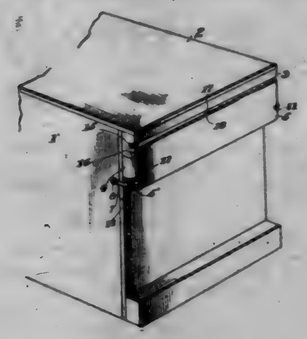


8. In a door the combination of a fibrous outer panel and a hollow tile stonework inner lining cast onto the door the major portion of said lining spaced from the outer panel.

1,538,471. COLLAPSIBLE MOLDING DIES. LLOYD G. COPEMAN, Flint, Mich. Filed Jan. 17, 1924. Serial No. 686,884. 8 Claims. (Cl. 25—130.)

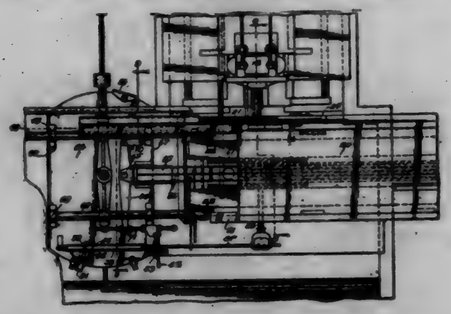
1. In a molding apparatus, a collapsible molding core provided with side walls and a bottom wall, and means requiring the side walls to draw in away from the casting as the side walls are removed from the bottom wall.

1,538,472. CONDENSER. POWEL CROSLEY, JR., Cincinnati, Ohio. Filed May 28, 1921. Serial No. 471,806. 8 Claims. (Cl. 250—41.)



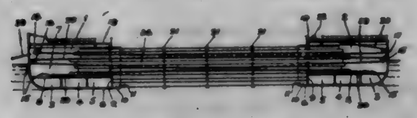
1. In a condenser, a plurality of elements having opposed dielectrically separated electrically conducting surfaces, a support on which one of said elements may be moved toward or away from the other element, to vary the capacity between said surfaces, manipulating means, and operating means having a sliding engagement with said one of said elements to transmit movement of the manipulating means to said one of said elements, this one of said elements yieldingly resisting said operating means, whereby the element and the operating means have their sliding engagement maintained throughout the movement.

1,538,473. BOX FASTENER. WILLIAM CROSS, Polo, Ill. Filed Sept. 22, 1924. Serial No. 739,285. 3 Claims. (Cl. 212—56.)



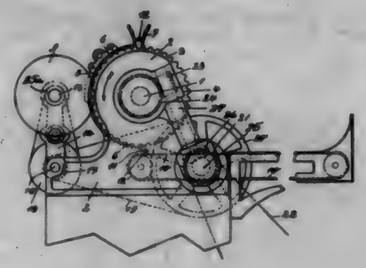
1. In combination with a crate provided with a cleat on its end wall below the top thereof and a lid therefor provided with a depending cleat adapted to rest on the

first mentioned cleat, the cleat on said lid being provided with a longitudinal groove in its outer face; of a plate pivotally carried on said crate and provided with



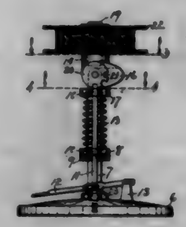
an inwardly projecting flange adapted to be received in the groove of the last mentioned cleat, and spring means to normally retain said locking plate in engaging position.

1,538,474. SPACING TABLE. EDWIN G. DANIELS, Chicago, Ill., assignor to Chicago Bridge & Iron Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1923. Serial No. 671,933. 22 Claims. (Cl. 164—117.)



1. A device of the character described comprising; a slidably mounted table; a rack-bar attached to the table; a dog arranged in connection with the rack-bar, whereby the dog will engage the successive teeth of the rack-bar upon successive movements of the table; and means for moving the dog in a direction parallel to the movement of the table, a predetermined distance at each movement of the table.

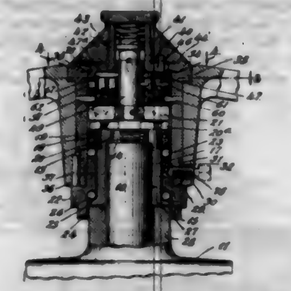
1,538,475. LOG RAFT AND RAFTING DEVICE. GILBERT G. DAVIS and MATTHEW J. DAVIS, Portland, Oreg. Filed Nov. 21, 1923. Serial No. 676,124. 8 Claims. (Cl. 9—15.)



1. The combination with a longitudinally arranged log raft having floor logs and side wall logs, of a pair of open ended vessels into which the ends of the raft are adapted to rest, and means surrounding the open ends of the vessels for engaging the ends of the floor and side wall logs.

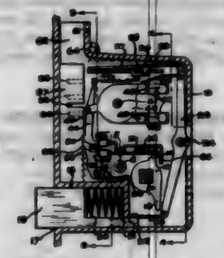
1,538,476. MACHINE FOR CUTTING SEVERAL INDIVIDUAL CIGARETTES FROM PREVIOUSLY-CUT CIGARETTE RODS. HEINRICH ELSNER, Dresden, Republic of Germany. Filed Jan. 31, 1921. Serial No. 441,520. 3 Claims. (Cl. 131—30)

1. A machine for the manufacture of individual cigarettes from previously cut cigarette rods characterized by a rotating drum, provided at its periphery with grooves into which the said cigarette rods drop after leaving the cigarette-making machine; and furthermore means for adjusting the cigarette rods so that the ends thereof will lie in one plane, guide bands around a part of the circumference of the drum, circular knives for dividing the cigarette rods into individual cigarettes, and a conveyor belt for carrying away the said individual cigarettes.



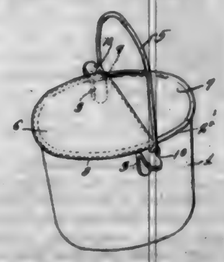
1,538,477. WIRE-REEL SUPPORT. IRVING EPSTEIN, Brooklyn, N. Y., assignor of one-half to Elmore F. Shuster, New Haven, Conn. Filed Oct. 2, 1924. Serial No. 741,211. 11 Claims. (Cl. 242—85.)

1. A reel support comprising a head, means for rotatably supporting said head, means on said head to rotatively receive a reel, a locking member rigid with said head, a retaining member to engage said locking member to positively retain said head against movement in opposite directions in different positions, and means for operating said retaining member to cause it to automatically retain said locking member.



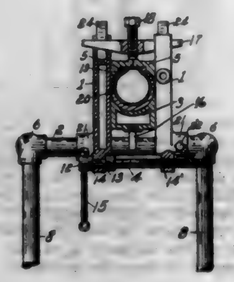
1,538,478. LOCK FOR AUTOMOBILE STEERING WHEELS. JOSEPH E. ERDEY and HARRY H. KNEE, Cleveland, Ohio, assignors to The Safelock Co. Inc., Cleveland, Ohio, a Corporation of Delaware. Filed Aug. 29, 1922. Serial No. 584,936. 7 Claims. (Cl. 70—129.)

1. A lock for automobile steering wheels comprising a base assembly consisting of a bushing adapted to be secured to the steering shaft of an automobile, a lock base secured to said bushing and a lock base cap; an upper assembly rotatably mounted on said lower assembly and including a steering wheel, a lock housing, means movable longitudinally of said shaft adapted to prevent relative rotation between said upper and lower



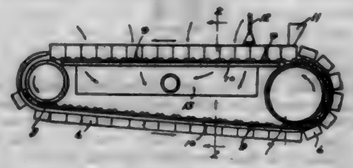
assemblies, and lock mechanism to control the longitudinal movement of said means, said bushing lock base cap defining a plurality of ball races.

1,538,479. COMBINATION LOCK. THOMAS JOSEPH FLEURY, Toronto, Ontario, Canada. Filed Mar. 5, 1923. Serial No. 623,043. 5 Claims. (Cl. 70—18.)



1. In a combination lock, the combination with a casing door knob and door knob shank extending through the casing, of a series of independently movable parallel plates, a bolt guided in the casing, an operating lever pivoted in the casing and linked to the bolt at one end, a push arm pivotally connected to the opposite end of the lever, means for independently adjusting the plates vertically located between the door knob shank and push arm, and a series of movable knobs located exteriorly of the casing for independently operating each of such individual plate adjusting means.

1,538,480. MILK PAIL. EDWARD A. GALLAGHER, Mount Vernon, Wash. Filed Aug. 19, 1919. Serial No. 318,564. 1 Claim. (Cl. 31—50.)

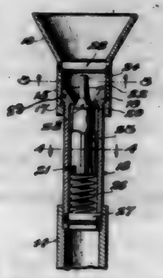


The combination with the beaded opening of a bucket, said bucket being provided with outwardly extending ears adjacent the under side of the bead of the beaded opening and oppositely disposed, of a cover for said bucket covering substantially half of the bucket, said cover comprising a semi-circular shaped member, a downwardly and inwardly extending flange carried by the cover and adapted to engage the bead of the beaded opening of the bucket, the inner corners of the downwardly and inwardly extending flange being bent downwardly and outwardly, thereby forming spring lugs adapted to engage over the bucket ear sides at the opposite sides thereof to the cover and under the bucket opening bead for holding the cover against displacement.

1,538,481. VULCANIZER. EDWIN RUDOLPH GEWERT, Cincinnati, Ohio. Filed June 11, 1924. Serial No. 719,358. 3 Claims. (Cl. 18—18.)

3. A vulcanizer comprising a frame a pair of hollow side walls, one of said side walls being fixed in position on said frame a lug on said fixed wall, the other side wall being slidably mounted on said frame, a female screw thread being tapped in said lug, a smooth-bored lug on the slidable side wall, a clamping screw adapted to screw into the threaded lug on the fixed side wall, and adapted to turn freely in the lug on the slidable side wall, stop collars on said screw, a handle on said screw adapted for turning same, said screw being adapted to move said slidable side wall toward or away from the fixed side wall.

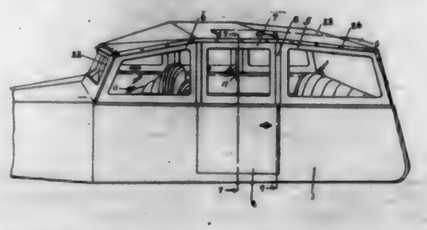
1,538,482. PROCESS OF PRODUCING HARD, CELLULAR, CLAY PRODUCTS. FRANK A. GLASS, Brainerd, Minn. Filed June 5, 1922. Serial No. 566,051. 1 Claim. (Cl. 25—158.)



The process of producing from a clay substance a light weight hard cellular slag-like mass suitable for concrete aggregates, road beds, and the like, which consists in intimately and evenly commingling finely divided earth substances with finely divided fuel, in maintaining the commingled mass in a uniformly and freely permeable condition, in igniting the fuel of the mass at one surface thereof, and in concurrently maintaining three actions, to wit: (a) progressively burning out the fuel of the mass by forcing a combustion-supporting gas therethrough, (b) maintaining the commingled mass in a state of quiescence, free from mechanical agitation, and (c) cooling that portion of the mass from which the fuel particles have been burned by forcing the combustion-supporting gas therethrough on its way to the burning zone.

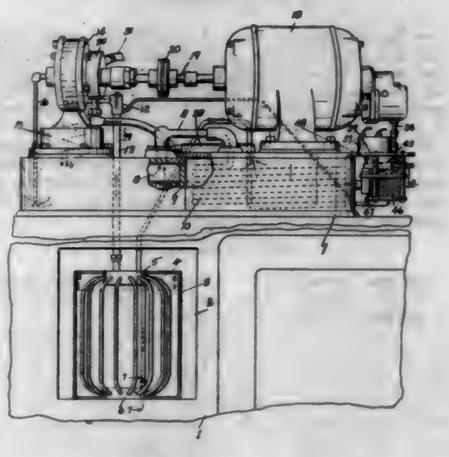
1,538,483. LIQUID-COOLING DISPENSING DEVICE. FREDERIC CHARLES GRANTHAM, Vancouver, British Columbia, Canada. Filed Oct. 15, 1924. Serial No. 743,828. 2 Claims. (Cl. 225—40.)

1. In a device of the class described, a liquid container having a top opening and adapted to be supported upon a cooler and to discharge liquid when in inverted position, a sleeve fitted to the top opening, a pair of oppositely disposed stoppers endwise movable to engage opposite ends of the sleeve to seal the container, and means upon one of the stoppers to engage the end of the sleeve to remove it from the container.



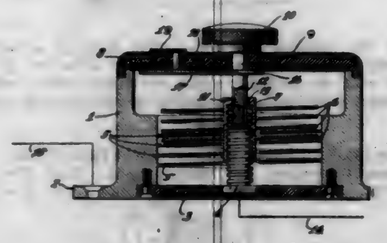
1,538,484. LIFE BELT. SAMUEL H. HAHN and FRED MORSE, New Haven, Conn. Filed Nov. 8, 1924. Serial No. 748,756. 3 Claims. (Cl. 9—17.)

1. Mechanism of the class described, comprising a body member having a valve seat near one end thereof, a valve within the body member, yielding means for moving the valve upon its seat; and a mouth piece slidably connected with the body member having a part connected therewith which during its movement in one direction engages the valve and moves it off its seat.



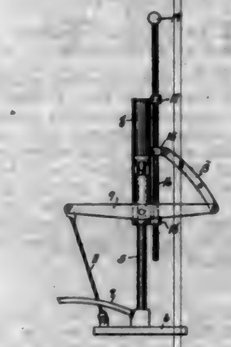
1,538,485. CONVERTIBLE VEHICLE BODY. ALBERT OWEN HOLTOM, New York, N. Y. Filed Dec. 31, 1921, Serial No. 526,277. Renewed Jan. 12, 1925. 16 Claims. (Cl. 296—08.)

1. In a convertible vehicle body, the combination of sides having opposed door openings therein, doors, said sides and doors being chambered to receive side and door panels, the inner walls of said sides and doors terminating below the outer, front and rear side and door panels telescoping in said sides and doors, top rails hinged to the inner walls of the sides and doors to complement the same and adapted to close outwardly against the outer walls or to clamp the panels when in their erected position, clamping means for said rails whereby the panels are independently supported, frame-like top members hinged to the sides to collapse inwardly about the said door openings thereof or to be swung to erected position constituting door frame members for the erected door panels, detachable cross top members supporting said top members in erected position, a wind shield, and a cover of flexible material



adapted to be drawn over said panels and said top frame members, said side panels and top frame members and wind shield, and said cover being provided with coacting disengageable fastener members whereby the cover may be detachably secured thereto, said sides being also provided with fastener members adapted to coact with the fastener members of said cover when the rear side panels are collapsible, for the purpose specified.

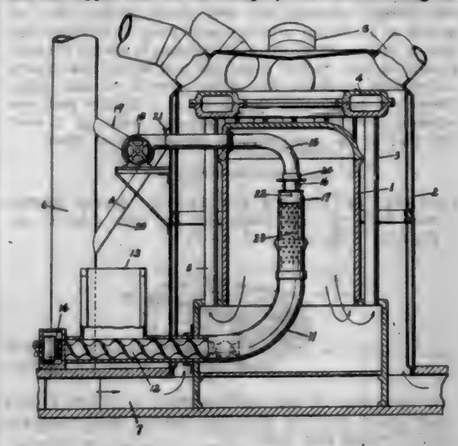
1,538,486. REFRIGERATING MACHINE. FREDERICK J. HUMPHREY, HUBERT R. HUMPHREY, and GEORGE A. HUMPHREY, Kalamazoo, Mich., assignors to The General Gas Light Company, Kalamazoo, Mich. Filed June 14, 1923. Serial No. 645,285. 28 Claims. (Cl. 62—4.)



1. In a structure of the class described, the combination of a compressor, a motor for driving said compressor, an expansion chamber, a condenser operatively connected to said compressor and expansion chamber, means for controlling said motor comprising a switch, an actuating lever for said switch provided with a dog, a timing member driven by said motor provided with a tappet coacting with said dog for actuating said lever to switch opening position, a spring for actuating said lever to switch closing position when said dog is disengaged from said tappet, releasing means for said dog operatively associated with said expansion chamber, and a water supply valve for said condenser provided with a stem, said timing member being provided with a cam adapted to hold said valve open during the actuation of said timing member, said cam permitting the valve to close when the timing member is in its initial position.

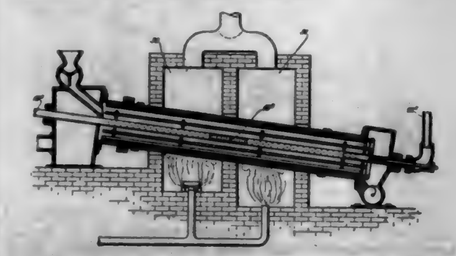
1,538,487. ELECTRICAL CONDENSER. OSKAR MEIROWSKY, Palisade, N. J. Filed Apr. 29, 1922. Serial No. 557,451. 8 Claims. (Cl. 250—41.)

1. A variable condenser embodying a plurality of co-operating, coaxial, helical plates, at least one of which is relatively rotatable for the purpose of varying the effective cooperating areas of said plates.



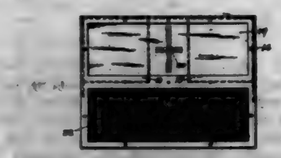
1,538,488. TIRE PUMP. PIETRO PASCUCCI, Meriden, Conn. Filed July 2, 1924. Serial No. 723,653. 2 Claims. (Cl. 230—27.)

1. A tire pump, comprising a base, a hollow piston rigidly mounted thereon, an outlet for said piston, a cylinder set over the upper end of the piston, a lever pivotally connected with the cylinder and projecting from the opposite sides thereof, a link connecting one end of the lever with the base, an operating-rod guided for vertical movement with the cylinder, and a link connecting the opposite end of the lever with said operating-rod.



1,538,489. FURNACE. RAY J. POTTER, Dowagiac, Mich. Filed Sept. 16, 1924. Serial No. 738,012. 19 Claims. (Cl. 110—75.)

1. In a structure of the class described, the combination with a combustion chamber, of a tubular foraminated firepot of relatively small diameter disposed vertically within said combustion chamber, a fuel feed means provided with a fuel delivery conduit connected to the bottom of said firepot, and a blast pipe projecting into said combustion chamber above said firepot, and provided with a conical nozzle head constituting a closure for the upper end of the firepot, said head having air



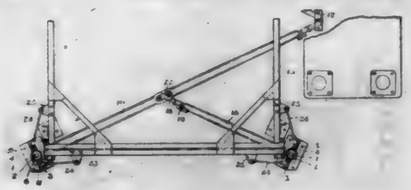
ports in its upper end and a nozzle depending therefrom centrally within said firepot and having side discharge openings.

1,538,490. ROTARY RETORT. JAMES W. H. RANDALL, New York, N. Y. Filed May 13, 1920. Serial No. 380,967. 7 Claims. (Cl. 202—15.)

7. A fractionating apparatus embodying an inclined retort mounted for rotation, means for rotating the retort and a plurality of perforated fluid inlet ducts extending longitudinally of the retort and positioned between the axis of the retort and the inner circumference of said retort, said ducts being mounted for bodily rotation with the retort and adapted to be successively buried by the material under treatment for the purpose of lowering the temperature at which the vapors are evolved and to also drive off the vapors immediately upon their evolution.

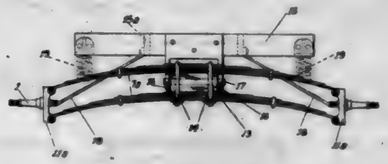
1,538,491. MOTOR-VEHICLE SIGNAL DEVICE. WILLIAM B. REED, Portland, Oreg. Filed Dec. 27, 1922. Serial No. 609,293. 4 Claims. (Cl. 40—132.)

1. In a vehicle signal device, a rigidly secured translucent glass panel having two laterally aligned portions, the first portion of a color different from that of the characters on an official vehicle license plate of com-



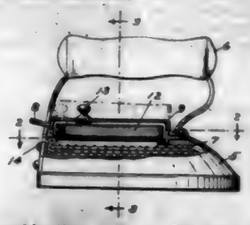
mon type, the second portion of a color like that of the background of such a plate, and a stencil plate superimposed upon said glass panel, said stencil having cut therein, opposite the first panel portion, the numerals of an official vehicle license plate of common type, with a surface about them of like color to that of the background of such license plate, the said stencil also having cut therein, opposite the second portion of said panel, characters designating the licensing authority and year numerals, with a surface about the same of a color like that of the characters on such a license plate.

1,538,492. SWIMMER'S APPLIANCE. JOSEPH REITER, New York, N. Y. Filed Oct. 9, 1923. Serial No. 667,463. 3 Claims. (Cl. 9—17.)



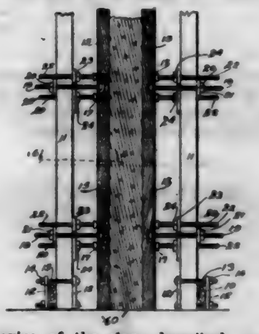
1. In a float of the type described, a hollow wooden block, and a one-piece grille-like skeleton reinforcing element enclosing said block.

1,538,493. GRAIN-HOPPER SCALE. JAMES P. STEEDMAN, Hamilton, Ontario, Canada, assignor to Gurney Scale Company, Limited, Hamilton, Canada. Filed Mar. 10, 1924. Serial No. 700,399. 7 Claims. (Cl 265—71.)



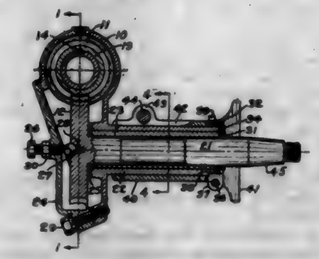
1. In a hopper scale, a hopper frame, a plurality of scale beams arranged in diagonal relation to the frame, bolts suspended to swing freely from rigid supports, pivot block supporting the pivot ends of said beams and mounted on said bolts, said hopper frame being supported from said levers.

1,538,494. SPRING AXLE. JESSE D. TUCKER, Sacramento, Calif. Filed Feb. 6, 1923. Serial No. 617,262. 2 Claims. (Cl. 280—124.)



1. A spring axle structure for vehicles comprising spindles, a pair of spring elements spaced apart and connected to opposite ends of the spindles, a block secured between the springs midway of their ends, a depending bracket on the vehicle, ears on the bracket projecting between the springs and adjacent opposite ends of the block, a pivot pin pivotally connecting the ears and block to allow the springs a pivotal movement on a horizontal axis transversely of the vehicle, and means for limiting such pivotal movement.

1,538,495. FLATIRON. FRANK M. VLCEK, Silver Lake, Minn. Filed Nov. 12, 1923. Serial No. 674,364. 4 Claims. (Cl. 219—25.)



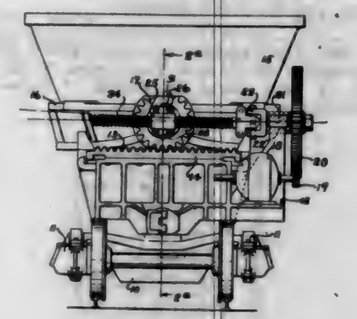
1. The combination with a flat iron, of a heating element within the iron, a rheostat arranged on the iron and in constant circuit with the entire heating element, said rheostat including circuit breaking means.

1,538,496. PLASTIC-MOLD-FORM STRUCTURE. ALBERT C. WELLS, Des Moines, Iowa. Filed Mar. 10, 1922. Serial No. 542,551. 18 Claims. (Cl. 25—131.)

1. In a device of the class described, a plurality of members connected together to form a frame, a form section, means for adjustably connecting a frame member with a form section, comprising bolts, means for connecting said bolts with the form section, a bar extending across the frame member, said bolts being mounted in said bar, a second bar arranged adjacent to the last-mentioned frame member on the opposite side thereof from the first bar, bolts extended through said last bar, the heads of the last bolts being adapted to engage the form section.

1,538,497. STEERING MECHANISM. BENJAMIN H. ANIBAL, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 3, 1924. Serial No. 723,891. 5 Claims. (Cl. 308—63.)

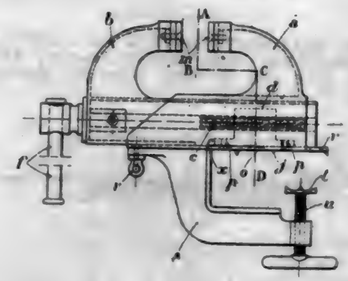
1. In combination with a casing, intermeshing gears in said casing, spindles for supporting said gears, a bushing provided with a plurality of notches in one end thereof, in which one of said spindles is eccentrically



journaled, a rotatable ring member having a slot through one side thereof mounted on said casing, a projection on said ring engageable with one of said notches, a groove in said casing, a locking member positioned within said slot and projecting into said groove, and means for drawing said ring into close relationship with said collar and for holding said locking member in operative position.

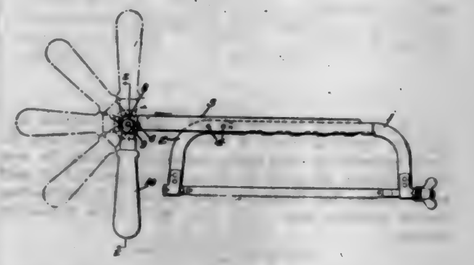
1,538,498. CORN RAZOR. EDWARD H. ANSHELM, New York, N. Y. Filed Dec. 13, 1922. Serial No. 606,645. 2 Claims. (Cl. 30—28.)

1. A one-piece corn razor embodying a sheet metal blank, a portion intermediate the ends of which is longitudinally bent to form a guard which is provided with a transverse slot, one end portion of the blank serving as a handle and the other end portion of the blank being looped back over the outside of the curved guard and having a cutting edge juxtaposed with the slot and normally spaced from the edges of said slot by facial engagement of the blade with the guard.



1,538,499. DUMPING CAR. CARL P. ASTROM, East Orange, N. J., assignor to M. H. Treadwell Company, a Corporation of New York. Filed May 29, 1924. Serial No. 716,551. 11 Claims. (Cl. 105—265.)

1. In a tilting and laterally moving dumping car, a car body having tilting and rolling supporting trunnions, a rotary motor and driving mechanism connected to one trunnion, said mechanism including flexible means permitting shifting of the trunnion axis relative to the motor axis without straining the driving mechanism or motor.



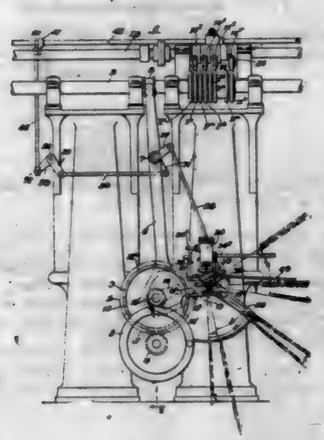
1,538,500. VISE. LOUIS PIERRE AUBARD, Billancourt, France. Filed Apr. 19, 1921. Serial No. 462,643. 2 Claims. (Cl. 81—42.)

1. A vise with parallel jaws comprising a stationary branch and a movable branch formed of steel sheets, strengthening ribs formed of steel sheets on the walls of said branches, prismatic hollow shanks made of steel

sheets, integral with said branches, the one shank being adapted to slide within the other.

1,538,501. ADJUSTABLE-HANDLE HACK-SAW FRAME. ALBERT WASHINGTON AMSDEN, Athol, Mass., assignor to The L. S. Starrett Company, Athol, Mass., a Corporation of Massachusetts. Filed May 12, 1924. Serial No. 712,614. 8 Claims. (Cl. 145—33.)

3. An adjustable handle hack saw frame, comprising a tubular back for the separable sections of the hack saw frame, a corrugated locking disc enclosed in the rear end of said back, a handle stud pivoted to the rear end of said backing and straddling said locking disc, a handle adjustable on said handle stud, and a movable locking roll interposed between said handle and said locking disc and movable into engagement with the teeth of said disc when the handle is adjusted inwardly along said handle stud.



1,538,502. CASE. CLARENCE L. ARMISTEAD and SAMUEL F. BATES, Sullivan, Mo., assignors of one-third to Jesse E. Farrar and Edward E. Mathias, Leslie, Mo. Filed July 26, 1923. Serial No. 653,947. 3 Claims. (Cl. 217—12.)

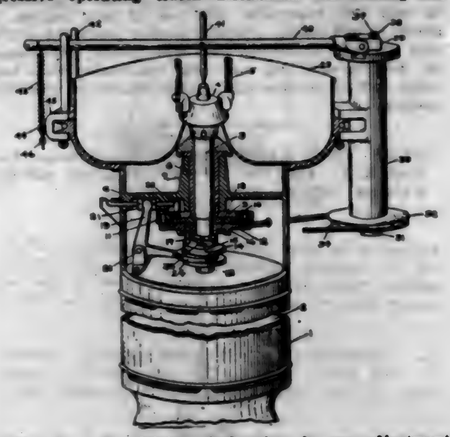
1. A receptacle of rectangular cross section, divided along a diagonal plane to form separable parts, angular

retainers extended about the angles formed by cooperating walls of said parts, and means on said parts for engaging the retainers.

1,538,503. FUEL-VALVE CONTROL WITH LEVER AND CONNECTIONS. AXEL AUGUST ASPLUND, Auburn, N. Y. Filed Feb. 17, 1920. Serial No. 359,411. 4 Claims. (Cl. 123—41.)

1. In a control mechanism for explosive engines having cam operated valves, a rotor, means for shifting the cams operated by said rotor, means for raising the cam levers during the shifting of the cams operated by said rotor, means for regulating the valves and interlocking means between said rotor and said valve regulating means.

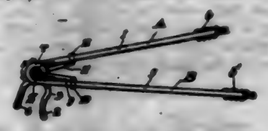
1,538,504. PROCESS OF TANNING HIDES. FREDERICK C. ATKINSON, Indianapolis, Ind. Filed June 26, 1919. Serial No. 306,780. 8 Claims. (Cl. 149—5.)



8. The process of tanning animal skins, which comprises saturating with salt the acid liquor obtained from the destructive distillation of cellulose material to prevent softening of the skins, removing the oily and tarry material that separates out of the liquor, and immersing the skins in the liquor, substantially as set forth.

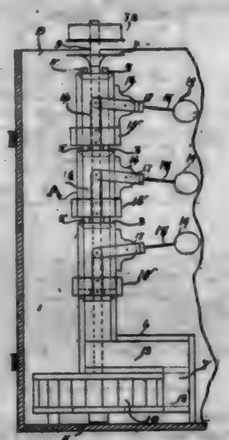
1,538,505. CHARCOAL AND METHOD OF PREPARING THE SAME. FREDERICK C. ATKINSON, Indianapolis, Ind. Filed Aug. 16, 1919. Serial No. 317,904. 11 Claims. (Cl. 252—1.)

1. Charcoal from demineralized corn cobs.



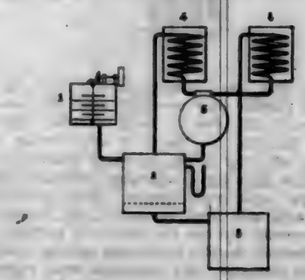
1,538,506. GRINDING MACHINE. ARTHUR A. ARNOLD, Hartford, Conn., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 8, 1919. Serial No. 309,344. 1 Claim. (Cl. 74—84.)

In mechanism of the character described, the combination with a driven shaft and a driving shaft, of clutch members carried by said parts for direct drive engagement, and means for operating the driven shaft at a reduced rate of speed, including a spider member having a pulley portion, pinions rotatably mounted on the spider member, a pair of gears having unequal numbers of teeth, one of said gears being fixed on the driven shaft and the other being loosely mounted, and progressive operating clutch mechanism for driving the



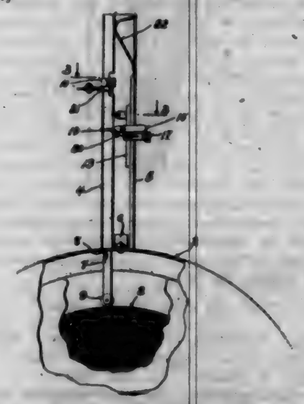
spider from the driving shaft when in one adjustment and for driving both the spider and the driven shaft when in a second adjustment, substantially as illustrated.

1,538,507. LIFTER. JOHN BARUMLE, Milwaukee, Wis. Filed Dec. 18, 1924. Serial No. 756,714. 4 Claims. (Cl. 294—31.)



1. A lifter of the kind described having, dual wire members oppositely wound to form registering loops, jaw portions beneath the said loops, handle elements, and tubular pivoting means, joining the handle elements, said means within the loops aforesaid and between the jaw portions and the handle elements.

1,538,508. CIRCULATING AND AGITATING DEVICE. RENSSELAER W. BARTON, Binghamton, N. Y. Filed Feb. 14, 1923. Serial No. 619,039. 7 Claims. (Cl. 259—96.)

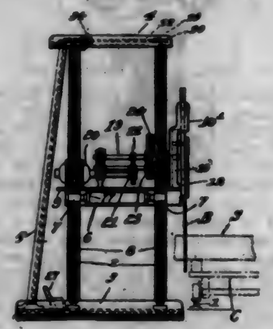


1. In an improvement in circulating and agitating devices, a vat, containing the liquid to be agitated; a vertical sectional tubular housing, mounted in a base chamber support on the floor of the vat; a channel opening therethru to said housing; a pivoted centrifugal pump impeller mounted in said base chamber, adjacent to the channel opening; a shaft mounted in said impeller and extending upward thru the housing; a pulley, mounted thereon and connecting means between said pulley and a source of power, openings thru the housing sections, sliding sleeves, mounted on the housing, adapted to removably close the openings; lugs mounted on the housing, supporting a forked lever having pivotal connection with the sleeves, a float mounted on the outer end of lever, adapted to be raised or lowered with the rise or fall of liquid within the receiving vat.

1,538,509. NEUTRALIZING OILS AND FATS. JEAN BENOIST, Marseille, France, assignor to Société Rocca, Tassy & De Roux, Marseille (Bouche-du-Rhone), France. Filed Nov. 4, 1920. Serial No. 421,703. 2 Claims. (Cl. 87—12.)

1. In the separation of neutral fats from mixtures thereof with fatty acids by means of a solvent and a saponifying agent for the acids; the improvement which comprises dissolving the neutral fat in a solvent and saponifying the fatty acid by means of an anhydrous alkaline carbonate in excess, thereby forming separable granular bi-carbonate and soap.

1,538,510. METER AND SIGNAL FOR MOVING-PICTURE REELS. FRANK BONK, Jr., Ripon, Wis. Filed Jan. 27, 1922. Serial No. 532,341. 3 Claims. (Cl. 33—172.)



1. An indicating device comprising an elongated casing having a longitudinal guideway therein, means for attaching said casing to the film magazine of a moving picture machine, a bar slidable in said guideway and having a roller on one end and adapted to extend through the wall of the magazine with the roller contacting with the surface of the film roll therein, an indicator attached to the bar and extending outside of the casing and a scale on the casing provided with numbers so graduated that the number opposite the indicator will indicate the amount of film on the roll.

1,538,511. CLOTHES-WRINGER ATTACHMENT. SCOTT M. BURKETT, Tarentum, Pa. Filed Oct. 11, 1923. Serial No. 667,916. 1 Claim. (Cl. 68—32.)

An attachment for clothes wringers comprising a hollow casing consisting of an upper shell and a lower shell fitted snugly in the upper shell, said shells being provided with ledges extening toward each other at their inner sides and the ledge on the lower shell having a recess in its edge, means for securing the shells together, means for securing the ends of the upper shell to the wringer frame, a brush disposed within the casing with its bristles extending through the recess in the ledge on the lower shell and guided by the same and the ledge on the upper shell, and means within the casing for yieldably holding the brush to a wringer roll.

1,538,512. RECIPROCATING SAWING MACHINE. JAMES CANNING, Montpelier, Vt., assignor to Lane Manufacturing Company, Montpelier, Vt., a Corporation of Vermont. Filed July 5, 1919. Serial No. 308,894. 4 Claims. (Cl. 125—16.)

1. In a stone sawing machine, a support, a carriage mounted for both angular and vertical adjustment relative thereto, a saw frame mounted to slide relative to said carriage, independently operable devices for raising and lowering one end of said carriage relative to the opposite end thereof, and swiveled connections between said carriage and support for permitting said adjustment, said connections also permitting relative sliding movement of the carriage and support at one end of the frame.

1,538,513. ANÆSTHETIC. JAMES HENRY COTTON, Toronto, Ontario, Canada, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 25, 1916. Serial No. 255,636. 5 Claims. (Cl. 167—7.)

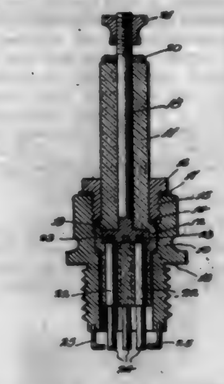
1. A new composition of matter comprising ethyl ether charged with ethylene and being substantially free from substances having a tendency to produce undesirable physiological effects.

4. An anæsthetic comprising one volume of ethyl ether containing from 1 to 3.5 volumes of ethylene and about 0.5 volume of carbon dioxide and being free from aldehydes and other substances capable of producing undesirable physiological effects.

1,538,514. WELT SHOE. HARRY W. CROCKER, Boston, Mass. Filed Feb. 20, 1925. Serial No. 10,470. 3 Claims. (Cl. 36—76.)

1. A welt shoe, of the type having a metatarsal pocket for holding a remedial pad, comprising: an insole having a welt-attaching rib throughout the shank and fore part and split in a plane above the base of said rib, throughout the shank and to a point forward of the ball-line forming upper and under layers separable throughout the shank and heel-seat but integrally connected at the fore end of the fore part, and further connected at the fore end of the split by a line of stitching extending in a curve transversely across the insole, following generally the forward ends of the bones of the metatarsal arch of the foot, thereby forming a pocket adapted to hold said remedial pad, access to the pocket being obtained by lifting the rear portion of the upper layer from the lower layer; upper materials and a welt secured to said rib on the under layer; an outsole secured to said welt and to said under layer only at its heel end; and a heel secured to the outsole and said connected insole layer.

1,538,515. PLAYING CARDS. WILLIAM P. DIETZ, Baltimore, Md. Filed Nov. 24, 1922. Serial No. 603,087. 3 Claims. (Cl. 273—152.)



1. A deck of playing cards embodying a plurality of suits each having a distinctive color and embracing a series of cards emblematic of political parties and a series of cards representing voters and carrying numerical designations, and an independent suit embracing only a series of cards emblematic of political parties.

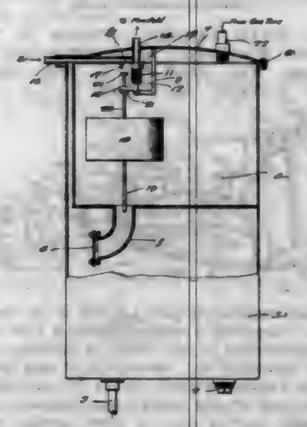
1,538,516. BUTYL ALCOHOL AND ACETONE FERMENTATION PROCESS. FORREST J. FUNK, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 21, 1921. Serial No. 446,764. 16 Claims. (Cl. 260—135.)

1. The process which comprises adding to a sterilized fermentable carbohydrate mash a culture of microorganisms, mainly in the spore form, which are derivable from ordinary corn meal, are sufficiently heat-resistant to withstand a temperature of 80° C. for about 20 minutes, and are capable of producing butyl alcohol and acetone by fermentation, in the presence of air, of a sterilized corn meal solution, said addition being made while said mash is at a fermentation temperature and with said culture at a pasteurization temperature, and then allowing fermentation to proceed.

10. The process which comprises heating a culture of bacillus aceto-butylicum existing in the spore form to a pasteurization temperature, shortly thereafter, and while said culture is still at a pasteurization temperature, adding said culture to a fermentable carbohydrate mash while the latter is at a fermentation temperature, and then allowing fermentation to proceed to completion.

1,538,517. SPARK PLUG. FRED F. GEBHARDT, Pittsburgh, Pa. Filed Aug. 2, 1922. Serial No. 579,160. 1 Claim. (Cl. 123—169.)

In a spark plug, the combination of a shell, an insulator carried thereby and provided near its lower end with an annular shoulder, a main electrode extending downwardly through the insulator and having a flat annular head embedded in the insulator medially of said shoulder, and a plurality of sparking terminals provided at their upper ends with reduced studs screwed into engagement with said head supporting the terminals to extend downwardly through the lower end portion of the insulator embedded thereby to be held against accidental release by the insulator, said terminals being reduced at the lower end face of the insulator to form sparking points.



1,538,518. POCKETBOOK OR HAND BAG. MAX J. MARYMONT, Brooklyn, N. Y. Filed Feb. 1, 1924. Serial No. 689,911. 3 Claims. (Cl. 150—36.)

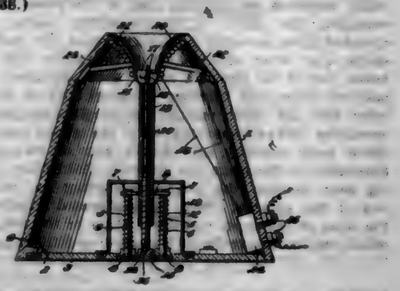
1. In a pocket-book, a secret pocket flexibly attached therein to be extensible outwardly and means foldable around the bottom of said pocket and capable of concealably locking the latter.

1,538,519. VACUUM TANK. HOWELL RINGGENBERG, Sherburn, Minn. Filed Oct. 18, 1924. Serial No. 744,415. 2 Claims. (Cl. 103—236.)

2. A vacuum tank of the class described embodying a substantially L-shaped supporting bracket, a bell crank lever pivoted upon the free end of the short arm of said bracket, a vertically disposed spring containing cup carried by said bell crank, a spring located in said cup, a ball check valve located in said cup and cooperative with said spring, a pipe closed by said ball check valve and adapted to lead to the intake manifold of an engine, an air supply pipe adjacent said first named pipe and provided with a discharge port, a stop on said pipe adjacent said port, the aforesaid ball check valve being adapted to control said port, a float provided at its

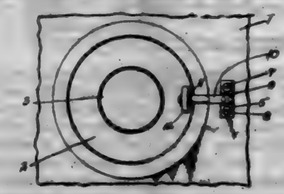
bottom with a guide stem and at its top with a stem equipped with spaced stops cooperable with horizontal arms of said bell crank for moving said cup to a diagonal position when said float assumes a dangerously low level.

1,538,520. FLYING MACHINE. FRANZ SCHUH, Vienna, Austria. Filed Nov. 10, 1923. Serial No. 675,662. 4 Claims. (Cl. 244—14.)



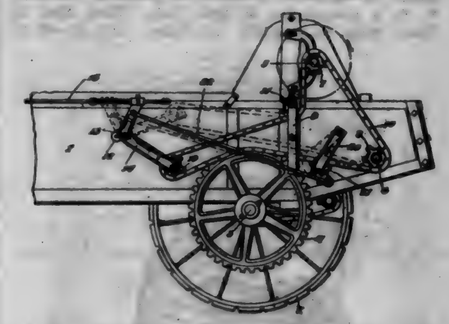
1. A flying machine having a supporting surface symmetrically formed on all sides and mounted to swing on a horizontal axis situated in the plane of the supporting surface at right angles to the longitudinal axis of the machine, a chassis suspended therefrom, the geometrical center of said supporting surface being also the point of suspension of the chassis, and said center lying in the said horizontal axis and in a vertical line passing through the center of gravity of the whole machine when in a condition to descend in a vertical line, horizontal rudder planes on the chassis, and pivotally connected thereto at points outside of the plane of the supporting surface for counteracting the torque at the geometrical center of said supporting surface.

1,538,521. SCRAPER FOR COOKING UTENSILS AND THE LIKE. WILLIAM JAMES SHERIDAN, Hamilton, Ontario, Canada. Filed Nov. 24, 1924. Serial No. 752,062. 2 Claims. (Cl. 15—236.)



1. A scraper for cooking utensils and the like, comprising, a dished metal plate, the entire periphery of which constitutes a scraping edge, and a reversely dished portion at the center of the plate.

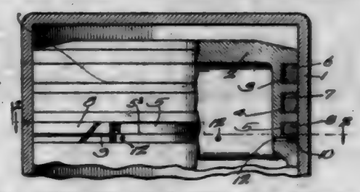
1,538,522. SANITARY CIGAR CUTTER. ABRAHAM SPIEWAK and JOHN S. MERENNA, Brooklyn, N. Y. Filed Aug. 14, 1922. Serial No. 581,868. 6 Claims. (Cl. 131—38.)



1. A cigar cutter comprising a casing having an opening therein, perforating and cutting means and means to sterilize such means.

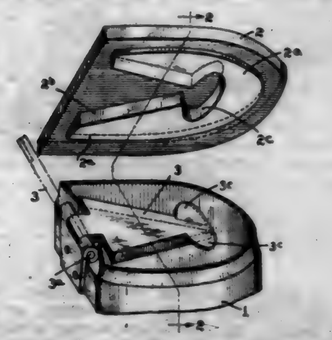
1,538,523. GEARING FOR INSTRUMENT DIALS. LE ROY W. STAUNTON, New York, N. Y., assignor to C. Brandes, Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1924. Serial No. 718,816. 2 Claims. (Cl. 74—7.)

1. In a dial revolving device the combination of an instrument panel, a rotatable dial mounted adjacent thereto, a resilient member, one end of said member being secured to said panel adjacent said dial and the other end of said member carrying a rotatable friction wheel adapted to engage the surface of said dial whereby said dial may be rotated through small angular distances.



1,538,524. GEARING. HENRY SYNCK, Coldwater, Ohio, assignor to The New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Aug. 5, 1922. Serial No. 579,888. 2 Claims. (Cl. 74—21.)

1. In a manure spreader, the combination with a wagon body including spaced beater shafts, of a driving gear member, sprocket wheels secured to the beater shafts, a sprocket chain engaging the driving gear member and trained around said sprocket wheels, an elbow lever pivotally mounted on one side of the wagon body forward of the driving gear member and provided with

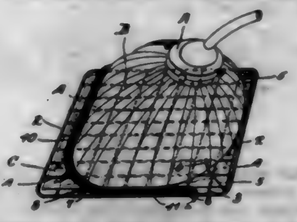


arms of different lengths, a single arm lever pivotally mounted on the same side of the wagon body at the rear of the driving gear member, a sprocket idler pivotally mounted on the long arm of the elbow lever and engaging the bight in the sprocket chain, another sprocket idler pivotally mounted between the ends of the single arm lever and engaging the outer side of the lower run of the sprocket chain, a rod forming a direct positive connection between the short arm of the elbow lever and the lower end of the single arm lever, and operating means connected with the short arm of the elbow lever whereby said levers may be swung simultaneously to disengage the sprocket chain from the driving gear member, the levers, connecting rod and lower run of the sprocket chain being disposed wholly within the lines of the upper and lower edges of the wagon body when the levers are in both normal and tilted positions.

1,538,525. RECIPROCATING MECHANISM. CHARLES N. TRETON, Hagerstown, Ind. Filed Feb. 19, 1923. Serial No. 619,849. 6 Claims. (Cl. 74—109.)

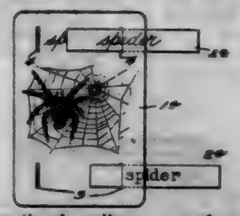
1. In a reciprocating mechanism, the combination with a cylinder; of a hollow piston in the cylinder and formed with a circumscribing piston ring receiving groove having circumscribing portions of different diameters and depths in neighboring zones and having a surface portion angular to the axis of the piston and located between and joining the curved inner sides of said circumscribing groove portions; and a piston ring received in said groove and whose inner side is shaped substantially to conform to the base of the piston groove, the piston having a passage positioned to establish communication between the interior of the piston and the shallower one of said circumscribing groove portions, said ring having a circumscribing groove and passages therethrough establishing communication between this groove and the shallower portion of the piston groove.

1,538,526. MEANS FOR ATTACHING RANDS TO HEELS. RICHARD M. TRUTNAL, Endicott, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed May 14, 1924. Serial No. 713,193. 11 Claims. (Cl. 12—67.1.)



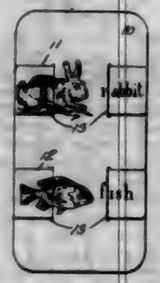
1. In means for attaching rands to heels; a heel mold; a movable spreader adapted to spread and position a rand upon the heel lift; and a presser adapted to press the lift against the heel, said spreader having a depending portion on its under side adapted to enter the mold and engage inner edges of the rand and press the rand against the mold, said presser having a projecting portion recessed to accommodate the spreader.

1,538,527. ROAD TAMPER. WILLIAM R. THOMAS, Watertown, Wis., assignor of one-half to John Murphy, Watertown, Wis. Filed May 8, 1922. Serial No. 559,852. 4 Claims. (Cl. 94—49.)



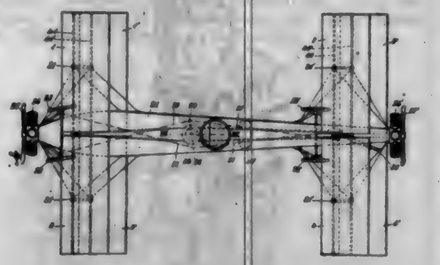
1. A road tamping machine adapted to be drawn over a roadway comprising a wheeled frame, a rock shaft extending transversely of said frame, a plurality of levers projecting forwardly and rearwardly of said rock shaft and rigidly attached thereto, means for oscillating said rock shaft, each of said levers being composite and having an outer portion and an inner portion with the outer portion pivoted intermediate its ends to the inner portion, a spring carried by said inner portion and opposing rocking motion in one direction of said outer portion, and a tamper suspended from said outer portion.

1,538,528. HOLDER FOR COLORED LIGHT SCREENS. PAUL J. TIMMERLAKE, Jackson, Mich. Filed July 26, 1923. Serial No. 653,981. 6 Claims. (Cl. 240—1.)



2. A holder for a sheet of material, consisting of a frame, an extensible spring securing means extending across the frame and connected therewith near the opposite edges thereof, and fixed stops, the stops being arranged to engage with the edge of a lamp shade and the said cross securing means being arranged to be sprung over the edge of the shade opposite that portion which engages the said stops.

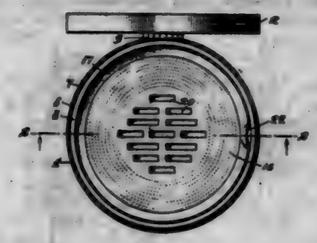
1,538,529. EDUCATIONAL APPLIANCE. NELLIE YORK TROIDL, Niagara Falls, N. Y. Filed Feb. 28, 1922. Serial No. 538,454. 5 Claims. (Cl. 35—9.)



1. In an educational appliance, a card, a slip removably retained on said card with portions of said slip exposed at opposite sides of the card, said card bearing on opposite faces thereof different representations, and said slip bearing on the portion thereof exposed at the front side of the card a designation of the representation on the front face of the card, and bearing on the portion thereof exposed at the reverse side of the card a designation of the different representation on said reverse side of the card.

1,538,530. EDUCATIONAL APPLIANCE. NELLIE YORK TROIDL, Niagara Falls, N. Y. Filed June 18, 1924. Serial No. 720,764. 6 Claims. (Cl. 35—9.)

1. In an educational appliance, a thin card, and a separate slip detachably engaging widely spaced integral parts of the card whereby the slip is removably retained on said card with a portion of said slip exposed at one face of the card, said card having displaced thereon a portion of a word or the like, and said slip bearing on its exposed portion a complementary portion of said word or the like, so that when said slip is in place on the card, said complementary portions will be combined to complete said word or the like, said slip when in place on the card not projecting beyond the edges of the card.

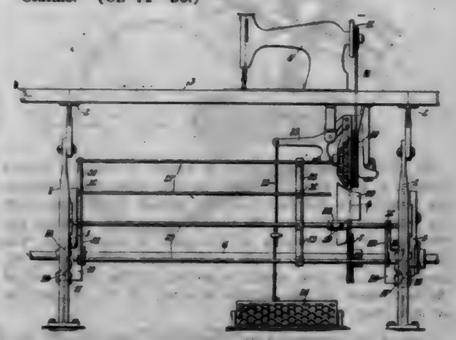


1,538,531. AEROPLANE. FRANCISCO VERDAGUER, Balaguer, Spain. Filed Dec. 5, 1922. Serial No. 605,108. 11 Claims. (Cl. 244—29.)

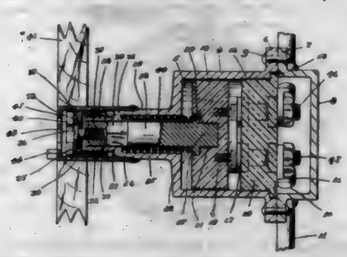
1. In an aeroplane, a frame, front and rear transverse axles arranged on each side of said frame, forward and rear wings mounted for independent oscillation on said axles, an axially movable tube supported by the frame, means associated with said tube to permit the operator to axially move the tube, a steering wheel mounted on said tube for universal movement, and means connecting said steering wheel with the wings for changing the inclination of said wings according to the movements of the steering wheel.

1,538,532. VANITY BOX. JOHN J. VOGLER, Douglaston, N. Y., assignor to Alfred H. Smith Co., New York, N. Y., a Corporation of New York. Filed Dec. 27, 1923. Serial No. 682,883. 10 Claims. (Cl. 132—82.)

1. In a powder box, a powder holding compartment, a cover therefor, a powder distributing member having a plurality of cup shaped depressions arranged in lines, those in certain of the lines being divided from each other longitudinally, and side openings in certain of the cups through which powder may pass into the cups and be retained therein.

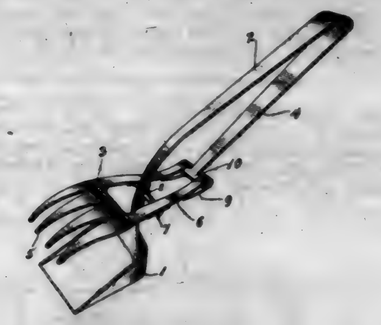


1,538,533. ASH REMOVER FOR VEHICLES. RUDOLPH J. VOTT, Cicero, and CHARLES VAIC, Chicago, Ill. Filed Mar. 16, 1923. Serial No. 625,490. 1 Claim. (Cl. 4—275.)



The combination with a vehicle, of an ash removing tube, extending through an aperture in the floor thereof, said tube having its lower end split at its rear side, said split portion being bent outwardly to form a wind guard.

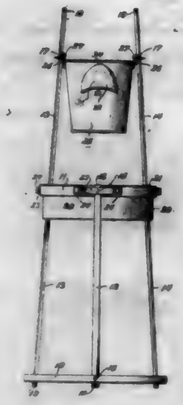
1,538,534. POWER-TABLE GUARD. IRVING F. WEBB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 25, 1925. Serial No. 18,200. 4 Claims. (Cl. 74—56.)



1. A guard for a power-table section comprising, a plurality of up-and-down supports and a plurality of horizontal rods carried by said supports, certain of said rods being of reduced length, and a transmitter-guard mounted on one of the full-length rods adjacent the end of a reduced length rod.

1,538,535. CIRCUIT-BREAKER LOCK. JOHN G. WELLING, Cincinnati, Ohio. Filed Feb. 21, 1922. Serial No. 538,899. 3 Claims. (Cl. 200—44.)

1. In a device of the class described the combination of a casing having a bore therein, one end of the bore being angular, a fixed insulating block in the bore, contact posts on the block having electrical connectors extending from the casing, a reciprocating insulating block in the bore, conductor bars on the reciprocating block adapted to electrically connect the contact posts, a rod mounted at one of its ends on the reciprocating block slidable longitudinally of itself in the bore, a shoulder on the casing extending into the bore, a spring the ends of which abut the shoulder and the reciprocating block, an angular head on the other end of the rod engaging reciprocally in the angular bore in the casing, screw threads formed on the casing at the end having the angular bore, a threaded nut adapted to engage the threads on the casing, and a connection between the nut and the rod adapted to permit relative rotary motion of the nut and the rod and to transmit longitudinal movement of the nut to the rod.

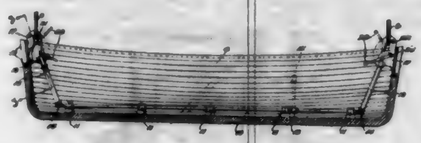


1,538,536. GRIPPING IMPLEMENT. ISAAC J. WISOFF, Brooklyn, N. Y. Filed May 17, 1924. Serial No. 714,042. 1 Claim. (Cl. 294—33.)

An implement comprising a scoop, a handle joined thereto, a jaw with tines and having extensions flanking the handle, an extension on the handle projecting from the rear end of the handle toward the scoop, a pivot pin bridging the extensions of the jaw, a bearing on the handle for said pin, loops on the rear ends of the extensions of the jaw, and a cross bar on the front end of the extension of the handle engaged at its extremities by said loop.

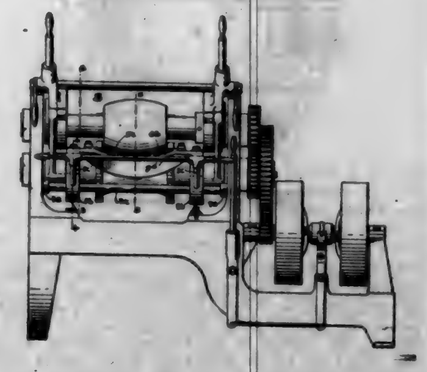
1,538,537. TEEING STAND FOR GOLF COURSES. CLARENCE M. WOOD, Langhorne, Pa. Filed May 9, 1922. Serial No. 559,645. 12 Claims. (Cl. 273—32.)

1. A teeing stand comprising a stand proper having uprights forming handles; means for suporting a sand receptacle and a water bucket in the stand, said stand having a base member provided at one side with opposed bottom notches; a wheeled axle detachably engaged in said notches; and retaining members on the



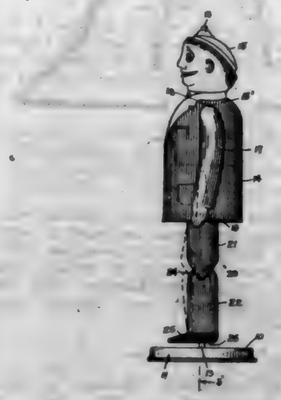
axle to engage the base member to prevent displacement of the stand and axle one with respect to the other; substantially as described.

1,538,538. PAD FOR CHILDREN'S CHAIRS. MARIE ELIZABETH WOOD, Ogden, Utah. Filed Apr. 28, 1924. Serial No. 709,580. 1 Claim. (Cl. 155—189.)



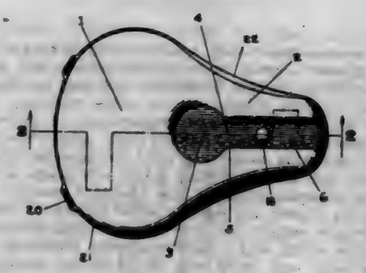
A pad for a child's chair comprising a cushioning section adapted to overlie the seat of a chair and to extend upwardly in covering relation to the front face of the back of the chair, means at the upper end of said cushioning section for attaching the latter to the back of a chair, a section extending from the forward end of the cushioning section for engaging the body of a child seated upon said cushioning section, said body-engaging sections terminating at its free end in an arcuately curved edge adapted to partly encircle the body of the child and having at its free end a pair of elongated attaching members adapted to extend rearwardly at opposite sides of the body of the child for attachment to the chair.

1,538,539. BOAT-LAUNCHING APPARATUS. GEORGE WRIGHT, Oakland, Calif. Filed Oct. 20, 1922. Serial No. 595,706. 1 Claim. (Cl. 9—28.)



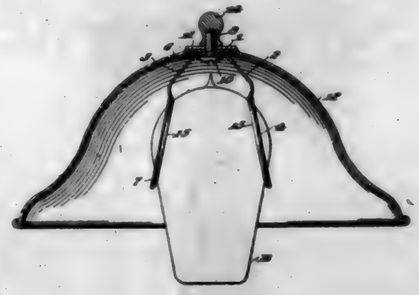
In a launching gear for life boats and the like, forked brackets adapted to be mounted at the inner sides of the opposite ends of a boat, hook members pivotally mounted in said brackets and capable of opening and closing movements for the attaching thereto and the disengagement therefrom of the looped ends of the usual hoisting and lowering falls of a vessel, an operating shaft journalled longitudinally of the boat, tubular shaft sections coupled to the opposite ends of said operating shaft and having their upper end portions journalled in the lower ends of said brackets, the upper ends of said tubular shaft sections having slots opening into the bores thereof for the passage therethrough and engagement in the latter of the free ends of the said hook members after the looped ends of the said falls have been engaged therewith, means for actuating said operating shaft for imparting turning movements to said tubular shaft sections whereby to effect the locking of the free ends of said hook members in position by the displacing of the said slots to one side of the path of swinging movement of the latter and the release of the free ends of the same for swinging movement to open position for the disengagement therefrom of the attached ends of the said falls by returning the said slots to proper position for the purpose, and forked hand levers pivotally straddling the forked arms of the brackets for temporary engagement over said hook members to retain same in closed position during the movement of said tubular shaft sections to locking position.

1,538,540. METAL-BENDING MACHINE. CARL M. YODER, Cleveland, Ohio. Filed Sept. 18, 1922. Serial No. 588,830. 6 Claims. (Cl. 153—58.)



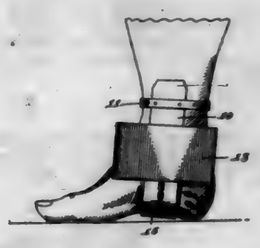
1. In apparatus of the class described, the combination of a pair of rollers, a guide arranged to support a section of metal to feed it between said rollers, and a supporting means on the opposite side of said rollers from said guide and adapted to removably support either a shoe to co-operate with said guide, whereby the section of metal may be curved on transverse lines in one direction, or a shoe for curving a curved section of metal on transverse lines in the reverse direction, said supporting means being movable in either direction about the axis of one of said rollers according to the shoe supported thereon.

1,538,541. MECHANICALLY-OPERATED DANCING TOY. T RAYMOND ARDEN, New York, N. Y., assignor, by mesne assignments, to Louis Marx, New York, N. Y. Filed Jan. 19, 1924. Serial No. 687,172. 26 Claims. (Cl. 46—40.)



1. A dancing toy comprising a toy figure adapted to be actuated, motor means within the toy figure associated therewith for actuating the same, and means supporting the toy figure operatively connected to said motor means for winding the same.

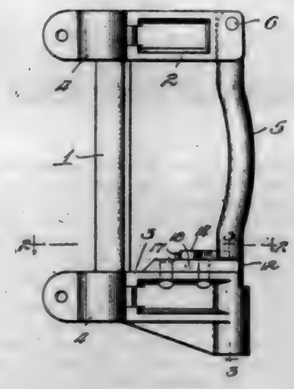
1,538,542. BICYCLE AND MOTOR-CYCLE SEAT. FRED BLAKE, Indianapolis, Ind. Filed Feb. 16, 1924. Serial No. 693,327. 5 Claims. (Cl. 208—15.)



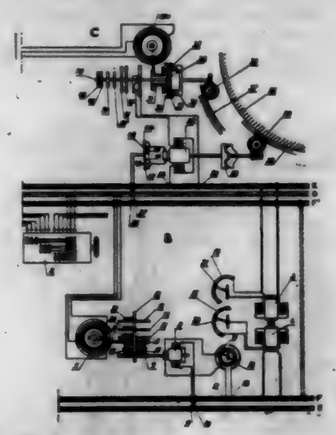
1. A bicycle and motorcycle seat comprising a conveniently shaped outer plan formation; a bell-mouthed depression contained in said seat adapted to partly contain the private organs of male riders, and a channel having parallel bell-mouthed sides adapted to partly contain the private organs of female riders, for supporting said organs.

1,538,543. LAMP-SHADE SUPPORT. ANDREW J. CARMICHAEL and JOHN R. PETERSON, New Haven, Conn., assignors to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 13, 1923. Serial No. 624,772. 3 Claims. (Cl. 240—138.)

1. A shade support comprising, in combination, a plurality of flat sheet metal arms arranged to extend divergently from a central point of connection with a lamp shade, said arms terminating in circular lamp-engaging portions, said circular portions being bent transversely of their planes to form convexly curved lamp-engaging surfaces.



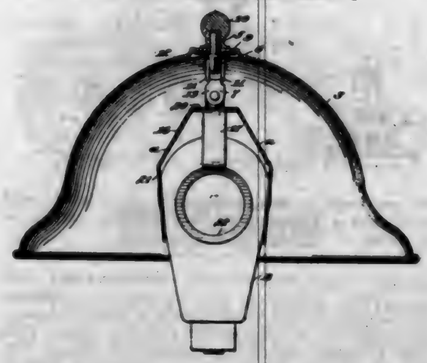
1,538,544. SWIMMING DEVICE. ROSARIO DI RENZO, Portland, Me. Filed Sept. 12, 1924. Serial No. 737,409. 1 Claim. (Cl. 9—21.)



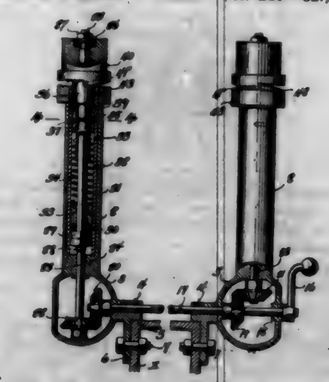
In a swimming device, a substantially U-shaped narrow member adapted to be passed beneath the instep of the foot of the user, means for attaching the parallel portions of said member to the ankle, relatively wide wings mounted on the parallel portions and projecting an appreciable distance beyond both sides thereof, a hinge connecting each wing with the adjacent parallel portion, each hinge including spaced side plates secured to the adjacent edges of the U-shaped member and projecting beyond the opposed sides thereof to provide an effective support for the adjacent wing throughout its entire width, and a flexible element terminally connected with each wing and the U-shaped member to limit the outward movement of the wing.

1,538,545. RELEASING HANDLE FOR VESTIBULE CURTAINS. PLATO G. EMERY, Chicago, Ill. Filed Jan. 25, 1924. Serial No. 688,416. 8 Claims. (Cl. 105—24.)

1. A device of the character described, comprising a U-shaped body member, a bar hinged to the free end of one of the arms of said member and having in its free end a seat, the other arm of said member having a socket opening out of the top thereof, a spring in said socket, a catch element resting on said spring and projecting out of the socket to engage in said seat in said bar, and means for adjusting said spring to vary the pressure on said element.

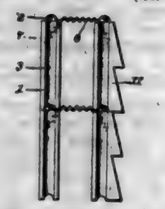


1,538,546. ELECTRIC DISTANT-CONTROL SYSTEM, ELIE GRANAT, Paris, France. Filed Jan. 29, 1923. Serial No. 615,777. 9 Claims. (Cl. 172—239.)



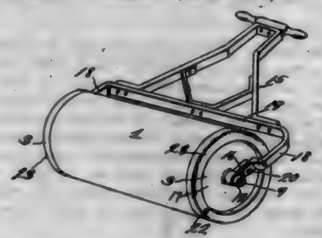
1. An electric distant control system comprising in combination, a transmitting station and at the transmitting station, an electric distant control transmitter; a generating station, at the generating station means for varying the voltage of the generating station an electric motor fed by the generating station and a distant receiver controlled by the said transmitter and operating the said means for varying the voltage of the generating station; a receiving station, at the receiving station, a motor fed by the generating station; means for starting in either direction, stopping and regulating the speed of the said second motor; a distant receiver controlled by the transmitter and operating the said means.

1,538,547. LAMP-SHADE SUPPORT. WALTER C. GEBIST, ANDREW J. CARMICHAEL, and JOHN R. PETERSON, New Haven, Conn., assignors to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 13, 1923. Serial No. 624,851. 4 Claims. (Cl. 240—138.)



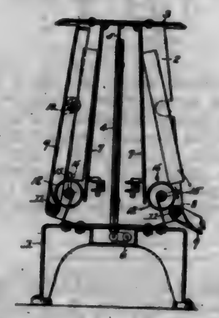
1. A lamp shade support made of flat sheet material, and comprising a plurality of clamping arms arranged angularly to each other, said arms terminating in circular clamping members to engage a lamp, with means for securing said support to a shade.

1,538,548. DIRIGIBLE HEADLIGHT. ALFRED M. HAANSTAD, Eau Claire, Wis. Filed Sept. 21, 1923. Serial No. 663,995. 1 Claim. (Cl. 240—62.)



The combination of an automobile having a steering post, a pair of sleeves rigidly carried adjacent the front of said automobile, a vertical shaft located within each sleeve and extending beyond the ends of such sleeves, a transverse shaft located below said first mentioned shafts, bevel gears positively connecting said first mentioned shafts and said horizontal shafts, mechanism positively connecting said horizontal shaft and said steering post to transmit rotary motion from said steering post to said horizontal shaft, headlights having hub portions through which said shafts loosely extend, said sleeves and hubs having interengaging lugs adapted to prevent rotation of said hubs except in predetermined directions, said shafts having pins projecting radially therefrom, said hubs having slots within which said pins are received, and helical springs carried within said sleeves and rigidly attached at one end to such sleeves and at the other end to said hubs to yieldingly hold said hubs with the interengaging lugs of the respective sleeves and hubs in contact under normal conditions.

1,538,549. BUILDING UNIT AND TIE FOR SAME. FRANK R. HAHN, Decatur, Ill. Filed Feb. 25, 1922. Serial No. 539,274. 5 Claims. (Cl. 72—43.)



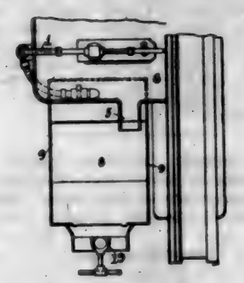
1. A building unit of plastic material having a tying element embedded therein and extending upwardly from the rear edge thereof, said tying element being formed of a strip of corrugated metal.

1,538,550. LAWN ROLLER. HARRY B. HAMILTON, Elizabethtown, Pa., assignor to Buch Manufacturing Co., Elizabethtown, Pa. Filed Dec. 17, 1924. Serial No. 756,538. 2 Claims. (Cl. 55—48.)

1. A lawn roller comprising a cylindrical chambered body member, end plates for said body member, sealing means interposed between the body member and the plates, a shaft extending axially through said body member and plates, said shaft having its ends reduced and threaded thereby forming shoulders, outwardly extending bosses carried by the plates and with the outer ends of which the shoulders of the shaft register, a nut threaded on each of the reduced threaded portions of the shaft and engaging the outer ends of the bosses and forming sealing means, a handle member, arms carried by said handle member and overlying the ends of the roller, said bosses being rotatably mounted in bearings of the arms of the handle member.

1,538,551. TOASTER. JACOB M. HARRIS, New York, N. Y., assignor to Fulton Bell Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1923. Serial No. 615,872. 5 Claims. (Cl. 53—5.)

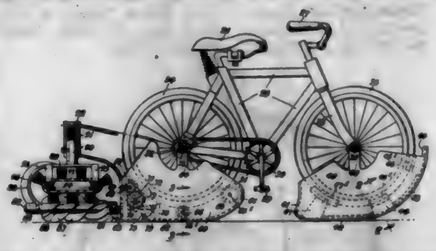
5. A vertical toaster comprising a grid approximately vertical, a door hinged at its lower edge for holding the toast against the grid when in its closed position and for



catching the toast when in its open position, a toast-support independent of the door and located between the grid and the door, and means operable independently of the door for moving the lower edge of the toast outwardly from the toast-support to permit it to slide upon the open door for the purpose of reversing the same.

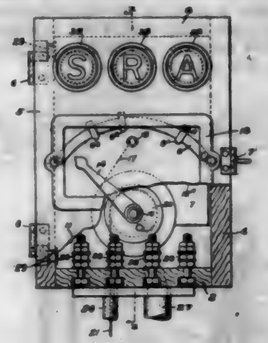
1,538,552. MANURE LOADER. JOHN WILLIAM HARRIS, Wesley, Iowa. Filed Nov. 13, 1924. Serial No. 749,687. 3 Claims. (Cl. 198—113.)

1. In a mechanism of the class described, the combination with a frame, of a conveying mechanism on said frame, said conveying mechanism including a shaft, an idle sprocket wheel on said shaft, said sprocket wheel provided with a plurality of sockets, a disc keyed to said shaft, a trigger finger carried by said disc and provided with a roller adapted to engage said sockets of the sprocket wheel for locking the disc and sprocket wheel together, and manually controlled means for engaging the trigger finger for disengaging the roller from said sprocket wheel.



1,538,553. WATER TANK FOR GRINDING MACHINES. JAMES N. HEALD, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 15, 1922. Serial No. 588,514. 2 Claims. (Cl. 51—267.)

1. A portable water supply tank for a grinding machine, said tank having three vertical walls and one sloping wall, all of them rectangular, a pivotally mounted baffle plate, dividing the tank, being adapted to swing towards the sloping wall and with it forming a settling compartment, a pump in the other compartment, and legs under the tank spaced and of such a height as to receive and permit the tank to be lifted by a wheeled conveyor of the lifting type.

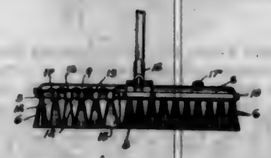


1,538,554. VEHICLE PROPELLING MECHANISM. JOHN HOLTZMAN, New York, N. Y. Filed Nov. 10, 1921. Serial No. 514,213. 18 Claims. (Cl. 208—162.)

1. Propelling means for wheeled vehicles comprising a casing for the driving wheel, rollers in said casing frictionally engaging the periphery of the wheel and rotated thereby, a gear train driven by one of said rollers, a spindle extending rearwardly of said casing driven by

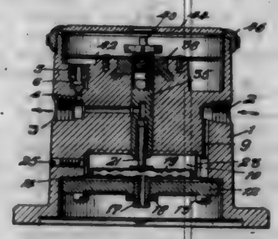
said gear train, a helical propeller connected to said spindle, and a housing over said propeller carried by said casing.

1,538,555. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1922. Serial No. 603,461. 3 Claims. (Cl. 246—182.)



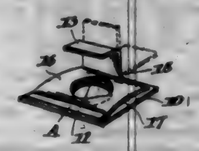
1. In combination, a vehicle, a speed-responsive device on said vehicle, a pointer operated by said device, a plurality of adjustable members adjacent to the path of the said pointer, and a plurality of lamps associated with said members and illuminating them and controlled by traffic conditions ahead of the said vehicle.

1,538,556. LOCK STRUCTURE. WILLIAM R. HOYT, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Apr. 25, 1924. Serial No. 708,988. 4 Claims. (Cl. 70—16.)



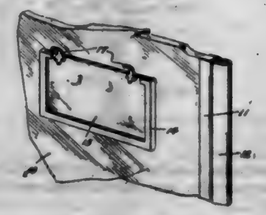
3. The combination with a door or support having a rabbeted edge and a lock provided with a front plate, said lock mounted in the door or support and having a portion entering the rabbet in the same, of an auxiliary facing plate to lie against the exposed side face of the lock and provided with ears lying parallel with the top and bottom edge portions of the lock and covering the exposed parts of the same, said auxiliary facing plate also provided with ears secured to the front plate of the lock.

1,538,557. DUSTLESS BRUSH. FREDERICK S. HUNT, Milwaukee, Wis., assignor to Milwaukee Dustless Brush Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 10, 1923. Serial No. 661,948. 5 Claims. (Cl. 15—182.)



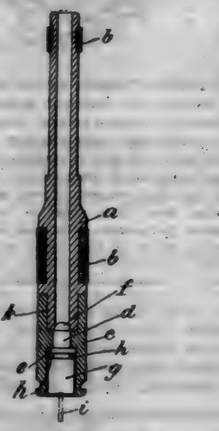
1. A dustless brush, comprising a brush back having an oil reservoir provided with a plurality of tuft openings, and a tuft composed of absorbent and non-absorbent strands extending into each of said openings to control the flow of oil therethrough.

1,538,558. REGULATING VALVE. EMIL AUGUST ILLMAN, Queens, N. Y., assignor, by mesne assignments, to American Schaeffer & Budenberg Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 7, 1922. Serial No. 605,544. 9 Claims. (Cl. 50—10.)



1. In a pressure actuated valve mechanism, a valve member, a valve seat therefor, actuating means connected to said valve member and responsive to pressure applied to it from an outside source, and a casing forming both a chamber for said pressure responsive actuating means and a passage to the valve seat for the medium which said valve is intended to control.

1,538,559. LOCK WASHER. EDWARD ANGUS JOHNSON, New Glasgow, Nova Scotia, Canada. Filed Aug. 18, 1924. Serial No. 732,727. 5 Claims. (Cl. 151—38.)

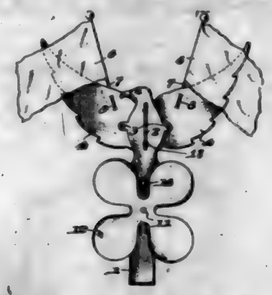


1. A rectangular plate having a central perforation, a rectangular projection of less width than the plate extending from one side thereof and designed to be bent against the side and over the top of a nut, a spring plate of spring steel on the rectangular plate having a central perforation registering with the said plate perforation.

1,538,560. WINDOW-GLASS ATTACHMENT. HERMAN H. D. KLINKER, New York, N. Y. Filed Aug. 15, 1923. Serial No. 657,498. 2 Claims. (Cl. 296—95.)

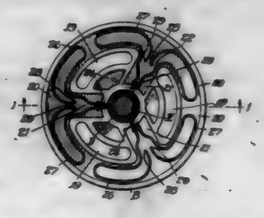
1. In a device as set forth, the combination with a window plate having an opening therethrough, of a seat formation adjacent to the opening, and a section fitted in said seat and across said opening, said seat being composed of an integral extension of the plate along certain edges of the opening.

1,538,561. PRACTICE CARTRIDGE. JOSEF KOLLER, Lucerne, Switzerland. Filed Oct. 31, 1923. Serial No. 672,016. 1 Claim. (Cl. 102—14.)



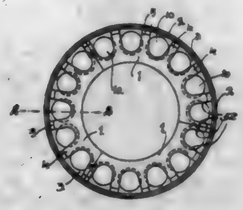
Means for enabling miniature cartridges to be used in rifles and other small-arms, comprising a bi-parted tubular bushing designed to fit the chamber of a small arm including a front portion having a reduced cylindrical projection and a rear portion slidable on the projection and removable therefrom, the rear portion also having a bore to receive a cartridge and an annular groove adapted to be engaged by the extractor of the rifle so that the back portion may be withdrawn from the front portion when the breech bolt of the rifle is retracted.

1,538,562. AIR-OPERATED TOY. CHARLES KOSHALKO, Cleveland, Ohio. Filed Aug. 18, 1922. Serial No. 582,698. 3 Claims. (Cl. 46—40.)



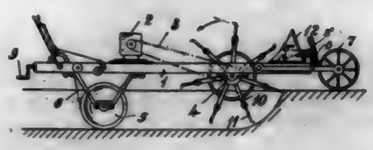
1. In an air-operated toy, the combination with an upright having a slot, of a pair of rockable members

pivoted to the upright and having slots, a wheel, a link pivoted to, and driven by the wheel having a pin, said



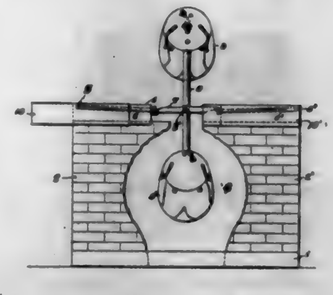
pin operating in the slots of the rockable members and slot of the upright, and air-operated means for driving said wheel.

1,538,563. VALVE. CHARLES H. LEINERT, Chicago, Ill., assignor to Leinert Valve Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1923. Serial No. 642,461. 10 Claims. (Cl. 251—119.)



2. In a valve for blowers or the like, the combination of a seat member, an abutment member located adjacent the seat member, a valve member interposed between the abutment member and seat member, and a plurality of circumferentially extending springs engaging the valve member and adapted to maintain it normally in engagement with the seat, certain of said springs extending in one direction from their point of engagement with the valve member and others extending in an opposite direction whereby twist of the valve member is prevented.

1,538,564. BALL CAGE FOR ANTIFRICTION THRUST BEARINGS. KARL OSKAR LEON, Stockholm, Sweden, assignor, by mesne assignments, to Nya Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed Mar. 2, 1920. Serial No. 362,860. 3 Claims. (Cl. 308—230.)

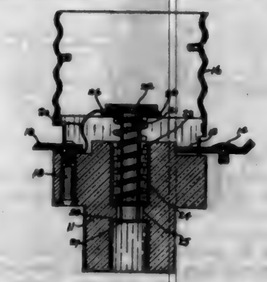


1. In a bearing, an inner ring divided radially into a plurality of segments, each segment being provided with radial recesses, balls arranged in said recesses, and a one-piece ring surrounding the segmental ring and adapted to normally retain said segments in position, each segment being removable from the surrounding ring by first moving the segment axially clear of the surrounding ring and then radial.

1,538,565. POWER-DRIVEN DITCH-DIGGING MACHINE. ANDERS LOKEN, Boltorp, Myssn, Norway. Filed Nov. 26, 1920. Serial No. 426,458. 2 Claims. (Cl. 37—94.)

1. In a motor driven and motor carrying ditch digging machine, a narrow rectangular frame, a rotary cutter, comprising a rotary shaft journaled in the longitudinal sides of the frame, a plurality of rigid radial arms mounted in the shaft, flexible cutting blades mounted on the free ends of the arms, a wheel for driving the frame mounted behind and in alinement with the cutter, supporting arms adjustably connected to the longitudinal sides of the frame and extending beyond the front end of the latter, a supporting wheel journaled in the supporting arms, a motor mounted on the frame behind the cutter, driving means connecting the motor and cutter adapted to rotate the latter at righ speed to create a suction, and means for deflecting the spray of earth flung up by the cutter.

1,538,566. TOY. JOSEPH LUSTIG, Jr., Janesville, Wis. Filed Sept. 18, 1922. Serial No. 588,947. 2 Claims. (Cl. 46—40.)

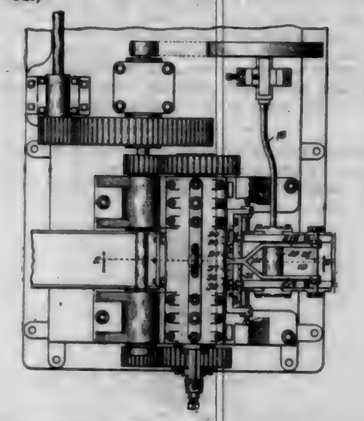


1. The combination of a pair of toy-like objects, a rigid member extending between and secured to said objects, a clip on said rigid member, a flange on one end of said clip, a second flange on the other end of said clip, a support, a second support, a rubber band secured to said first mentioned support at one end and at the other end to said flange, and a second rubber band secured at one end to said second support and at the other end to said second flange, said rubber bands extending in a substantially horizontal line, said flanges having a relatively large normal vertical dimension, whereby said objects, when in rest, are supported horizontally.

1,538,567. LAMP SOCKET. EDWARD W. MCINTYRE, Cleveland, Ohio, assignor to Hadley P. Freeman, Lakewood, Ohio. Filed July 14, 1923. Serial No. 651,556. 3 Claims. (Cl. 173—358.)

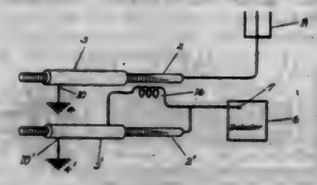
1. An electric lamp socket comprising a base having circuit terminals thereon, carrying a screw threaded socket adapted to receive the base of a lamp, provided with a longitudinal aperture therein, and having a center contact structure comprising a stem slidable in

said aperture, a head on said stem arranged to engage the center contact of the lamp, spring means acting to force said head against said center contact of the lamp,



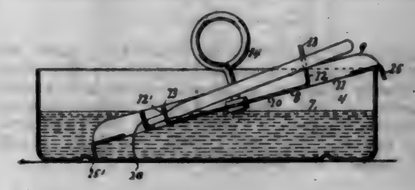
and a conductor connected to one of said terminals and interposed between said spring means and said head and held by said spring means in electrical communication with said head.

1,538,568. COMBINED CLASP AND PIN. ELLEN MCMAHON, New York, N. Y. Filed Feb. 10, 1925. Serial No. 8,200. 9 Claims. (Cl. 24—85.)



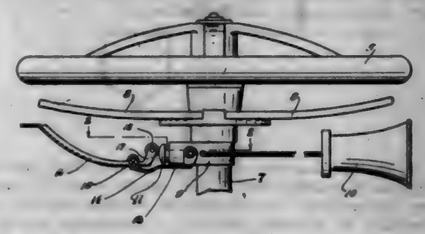
3. A lingerie clasp and pin comprising a member bent upon itself and having spaced upraised portions upon its relatively lower part and extending beyond one of said upraised portions, thence being bent back upon itself to form a pin portion, said pin portion adapted to be maintained between said upraised portions when in clasped position.

1,538,569. FEEDING DEVICE. JOHN MAKOFSKY, Warren, Ohio, assignor to Youngstown Pressed Steel Company, Warren, Ohio, a Corporation of Ohio. Filed No. 26, 1923. Serial No. 677,021. 12 Claims. (Cl. 271—51.)



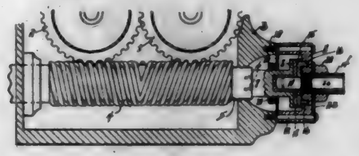
1. In combination with means for operating on a sheet metal blank, feeding means for feeding a blank to the operating means, and a pair of cooperating cam rollers operable on entrance of a blank into the operating means for rendering the feeding means inoperative during passage of the blanks therethrough.

1,538,570. ELECTRICAL SIGNALING. LOUIS COHEN and JOSEPH O. MAUBORGNE, Washington, D. C. Filed June 16, 1920. Serial No. 389,451. 2 Claims. (Cl. 250—20.)



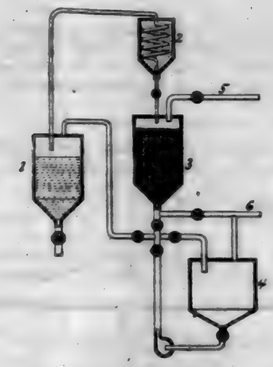
2. A system of receiving radio signals comprising an antenna, a resonance wave coil and an adjustable grounded metal tube sliding over said resonance wave coil, a secondary circuit, and a resonance wave coil of variable wave length in said secondary circuit, said secondary circuit being coupled to the resonance wave coil of the antenna circuit.

1,538,571. THERMOMETER HOLDER. CHRISTIAN W. MEINECKE and EDWARD JOHNSON, East Orange, N. J., assignors to Meinecke & Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 27, 1923. Serial No. 628,023. 2 Claims. (Cl. 167—8.)



2. A thermometer holder having upright members to hold a series of thermometers, a stop coacting with the lower end of the thermometers and apertures in the floor of the holder for allowing the passage of a solution.

1,538,572. SIGNAL-OPERATING ATTACHMENT FOR AUTOMOBILES. RICHARD R. MILLER, Chicago, Ill. Filed Dec. 7, 1922. Serial No. 605,491. 3 Claims. (Cl. 200—59.)



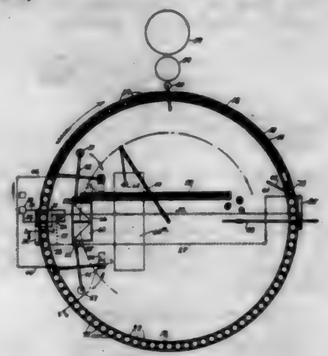
1. The combination with a signal operating switch including a casing and a push button thereon; an attachment comprising a bracket having means embracing and firmly secured to the sides of said casing and having ears in line with said push button; and a lever pivotally mounted in said ears beneath the steering wheel and having a turned end with means arranged to operate said push button, said lever being held inoperative by gravity and the outer end of said lever extending to a point adjacent the rim of said steering wheel.

1,538,573. ADJUSTABLE END THRUST FOR ELEVATOR SHAFTS. DAVID F. MINNEY, Fort Worth, Tex., assignor to Globe Elevator Appliance Company, Fort Worth, Tex., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,406. 3 Claims. (Cl. 308—166.)

1. The combination with an elevator shaft and bearings therefor, of an end thrust for adjusting said shaft consisting of a thrust drive member having a head and operatively connected with said shaft and provided with a socket therein, a bearing housing operatively connected to the bearing of said shaft, a non-revoluble steel driving disk operatively connected to said housing and an anti-friction bearing disk interposed between said steel disk and said head, a screw driving member operating through said housing for adjusting said thrust member and provided with a reduced end portion projected into said thrust member and constituting a bearing therefor and having a shoulder bearing against said steel disk, and means for preventing the turning of said screw driving member after it has been positioned.

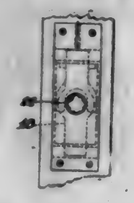
1,538,574. EXTRACTION OF SULPHUR. ALWIN MITTASCH and FRITS WINKLER, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of the Grand Duchy of Baden. Filed Nov. 3, 1920. Serial No. 421,594. 5 Claims. (Cl. 23—228.)

1. The process of extracting sulphur from active charcoal containing free sulphur which consists in passing through the mass ammonium sulphide solution by distilling an aqueous solution of ammonium sulphide, condensing its vapors immersing the charcoal in the condensate and causing the distillate to run non-intermittently through the sulphur-containing mass.



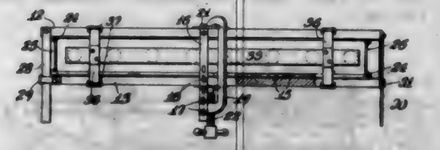
1,538,575. GRIDDLE GREASER. EULA A. MOSMAN, Allegany, N. Y. Filed May 28, 1923. Serial No. 640,936. 1 Claim. (Cl. 65—12.)

A griddle greasing device comprising a circular solid body having a peripheral securing face and merging into a central vertically disposed tubular handle provided with a closure plug at its upper end and forming a reservoir surrounded by the extended concentric base



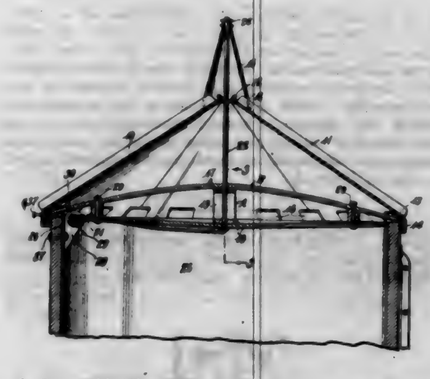
of the body to provide a pressure face, an absorbent covering for said base, and securing means for retaining said covering in contact with the securing face.

1,538,576. FOUNDRY APPARATUS. DANIEL C. MULVIHILL, Hannibal, Mo., assignor to Hannibal Car Wheel & Foundry Company, a Corporation of Missouri. Filed June 1, 1920. Serial No. 385,631. 17 Claims. (Cl. 22—20.)



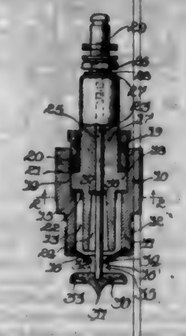
1. In foundry apparatus, in combination, a turntable, adapted to convey flasks to various stations arranged about its periphery, a revolving crane having a plurality of arms adapted to deliver flask parts containing completed impressions to the turntable and a plurality of positions each having apparatus adapted to perform part of the operation of making a completed impression in a flask part, said positions each being within the reach of the arms of the revolving crane.

1,538,577. CATCH HINGE FOR WINDOWS AND THE LIKE. RICHARD MURRAY, New York, N. Y. Filed Oct. 22, 1923. Serial No. 669,925. 6 Claims. (Cl. 16—144.)



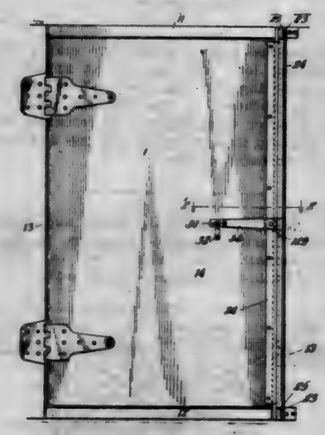
1. A catch hinge of the class described comprising a casing; a suitably supported lock element movably mounted therein, said element being provided with an aperture, a tapered pin adapted to be passed through said aperture and to be locked in engagement with the casing, through said lock element.

1,538,578. CONCRETE MOLD. RICHARD MURRAY, New York, N. Y. Filed May 24, 1924. Serial No. 715,522. 11 Claims. (Cl. 25—121.)



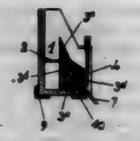
1. A mold of the class described comprising two substantially parallel mold members, means whereby said members may be retained in spaced relation, means for moving said members toward and from each other, and means for supporting the end portions of said members in connection with supports arranged at different levels.

1,538,579. SILO COVER. JOHN S. NEHER, North Manchester, Ind. Filed Oct. 30, 1923. Serial No. 671,792. 5 Claims. (Cl. 20—1.4.)



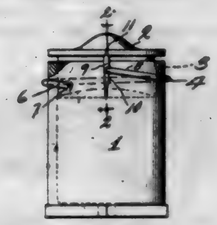
1. In combination with a silo, a top or cover portion capable of horizontal sliding movement and means to automatically elevate the same slightly during such movement substantially as described.

1,538,580. SPARK PLUG. WILLIAM B. O'BRIEN, Chicago, Ill. Filed Oct. 15, 1919. Serial No. 330,684. 3 Claims. (Cl. 123—169.)



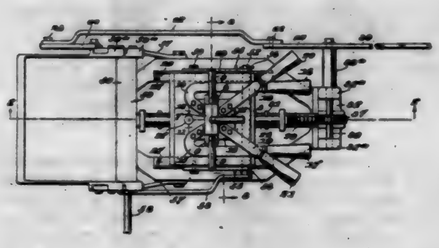
1. In a spark plug, the combination with a supporting body, an insulating body, and extensions on said first mentioned body forming a sparking terminal of a rod extending thru said insulating body and between and proximate to said extensions to form the other sparking terminal, a shield carried by one end of the rod and provided with an outwardly extending annular flange, a plurality of prongs on said rod to prevent inward movement of the same beyond a predetermined position, means for securing the rod, said prongs maintaining said shield out of sparking distance with said extensions and preventing rotation of said rod.

1,538,581. DOOR AND FASTENER THEREFOR. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 30, 1922. Serial No. 532,618. 9 Claims. (Cl. 292—241.)



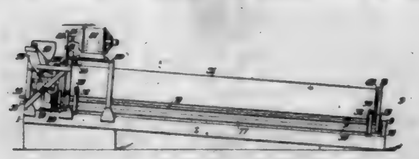
1. In a member having a door opening and a door for closing the opening, the combination with an operating shaft arranged parallel to the free edge of the door, said shaft having a longitudinally extending slot therein; and a cooperable plate extending parallel to the free edge of the door, said plate entering said slot when the door is moved to approximately closed position, the rotation of said shaft after engagement of the slot and shaft forcing the door to fully closed position.

1,538,582. MANUFACTURE OF PAPER. FRITJOF OLANDER and VJEKTO MOISIO, Aanekoski, Finland. Filed Aug. 25, 1923. Serial No. 659,387. 1 Claim. (Cl. 92—40.)



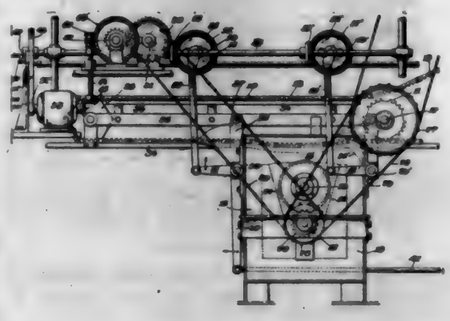
Apparatus for applying liquid filling material to the pulp web on the wire cloth of a paper machine, comprising a box or reservoir supported from the paper machine, a base member sloping from its centre to both ends, a wedge shaped block secured to the reservoir or box, an adjustable gate between which and the block is formed a vertical slot for regulating the flow of the filling material, and a tongue over which said material flows in a stream on to the pulp web on the wire cloth of the machine.

1,538,583. GREASE-CUP-COVER HOLDER. FRANCIS EDWARD OWEN, Thistle, Utah. Filed Oct. 24, 1924. Serial No. 745,597. 1 Claim. (Cl. 184—48.)



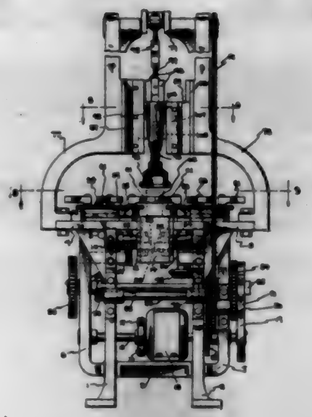
The combination with a grease cup and a threaded closure threaded into said cup, of an annular spring member surrounding the cup, one end of said spring member being anchored to the cup, the other end of said spring member terminating in a vertically disposed inset arm disposed in a groove of the cup and cooperating with the threaded closure.

1,538,584. MOLD. ROBERT J. OWEN and HARRY D. RINDSBERG, Cincinnati, Ohio, assignors to Harry J. Hater, Cincinnati, Ohio. Filed Nov. 14, 1923. Serial No. 674,659. 7 Claims. (Cl. 22—57.)



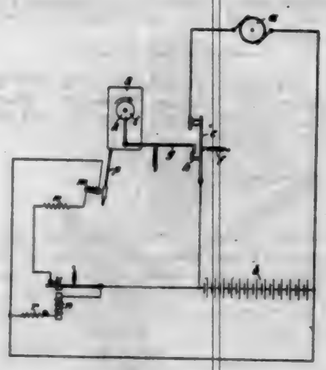
1. In combination, a metal mold for forming cylindrical articles, comprising a pair of movable separable sections each having an inner surface forming part of the curved wall of the open top mold cavity, and a pair of independent plates secured one to the lower end of each of said sections and serving, when said sections are assembled to form the bottom of the mold cavity, and supporting means on which said sections are slidably mounted.

1,538,585. CENTRIFUGAL CASTING MECHANISM. ARTHUR E. PAIGE, Philadelphia, Pa. Filed July 27, 1923. Serial No. 654,231. 22 Claims. (Cl. 22—65.)



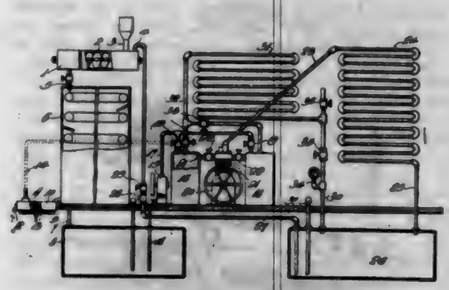
3. In centrifugal casting mechanism, the combination with a rotary mold; of a pouring trough through which molten metal is delivered into said mold; and means cooperatively connecting said mold and trough; arranged to coordinately effect rotary movements of said mold and trough in definite predetermined relation to each other.

1,538,586. MATCH MACHINE. MICHAEL PARIDON, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1923. Serial No. 644,839. 7 Claims. (Cl. 144—60.)



1. In a match machine, the combination of a splint carrier, a composition applying element below the path of the carrier, mechanism for actuating said element during the operation of the carrier, a motor, operative connection between the motor and the said element, a vertically-movable carrier support, means for raising and lowering said support, transmission means between the motor and said raising and lowering means, and means whereby said transmission means can be rendered active and idle at intervals.

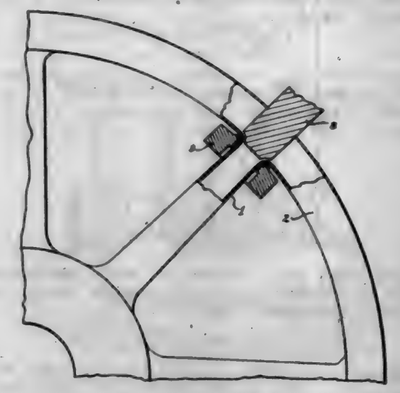
1,538,587. VACUUM CAPPING MACHINE. WILLIS Y. PERLLE, Chicago, Ill. Filed Sept. 15, 1921. Serial No. 500,724. 18 Claims. (Cl. 226—82.)



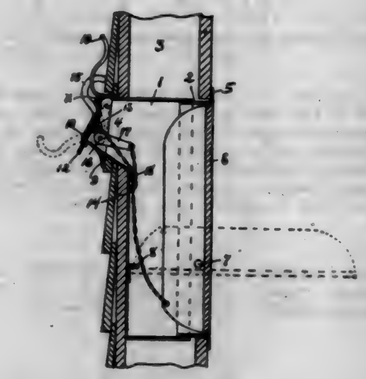
1. In a machine of the class described, an intermittently operated conveyor adapted to carry a series of containers to be sealed, a plurality of clamping members operable in pairs to successively embrace said containers and form a lateral seal thereabout, a reciprocable sealing head adapted to engage said clamping members and form therewith a sealed chamber enclosing the mouth of said container means associated with said sealing head through which to exhaust said sealed chamber and container, and means for sealing a closure on said container.

1,538,588. CHARGING OF LEAD STORAGE BATTERIES. ERNST PÖHLER, Hagen, Germany. Filed Apr. 20, 1923. Serial No. 633,650. 3 Claims. (Cl. 171—314.)

1. The method of charging accumulator batteries which consists in passing a current through a cell until the commencement of gassing, then setting the charging rate at a predetermined amount of current, and finally interrupting the charging operation at a time fixed with relation to the point of commencement of gassing aforesaid.



1,538,589. METHOD AND APPARATUS FOR EXTRACTING SULPHUR FROM ITS ORE. JAMES ALBERT PRICE, Dallas, Tex., assignor to American Sulphur & Fertilizer Company, Inc., Dallas, Tex. Filed May 26, 1924. Serial No. 716,015. 11 Claims. (Cl. 23—228.)

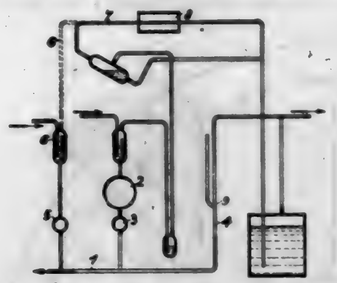


1. The herein-described method of extracting a mineral from its ore, which consists in treating the ore with a solvent to extract the mineral therefrom, and evaporating the solution in a vessel while causing the surface of the solution to be sprayed onto the walls of the vessel so as to cause part of the pure mineral to be deposited as a residue on the walls of the vessel.

1,538,590. ELECTRICAL WELDING PROCESS. JOHN THOMAS TURNEY RANDLES, Birmingham, England, assignor to Dunlop Rubber Company Limited, Birmingham, England. Filed Jan. 14, 1925. Serial No. 2,254. 3 Claims. (Cl. 219—10.)

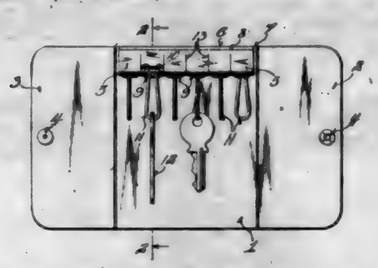
1. The method of electrically welding a tubular metal member to another metal member having an aperture therein which consists in forming a flange around the aperture in the last mentioned member and flanging the end of the tubular metal member, then bringing the flanges together, and connecting by means of an electric current applied thereto by electrodes.

1,538,591. MAIL RECEPTACLE. CHARLES A. RASTETTER, Fort Wayne, Ind. Filed Oct. 31, 1924. Serial No. 746,964. 5 Claims. (Cl. 232—19.)



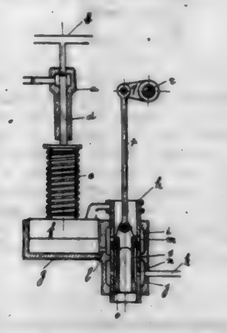
1. In apparatus of the class described, a receptacle having a receiving chute; a mail receiving member including a hinged lid for closing the chute; a hinged door closing the back of the receptacle; a chain connecting the lid and the door operable to open the door when the lid is open; a movable parcel receiving hook; and a connection between said hook and door operable to open the door when the hook is in position for use, and to return the hook to normal position when the hook is relieved and the door is closed.

1,538,592. GAS-ANALYZING DEVICE. OLOF RODHE, Stockholm, Sweden. Filed May 20, 1924. Serial No. 714,710. 8 Claims. (Cl. 23—256.)



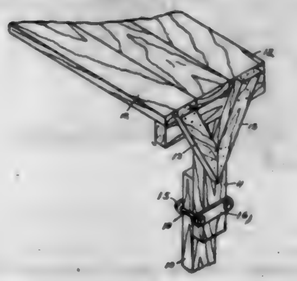
2. In a device of the kind described, a measuring vessel, a leveling vessel, liquid confining means comm-

nicating therewith, and gas introducing means communicating with the measuring vessel, an oxygen—and air



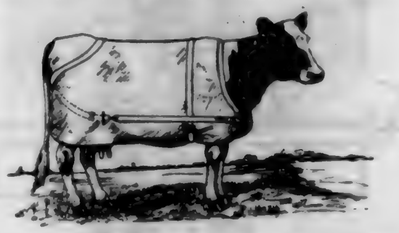
storage vessel and a by-pass on which said storage vessel is arranged, and suction creating means, connected to said storage vessel.

1,538,593. KEY CASE. BALTUS ROLFS, West Bend, Wis., assignor to Amity Leather Products Co., West Bend, Wis. Filed Oct. 4, 1924. Serial No. 741,610. 2 Claims. (Cl. 150—40.)



2. A key case comprising a back portion, cover flaps adapted to fold thereon, a folded flexible strip having its longitudinal edges stitched adjacent one edge of said back portion, and a plurality of key supporting members secured to said folded strip, said folded strip having slits located between successive key supporting members and extending to adjacent the longitudinally stitched edges.

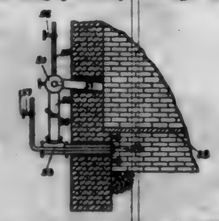
1,538,594. INTERNAL-COMBUSTION ENGINE. JEAN ROMETH, Brussels, Belgium. Filed Nov. 19, 1923. Serial No. 675,758. 6 Claims. (Cl. 123—33.)



1. An injection air pressure regulator for internal combustion engines, comprising a relief valve in the compressed air line; a loading spring acting on said valve to hold it on its seat; an abutment for said spring; means for supplying motive fluid under pressure to act on said abutment in opposition to the action of the loading spring; and a distributing device for controlling the fluid supply, embodying a distributing sleeve connected to move in unison with the abutment of the spring, a regulating shaft, and a distributing valve movable within and relatively to said sleeve and operatively connected with said shaft.

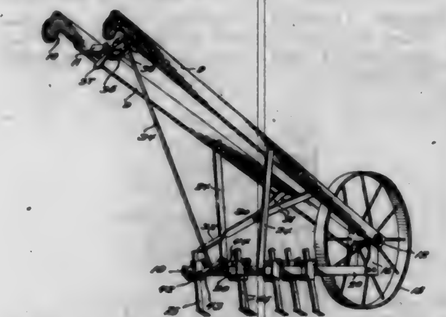
1,538,595. STAGING AND CLAMP FOR THE ERECTION THEREOF. WILLIAM SCHROEDER, Milwaukee, Wis. Filed Oct. 27, 1923. Serial No. 671,249. 1 Claim. (Cl. 304—40.)

In staging, the combination with a pair of uprights in mutual overlapping relation, of a pair of substantially duplicate clamping plates each being formed on one face with means adapted to effect interlocking engagement with one of said uprights, and a pressure device operatively connected with one of said plates and adapted to bear upon the other of said plates to press it in the direction of the first plate whereby to clamp the uprights together and to firmly interlock each of said plates with an upright, said device including substantially duplicate members arranged on opposite sides of the uprights.



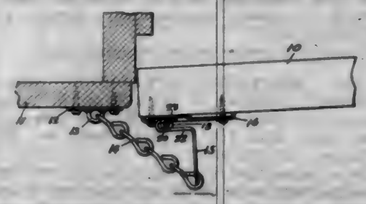
1,538,596. ANIMAL BLANKET. GEORGE M. SCHROEDTER, Chicago, Ill., assignor to William Cooper and Nephews, a Corporation of Illinois. Filed Oct. 10, 1924. Serial No. 742,767. 2 Claims. (Cl. 54—79.)

1. An animal blanket having straps adapted when in use to extend horizontally along the lower part of the sides of the animal and to be connected across the chest, other straps adapted to extend from the middle of the back of the animal diagonally downwardly and rearwardly to the margin of the blanket, around the legs, and then through openings in the blanket for attachment to the rear ends of said horizontal straps.



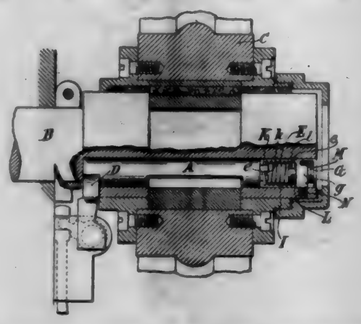
1,538,597. DEVICE FOR ABATING SMOKE. PETER J. SHOMER, Cleveland, Ohio. Filed May 9, 1922. Serial No. 637,683. 1 Claim. (Cl. 110—60.)

The combination with a furnace, of a device of abating smoke and promoting combustion of the fuel comprising air conduit pipes, outlet ports leading from said conduits into opposite sides of the furnace fire-box, inlet ports leading from the space beneath the furnace grate into said conduits, steam pipes having outlet ports coaxial with the outlet ports of said conduits for ejecting air therethrough from beneath the furnace grate, steam pipes extending partially through the inlet ports



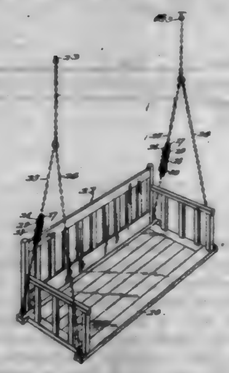
and projecting from the ends thereof within the space beneath the furnace grates, box shaped nozzles secured to the ends of the steam pipes in said inlet ports, said nozzles having apertures therein for directing air into said inlet ports from said furnace, and means for controlling the volume of mixture of air and steam passing into said conduits.

1,538,598. CULTIVATOR. CHARLES W. SKINNER, Newfield, N. J. Filed Oct. 22, 1921. Serial No. 509,655. 2 Claims. (Cl. 97—59.)



1. A cultivator including a wheel; a pair of handle bars supported thereon; resilient rails of spring steel supported by said wheel; supporting straps pivotally engaging said bars and rails; a brace bar between the upper ends of said handle bars; a bracket extending from said handle bars; a forwardly inclined operating rod supported in said bracket and having transverse means fastened to its bottom and pivotally linked to said rails; and lever means supported on said brace bar adjacent the handle parts of said handle bars, and connected to the top of said operating rod to flex said rails and vary the distance between them; substantially as described.

1,538,599. SAFETY DEVICE FOR HOLDING DOORS AJAR. HARRY E. SORBY, Milwaukee, Wis. Filed Dec. 8, 1922. Serial No. 605,588. 4 Claims. (Cl. 292—264.)

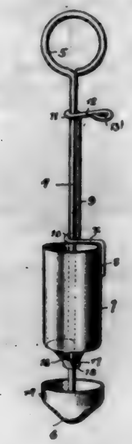


1. A safety device for securing a door in a partially opened position, comprising a part for attachment to the door casing and a short flexible connection including a hook extending therefrom, a part for attachment to the door and provided with a retaining member adapted to be engaged or disengaged with the hook only when the door is substantially closed, the hook being rotated about its vertical axis to locked position by movement of the door away from the casing.

1,538,600. CLUTCH. ROBERT W. STROUT, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed July 10, 1924. Serial No. 725,167. 6 Claims. (Cl. 192—29.)

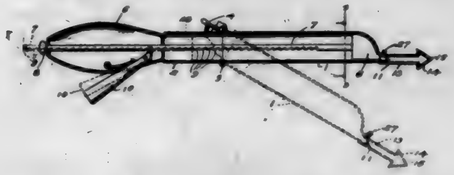
1. A clutch comprising an oscillating clutch-pin or key, a spring, and an anchor-piece, said spring being attached to said clutch-pin and anchor-piece, said anchor-piece being movable to tension said spring, means for locking said anchor-piece with the spring under tension, said spring acting to press said anchor-piece into engagement with its locking means.

1,538,601. PORCH SWING. EDGAR HUMB TALBERT, Chevy Chase, Md. Filed Apr. 22, 1921. Serial No. 463,684. 6 Claims. (Cl. 155—58.)



1. A porch swing comprising a seat, downwardly diverging front and rear tensile supporting elements having a single overhead axis of oscillation, said supporting elements being connected with said seat, certain of said elements being yieldingly extensible for elongation relative to the remainder to afford tilting vibration of the seat about a contained axis.

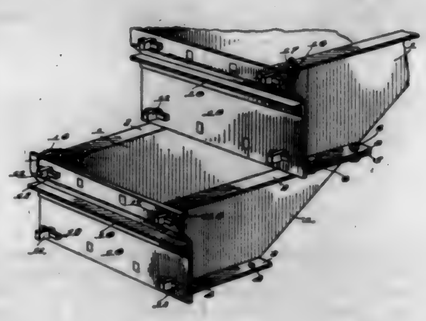
1,538,602. CREAM DIPPER. HERBERT R. TALBOT, Ridgewood, N. J. Filed Oct. 27, 1923. Serial No. 671,167. 1 Claim. (Cl. 65—28.)



A cream dipper comprising a cylindrical body portion open at both ends, a separable cup-like closure for the lower end of said body portion and having a cylindrical flange into which the lower end of the body portion

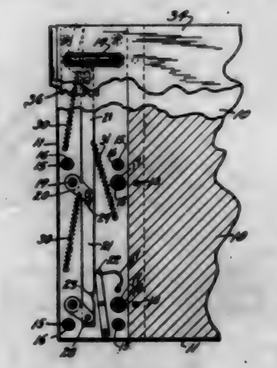
telescopically fits and forms a seal, a supporting rod secured centrally in the bottom of the cup, a centering guide at the lower end of the body portion and engaging said rod, said centering guide extending below the

lower margin of the body portion and affording room for the entry of a cleaning utensil to the interior of said body and means for manipulating the body portion to separate the same from the cup.



1,538,603. MASON'S AND PLASTERER'S TOOL. OWEN TAYLOR and CHARLES C. TAYLOR, Huntington, W. Va., assignors to John Edward Miller, sr., Huntington, W. Va. Filed Feb. 28, 1924. Serial No. 695,781. 2 Claims. (Cl. 72—138.)

1. A tool of the character specified having a hollow body in sections hingedly connected together, one of the sections having a handle portion, a catch for securing the sections in normal position, a plunger within the body provided with a rod extending therethrough and outwardly of the handle portion, said rod having ratchet teeth, a latch lever pivoted to the handle portion adapted to coact with the ratchet teeth to positively advance the plunger and forcibly expel material from the body, and said rod and plunger being retractile past the joint of the sections so that one section may be swung relatively to the other section for reception of a charge.

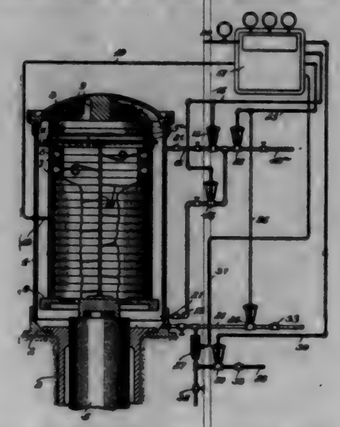


1,538,604. MOLD FOR FORMING STEPS. CHARLES AUSTIN THRASHER, Worcester, Mass., and CLARENCE RADIOUS OWEN, Greenville, S. C. Filed Sept. 18, 1924. Serial No. 738,490. 5 Claims. (Cl. 25—118.)

1. A mold for forming steps comprising pairs of spaced side plates having horizontal flanges at their upper and lower ends, lugs projecting forwardly of said side members, riser plates provided with perforations adapted to receive said lugs, means cooperating with said lugs for locking the riser plates to the outer ends of the side plates, said riser plates having an offset portion adjacent their upper ends, the forward ends of the side

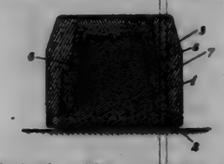
plates having projections adapted to fit into the offset portions of the riser plates, the flanges of the side plates at one riser being adapted to be bolted to the flanges of adjacent side plates at different horizontal levels.

1,538,605. LOOSE-LEAF BINDER. EARLE G. ALDEN, HARRY B. ALDEN, and JOHN P. SQUIRES, Denver, Colo. Filed Jan. 17, 1924. Serial No. 686,870. 3 Claims. (Cl. 129—10.)



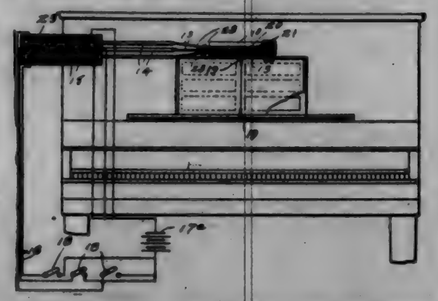
3. A loose-leaf binder comprising fixed standards; rotatable standards coacting therewith; lever arms secured to said rotatable standards; a connecting bar connecting the extremities of said lever arms, said connection being sufficiently flexible to allow each standard to move through a relatively small arc independently of the others and sufficiently rigid to cause all said arch standards to operate simultaneously through a relatively greater arc.

1,538,606. REGULATING APPARATUS. SAMUEL S. ANDURSKY, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 7, 1923. Serial No. 650,121. 7 Claims. (Cl. 18—6.)



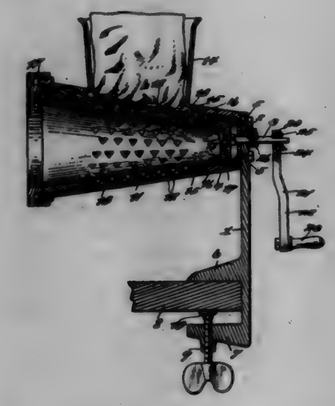
1. In a temperature regulating apparatus the combination with a body to be heated, of a plurality of conduits for heating medium communicating therewith, pressure operated means, one for each of said conduits, for controlling the flow of heating medium therein arranged for

operation respectively, by different pressures, means connected with said body and responsive to temperature conditions therein, and a device actuated by said re-



sponsive means arranged for connection with a source of pressure and connected with each of said controlling means for operating the latter individually.

1,538,607. METHOD OF MAKING MOLDS FOR ORNAMENTAL FLOWERPOTS. ANDREW ANDERSON and VICTOR AXELSON, Sacramento, Calif. Filed June 30, 1924. Serial No. 723,223. 5 Claims. (Cl. 25—29.)



1. A method of making molds for pots and the like having embossed ornaments on their sides consisting in employing a core about which the material forming the mold is poured, and applying to said core before the material is poured, detachable pieces having the desired ornamental configuration.

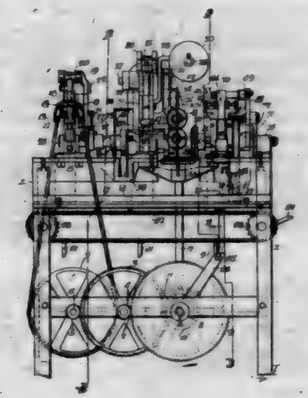
1,538,608. MUSIC-LEAF TURNER. HENRI ANDRIEU, Falk, Calif. Filed Sept. 7, 1922. Serial No. 586,708. 2 Claims. (Cl. 84—487.)

1. A turning apparatus of the class described having a combined channel-shaped support and guide, riders movably mounted thereon provided with depending portions and disposed outwardly and adjacent thereto and terminating at different elevations, operating means connecting said depending portions adjacent their free ends, and grooves on the outer surface of said combined support and guide serving as guides for said means.

1,538,609. SOAP SHREDDER. GRIFFITH E. BARNETT, Salt Lake City, Utah. Filed June 25, 1924. Serial No. 722,319. 4 Claims. (Cl. 146—91.)

1. A soap shredder including a casing of conical contour and provided with a soap receiving hopper, a support therefor, a shredding cone having smooth surfaces at its ends to engage corresponding surfaces of the casing, said shredding cone having struck-up shredding points between the smooth surfaces and being formed a distance equal to the length of the hopper, the smooth surfaces of the shredding cone extending radially a distance flush with the terminals of the shredding points, thereby preventing the shredding points from contacting with the surface of the casing at points beyond opposite sides of the hopper, and means operatively mounted in the casing and connected to the shredding cone for rotating the latter.

1,538,610. TEMPERATURE-SENSITIVE BULB. FRANK J. BAST, Brooklyn, N. Y., assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 8, 1923. Serial No. 610,531. 2 Claims. (Cl. 297—8.)



1. A unit for use in making temperature sensitive bulbs comprising a member having an internal chamber, an annular shoulder at one end of said chamber and a flange on said member projecting from said shoulder and adapted to be turned inwardly thereon and welded to close one end of said chamber.

1,538,611. OVERALL SUSPENDER STRAP AND METHOD OF MANUFACTURING SAME. GEORGE C. BEICHL, Beaver Dam, Wis. Filed Sept. 29, 1921. Serial No. 504,187. 2 Claims. (Cl. 24—197.)

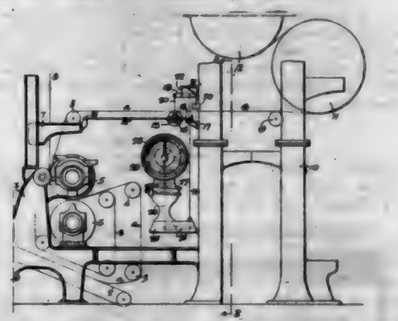
1. A suspender strap slide including a single piece of wire bent to form two adjacent substantially rectangular figures having a common side member, the ends of said wire being secured to the ends of said side member, together with a member pivotally connected with one of said figures and extending transversely thereof.

1,538,612. CAPPING MACHINE. BENJAMIN C. BETNER, Merion, Pa. Filed Dec. 23, 1920. Serial No. 432,735. 9 Claims. (Cl. 226—80.)

1. The combination in a machine of the character described, of mechanism for forming a hole in a filled package, mechanism for inserting a friction closure in such hole, and means for intermittently presenting a series of filled packages successively in timed relation to the said hole-forming and closure inserting mechanisms.

1,538,613. WHEEL TIGHTENER. THOMAS B. BOMAR, Dallas, Tex. Filed Nov. 3, 1923. Serial No. 672,661. 1 Claim. (Cl. 157—9.)

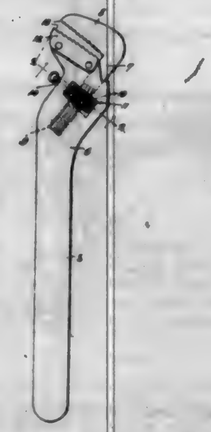
In a device for tightening wheels, protecting plates having inclined inner surfaces and having laterally extended portions adapted to engage the spokes of the wheel, a hollow body portion adapted to engage the spokes, a bolt extending through the hollow body portion, an expanding member adapted to be positioned between the protecting plates, said bolt adapted to extend through the expanding member, and means on the bolt and adapted to engage the expanding member to



force the expanding member between the protecting plates, and one end of the expanding member adapted to pass into the hollow body portion.

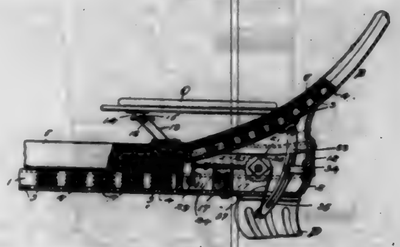
1,538,614. NECK-SHAVING GUARD. WILLIAM C. BRIDGES, Muscatine, Iowa. Filed Sept. 15, 1924. Serial No. 737,937. 6 Claims. (Cl. 132—45.)

1. In combination, a head engaging band, a guard, a bowed strip fixed at one end to the guard, and provided adjacent its other end with a roughened surface with which the band is engageable.



1,538,615. PROCESS OF AND APPARATUS FOR WEIGHING PAPER. JOHN B. BUEHLER and CONRAD J. KERN, Philadelphia, Pa. Filed Dec. 30, 1921. Serial No. 525,901. 6 Claims. (Cl. 265—27.)

1. The combination in a machine for weighing paper and like material, of two rollers spaced apart over which the web of paper travels; a weighing roller extending under the web of paper about midway between the two rollers; and indicating scales connected to each end of the weighing roller for indicating the weight of each side of the web of paper.

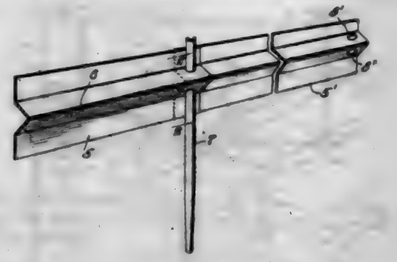


1,538,616. PIPE WRENCH. ARTHUR BURKMAN, Kenosha, Wis. Filed Oct. 11, 1923. Serial No. 667,915. 1 Claim. (Cl. 81—101.)

A wrench including a handle portion having a jaw formed at one end thereof and having a cutout portion formed therein adjacent to the jaw, said handle portion having a bore extending from a point adjacent to the jaw and terminating in spaced relation with the jaw, a movable jaw having a shank of less diameter than the bore to permit the movable jaw to rock within the bore, a nut on the shank, said nut being positioned in the cut-

out portion, said nut being of a width less than the width of the cutout portion to permit the nut to move with the shank, and a locking screw extending through the handle portion and engaging the nut to force the nut into engagement with one wall of the cutout portion.

1,538,617. CHAISE LONGUE. BARTHOLOMEW P. BURNS, Chicago, Ill., assignor of one-fourth to Andrew Dobscher, Chicago, Ill. Filed Nov. 28, 1922, Serial No. 603,797. Renewed Sept. 30, 1924. 5 Claims. (Cl. 155—118.)

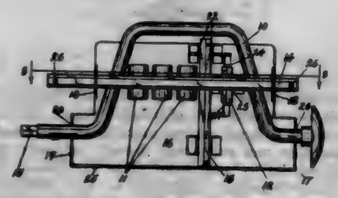


1. In a device of the character specified, a seat, a back pivoted to the seat, arms having pivotal connection with the back and movable therewith, and telescoping supports between the outer ends of the arms and the seat and rigidly connected thereto, respectively, and inclining upwardly and forwardly away from the back.

1,538,618. WELDING PROCESS. ROBERT J. BURNSIDE, New Castle, Pa. Filed Oct. 9, 1923. Serial No. 667,546. 4 Claims. (Cl. 148—25.)

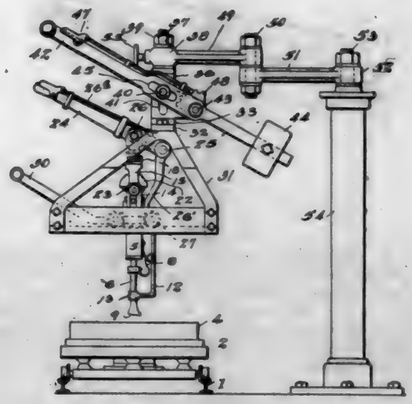
1. The process of welding copper which consists of subjecting the parts to be welded to the action of heat in the presence of a flux containing sugar.

1,538,619. PAVEMENT-MAKING DEVICE. WILLIAM C. BURRELL, Kankakee, Ill. Filed Dec. 10, 1923. Serial No. 679,587. 8 Claims. (Cl. 94—18.)



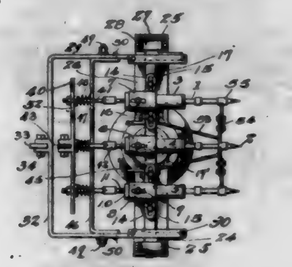
1. In combination with a strip having a laterally projecting, longitudinally extending bead, said bead having perforations extending transversely of the wall to receive a pin to be driven therethrough to hold the strip on its edge and a laterally contractible pin larger in diameter than said perforations to be driven thru said perforations.

1,538,620. BALL AND ROD MILL. FERDINAND MORA CANDA, Chrome, N. J. Filed Feb. 19, 1924. Serial No. 693,862. 2 Claims. (Cl. 83—9.)



1. In a ball mill, rod mill, or other grinding mill, a metal shell or casing, a circumferential series of brittle hard steel liner plates bolted to the shell, and a resilient shock absorbing medium interposed between the plates and the shell.

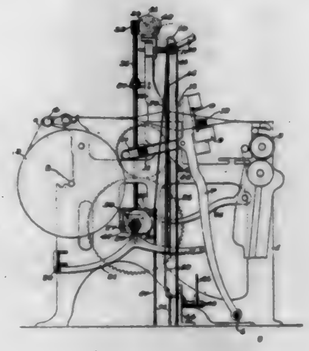
1,538,621. WRENCH CONTAINER. HENRY H. CHASE, Jamestown, N. Y. Filed Oct. 5, 1923. Serial No. 666,801. 2 Claims. (Cl. 206—16.)



1. A container for a high speed wrench outfit including a brace, sockets and extensions consisting of a plate having holders for said elements comprising a plurality of openings in which said sockets are placed, notched flanges for receiving said brace, spaced straps for all but one of said extensions and flanges having openings therein in which one of said extensions is inserted, said last named extension extending over and locking said other elements in said holders.

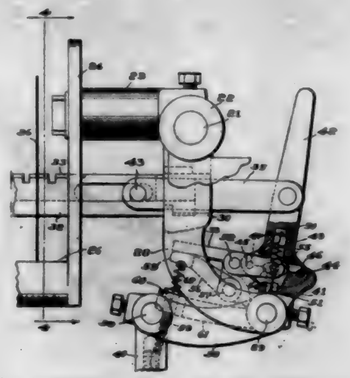
1,538,622. STONEWORKING MACHINE. DOUGLAS COLLINS, Salisbury, N. C. Filed Feb. 14, 1924. Serial No. 692,709. 13 Claims. (Cl. 125—8.)

1. The combination in a stone working machine with a plurality of machine tools and a relatively movable supporting frame therefor, of means for moving said frame and machine tools to adjusted position, and subsequently moving said frame with relation to the tools for gaging the cut of the tools.



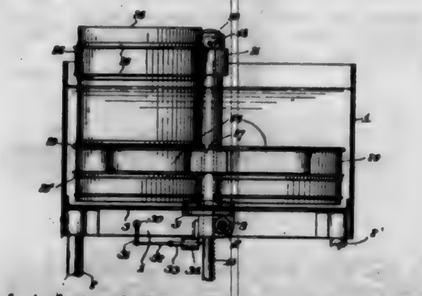
1,538,623. STONEWORKING MACHINE. DOUGLAS COLLINS, Salisbury, N. C. Filed Feb. 14, 1924. Serial No. 692,770. 4 Claims. (Cl. 125—8.)

1. The combination with a vertically movable cross head and a transversely adjustable frame including a head plate, of a fixed central bushing on the head plate and a machine tool supported therein, laterally disposed bushings carried by said head plate and means for adjusting said bushings relatively to the fixed bushing, and machine tools supported in said laterally disposed bushings.



1,538,624. LOOM. EDWARD A. CUNNIFF, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 23, 1924. Serial No. 739,327. 16 Claims. (Cl. 139—56.)

1. In a loom for weaving novelty cloth, the combination of the harnesses for controlling the warp threads, means for operating the harnesses in forming the shed, locking means for automatically locking the harness operating means at intervals with the shed open while the loom continues to run for the introduction of a plurality of picks of filling in the same shed, automatically acting lock tripping means to trip the lock at intervals, and



selvage forming means for producing a selvage along the edge of the cloth during the introduction of a plurality of picks of filling in the open shed.

1,538,625. WARP STOP MECHANISM FOR LOOMS. HARRY A. DAVIS and ARTHUR S. JOHNSON, Hopedale, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 26, 1924. Serial No. 734,234. 19 Claims. (Cl. 139—366.)

1. In a warp stop mechanism for looms, the combination of a series of drop wires normally supported by the warp threads during weaving, a detector having a detecting movement and adapted to be arrested by a drop wire, a rocker, a detector actuator yieldingly mounted on the rocker for tilting movement about either of two fulcra, a stop finger independently pivoted on the rocker and connected to the detector actuator as the latter is tilted by either fulcrum for movement about its pivot thereby when the detector is arrested by a drop wire, and means operated by the stop finger for stopping the loom.

1,538,626. FLOAT AND SINK TESTING APPARATUS. GEORGE R. DELAMATER, Lakewood, Ohio. Filed Apr. 26, 1924. Serial No. 709,286. 14 Claims. (Cl. 83—65.)

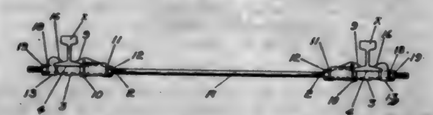
1. A float and sink testing apparatus comprising a float collector, a sink collector, and a transfer device, one of said members being revoluble about an axis to effect registration of said device with the respective collectors, and a fluid container for immersing said collectors.

1,538,627. SWIMMING DEVICE. BENVENUTO DI LAURO, Akron, Ohio. Filed Nov. 6, 1924. Serial No. 748,073. 2 Claims. (Cl. 9—21.)

1. A bathing belt comprising an inflatable bag formed with an inner wall of rubberized fabric and an outer wall of rubber, a valve in the outer wall for inflating the bag and tapes of rubberized fabric for securing the bag to the wearer, the inner and outer walls of the bags and the tapes being vulcanized together to form an integral structure.

1,538,628. WIRE-SPLITTING TOOL. GUY DINCOGNITO, Chicago, Ill. Filed Oct. 18, 1923. Serial No. 669,258. 10 Claims. (Cl. 164—47.)

1. A punch press tool, comprising a block with a slot with cutting edges, a bar mounted in a groove at each side of said slot, for holding a plurality of wires over said slot and longitudinally over said cutting edges, and a punch with means for splitting all of said wires with one punch press operation.

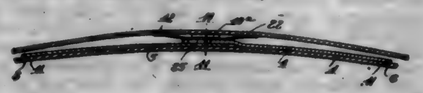


1,538,629. COMBINED WRITING TABLET AND COPY-HOLDER. PHILIP B. DOWNING, Everett, Mass. Filed Sept. 18, 1923. Serial No. 663,389. 1 Claim. (Cl. 281—7.)

A combined writing tablet and copyholder comprising in combination a plate, side members supporting said plate and extending beyond both ends thereof, said side members terminating in slotted brackets, an axle arranged in the slots in each of said brackets, the rearward axle being arranged to carry a web of paper and the forward axle to receive the end of said paper, a pair of springs each having one end secured to one of said brackets and bearing against the axle carried by the bracket to which it is secured to restrain the rotation thereof and tension said web, the free end of each of

said springs being bent around said axle to maintain the latter in position, and means whereby said axles may be rotated manually.

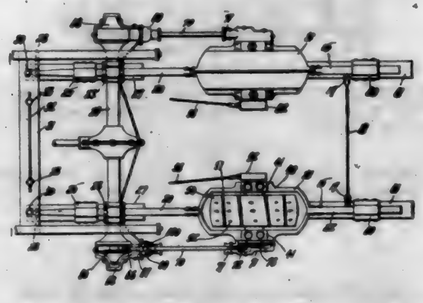
1,538,630. TRACK BRACE. THOMAS H. EDELBLUTE, Pittsburgh, Pa. Filed Jan. 17, 1925. Serial No. 3,038. 6 Claims. (Cl. 238—53.)



1. A rail brace including a tie rod and an adjustable rail engaging clamp on the tie rod, said clamp including a central clamping member adapted to engage the under side of a rail and through which the tie rod is slidably passed, said central member being beveled at one end and having an inclined bottom face tapering toward its other end, a vertically slotted flange-engaging clip engaging the inclined end of the central member, a vertically slotted flange clip telescopingly engaging the other end of the body, and nuts on the tie rod for confining the parts against movement.

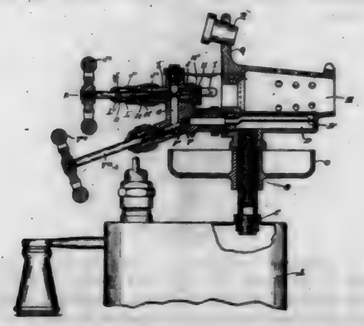
1,538,631. CONTAINER FOR PERFUMES, ETC. ANNIE FRANCIS, Detroit, Mich., assignor to Frederick Stearns & Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 7, 1923. Serial No. 630,606. 4 Claims. (Cl. 41—14.)

4. A container comprising a vial having a bulbular portion in the form of a bud of a flower, said bulbular portion having a hollow depending stem simulating the stem of the flower and leaves attached to said stem.



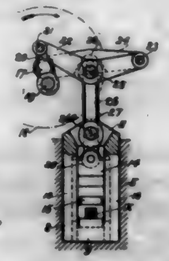
1,538,632. BELTED GARMENT. SAMUEL I. GOLDSTEIN, Rochester, N. Y. Filed Mar. 2, 1922. Serial No. 540,605. 6 Claims. (Cl. 2—85.)

2. The combination with a coat or similar garment having a half belt extending across the back thereof and composed of two members each attached at one end to the side of the garment and at the other end to the other member, of a full belt overlying the half belt and extend-



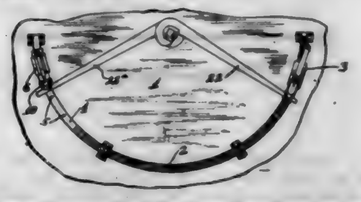
ing around the garment and detachably secured to the half belt by the same means which attaches the members of the half belt to each other to hold the two belts in register.

1,538,633. SNOW ATTACHMENT FOR AUTOMOBILES. HAROLD K. GOODRICH, Benson, Vt. Filed July 19, 1922. Serial No. 575,978. 8 Claims. (Cl. 180—6.)



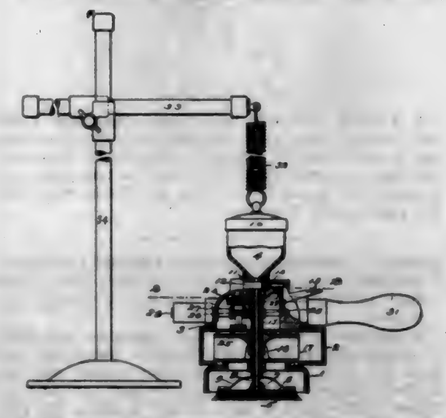
7. In a device of the class described, a unit for supporting a motor vehicle having a driving axle and brake applying means, which comprises a frame member, runner supports for said frame member, said member having spaced sides between said runner supports, a shaft passed through said sides, a traction wheel fixed to said shaft between said sides, a brake drum fixed to said shaft at one side of said frame, a brake in operative relation to said drum and actuated by said brake applying means, and driving connections to the opposite ends of said shaft from said driving axle.

1,538,634. TORCH-BURNER CONSTRUCTION. OTTO J. GROEHN, Detroit, Mich., assignor to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 30, 1921. Serial No. 518,882. 4 Claims. (Cl. 158—33.)



2. In a burner for blow torches, the combination with a fuel passage having a discharge orifice, of a nipple in alignment with the orifice, a stem threadedly adjustable in said nipple toward and away from said orifice, a clean out member carried by said stem adapted to be reciprocated through said orifice, a collar surrounding said nipple having a reduced portion fitting said stem, a collar surrounding the reduced portion of the collar aforesaid having an annular shoulder, and an enlargement on said stem alternately engageable with the outer end of the first collar and the annular shoulder of the second collar for limiting the movement of said stem toward and away from said orifice, and means remote from and independent of the clean out member and stem for controlling the flow of fuel through said passage.

1,538,635. BLOOM SHEARS. JOHANN HAHN, Pittsburgh, Pa. Filed Aug. 16, 1924. Serial No. 732,489. 8 Claims. (Cl. 164—47.)

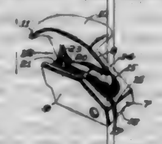


1. In a bloom shear, upper and lower knife carriers, a knife carried by each of said carriers, and interfitting parts on said carriers slidably engaging each other whereby one carrier may be slidably supported on the other and each movable with respect to the other, said interfitting parts serving to hold the carriers against spreading, and means for moving each carrier with respect to the other.

1,538,636. JOINT BREAKER. FRANK J. HINDERLITER, Tulsa, Okla. Filed Feb. 13, 1922. Serial No. 536,067. 5 Claims. (Cl. 255—35.)

1. In an apparatus of the class described, an arcuate rack having a smooth portion and a serrated portion, an adjustable stop on the serrated portion, and a screw jack on the smooth portion.

1,538,637. MACHINE FOR APPLYING POWDER TO PRINTED MATTER. HANS H. JESSEN, Windsor, and ECTOR F. MARCEAU, East Hartford, Conn. Filed May 7, 1924. Serial No. 711,619. 8 Claims. (Cl. 91—39.)

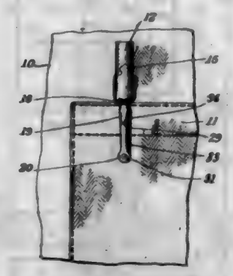


1. A machine for applying powder to printed surfaces which comprises a casing, a distributing pad rotatably supported by the casing, means for rotating the pad, a reservoir for powder communicating with the pad, a suction fan rotatably supported in the casing, and means for rotating the fan.

1,538,638. ROD-FEEDING CHUCK FOR AUTOMATIC SCREW MACHINES. GEORGE J. KALBERER, Hamilton, Ohio. Filed Aug. 8, 1923. Serial No. 656,357. 16 Claims. (Cl. 99—62.)

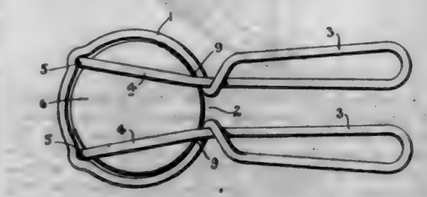
1. In a construction of the character described, a reciprocatory feed tube through which a rod of stock to be intermittently advanced extends, a split spring sleeve surrounding the stock within the tube and grasping the stock by the inherent tension of the sleeve said sleeve being operatively engaged upon longitudinal movement of the tube to advance the stock therewith and pressure operated means for expanding the sleeve against its inherent tension to release its grasp upon the stock upon resistance of the stock to advance movement.

1,538,639. AUTOMATICALLY-THREADING LOOM SHUTTLE. PATRICK KAVANAGH, Milford, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 2, 1924. Serial No. 741,129. 9 Claims. (Cl. 139—228.)



1. An automatically threading loom shuttle having a thread passage extending longitudinally thereof, a side delivery eye communicating with the thread passage, a thread casting and guiding device in the thread passage constructed and arranged to cast the thread and partially or wholly unthread the shuttle on the occurrence of an overthrow as the shuttle is arrested at the end of its flight, and a guide between the thread casting and guiding device and the side delivery eye for directing the thread into the said device as the unthreaded shuttle is picked.

1,538,640. ADHERENT MISSILE. MAX B. KRUSI, New York, N. Y. Filed June 8, 1922. Serial No. 565,624. 4 Claims. (Cl. 273—106.)

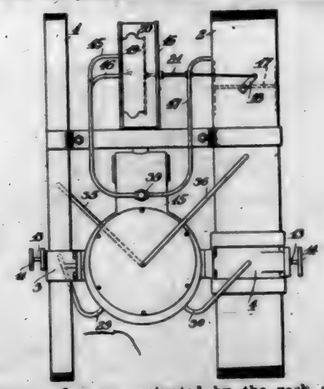


1. As a new article of manufacture, a hand thrown missile including a relatively heavy solid confection, a unitary flexible fabric member connected to said confection adapted to trail thereafter, and a bur connected to the confection in advance thereof.

1,538,641. PENCIL ATTACHMENT. JOHN LILJEQUIST, New York, N. Y. Filed Dec. 12, 1922. Serial No. 606,890. 1 Claim. (Cl. 120—84.)

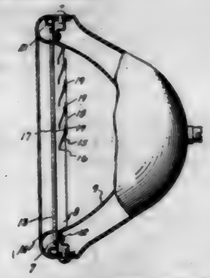
A pencil attachment of the class described formed of a single, substantially key-shaped metal plate, wings near the upper end of said plate adapted to be bent to tensionally engage about a pencil, an upper pointed lug on said plate adapted to engage the pencil under leverage, a recessed spring bar integral with said plate, a pad adjacent said wings adapted to be folded against said spring bar for guiding and holding a sharpener blade, an enlarged, perforated pad at the lower end of said bar, a perforated extension integral with said enlarged pad and adapted to be folded into parallel spaced relation with said pad, the openings in said pad and extension alined to receive a rivet on which said sharpener blade is pivoted, and means for preventing an accidental folding of the knife when in its working position.

1,538,642. FRUIT-JAR WRENCH. WILLIAM F. LONG, Grand Haven, Mich. Filed July 11, 1923. Serial No. 650,745. 3 Claims. (Cl. 81—3.1.)



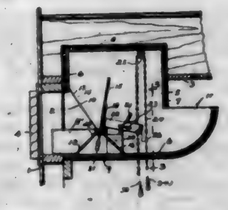
1. A fruit jar wrench formed of a single piece of material comprising a substantially circular body portion having a gap therein and thence extended outwardly at both sides of the gap and returned to form handle members and thence extending as chords across the circular body portion in a plane slightly above the same to form locating members substantially as described.

1,538,643. FLUID-PROPORTIONING APPARATUS. IVAR LUNDGAARD, Rochester, N. Y., assignor to Ratiometer Corporation, Rochester, N. Y., a Corporation of New York. Filed Apr. 21, 1919. Serial No. 291,783 1 Claim. (Cl. 137—78.)



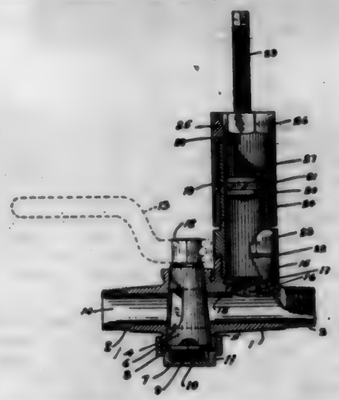
In a fluid proportioning apparatus, the combination with two conductors each provided with means for creating differential pressure therein and means for regulating the rate of flow through one of the conductors, of a pressure operated device for actuating said means and a controlling means for said device embodying a casing having two pressure chambers, a rock shaft extending into both chambers, pneumatic devices in the respective chambers connected to the shaft to operate

it in opposite directions, said devices being respectively sensitive to the pressure differentials in the respective



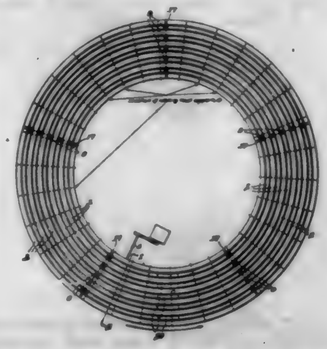
conductors, and means actuated by the rock shaft for controlling pressure to the actuating device, said means being located exteriorly of both pressure chambers.

1,538,644. LIGHT DEFLECTOR. JOSEPH MCELLIOTT, Detroit, Mich., assignor of one-half to M. J. Deleney, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 622,875. 4 Claims. (Cl. 240—43.4.)



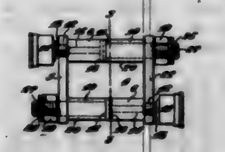
1. A deflector for vehicle lamps comprising a metallic band adapted for mounting thereon; a flange integral with said band and adapted for engagement with the reflector of said lamp; deflecting members integral with said flange and projecting across the same, the surface of the central longitudinal portion of said deflectors lying in a plane other than the plane determined by the edge of said flange, and the surface of the upper portion thereof lying in said plane determined by the edge of said flange.

1,538,645. VENTILATING MECHANISM. GEORGE THOMAS MARKEY, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis. Filed Mar. 1, 1923. Serial No. 621,990. 10 Claims. (Cl. 98—27.)



1. In a device of the character described, a valve stop comprising a pivoted member having a laterally projecting arm including a pair of friction applying members spaced substantially in the direction of the axis upon which said member is pivoted, and a rod fixed against movement about said axis and projecting between said friction applying elements, said rod being frictionally engaged by said elements, whereby to maintain said arm and member in a selected position of oscillation about said axis.

1,538,646. LUBRICATOR FOR AIR DRILLS. ADOLPH NELSON, Hugo, Colo. Filed Sept. 2, 1924. Serial No. 735,365. 1 Claim. (Cl. 184—55.)



A lubricating device for mechanisms adapted to be operated by compressed air comprising, in combination, a tubular body member adapted to be connected in an air line connecting a source of compressed air to a machine, the body member being provided with a stopcock adjacent the end nearest the air supply, said body member having a circular recess in one side thereof and an opening of smaller diameter than the recess connecting the latter with the passageway in the body member, a perforated disk in the bottom of said recess, a cylinder threadedly connected to the wall of the recess, a cap threadedly connected to the outer surface of the cylinder, a piston within said cylinder, and a threaded stem connected to the piston, said stem being threadedly connected with the cap whereby the rotation of the stem will move the piston within the cylinder.

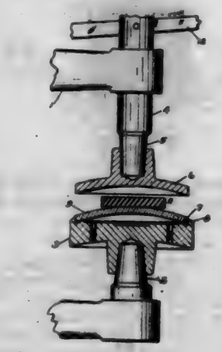
1,538,647. AMUSEMENT DEVICE. FRANK JACOB NEWBAUM, Detroit, Mich. Filed Jan. 22, 1924. Serial No. 687,838. 13 Claims. (Cl. 104—168.)

2. An amusement device of the kind described comprising a traveling trackway defining a general horizontal course, a manually propelled bicycle mounted on the track to be propelled thereover, and connecting means between the track and bicycle for confining the latter to the course and against unauthorized displacement from the trackway.

1,538,648. SPRING SHACKLE. PAUL A. NOBLE, Providence, R. I. Filed Apr. 3, 1922. Serial No. 548,910. 4 Claims. (Cl. 267—54.)

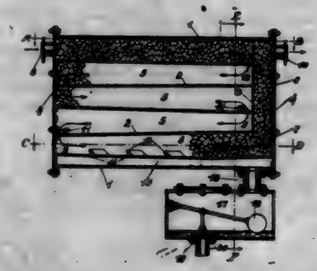
1. A shackle structure for vehicle-suspensions comprising a pair of opposite shackle links with an integral stud projecting from one link and adapted to be inserted through the bore of an integral sleeve projecting from the other link.

1,538,649. BOX MEMBER AND BLANK THEREFOR. ZACHARIAS S. OPPENHEIMER, New York, N. Y. Filed Aug. 22, 1924. Serial No. 733,541. 1 Claim. (Cl. 229—49.)



A box member comprising a blank which includes longitudinal and lateral flanges, longitudinal and lateral flaps on said flanges, and tongues at the ends of the longitudinal flanges, the corners of the blank having recesses; and reinforcing strips cemented to the inner sides of the longitudinal flanges and the tongues, the longitudinal flaps being folded and cemented to the longitudinal flanges and to surfaces of the reinforcing strips, the tongues being bent inward so that the reinforcing strips are bent into angular form, the transverse flanges being upward against the tongues, and the transverse flaps being folded inward and cemented to the transverse flanges and the reinforcing strips, said strips being characterized by the fact that each strip is a flattened laminated tube having surface layers contacting with the cement along their entire length, and intermediate layers covered by the surface layers, so that the intermediate layers are not rendered brittle by the cement and are free from each other and from the surface layers.

1,538,650. SODA-LIME COMPOSITION OF MATTER USEFUL AS A GAS ABSORBENT. WILLIAM PEACOCK and Daniel Gray, Oneida, N. Y., assignors of one-half to Chester M. Woolworth, Philadelphia, Pa. Filed Jan. 6, 1923. Serial No. 611,157. 2 Claims. (Cl. 252—2.)

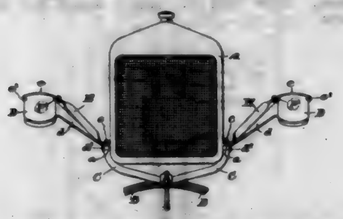


1. The herein described new composition of matter comprising a mixture of sodium hydroxide, calcium oxide, and a base metal sulphate, the same adapted to absorb hydrogen sulphide from the air and to convert the same into a metal sulphide.

1,538,651. LENS BLOCKING. ARTHUR PELLOW, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 17, 1919. Serial No. 311,406. 1 Claim. (Cl. 51—278.)

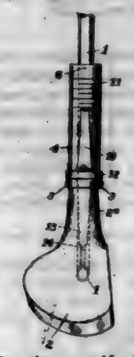
The process of blocking lenses consisting in heating the lens and lens block, supporting the lens, on the face which is to be subsequently ground, placing a piece of heat softenable adhesive on the opposite face of the lens, the said adhesive having a smaller diameter than either the block or the lens, and then bringing the heated block into engagement with the said adhesive whereby to soften the adhesive and to cause extrusion thereof so as to unite the parts in predetermined relation.

1,538,652. DEVICE FOR SEPARATING WATER FROM COMPRESSED AIR IN MOTION. RICHARD POTH, Dortmund, Germany. Filed Jan. 7, 1921. Serial No. 435,778. 11 Claims. (Cl. 183—122.)



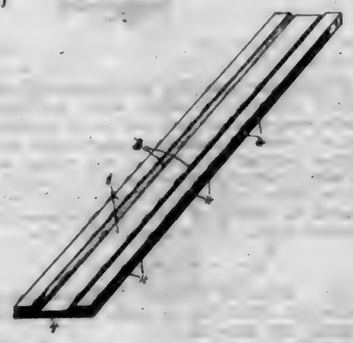
1. A device for separating water from compressed-air in motion comprising a casing, means for introducing the moist compressed-air into said casing, a packing consisting of a mass of particles of sharp-edged practically non-porous material contained in said casing, such material being practically impervious to air adapted to separate the water from said inflowing moist compressed air, means for leading off the dried compressed air, and a collecting-chamber for said separated water.

1,538,653. FENDER BRACE. RASMUS RASMUSSEN, Pontiac, Ill. Filed Dec. 10, 1923. Serial No. 679,707. 1 Claim. (Cl. 280—152.)



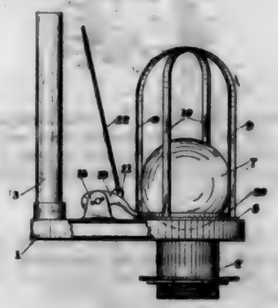
In a vehicle having the usual frame, wheel fenders, and a radiator secured to the vehicle frame by bolts, a fender brace comprising an outer part extending over

the top of the fender formed with a hooked outer end engaging the outer end of the fender, a foot portion secured to the vehicle frame by one of the bolts which



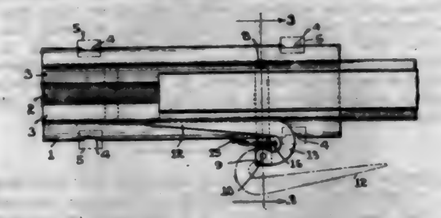
secures the radiator thereto, and a clamp member carried by the upper part of the brace and engaging the inner edge of the fender.

1,538,654. GOLF CLUB. MILTON B. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Feb. 7, 1924. Serial No. 691,234. 7 Claims. (Cl. 265—21.)



1. In combination in a golf club, a shaft, a head slidably mounted thereon and having a scale bearing portion, an index, means between the shaft and index to restrain the latter from downward movement with the head and scale, said index engaging and moving upwardly with the head and scale on their return to normal position, and means for returning the head and scale to said normal position.

1,538,655. NOISELESS WINDOW GUIDE. GEORGE ALLEN REYNOLDS, Jr., Binghampton, N. Y. Filed June 16, 1922. Serial No. 568,736. 1 Claim. (Cl. 296—44.5.)

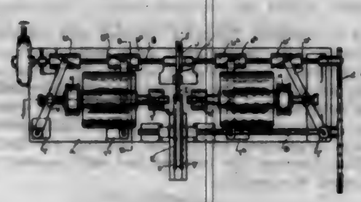


In a noiseless window guide, an elongated strip of felt having transversely spaced lengthwise grooves in one side between its opposite longitudinal edges, said felt strip having incorporated therein bendable wires extending transversely of and beyond the grooves in longitudinally spaced relation, the opposite longitudinal edges of the strip with the wire therein being folded in one and the same direction along said grooves, the bendable wires serving to hold the longitudinal edges in their folded positions.

1,538,656. FLUSH VALVE. GEORGE E. RICHARDSON, Colebrook, N. H. Filed Aug. 3, 1922. Serial No. 579,514. 1 Claim. (Cl. 4—57.)

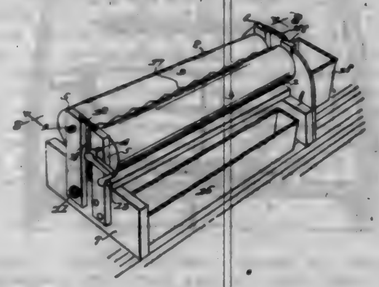
In a flush valve, a base plate having an outlet therein, a recess extending about the outlet, a tubular washer arranged within said recess and forming a seat for a valve, a spherical valve of a diameter greater than the diameter of said valve seat and adapted to rest upon said tubular washer, a lever pivoted to the upper side of the base plate and provided on its free end with a ring extending above the valve seat but below the horizontal plane of the center of the spherical valve, and encircling the lower portion of said valve, the interior diameter of said ring being greater than the outer diameter of the tubular washer, means for moving the lever to displace the valve from its seat, and means for limiting the upward movement of the spherical valve when displaced from its seat comprising a ring provided with keyhole slots and having U shaped strips secured thereto, the base plate being provided with headed pins adapted to enter the enlarged portions of the keyhole slots, and a locking means attached to the ring comprising a pivoted member provided with a recess adapted to encircle said headed pin against disengagement.

1,538,657. RAIL JOINT. ALVA M. RIDDLE, Alexander, W. Va. Filed Oct. 21, 1924. Serial No. 744,928. 5 Claims. (Cl. 238—205.)



1. The combination with a rail chair having vertical sides, of a bolt passing transversely through the chair and through a rail mounted therein and being threaded into the opposite side of the chair, and means pivotally carried by the bolt at its head end and locked in conjunction therewith and lying normally in a position parallel with the chair when locked, thereby preventing the removal of the bolt.

1,538,658. FISHING BAIT. VINCENT R. BINDT, Winter, Wis. Filed May 14, 1924. Serial No. 713,853. 13 Claims. (Cl. 43—43.)

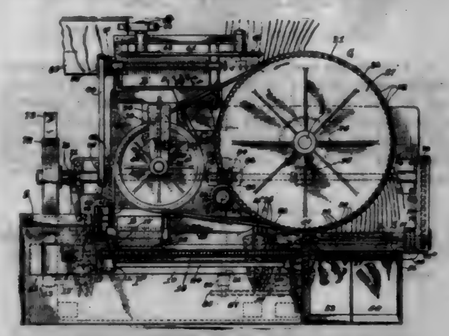


5. The combination with a fishing lure, a fishing line, of rotatable spinners carried by said lure, of means for rotating said spinners during casting and trolling operations, said means comprising a rack, a gear connection between the rack and the spinners, a contractible coiled spring cooperating with the rack for normally maintaining the same in inner position, said fishing line being attached to the outer end of said rack.

1,538,659. MACHINE FOR MANUFACTURING STUDS, NIPPLES, AND SIMILAR ARTICLES. FREDERICK N. ROSS, Detroit, Mich. Filed Mar. 6, 1922. Serial No. 541,607. 12 Claims. (Cl. 82—2.)

1. The combination of means for intermittently advancing a series of cylindrical blanks, of a clamp successively engageable with the central portion of said blanks, a slidable member secured to said clamp having a cam follower mounted thereon, a cam engaging said follower for intermittently actuating said clamp, and a pair of longitudinally reciprocable rotary tools axially aligned with the blank engaged by said clamp.

1,538,660. GRAIN SEPARATOR. ARTHUR W. SAGER, Horicon, Wis. Filed Oct. 24, 1923. Serial No. 670,545. 1 Claim. (Cl. 130—18.)

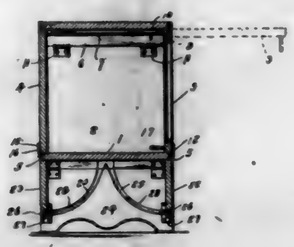


A device for the purpose indicated comprising cooperating complemental rollers in peripheral contact and disposed at an inclination to provide a downwardly inclined trough above the points of peripheral contact, means for rotating the rollers, and means for disposing grain kernels transversely of the rollers and consisting of a zig zag or serpentine wire supported above the points of peripheral contact within the rollers.

1,538,661. VEHICLE WHEEL. JOSEPH SALUS, St. Paul, Minn. Filed Aug. 31, 1923. Serial No. 660,846. 4 Claims. (Cl. 301—63.)

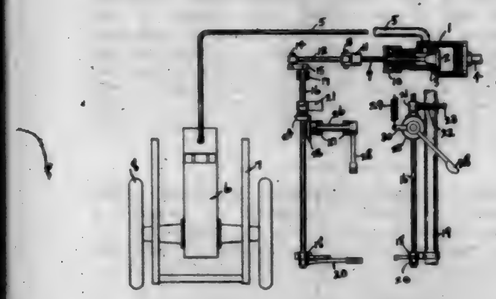
1. In a vehicle wheel a web comprising an inner and an outer disc, said discs secured together adjacent the wheel rim, said wheel rim having two oppositely arranged tire holding flanges, said inner disc formed integral with the entire corresponding tire flange, the outer flange formed in two sections, one section integral with the outer disc and the other section hingedly secured to the adjacent parts of said integral flange section and comprising an arched member with an integral arched plate adapted to be detachably secured to the inner disc, said arched member having apertures, the inner disc provided with fixed hook-shaped studs extending through the said apertures and locking devices engageable with said hooks for forcing and for holding the hinged member toward the inner disc and the tire.

1,538,662. TOBACCO-STEMMING MACHINE. FREDERICK C. SCHOFIELD, Lynchburg, Va., assignor to United Cigarette Machine Co., Inc., Lynchburg, Va., a Corporation of Virginia. Filed Jan. 27, 1922. Serial No. 532,182. 27 Claims. (Cl. 131—57.)



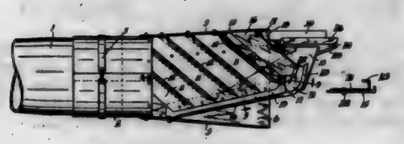
26. In a device of the class described means to move tobacco leaves laterally and longitudinally in succession, and a succession of flexible cutting blades engaging the leaves at opposite sides of the stem and cutting in the opposite direction to their longitudinal movement.

1,538,663. FOLDING BOOKCASE. HARVEY C. SLAUGHTER, and BERT D. JONES, San Marcos, Tex. Filed Aug. 28, 1923. Serial No. 659,789. 3 Claims. (Cl. 45—78.)



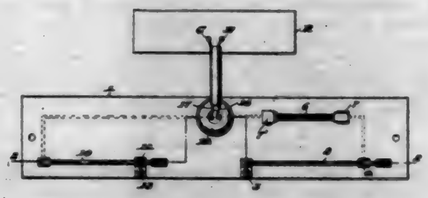
1. In a device of the character specified, a top, battens rigid with and depending at opposite ends of the top, in-

wardly folding sides hinged to the battens and provided upon their inner sides with arcuate grooves, a front and a back hinged to the top and foldable against the



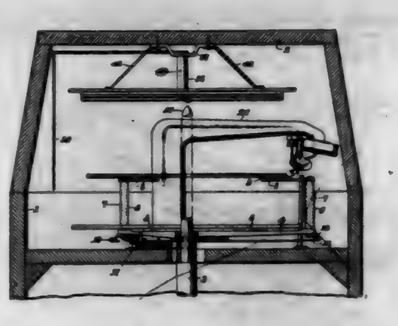
underside thereof, and studs projecting outwardly from the lower corners of the front and back, and entering said arcuate grooves.

1,538,664. THROTTLE CONTROL FOR STEAM AUTOMOBILES. LEWIS L. SCOTT, St. Louis, Mo. Filed Aug. 5, 1921. Serial No. 490,064. 5 Claims. (Cl. 251—133.)



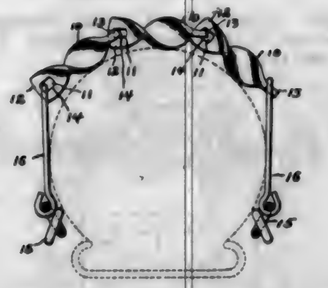
1. A valve for controlling the flow of steam to a steam engine, comprising a valve casing, a valve therein subject to the pressure of the steam, a manually-operated device associated with said valve for opening and closing the same, and means located exteriorly of said casing and associated with said opening and closing device for balancing said valve against the steam pressure.

1,538,665. GRAIN-SAVING ATTACHMENT. GEORGE M. SINCLAIR, Timmer, N. Dak. Filed July 30, 1923. Serial No. 654,519. 13 Claims. (Cl. 130—17.)



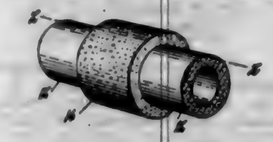
1. A grain saving device comprising a conduit adapted to be attached in communication with a discharge tube of a pneumatic stacker, said conduit having a floor inclined upwardly at an angle to the axis of said tube and against which the discharged material is projected, a plurality of baffle deflecting means extending diagonally across said floor adapted to intercept and direct the grain to one side thereof, and grain directing and collecting means co-operating therewith.

1,538,666. ELECTRIC SWITCH. CHARLES MAXWELL SMALL, New York, N. Y. Filed July 8, 1924. Serial No. 724,798. 9 Claims. (Cl. 250—16.)



1. In a combined lightning arrester and switch, the combination with the antenna of a radio receiving set and a receiver, of a member electrically connected to ground, and a switch for making the sole electrical connection between the antenna and said member when the receiver is inoperative, a second switch independent of said first mentioned switch for making an electrical connection between the receiver and said member when the receiver is operative.

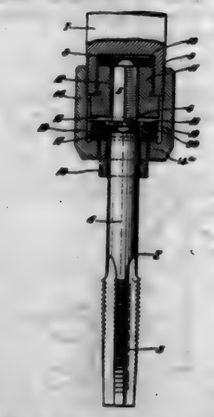
1,538,667. RECORD-CHANGING MECHANISM FOR PHONOGRAPHS. BLANCHARD D. SMITH, Lagrange, Ga., assignor of one-half to John Audley Grant, Atlanta, Ga.; one-sixth to G. Fred W. Martin, New York, N. Y.; and one-sixth to Ray B. Whitman, Bridgeport, Conn. Filed Nov. 12, 1921. Serial No. 514,760. 13 Claims. (Cl. 274—10.)



1. In a device of the class described, the combination of a rotatable support for used records, vertical sleeves carried thereby, rotatable rods in said sleeves, arms carried by the upper ends of said rods and normally constituting a support for the record that is being played, and means for automatically rotating said rods and thereafter swinging said arms from under the record to permit it to drop upon the first named support.

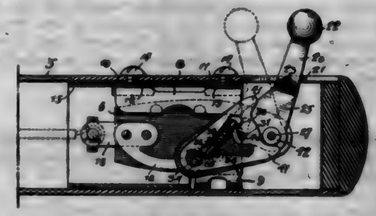
1,538,668. TIRE CHAIN. FRANK A. SMITH, Union City, Conn. Filed July 10, 1923. Serial No. 650,691. 3 Claims. (Cl. 152—14.)

1. Cross chains for a tire chain composed of a plurality of solid links of helical form, having openings at the opposite ends thereof and joined together so that the outer spiral edge of one link at the end of the link are at substantially a right angle to the similar edges of the adjacent link and intersect each other.



1,538,669. SUBSOIL TILE LINE. WILLIAM R. SMITH, Buffalo, N. Y. Filed Feb. 2, 1924. Serial No. 690,317. 1 Claim. (Cl. 61—10.)

As an article of manufacture a tubular porous coupling sleeve having relatively thin end portions of maximum internal diameter, the inner surfaces of said portions forming the walls of sockets adapted to receive and closely fit the peripheries of two aligned tubular tiles, and a thicker central portion of a smaller internal diameter, the ends of said thicker portion forming the inner ends of said sockets and being adapted to closely fit the end faces of said tiles, so that the internal surfaces of the end portions and the ends of the thicker portion are adapted to cooperate with the peripheral portions and end faces of the tiles in forming angular joints, the sleeve being characterized by the fact that its wall is uniformly imperforate and uniformly porous so that the said wall and the said angular joints are impervious by roots, and the thickened portion of the sleeve is adapted to space the tile ends apart and permit the seepage of water between said ends.



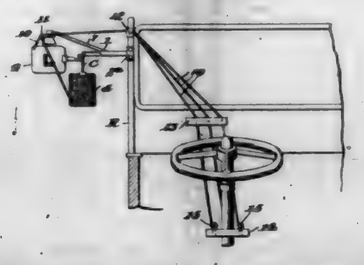
1,538,670. TOOL HOLDER. JOSEPH W. STANLEY, Johnstown, Pa. Filed Feb. 26, 1923. Serial No. 621,348. 8 Claims. (Cl. 10—134.)

1. The combination with a nut tapping tool having a tapping head on its lower end, a squared upper end adapted to be gripped in a holder, and a cylindrical shank portion of less diameter than said tapping head, said shank portion being provided with an annular concave groove adjacent its upper end, of a holder adapted to receive the squared upper end of said tool and comprising a body portion, a split washer mounted in said body portion and provided with a rounded or convex inner wall adapted to be engaged in the groove in said shank to prevent accidental displacement of the tool, and

means for resiliently holding said washer in engagement with said tool, said tool being releasable by relative longitudinal movement between said tool and said washer.

1,538,671. ELECTRIC SWITCH. LUDWIG STENDAHL, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 22, 1920. Serial No. 375,765. 23 Claims. (Cl. 200—67.)

1. In an electric switch, a switch frame comprising parallel insulating side plates, brackets extending between said plates to space the same apart, pivot means independent of the brackets and extending between said side plates and switch mechanism mounted on said pivot means between the side plates.

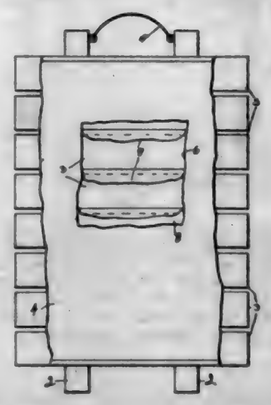


1,538,672. GUARD RAIL. HENRY C. STIFF, Johnstown, Pa. Filed Feb. 7, 1925. Serial No. 7,652. 2 Claims. (Cl. 238—19.)

1. A one-piece guard rail comprising a base flange having track rail supporting feet projecting outwardly from one side thereof and rib supporting projections extending outwardly from the other side thereof, a vertical web portion extending upwardly from said flange, a head portion formed on the upper edge of said web, vertically disposed upwardly inclined reinforcing ribs formed integral with said rib supporting projections and said web, rail spacing and securing ribs formed integral with said

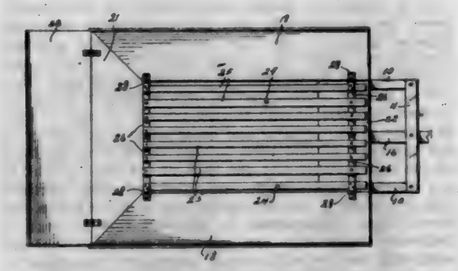
base flange and said web at points opposite said reinforcing ribs, and a foot guard adjacent each end of said guard rail, said guards being formed integral with said web portion and extending outwardly from said web portion a sufficient distance so as to normally underlie the head of the track rail.

1,538,673. DIRECTION SIGNAL. DOMINICK MCDONNELL SUSI, Pittsfield, Me. Filed Feb. 2, 1925. Serial No. 6,364. 3 Claims. (Cl. 116—53.)



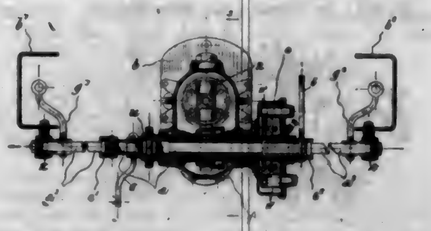
1. A direction indicator comprising a bracket to be attached to a suitable portion of a vehicle, a plurality of signal arms pivotally mounted on the bracket and normally held in alined inoperative position with respect to the bracket, a substantially rigid extension projecting from said bracket and a light mounted on the free end of said extension to lie adjacent said signal arms when moved to operative signaling position, and means for operating said signaling arms comprising flexible elements connected to each of said signal arms, respectively, and extended over guide means on the free end of said substantially rigid extension of the bracket to terminate within the vehicle adjacent the driver's seat, whereby said flexible members may be selectively operated to give the desired signal.

1,538,674. MUSIC STAND. EDWARD THIMGREN, Popotla, Mexico. Filed Apr. 24, 1924. Serial No. 708,709. 6 Claims. (Cl. 40—28.)



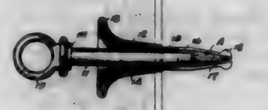
1. In a music stand, a frame, spaced rolls carrying a music sheet journalled on the frame, means for selectively rotating the rolls in reverse directions, said means including a shaft journalled at the lower end of the frame, a gear journalled on the shaft, pawl and ratchet mechanism for locking the gear to the shaft for effecting rotation of the shaft in one direction, a shaft supported rack segment associated with the gear, treadle mechanism for operating the rack segment and belt and pulley connections between the music rolls and gear supporting shaft.

1,538,675. SIGN. WILLIAM ZINGER, Philadelphia, Pa. Filed Sept. 6, 1924. Serial No. 736,198. 7 Claims. (Cl. 35—17.)



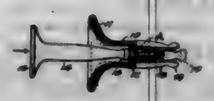
1. A sign comprising a plaster wall section provided with an aperture wherein is represented the formation of the back of a plaster wall.

1,538,676. GRAIN-SAVING ACCESSORY FOR THRASHING MACHINES. LORENZO W. BELL, Carrollton, Mo., assignor of one-half to William H. Gatlin, Carrollton, Mo. Filed July 29, 1924. Serial No. 728,948. 1 Claim. (Cl. 130—19.)



A grain saving accessory for thrashing machines comprising a relatively deep body having sides and ends, the body at the upper ends of the two sides and one end thereof having inclined extensions at such sides and end combining to form a hopper, braces extending transversely of the body adjacent opposite ends thereof and adjacent the upper ends of the walls thereof and racks pivotally connected to the upper end of the side walls of the body and swingable to a position closing the open top of the body to the entrance of straw but permitting the passage of grain therethrough and in which they are supported by said braces or to a position where they are supported by the sides of said hopper and permit access to the interior of the body.

1,538,677. VEHICLE-BRAKE-OPERATING DEVICE. MARC BIRKIOT, Bois Colombes, France. Filed Jan. 10, 1921. Serial No. 436,276. 2 Claims. (Cl. 188—140.)

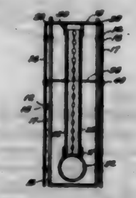


1. In combination with a vehicle brake, an operating device therefor, comprising a shaft divided into sections connected by flexible joints, certain of said sections being pivoted to the framework of the vehicle, means connecting said sections to the braking device and means for angularly displacing one of said sections relative to the others.

1,538,678. SUPPOSITORY INJECTOR. JOSEPH S. BLINN, New Haven, Conn. Filed Feb. 24, 1923. Serial No. 620,996. 3 Claims. (Cl. 128—264.)

1. As a new article of manufacture, a suppository injector comprising a cylinder, a flaring bell mouth on said cylinder at the rear end said bell mouth at its rear end constituting a stop flange to limit the inward movement of the injector into the cavity, a tapered tip on said cylinder comprising a plurality of resilient elongated members, the forward ends of said fingers having enlarged laterally protuberant front ends presenting longitudinally rounded external surfaces to give an approximate ball formation to the front end of the injector, and a plunger adapted to be inserted into the cylinder through the said bell mouth for forcing a suppository through the resilient members.

1,538,679. SUPPOSITORY INJECTOR. JOSEPH SYLVESTER BLINN, New Haven, Conn. Filed May 8, 1923. Serial No. 637,548. 2 Claims. (Cl. 128—264.)



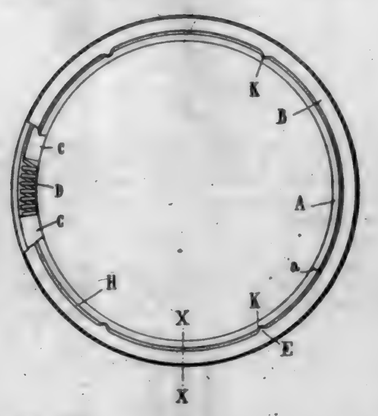
1. As a new article of manufacture, an injector comprising a tubular body having longitudinally disposed fingers at the front end, and a plunger adapted to be inserted in said body for forcing a suppository through said body, said plunger having a shank of transverse dimensions to cause engagement thereof with said fingers and hold the fingers spread when the plunger is in position in the body.

1,538,680. AUGER. GIUSTO BOGORO, Royalton, Ill. Filed Oct. 4, 1923. Serial No. 666,640. 1 Claim. (Cl. 145—128.)

An auger of the class described having a head connected with its shank inclinedly arranged ribs on one face of the head, a bit inclinedly arranged on the other face of the head and means for adjustably holding the bit on the head.

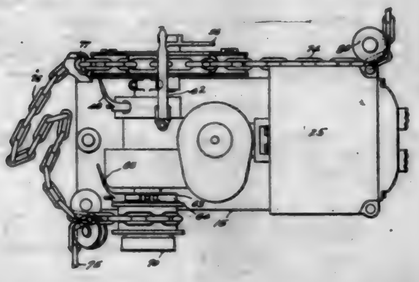
1,538,681. WALL CONSTRUCTION. WILLIAM C. BUCKHOUT, Yonkers, N. Y. Filed May 3, 1923. Serial No. 636,499. 4 Claims. (Cl. 72—48.)

1. A wall structure including upright end posts, vertically spaced horizontal wires connected to the opposite sides of and stretched longitudinally between the end posts, foraminous strips of material secured to the wires to provide spaced parallel surface defining and reinforcing elements, permanent U-shaped braces arranged transversely between the strips and having a bight portion and vertical legs formed with corrugations on their outer sides for the reception of the horizontal wires, binding devices tying the leg corrugations, transverse braces engaging the free terminals of the legs to prevent spreading thereof, transverse tie elements having offset hooked terminals engageable in the interstices of the foraminous strips to brace the same against bulging and a plastic filling between said strips extending through the interstices thereof and coating the outer surfaces of the same.



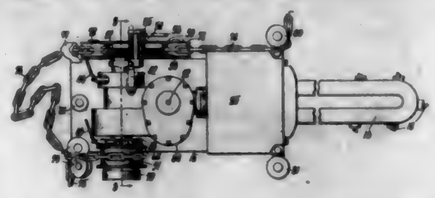
1,538,682. WRENCH. JOHN V. BUTTS, Sanders, Ky. Filed Mar. 18, 1924. Serial No. 700,116. 1 Claim. (Cl. 81—161.)

A wrench comprising a shank having longitudinally disposed relatively offset recesses in opposite sides thereof, rows of spaced teeth extending downwardly and longitudinally with the shank from opposite sides of an integral jaw adjacent the recesses, a transversely



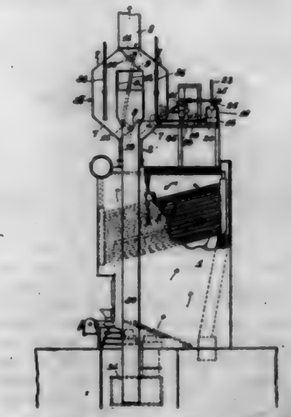
slotted inner sleeve having opposed guide grooves and slidingly receiving the opposite edges of the shank therein, a movable jaw carried by the inner sleeve, an outer rotatable sleeve received on the inner sleeve and having inwardly extending oppositely disposed lugs received in the slots and interposed between the teeth, and spring means included in the rotatable sleeve for engagement with the inner sleeve to hold the same against accidental displacement.

1,538,683. PISTON RING. PETER CAMPBELL and WILLIAM JAMES BANKS, Bristol, England. Filed Aug. 4, 1923. Serial No. 655,763. 1 Claim. (Cl. 74—109.)



A split packing ring for the piston of a steam engine, pump or the like having a shouldered recess in combination with a restraining ring comprising a solid annulus situated within said recess, transverse projections on the inner surface of the restraining ring that co-act with the shoulder of the recess, which projections have such a dimension that the wear automatically provides for the gradual expansion of the packing ring by means of the normal friction of the parts.

1,538,684. MINING MACHINE. FRANK CARTLIDGE, Terre Haute, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 5, 1916. Serial No. 101,687. 141 Claims. (Cl. 262—30.)



1. The combination with a mining machine, of feeding mechanism therefor comprising a driving motor, a shaft, a variable speed connection between said motor and said shaft, two drums driven from said shaft, and a variable speed connection between said shaft and one of said drums.

1,538,685. MINING MACHINE. FRANK CARTLIDGE, Cincinnati, Ohio, assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed June 5, 1916, Serial No. 101,687. Divided and this application filed June 25, 1924. Serial No. 722,372. 81 Claims. (Cl. 262—30.)

1. In a mining machine, a frame, a projecting cutter carried thereby, a winding drum, a paying-out drum, and a tension member extending in a slack bight between the two drums and extending from the winding drum forward from the frame near the end toward the cutter and from the paying-out drum backward from the frame at a point farther from the cutter end, and means for operating said two drums so that the paying-out operation is slower than the winding operation.

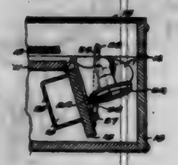
1,538,686. AIR PREHEATER. WILLIAM T. CHAMBERLAIN, New York, N. Y. Filed May 31, 1924. Serial No. 717,077. 4 Claims. (Cl. 110—56.)

1. An air preheater, comprising a casing having a pair of passages therein with inlet and outlet flues communicating with both passages, valves at the ends of the casing adapted to connect the flues with either passage, the said casing having an air inlet between the passages at one end of the casing and an air outlet between the passages at the other end of the casing, and heating elements in said passages.

1,538,687. COARSE-GRINDING WHEEL FOR SURFACING STONE. ELIOT A. CHASE, Northfield, Vt. Filed Apr. 13, 1922. Serial No. 552,278. 8 Claims. (Cl. 51—209.)

1. A grinding wheel comprising a frame, means by which said frame may be rotated, and a plurality of grinding members mounted on said frame, said members having a series of closely adjacent ledges on their inner faces and said ledges being upwardly and rearwardly inclined to form pockets for the grinding abrasive.

1,538,688. SHOE-TONGUE HOLDER. LOUIS CHICOINE, Wilton, Me. Filed Jan. 2, 1925. Serial No. 215. 1 Claim. (Cl. 24—117.)

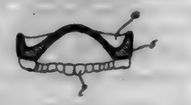


A shoe tongue supporting device of the character described comprising a hollow cylindrical member, open at both ends and having a curved annular flange extending from the upper periphery thereof, the lower periphery of the hollow cylindrical member being flared outwardly and terminating in a correspondingly shaped annular flange, the proportions of the annular flanges being embedded within the opposite sides of the shoe tongue adjacent the opening therein, and an inverted substantially U-shaped member secured to the upper annular flange at diametrically opposite sides thereof, and receiving the ends of shoe laces therethrough.

1,538,689. MANUFACTURE AND PRODUCTION OF THREADS, FILAMENTS, AND THE LIKE FROM VISCOSE. CHARLES FREDERICK CROSS, Lincolns Inn, England, assignor to Courtaulds Limited, London, England. Filed May 5, 1924. Serial No. 711,241. 3 Claims. (Cl. 18—54.)

1. A process for the production of threads, filaments and the like, from viscose, the said process comprising the step of extruding the viscose into a bath containing an alkali silicate in aqueous solution and thereby congulating the viscose.

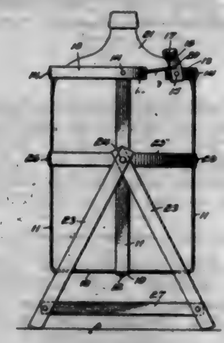
1,538,690. PORTABLE PHONOGRAPH. SAUL DAVIDSON, New York, N. Y. Filed June 8, 1923. Serial No. 644,213. 2 Claims. (Cl. 274—2.)



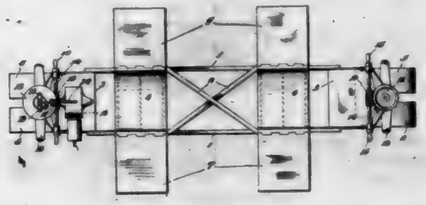
1. A portable phonograph, comprising a body having a hinged cover, a bed over which a turntable is mounted, a box-like member hinged to the bed and defining an amplifying chamber having an inlet opening and an outlet opening in its upper wall, a tone arm swiveled to the upper wall of said member and having communication with the inlet opening, and a connection between the cover and said box-like member operable upon closing of the cover to swing the member downward for disposing the tone arm below the plane of the turntable and functioning upon opening of the cover to swing the member upwardly to dispose its upper wall in a plane with the bed whereby to position the tone arm for cooperation with the turntable.

1,538,691. MANUFACTURE OF DENTAL PLATES. EDWARD L. DILLMAN, Jamaica, N. Y. Filed Sept. 15, 1924. Serial No. 737,889. 1 Claim. (Cl. 32—4.)

A mold for forming mineral dental plates and comprising a plurality of sections of a material having a higher fusing point than the material from which the plate is formed, and means for preventing a fusing of the mold material and the plate material, said means serving to bind the several sections of the mold together in operative relation and comprising a sheet of metallic foil adapted to envelope the several sections of the mold.

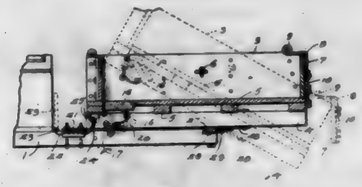


1,538,692. DENTAL PLATE. EDWARD L. DILLMAN, New York, N. Y. Filed Nov. 24, 1924. Serial No. 751,965. 2 Claims. (Cl. 32—4.)



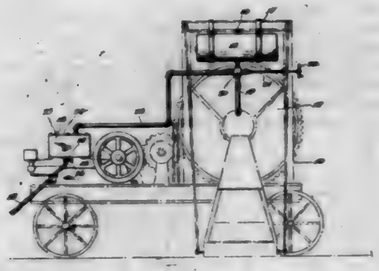
1. A dental plate comprising a metallic body portion, and a ceramic material fused to said body portion and completely enveloping the same.

1,538,693. CONTAINER RACK. HENRY F. GILBERT, Miami, Fla. Filed Jan. 6, 1922. Serial No. 527,347. 1 Claim. (Cl. 248—58.)



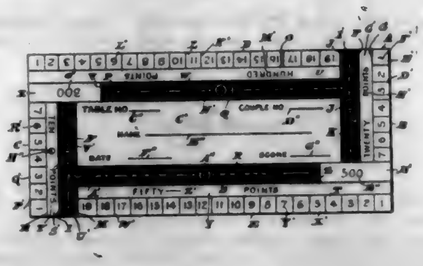
In a container support of the character described, a frame comprising a pair of vertically positioned U-shaped members positioned at right angles one with respect to the other, and secured together at their contacting lower portions, a circular band surrounding and connecting the members intermediate their ends, a split band surrounding and secured to the members at their upper ends, a curved lever member having one end pivotally secured to one end of said split band upon the outer side thereof, said curved lever member having a curve equal to the curve of the band to which it is attached and adapted when in one position to lie snugly against the outer surface of said split band, a curved link member having one end secured to the other end of the said split band and having its other end secured to the said lever inwardly of its pivotal point, said link and lever acting, when the lever is shifted from a vertical to a horizontal position to draw, through the action of the connecting link, the ends of the split ring toward one another to bend inwardly the upper ends of the said U-shaped members to secure a container within the said frame, and a base and pivot means for swingingly suspending the said frame in position.

1,538,694. TRUCK-TURNING APPARATUS. EDWARD C. GERDHILL, Galion, Ohio. Filed Mar. 12, 1924. Serial No. 698,696. 6 Claims. (Cl. 180—1.)



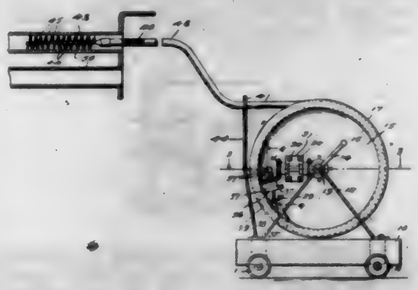
1. An apparatus for reversing a hauling truck comprising a wheel-supported frame, means for effecting travel of the frame, means for steering the frame during its travel, dished transverse platforms upon the frame to receive and hold the front wheels of a hauling truck, and runways carried upon the frame in alinement with the platforms and extending laterally from the frame.

1,538,695. DUMPING-WAGON BODY. ELMER E. GRABBS, Sandborn, Ind. Filed Nov. 28, 1923. Serial No. 677,446. 2 Claims. (Cl. 298—17.)



1. A wagon body pivotally mounted intermediate its ends to tilt and provided in the front portion of its bottom with a trap door to facilitate the tilting of the body by discharging a portion of the load therethrough, and a shaft mounted upon the body and having crank connection with the trap door to effect opening or closing thereof.

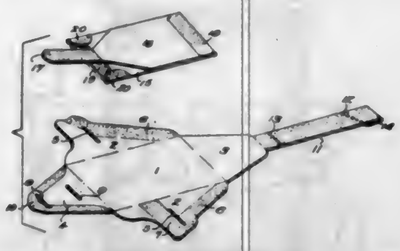
1,538,696. WATER-CIRCULATING SYSTEM FOR CONCRETE MIXERS AND ENGINES. OTA T. GRAHAM, Richmond, Va. Filed June 14, 1924. Serial No. 720,144. 6 Claims. (Cl. 83—73.)



1. The combination with a concrete mixer having an engine for operating the same; of a water circulating system comprising a water jacket for the engine, a suitable connection from a source of cold water supply to said water jacket, means for conducting heated water from said water jacket to the concrete mixer and means for controlling the flow of heated water to the mixer.

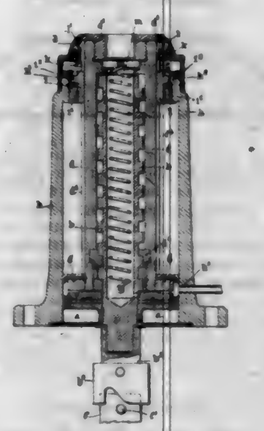
1,538,697. SCORE CARD. HARRY ANTHONY HAGEN, East Dubuque, Ill. Filed Feb. 19, 1924. Serial No. 693,799. 6 Claims. (Cl. 283—49.)

1. A score card comprising a body portion having one face provided with means to constitute a value designated elongated points lost narrow scoring space and a row of points made narrow scoring spaces parallel to the points lost scoring space, said body portion further provided with means to form independent spaced value indications for the number of points lost or made, said indications common to the points lost scoring space and the row of points made scoring spaces to designate the score of a player when the points lost or made spaces are separately punched, the points lost scoring space being distinctive from that of the row of points made scoring spaces and of the same length as the length of said row.



1,538,698. ROTARY FLUE CLEANER. MARCELLUS C. HALL, West Marion, S. C. Filed Aug. 25, 1923. Serial No. 659,341. 8 Claims. (Cl. 15—104.10.)

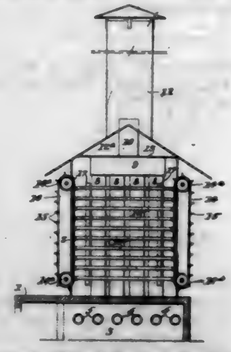
1. An apparatus of the class described having a flexible tool-operating shaft, a take up drum for said shaft, and driving means associated with the drum and operable to drive said shaft.



1,538,699. ENVELOPE. CHARLES G. HEATH, Hart, Mich. Filed May 12, 1922. Serial No. 560,401. 2 Claims. (Cl. 229—80.)

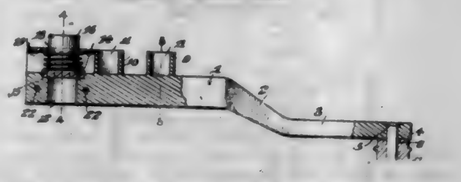
1. An envelope comprising a blank having side flaps, top and bottom flaps extending therefrom, the bottom flap being provided with a sealing tongue, the side flaps being provided with slots adapted to register when in folded position, the top flap being provided with a pair of slots, one of which is adapted to register with said first mentioned slots when the top is closed, said tongue being adapted to be passed outwardly through said registering slots and then into the envelope through the other slot, the tongue being provided with transversely extending rows of perforations, and an inner reenforcing

member adapted to be arranged in said envelope, said inner reenforcing member being provided with a tongue adapted to extend outwardly through one of said slots.



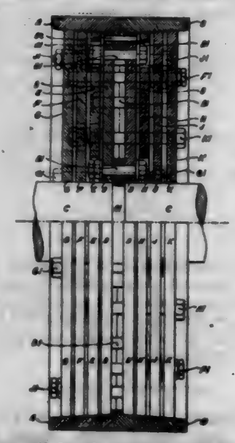
1,538,700. STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. NICOLAS HERSMARE, Paris, France. Filed Aug. 5, 1920. Serial No. 401,351. 8 Claims. (Cl. 121—37.)

1. A starting device for internal combustion engines and the like, comprising a rotatable member susceptible of slight longitudinal displacement, a screw secured to said member, a nut engaging said screw, a second member fast with said nut and longitudinally displaceable in a direction opposite to that of the first mentioned member, means for admitting compressed gases between said movable members, means for returning both members against one another, and means for coupling the rotatable and longitudinally displaceable member with the engine shaft.



1,538,701. DRIER. ALPHEUS O. HURXTHAL and HENRY L. GALSON, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1924. Serial No. 743,714. 5 Claims. (Cl. 34—11.)

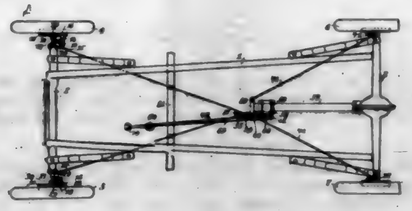
2. The combination in a drier, of a base; an air heating furnace therein; a drying chamber above the base; means, in said drying chamber, for supporting material to be dried; a series of vertical heating flues extending from the base through the drying chamber; a manifold at the upper end of said vertical flues; an exhaust flue communicating with the upper portion of the drying chamber; and a deflecting plate extending in the drying



chamber at each side of the manifold, the exhaust flue terminating within the stack to cause an induced draft in the drying chamber.

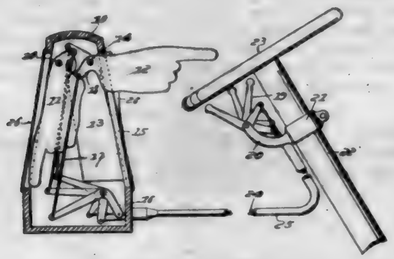
1,538,702. RATCHET CRANK. JOHN A. JOHNSON, Pittsburg, Kans. Filed Nov. 1, 1924. Serial No. 747,354. 4 Claims. (Cl. 74—38.)

1. In a crank of the character set forth, a shank having an aperture through one end thereof, a handle, ratchet teeth formed flush in the face of said shank around the rim of said aperture, a ratchet coacting with said teeth, and a tubular sleeve carried by said ratchet in alignment with said passage.



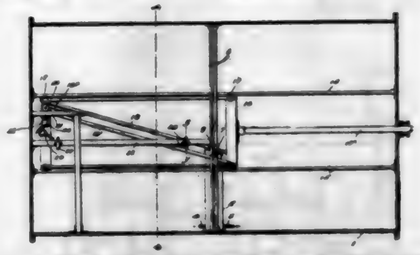
1,538,703. CRUSHING ROLL. GEORGE JOHNSTON, Manchester, England. Filed Mar. 14, 1923. Serial No. 625,060. 4 Claims. (Cl. 83—12.)

1. A built-up roll for the purposes set forth comprising two shells externally cylindrical and internally conical secured together coaxially, in combination with means



button hole, an elastic tape adapted to be arranged between the folds of the collar, a loop carried by one end of the tape and adapted to receive said button, a buckle arranged at the other end of the tape, a headed stud projecting from said buckle and adapted to be received by the second mentioned button hole at the side of the collar for the purpose specified.

1,538,714. FOUR-WHEEL-BRAKE MECHANISM. CLYDE J. MCNERNY, San Francisco, Calif. Filed Apr. 7, 1924. Serial No. 704,800. 5 Claims. (Cl. 188—10.)

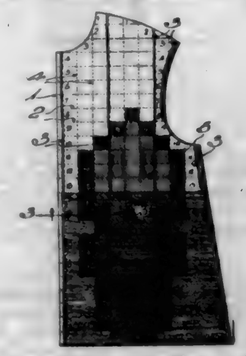


1. In a four-wheel brake mechanism for vehicles, a brake band applying device for each of the wheels of the vehicle, an operating member having its ends connected to the devices for the front wheels, a pair of operating members connected to the devices of the rear wheels, a pull lever having one end connected with the operating member for the front wheel devices, a pull lever connected to the operating members for the rear wheel devices, a pair of operating elements, one connected to that lever to which the operating members for the rear wheel devices are attached and the other of said elements connected to the other end of the pull lever to which the operating member for the front wheel devices is connected, and means for simultaneously operating said elements.

1,538,715. DIRECTION INDICATOR. JOHN A. MANN, Lockport, N. Y. Filed Sept. 17, 1921, Serial No. 501,321. Renewed Nov. 25, 1924. 1 Claim. (Cl. 116—53.)

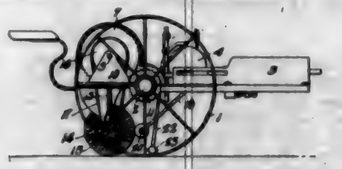
A direction indicator having a casing adapted for support at the rear end of a car or vehicle, indicator members pivotally mounted within and housed by said casing for selective extension through slots in the walls thereof, bell-crank levers also mounted in the casing and respectively connected with said indicator members, and actuating levers arranged adjacent to the vehicle steering wheel and flexibly connected respectively with said bell-crank levers, the slots in the casing for the passage of said indicator members being provided with flexible guard flanges adapted for separation by the extension of said members.

1,538,716. AIR COMPRESSOR. WILLIAM L. MARTIN, Stamford, Tex. Filed Nov. 25, 1922. Serial No. 603,257. 5 Claims. (Cl. 230—27.)



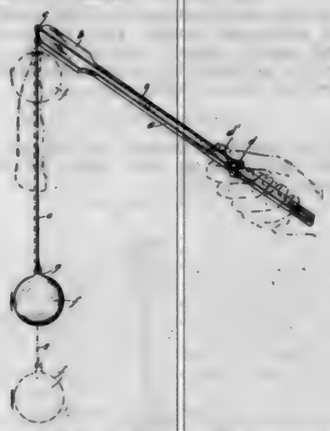
1. A device of the class described comprising a tank, a compressor therein having its inlet in communication with the atmosphere, a reciprocating member in the tank, means for reciprocating the same and means carried by said member for reciprocating the piston of the compressor.

1,538,717. GUN. GEORGE B. MEAD, San Francisco, Calif., assignor of one-fourth to Julius Griffin, San Francisco, Calif. Filed Mar. 29, 1924. Serial No. 702,969. 2 Claims. (Cl. 124—14.)



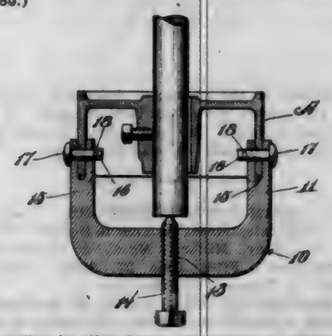
2. In a gun, a stock having a groove formed therein, an ammunition carrier adapted to be reciprocated on the groove, a U-shaped spring fastening clip adjustably secured to said stock, a resilient band secured to said clip and engaging said ammunition carrier, a U-shaped stop adapted to straddle said stock, eyes formed in said stop and adapted to encircle said spring on opposite sides of said carrier, a spring formed integral with said stop and adapted to enter into said stock, a V-shaped member pivoted to said stock, a link connected to said V-shaped member and to said band for moving said V-shaped member to a vertical position when said band is under tension, means for releasing said carrier, said means comprising a pivoted trigger mounted within said stock, a spring pressed latch adapted to be actuated by said trigger, and a dog formed on said latch and adapted to enter a recess formed in said carrier.

1,538,718. CROCHET PATTERN. EMMA BERNER MEHLEM, Chicago, Ill. Filed Sept. 22, 1924. Serial No. 739,221. 4 Claims. (Cl. 283—1.)



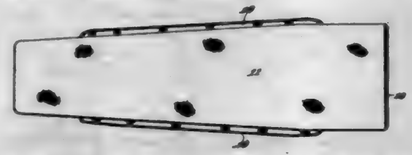
1. A crochet pattern comprising a backing sheet, parallel guide lines thereon, and rows of basting stitches engaged with said sheet and extending across said guide lines for the purpose set forth.

1,538,719. WEED EXTERMINATOR. THEODORO B. MENCHACA, Galveston, Tex. Filed Sept. 9, 1924. Serial No. 736,756. 1 Claim. (Cl. 126—271.2.)



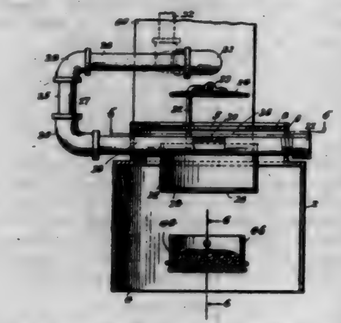
In a weed exterminator, a frame, wheels for said frame, a burner supported below the frame, a rotary brush supported below the frame and adapted to direct material toward the burner, said brush being located to the rear of said burner, and a roller engageable with the brush having its axis on substantially the same level as the axis of the brush and being disposed rearwardly of the burner.

1,538,720. COMBINED BAT AND BALL. WILLIAM H. MERCER, Portland, Oreg. Filed Aug. 28, 1923. Serial No. 659,756. 3 Claims. (Cl. 273—95.)



1. A toy consisting of a bat, a ring slidably mounted on the handle end of said bat, an elastic cord having one end fastened to said ring and its other end passing through an eye provided on the head of said bat, and a resilient ball to which the free end of said cord is attached.

1,538,721. TRANSMISSION-CLUTCH-DISK-DRUM PULLER. FRED MERDIAN, Vancouver, Wash. Filed May 27, 1924. Serial No. 716,239. 2 Claims. (Cl. 29—85.)

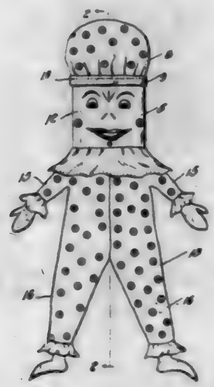


1. A puller for disk drums comprising a U-shaped body to provide parallel arms, the arms at their extremities being longitudinally slotted, the slots extending to the ends of the arms and the ends of the arms being transversely apertured, pins adapted to pass through the apertures, and a centrally disposed screw extending parallel to the arms and between the same.

1,538,722. IRONING-BOARD COVER. MARY E. MERRICK, Milford, Ind. Filed Apr. 28, 1924. Serial No. 709,645. 1 Claim. (Cl. 68—10.)

The combination with an ironing board, of a cover and a pocket secured to the cover, said pocket being open at the top and extending downwardly along the edge of the board.

1,538,723. COAL-OIL BURNER. CHARLES H. MILLER, Huntington, Ind. Filed Feb. 16, 1923. Serial No. 619,452. 2 Claims. (Cl. 158—64.)



2. An oil burner of the class described comprising a cylindrical base member open at its bottom and having a head member formed on the top thereof, said head member having a central circular opening therein, a draft check member centrally supported in the upper portion of said base member below the head, said draft check member being cup-shaped in design and having a central opening in its bottom concentric with the opening in the top of the head, a fuel supply pipe, a vaporizing pipe connected to the latter and extending diametrically through the head of said base member, said vaporizing pipe having a jet formed in the top thereof concentric with the aforesaid openings, the portion of the device surrounded by said head member above the vapor pipe constituting a generating chamber, a starting member including a cup-shaped receptacle pivotally supported within said base member adjacent the bottom thereof and a handle for manually actuating the same, and a flame deflector supported above the head of the base member adapted for position over the opening in the top thereof, as and for the purposes described.

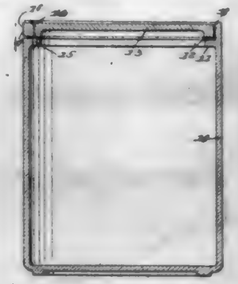
1,538,724. SURFACING ATTACHMENT FOR CULTIVATORS. HENRY H. MILLS, Maynard, Minn. Filed May 25, 1922. Serial No. 563,602. 2 Claims. (Cl. 97—144.1.)

1. A ground leveling attachment for cultivators of the type which include a draw-bar having a depending shovel shank provided with a reduced lower end, said attachment including a vertical attaching shank, a pair of horizontal blades pivotally connected at their forward ends to the lower end thereof for relative lateral swinging movement, said blades having vertical spaced openings

for securing the roll upon a shaft and means for internally reinforcing the shells comprising a series of pairs of annular discs counterpartly conical on their peripheries and drawn together in pairs.

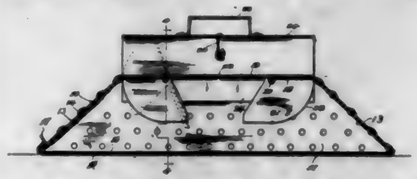
1,538,704. BOUNCING TOY. ANSEL R. KAY, Davenport, Iowa. Filed June 30, 1923. Serial No. 648,712. 8 Claims. (Cl. 46—40.)

1. A toy having a resilient member to impart movement to the toy through impact, and said toy having a space in which said member travels to determine the landing position of the toy, the resiliency of said member being sufficient to be unaffected by the covering of the toy and to carry the toy into the air after impact.



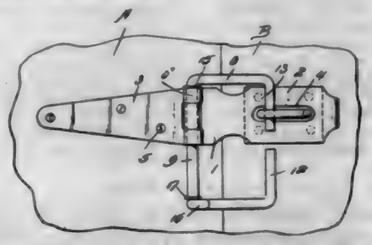
1,538,705. BELT CLAMP. CLYDE J. KENNEDY and CARL H. PRINCE, Newkirk, Okla.; said Prince assignor of his entire right to Cary R. Edmondson, County of Osage, Okla. Filed May 20, 1924. Serial No. 714,659. 1 Claim. (Cl. 24—31.)

A belt clamp consisting of a channeled body having its channel of dovetail shape and its wider end closed, wedges disposed in the channel and coacting with the inclined walls thereof to bind the ends of the belt together, the side walls of the body having outwardly extending flanges at their distal edges.



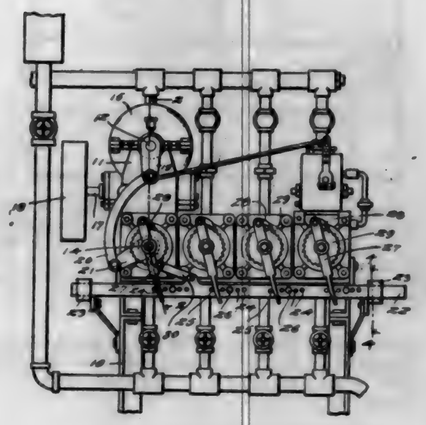
1,538,706. PACKING JAR. GEORGE H. KRAUSE, Zanesville, Ohio. Filed Feb. 1, 1923. Serial No. 616,330. 5 Claims. (Cl. 215—56.)

1. A packing or preserving jar having an annular seating ledge and a lid or cover for support by said ledge with an interposed cushioning gasket and adapted to be held in place by atmospheric pressure, said lid or cover being provided with an exteriorly accessible vent



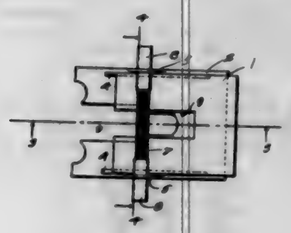
for the admission of atmospheric pressure and consisting of registrable perforations respectively in the lid or cover and said ledge.

1,538,707. ANIMAL TRAP. HENRY F. KRAUSE, Schulenburg, Tex. Filed Mar. 12, 1924. Serial No. 698,734. 1 Claim. (Cl. 43—69.)



An animal trap comprising a base open at top and bottom, bridges extending from the top edges of the end walls of the base inwardly between the side walls thereof, a removable floor plate normally closing the bottom of the base, a tunnel secured on top of the base and having its side walls depending into the base through the bridges, doors hinged between their ends at the inner edges of the bridges, the outer portions of the doors normally resting on the bridges and the inner portions thereof normally closing the top of the base, wings depending from the sides of the outer portions of the doors and extending through the bridges immediately adjacent the side walls of the tunnel, and a bait holder in the tunnel.

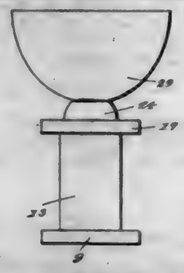
1,538,708. HASP LOCK. ANDREW LANGE, Braddock, Pa. Filed Apr. 11, 1924. Serial No. 705,908. 4 Claims. (Cl. 292—281.)



1. A fastening of the class described comprising a hasp, including front and rear portions, the rear portion being adapted to be secured to a door, the front portion having a lock formed therein for detachable engagement with a staple secured to the frame for said door, and a lock forming a hinge connection for the front and rear portions of said hasp and adapted for engagement with said staple.

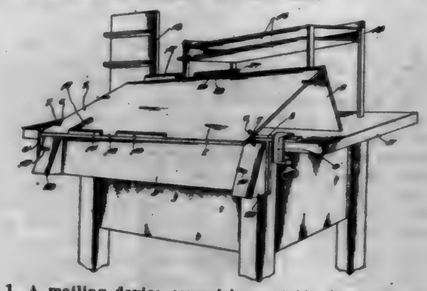
1,538,709. STOKER-VALVE-OPERATING MECHANISM. WILLIAM J. LAPWORTH, Pittsburg, Kans. Filed June 5, 1924. Serial No. 718,112. 5 Claims. (Cl. 110—104.)

1. Operating means for the valve mechanism of a mechanical stoker, the same embodying a slide bar, a ratchet wheel fast to each of the valve stems, a lever loose upon each of the valve stems and adapted to be actuated by means of the slide bar and provided with a pawl for co-operation with the teeth of the ratchet wheels and means carried by the slide bar relatively adjustable to admit of varying the operation of the several valves.



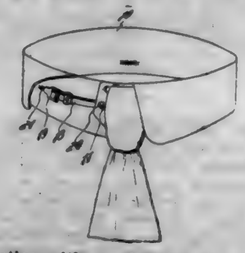
1,538,710. COIL-VIBRATOR FILING GAUGE. WALTER F. LUCAS, Brooklyn, N. Y. Filed May 18, 1924. Serial No. 713,037. 3 Claims. (Cl. 29—80.)

1. A device of the character and for the purposes specified, the same comprising upper and lower plates, a cooperating incline between the plates to effect vertical adjustment of the upper plate, and a file carried by the plates and directed in its movements thereby.



1,538,711. STONE STATUARY AND METHOD OF CONSTRUCTING SAME. ALLEN A. LYON, Belvidere, Ill. Filed May 25, 1923. Serial No. 641,461. 7 Claims. (Cl. 25—154.)

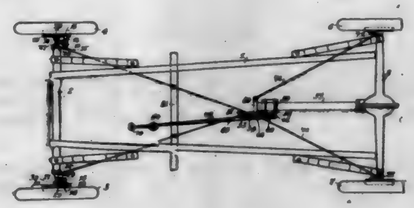
4. The method of forming a stand, comprising the sectional formation of a mold, studding the interior of said mold sections with ornamental particles, pouring plastic material into said mold sections to form the various portions of said stand, and assembling said mold-sections while the various sections of the stand



body are in a semi-plastic condition, and permitting said assembled mold sections to stand until the various portions of the stand have become united and hardened.

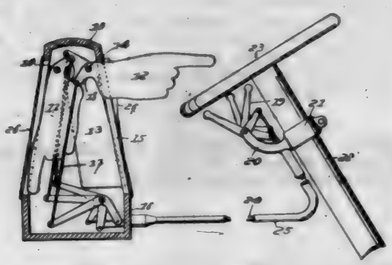
1,538,712. MAILING DEVICE. CHARLES E. MCCORMICK, Princeton, Ind. Filed July 27, 1923. Serial No. 654,208. 3 Claims. (Cl. 211—36.)

1. A mailing device comprising a table frame adapted to be clamped to a table, a body board, a plurality of edging strips carried by one face of said body board, a supporting board attached to the body board along one edge and extending transversely to the body board, said body board provided with notches extending inwardly from its end edges, pins carried by said table frame for engagement in said notches, substantially triangular shaped supporting blocks carried by said table frame, pins carried by said triangular supporting blocks, said body board provided with a second set of notches adapted to engage over the pins carried by said triangular shaped supporting blocks for supporting the body board in an envelope sealing position.



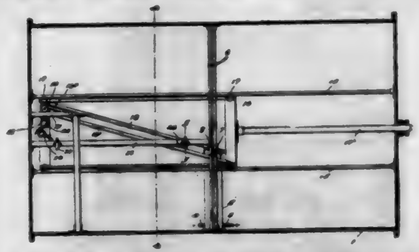
1,538,713. TIE HOLDER AND COLLAR FASTENER. WILLIAM MCMEANS, Scranton, Pa. Filed Oct. 31, 1923. Serial No. 672,002. 1 Claim. (Cl. 2—141.)

The combination with a collar having a button hole arranged adjacent one end thereof, and a button hole arranged at the side of the collar and in the inner fold thereof, of a button arranged in the first mentioned



button hole, an elastic tape adapted to be arranged between the folds of the collar, a loop carried by one end of the tape and adapted to receive said button, a buckle arranged at the other end of the tape, a headed stud projecting from said buckle and adapted to be received by the second mentioned button hole at the side of the collar for the purpose specified.

1,538,714. FOUR-WHEEL-BRAKE MECHANISM. CLYDE J. MCNERNY, San Francisco, Calif. Filed Apr. 7, 1924. Serial No. 704,800. 5 Claims. (Cl. 188—10.)

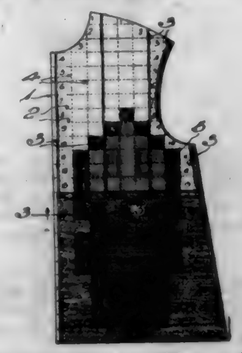


1. In a four-wheel brake mechanism for vehicles, a brake band applying device for each of the wheels of the vehicle, an operating member having its ends connected to the devices for the front wheels, a pair of operating members connected to the devices of the rear wheels, a pull lever having one end connected with the operating member for the front wheel devices, a pull lever connected to the operating members for the rear wheel devices, a pair of operating elements, one connected to that lever to which the operating members for the rear wheel devices are attached and the other of said elements connected to the other end of the pull lever to which the operating member for the front wheel devices is connected, and means for simultaneously operating said elements.

1,538,715. DIRECTION INDICATOR. JOHN A. MANN, Lockport, N. Y. Filed Sept. 17, 1921, Serial No. 501,321. Renewed Nov. 25, 1924. 1 Claim. (Cl. 116—63.)

A direction indicator having a casing adapted for support at the rear end of a car or vehicle, indicator members pivotally mounted within and housed by said casing for selective extension through slots in the walls thereof, bell-crank levers also mounted in the casing and respectively connected with said indicator members, and actuating levers arranged adjacent to the vehicle steering wheel and flexibly connected respectively with said bell-crank levers, the slots in the casing for the passage of said indicator members being provided with flexible guard flanges adapted for separation by the extension of said members.

1,538,716. AIR COMPRESSOR. WILLIAM L. MARTIN, Stamford, Tex. Filed Nov. 25, 1922. Serial No. 603,257. 5 Claims. (Cl. 230—27.)

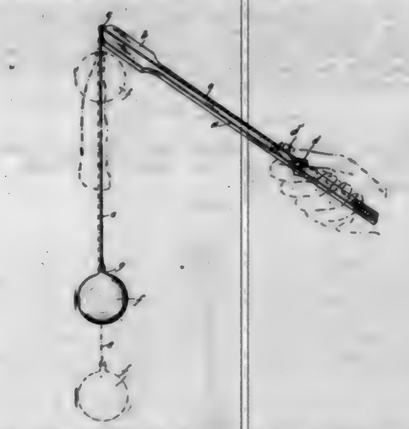


1. A device of the class described comprising a tank, a compressor therein having its inlet in communication with the atmosphere, a reciprocating member in the tank, means for reciprocating the same and means carried by said member for reciprocating the piston of the compressor.

1,538,717. GUN. GEORGE B. MEAD, San Francisco, Calif., assignor of one-fourth to Julius Griffin, San Francisco, Calif. Filed Mar. 29, 1924. Serial No. 702,969. 2 Claims. (Cl. 124—14.)

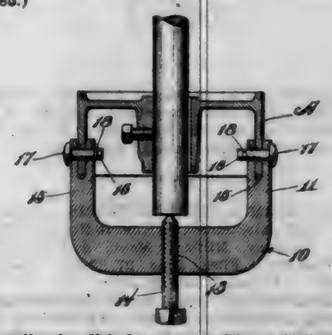
2. In a gun, a stock having a groove formed therein, an ammunition carrier adapted to be reciprocated on the groove, a U-shaped spring fastening clip adjustably secured to said stock, a resilient band secured to said clip and engaging said ammunition carrier, a U-shaped stop adapted to straddle said stock, eyes formed in said stop and adapted to encircle said spring on opposite sides of said carrier, a spring formed integral with said stop and adapted to enter into said stock, a V-shaped member pivoted to said stock, a link connected to said V-shaped member and to said band for moving said V-shaped member to a vertical position when said band is under tension, means for releasing said carrier, said means comprising a pivoted trigger mounted within said stock, a spring pressed latch adapted to be actuated by said trigger, and a dog formed on said latch and adapted to enter a recess formed in said carrier.

1,538,718. CROCHET PATTERN. EMMA BERNER MEHLEM, Chicago, Ill. Filed Sept. 22, 1924. Serial No. 739,221. 4 Claims. (Cl. 283—1.)



1. A crochet pattern comprising a backing sheet, parallel guide lines thereon, and rows of basting stitches engaged with said sheet and extending across said guide lines for the purpose set forth.

1,538,719. WEED EXTERMINATOR. THEODORO B. MENCHACA, Galveston, Tex. Filed Sept. 9, 1924. Serial No. 736,756. 1 Claim. (Cl. 126—271.2.)

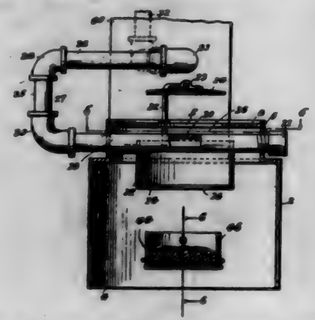


In a weed exterminator, a frame, wheels for said frame, a burner supported below the frame, a rotary brush supported below the frame and adapted to direct material toward the burner, said brush being located to the rear of said burner, and a roller engageable with the brush having its axis on substantially the same level as the axis of the brush and being disposed rearwardly of the burner.

1,538,720. COMBINED BAT AND BALL. WILLIAM H. MERCER, Portland, Oreg. Filed Aug. 28, 1923. Serial No. 659,756. 3 Claims. (Cl. 273—95.)

1. A toy consisting of a bat, a ring slidably mounted on the handle end of said bat, an elastic cord having one end fastened to said ring and its other end passing through an eye provided on the head of said bat, and a resilient ball to which the free end of said cord is attached.

1,538,721. TRANSMISSION-CLUTCH-DISK-DRUM PULLER. FRED MERDIAN, Vancouver, Wash. Filed May 27, 1924. Serial No. 716,239. 2 Claims. (Cl. 29—85.)

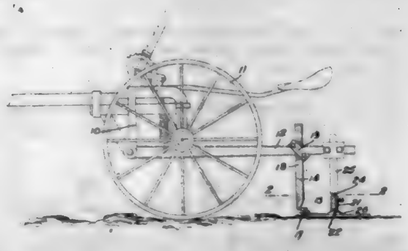


1. A puller for disk drums comprising a U-shaped body to provide parallel arms, the arms at their extremities being longitudinally slotted, the slots extending to the ends of the arms and the ends of the arms being transversely apertured, pins adapted to pass through the apertures, and a centrally disposed screw extending parallel to the arms and between the same.

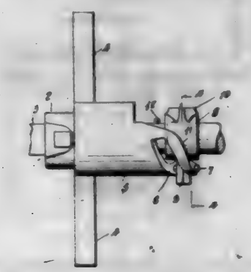
1,538,722. IRONING-BOARD COVER. MARY E. MERRICK, Milford, Ind. Filed Apr. 28, 1924. Serial No. 709,645. 1 Claim. (Cl. 68—10.)

The combination with an ironing board, of a cover and a pocket secured to the cover, said pocket being open at the top and extending downwardly along the edge of the board.

1,538,723. COAL-OIL BURNER. CHARLES H. MILLER, Huntington, Ind. Filed Feb. 16, 1923. Serial No. 619,452. 2 Claims. (Cl. 158—64.)



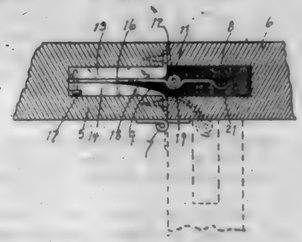
2. An oil burner of the class described comprising a cylindrical base member open at its bottom and having a head member formed on the top thereof, said head member having a central circular opening therein, a draft check member centrally supported in the upper portion of said base member below the head, said draft check member being cup-shaped in design and having a central opening in its bottom concentric with the opening in the top of the head, a fuel supply pipe, a vaporizing pipe connected to the latter and extending diametrically through the head of said base member, said vaporizing pipe having a jet formed in the top thereof concentric with the aforesaid openings, the portion of the device surrounded by said head member above the vapor pipe constituting a generating chamber, a starting member including a cup-shaped receptacle pivotally supported within said base member adjacent the bottom thereof and a handle for manually actuating the same, and a flame deflector supported above the head of the base member adapted for position over the opening in the top thereof, as and for the purposes described.



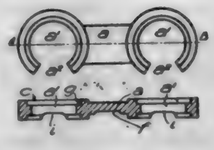
1,538,724. SURFACING ATTACHMENT FOR CULTIVATORS. HENRY H. MILLS, Maynard, Minn. Filed May 25, 1922. Serial No. 563,602. 2 Claims. (Cl. 97—144.1.)

1. A ground leveling attachment for cultivators of the type which include a draw-bar having a depending shovel shank provided with a reduced lower end, said attachment including a vertical attaching shank, a pair of horizontal blades pivotally connected at their forward ends to the lower end thereof for relative lateral swinging movement, said blades having vertical spaced openings

therein, a cross bar having slotted opposite ends adapted for registry with the openings in the blades, means adapted to extend through said slots and openings for adjustably connecting the blades in rearwardly diverging relation, and a socket member provided centrally on the upper side of the cross bar for receiving the reduced lower end of the shovel shank whereby to hold the blades at their rear ends against upward movement.



1,538,725. SAFETY STARTING CRANK. LOUIS T. MITCHELL, Licking, Mo. Filed May 12, 1924. Serial No. 712,802. 4 Claims. (Cl. 123—185.)



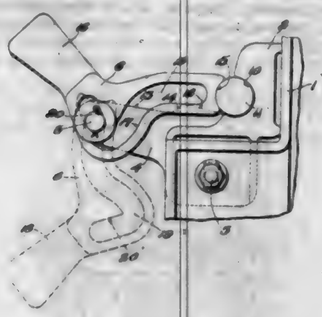
3. In a safety starting crank, a bearing for the shaft of said crank having an extension in which is formed a helical slot, a collar loosely mounted upon the shaft of the crank and having a ratchet connection therewith and formed with offstanding projections, the one operating in the helical slot and the other forming a stop to limit the outer clockwise movement of the crank when the engine back fires.

1,538,726. DOOR-RETAINING SPRING. EDWARD A. MORAN, Everett, Wash. Filed Mar. 7, 1924. Serial No. 697,661. 4 Claims. (Cl. 292—77.)

1. In a device of the character described a plurality of castings, a spring having one end interposed between said castings, one of said castings being curved, semi-circular portions formed in said spring at a point beyond the outer margin of said castings said semi-circular portions being spaced one from the other, substantially as and for the purpose specified.

1,538,727. DEVICE FOR THE REMOVAL OF INTERNAL-COMBUSTION ENGINE VALVES. GEORGE JAMES MORGAN and RICHARD MILLWARD MORGAN, Cefn Coed, near Merthyr Tydvil, Wales. Filed Dec. 12, 1922, Serial No. 606,537. Renewed Mar. 10, 1925. 3 Claims. (Cl. 29—86.3.)

1. A valve spring compressing device consisting of a pair of complemental separate plates adapted for superimposed insertion beneath the valve spring cups, said plates being so constructed that they may be pried apart by a separate tool or implement.



1,538,728. HOLDER. BETTIE ABELL MULLER, Tacoma, Wash. Filed July 10, 1924. Serial No. 725,300. 5 Claims. (Cl. 15—150.)

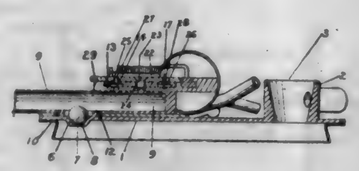
I. A holder of the character described, including a pair of jaws, each jaw comprising a group of wires, loops formed adjacent the upper ends of said groups, and a pivot pin passing through said loops.

1,538,729. BEAM LOCK FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed June 27, 1923. Serial No. 648,003. 7 Claims. (Cl. 64—10.)

1. A beam lock for looms having, in combination, a seat having a bracket and a bolt, the bolt and bracket having cooperating parts formed to force the front end of the bolt into locking position when the bolt is raised during a portion of the forward movement of the bolt,

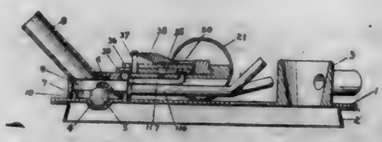
and to force the bolt into locking position when the bolt is depressed during the latter part of its forward movement.

1,538,730. DEVICE FOR CONVERTING LIQUIDS INTO UNIFORM DROPS. ALBERT OBERSOHN, Berlin-Charlottenburg, WILHELM WACHTEL, Berlin, DANIEL SAKOM, Wiesbaden, and PAUL ASKENASY, Karlsruhe, Germany. Filed Aug. 7, 1924. Serial No. 730,783. 3 Claims. (Cl. 83—91.)



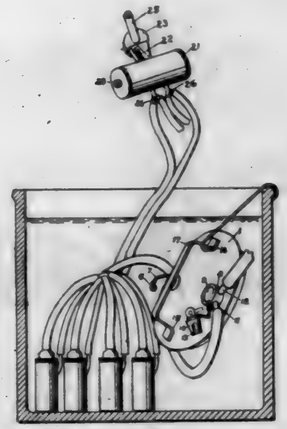
1. A device for converting liquids into uniform drops consisting of a container for the liquid having an opening in its bottom, and a pin passing through said opening of a predetermined diameter to permit the passage of the liquid therethrough at a predetermined rate, the lower end of said pin being cut off at substantially a right angle to present a drop-forming surface of predetermined area.

1,538,731. TEAT CUP FOR MILKING MACHINES. HENRY CLYDE ODEN, Columbus, Ohio, assignor, by mesne assignments, to Pine Tree Milking Machine Company. Filed July 28, 1919. Serial No. 313,885. 1 Claim. (Cl. 31—85.)



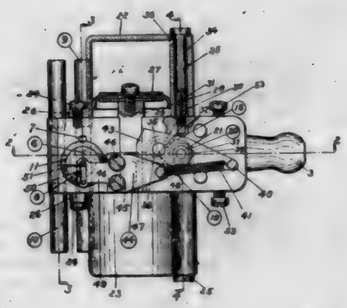
A teat cup comprising a removable transparent nipple bottom, an external shoulder on said bottom, an external rigid casing, an internal elastic cylinder fitting over said shoulder on said nipple bottom, an internal shoulder member positioned adjacent the lower end of said casing and adapted to engage said elastic cylinder, internal screw threads on the lower end of said member and an externally threaded plug adapted to be screwed into said internal threads so as to clamp said external shoulder and the elastic cylinder fitting thereover between said plug on one side and said internal shoulder on the other side.

1,538,732. MILKING MACHINE. HENRY CLYDE ODEN, Columbus, Ohio, assignor, by mesne assignments, to Pine Tree Milking Machine Company. Filed Aug. 14, 1919. Serial No. 317,418. 3 Claims. (Cl. 31—62.)



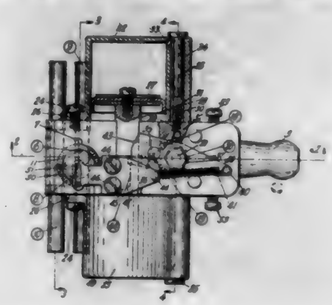
1. A pulsator for milking machines having conduits for attachment to pulsating teat cups comprising an element reciprocable by fluid pressure, one set of conduits for varying the fluid pressure in said element to effect reciprocation, another set of conduits for varying the fluid pressure in said pulsating teat cups, and controlling means for said sets of conduits, the controlling means for the pulsating cups being interposed between the main vacuum line and the means for controlling the varying of the fluid pressure to effect said reciprocation, so that any moisture leaking into said pulsator conduits will pass to the main vacuum line without reaching said reciprocable element.

1,538,733. MILKING MACHINE. HENRY CLYDE ODEN, Columbus, Ohio, assignor, by mesne assignments, to Pine Tree Milking Machine Company. Filed Aug. 27, 1919. Serial No. 320,096. 10 Claims. (Cl. 31—70.)



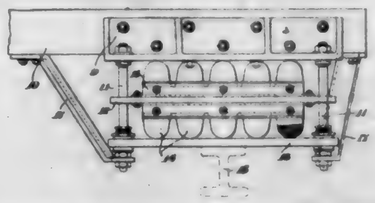
1. A milking machine of the type designed to supply vacuum to teat cups comprising a pulsator comprising an element reciprocable by the varying of the fluid pressure alternately at opposite ends thereof, conduits for effecting the subjection of the ends of said elements alternately at such variations, conduits for subjecting said teat cups to varying degrees of fluid pressure, conduits for connecting the teat cups to vacuum, and a single valve for rendering said conduits effective at proper times, said conduits and valve structure being so constructed that the respective connections when made between the vacuum and pulsator ends and between the vacuum and said teat cups lead to their proper points independently of each other.

1,538,734. MILKING-MACHINE APPARATUS. HENRY CLYDE ODEN, Columbus, Ohio, assignor, by mesne assignments, to Pine Tree Milking Machine Company. Filed Aug. 27, 1919. Serial No. 320,097. 2 Claims. (Cl. 31—58.)



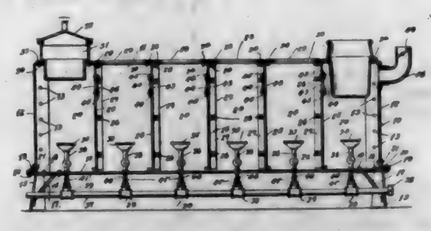
1. In milking machine apparatus, a milk pail cover comprising two separable parts, one part embodying the body of the cover, a check valve and a milk valve casing, and the other part embodying a pulsator, conduit structure, valve structure and the upper portion of the check valve casing, said two parts being separable as units from each other.

1,538,735. MILKING MACHINE. HENRY CLYDE ODEN, Syracuse, N. Y., assignor, by mesne assignments, to Pine Tree Milking Machine Company. Filed Mar. 10, 1921. Serial No. 451,252. 18 Claims. (Cl. 31—33.)



1. In a milking machine, a claw structure comprising a milk claw, and an air claw said milk and air claws being designed to interlock but to be capable of slight relative movement while so interlocked.

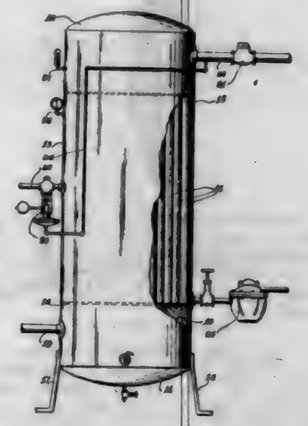
1,538,736. MILKING MACHINE. HENRY CLYDE ODEN, Columbus, Ohio, assignor to Pine Tree Milking Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 10, 1921, Serial No. 451,252. Divided and this application filed Sept. 6, 1924. Serial No. 736,365. 21 Claims. (Cl. 31—70.)



1. In a milking machine, a valve structure comprising a valve held to its seat by vacuum, and an operating arm supported at its front and rear by means independent of said valve and positioned above the valve seat.

1,538,737. SHOCK-ABSORBING DEVICE. PATRICK O'FLYNN, Pirbright, England. Filed Apr. 28, 1924. Serial No. 709,670. 5 Claims. (Cl. 267—63.)

1. A shock absorbing construction for vehicles including a relatively fixed member having guide means, a relatively movable member engaging said guide means, a floating member also engaging said guide means and arranged between said first named members, and resilient elements embraced by said floating means and constituting a spring buffer between said relatively fixed and movable members.



1,538,738. FOOD WARMER. ARTHUR S. OLDHAM, Miami, Okla. Filed Jan. 17, 1924. Serial No. 686,900. 3 Claims. (Cl. 126—39.)

1. A warmer for foods or the like having a casing, said casing being provided with vertical partitions affording individual warming compartments, containers, means to support the containers in positions depending into the compartments, individually controlled heating means

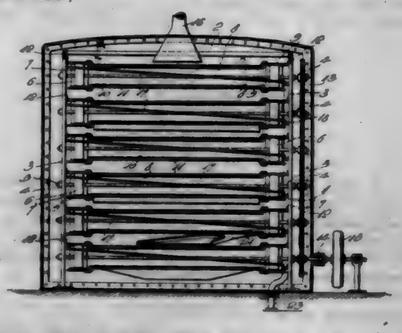
disposed in each compartment, and means associated with said partitions normally preventing communication between them operable to establish communication between each compartment and the remaining compartments.

1,538,739. PROCESS FOR DEHYDRATING OIL. HENRY FREDERIC OWEN, Maricopa, Calif. Filed Dec. 10, 1923. Serial No. 679,751. 10 Claims. (Cl. 196—5.)

8. The process of dehydrating oil which consists in continuously passing oil through a heater in a stream, characterized by confining said stream in a conduit, whirling said oil in said stream, transmitting heat to said stream, and separating the water from the oil.

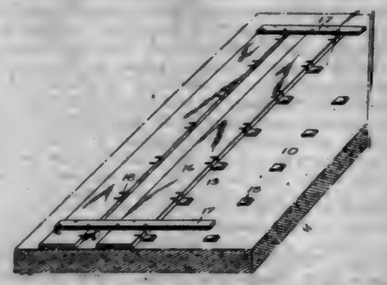
1,538,740. BATH-SPONGE DEVICE. CARL PETERSEN, New York, N. Y. Filed May 17, 1924. Serial No. 714,086. 3 Claims. (Cl. 15—244.)

1. A bath sponge device, which includes a sponge, a layer of rubber formed on the upper portion of said sponge, a wire mesh embedded in the rubber layer, the ends of the wire extending beyond the rubber material, a plate covering the top of the sponge, and a flanged ring embracing the sides of the upper portion of the sponge, said ring having a groove therein in which the ends of the wire engage, the flange of the ring holding the plate on top of the sponge.



1,538,741. LATHERING DEVICE. GUST WILLIAM PETERSON, Long Beach, Calif. Filed Sept. 28, 1924. Serial No. 739,430. 2 Claims. (Cl. 15—135.)

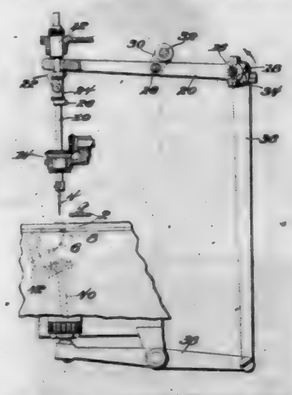
1. A lather spreader and beard softener including an applicator of soft compressible material having an axial opening, a supporting plate on which said applicator is fixed, a pair of discs held by said plate, one of which discs has an axially projecting tube, and a valve member shiftable between said discs, the discs and said plate having register openings communicating between the said



tube and the axial opening of the applicator and forming therewith a feed channel for which said valve acts as a cut-off.

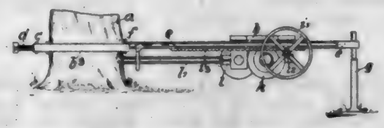
1,538,742. SELF-CLEANING FILTER. JAMES ALBERT PRICE, Dallas, Tex., assignor to American Sulphur & Fertilizer Company, Inc., Dallas, Tex. Filed May 26, 1924. Serial No. 716,014. 3 Claims. (Cl. 210—198.)

3. In a filter, the combination of a pair of horizontally disposed shafts arranged in spaced parallel relation, pulleys fixed upon the ends of said shafts, belts passing around said pulleys, rigid strips secured adjacent their ends to said belts and extending between the same, the intermediate portions of said strips being offset inwardly, and a filtering apron secured to said strips.



1,538,743. PROCESS FOR LAYING WOODEN FLOORS AND THE LIKE ON A CONCRETE BASE. CLYDE W. PRICKETT, Winterset, Iowa. Filed Feb. 27, 1922. Serial No. 539,701. 9 Claims. (Cl. 72—101.)

2. A process comprising the forming of a plastic base, inserting therein from above with a vertical movement stiff legs of preformed clips having sleeper engaging portions lying flat above the base and provided



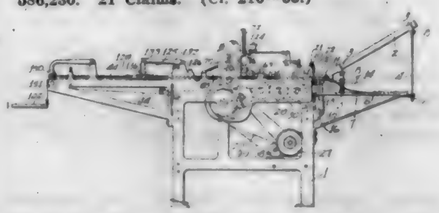
with a connecting piece, then using the base as a floor during further building operations, then bending portions of the clip to upright position, securing sleepers thereto and securing a wooden floor to the sleepers.

1,538,744. SEWING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Continuation of application Ser. No. 187,194, filed Aug. 20, 1917. Patent No. 1,492,084, dated Apr. 29, 1924. This application filed Nov. 11, 1919. Serial No. 337,147. 6 Claims. (Cl. 112—157.)

1. A stitch forming mechanism having, in combination, a needle carrier, a lever, a link having one end pivoted to one end of the lever and the other end pivoted to the carrier for oscillating the carrier in unison with the end of the lever, a crank engaging the other end of the lever, and a shiftable fulcrum for the lever.

1,538,745. APPARATUS FOR PREPARING LIVING TREES FOR COLORING THE WOOD. OTTO REIMANN, Charlotteuburg, near Berlin, Germany. Filed Mar. 21, 1923. Serial No. 626,609. 1 Claim. (Cl. 144—92.)

The improved apparatus for coloring the wood of living trees, comprising in combination a square frame with a hinged member and two perforated adjacent fixed members, said frame being adapted to be tightened upon the trunk of the tree, clamping screws in said frame, a framework adapted to be connected with either of the perforated fixed members of said trunk frame and to be moved parallel with itself along said member, a carriage upon said framework, a plurality of parallel drills upon said carriage, a motor upon said carriage for driving said drills, and means for moving said carriage towards or away from the trunk of the tree.

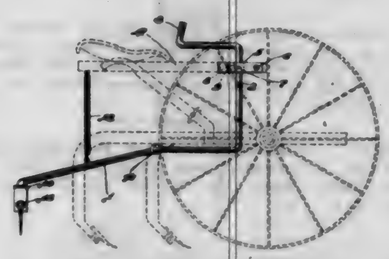


1,538,746. PLUMB BOB. CHARLES POWELL RENEAU, Tunica, Miss. Filed Apr. 27, 1923. Serial No. 635,121. 1 Claim. (Cl. 33—217.)

A plumb bob construction, which includes a stem, a head on the lower end of said stem and threads on the upper end of said stem, a tapered bob weight slidable on the stem and supported on the head, said weight having a shoulder on its upper surface, a shell having one end closed and apertured to embrace the stem, the open end of the shell resting on the weight, a plumb-line spool slidably and removably disposed within the shell around

the stem, a clamp nut engaging the threaded upper edge of the stem and bearing against the closed end of the shell to hold the shell, the spool and the weight on the stem, said nut having a key slot therein, and a swivel link attachably associated with said slot for the purpose set forth.

1,538,747. SEALING MACHINE. DONALD RICHARD ROBINSON, Chicago, Ill., assignor to Rose Mary Robinson, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,230. 21 Claims. (Cl. 216—55.)

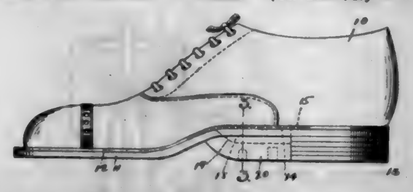


1. A feeding mechanism comprising endless belts, means for intermittently actuating said belts, adjustable rubber members adapted to be moved toward or away from said belts, and metal casings partially enclosing said members whereby a small portion of said members adjacent to the belts is left exposed.

1,538,748. OIL GAUGE. EDWIN HAROLD ROSENBLAD, San Francisco, Calif. Filed Sept. 9, 1922. Serial No. 587,115. 1 Claim. (Cl. 73—82.)

In combination with a crank case of an automobile engine, a hollow casting connected to said crank case, the interior of this casting having communication with the interior of said crank case, an indicator housing positioned in the floor of an automobile and adapted to be visible from the driver's seat, indicating means pivoted in said housing, a plurality of vertical grooves formed in the sides of said casting, a float mounted in said casting, lugs formed on said float and adapted to move in said grooves, a spiral rod extending through said float, said float having guide means therein adapted to rotate said rod when said float moves thereover, a vertical rod secured to the upper end of said spiral rod, a coiled wire secured to the upper end of said vertical rod, the opposite end of said wire being attached to said indicating means.

1,538,749. CULTIVATOR ATTACHMENT. HARLEY SCHOON, Glasford, Ill. Filed Mar. 6, 1922. Serial No. 541,524. 1 Claim. (Cl. 97—6.)

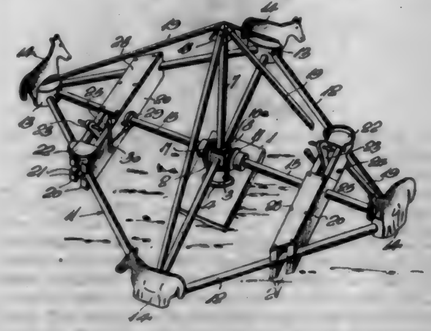


A plant uncovering attachment for cultivators comprising an attaching bar, an operating rod connected thereto, a cross rod attached to one end of said operating rod, couplings carried by said cross rod, rake heads carried by said couplings and including inverted U-shaped backs, tooth carrying rods rockably carried by said backs, inverted U-shaped teeth carried by said rods, and pressure plates adjustably connected to said rods and pressing against the bight portions of said teeth to hold them in place.

1,538,750. SPARK PLUG. SALVATORE SCOGNAMILLO, New York, N. Y. Filed Aug. 25, 1922. Serial No. 584,283. 7 Claims. (Cl. 123—169.)

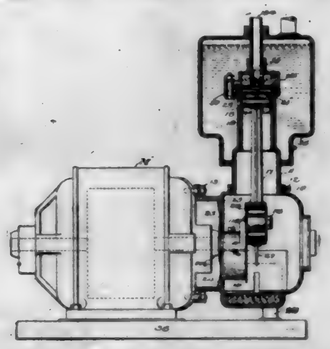
1. In a spark plug, a body with an upper transparent closing means to render the flash of the electrodes exteriorly visible at the top of the plug to determine the character of operation of the electrodes, an electrode-carrying means removably applied to the lower end of the body and having a flat flanged bottom and an electrode holding cup rising from the upper side of said bottom with electrodes extending radially thereinto, the cup being fully open at the top to expose the flash of the electrodes upwardly through the body, and an electrode device extending downwardly through the body and into the open top of the said cup, the cup being of less diameter than the interior of the said body and the latter adjacent to and around the cup being formed with openings.

1,538,751. SHANK STIFFENER. EUGENE SEAVEY, New York, N. Y., assignor to C.-V. Products Corporation, a Corporation of New York. Filed July 30, 1923. Serial No. 654,680. 7 Claims. (Cl. 36—76.)



6. A shank stiffener comprising a pair of tracks, means for attaching said tracks to the arch portion of a shoe, and a tread member having grooves for co-action with said tracks for sliding movement thereon.

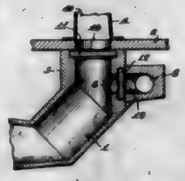
1,538,752. SHOE-SEWING MACHINE. THOMAS H. SMELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 22, 1916, Serial No. 138,399. Patent No. 1,355,856, dated Oct. 19, 1920. Divided and this application filed Apr. 19, 1919. Serial No. 291,294. 9 Claims. (Cl. 112—41.)



1. A shoe sewing machine having, in combination, stitch forming devices including a curved hook needle, a looper, a looper lever, means for heating the lever to heat the looper, an arm secured to the lever, a thread gripping device carried by the arm, and means whereby the length of the arm between the gripping device and the lever may be adjusted.

1,538,753. CHILD'S MERRY-GO-ROUND. GEORGE EDWARD SMITH, Hudson, Colo. Filed July 11, 1923. Serial No. 650,967. 5 Claims. (Cl. 272—33.)

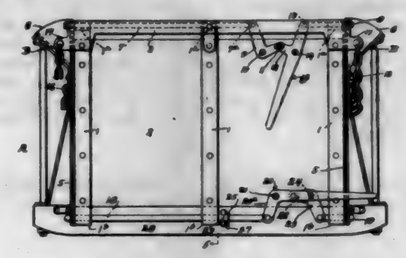
1. A children's merry-go-round comprising a rotatably mounted horizontally disposed frame having angularly disposed side bars, elongated supporting members extending obliquely across the corners of said frame and each secured at its ends to two adjacent side bars, of said frame, to relatively brace the same, seats carried by said supporting members, and means for rotating said frame including handles mounted on said supporting members.



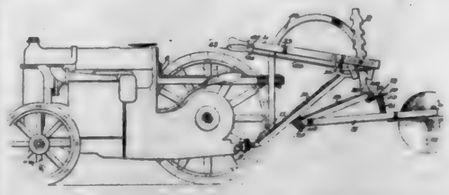
1,538,754. ELECTRIC-MOTOR-DRIVEN COMPRESSOR. GREGORY JOHN STOHERR, East Orange, N. J. Filed June 30, 1923. Serial No. 648,727. 12 Claims. (Cl. 230—6.)

1. A compressor of the class described, comprising a piston and cylinder, a casing on said cylinder forming a container for oil and drive elements, said casing having means whereby to secure it to an electric motor so that said drive elements will be actuated by the shaft of the electric motor, said casing at one end thereof affording an inlet for air to said oil container, and means in said oil container and near the air inlet to said chamber and forming an air baffle within the container to maintain separated the oil passing to the cylinder through said oil container.

8. A compressor assemblage comprising an air tank, a brace having clamp means holding it to the tank, a clamp band mounted on the tank at the upper end, a base mounted on said clamp band, a motor, and a compressor pump rigid with the motor casing, said motor and pump supported on said second-mentioned base.



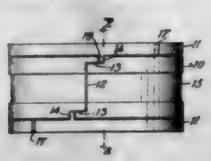
1,538,755. COMBINED RADIO AND PHONOGRAPH CABINET CONSTRUCTION. MORRIS STETTNER, Brooklyn, N. Y. Filed Jan. 26, 1924. Serial No. 688,769. 2 Claims. (Cl. 179—100.1.)



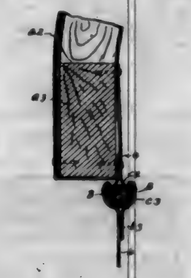
1. A combined radio and phonograph cabinet construction, which comprises a body portion having a main sound passage therein, a plurality of other body portions having auxiliary sound passages therein connected to the main sound passage, slidable apertured members in said body portions adapted to be interposed between the main passage and the auxiliary passages, and means for moving said slidable members simultaneously to alternately register their respective apertures between the main sound passage and the respective auxiliary passages whereby the flow of sound between the main passage and the auxiliary passages can be selectively controlled.

1,538,756. DOUBLE-ACTING END GATE. JOSEPH STIFTAR, Pittsburgh, Pa. Filed Oct. 28, 1922. Serial No. 597,621. 2 Claims. (Cl. 296—51.)

1. In combination with a vehicle body, an end gate, means for hingedly securing the gate at its upper end to the body, locking rods slidably mounted on the lower end of the gate, means connecting said rods for simultaneously projecting and retracting them, members secured to the body and positioned to receive the outer end portions of the rods when projected, and cooperating means carried by one of the rods and the body for securing the lower central portion of the gate against outward movement away from the body when said rods are projected, said means being released when the rods are retracted.



1,538,757. COUPLING OR HITCH FOR TRACTORS. SAMUEL L. SWINDALL, Bare Beach, Fla. Filed Oct. 14, 1922. Serial No. 594,596. 1 Claim. (Cl. 97—47.)



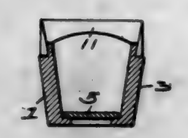
In combination with a tractor, supporting means mounted on said tractor, a main frame having flexible connections to the tractor, means carried by the supporting means for positively lowering and elevating the main frame, an earth working element, a tongue pivotally connected at its forward end to the main frame and carrying the earth working element at its rear end, and resilient connecting means between the main frame and the intermediate portion of the tongue for pressing the same downwardly.

1,538,758. PISTON RING. CLAUDE HUNTER, TAYLOR, Biloxi, Miss. Filed Sept. 17, 1924. Serial No. 738,231. 3 Claims. (Cl. 74—109.)

1. A piston ring comprising an intermediate split ring section and outer split ring sections, the intermediate section having an outer peripheral groove defining together with the cylinder wall a pressure receiving space for partially equalizing the fluid pressure on the opposite sides of the ring, whereby a pressure only slightly in excess of the inherent expansive action of the material from which the ring is formed, is exerted against the cylinder wall and interengageable means on the intermediate and outer sections of the ring for causing said outer sections to contract with the intermediate section for relieving the same of the greater part of the fluid pressure on the inner side, said means comprising complementary rabbeted portions on the confronting edges of the ring sections and interengageable means on the intermediate and outer sections for preventing relative rotation thereof, said means comprising a key or lug intersecting the rabbeted portion of each outer section and a recess in the opposite confronting edges of the intermediate section.

1,538,759. AUTOMOBILE CURTAIN. HORACE T. THOMAS, Lansing, Mich. Filed Apr. 5, 1923. Serial No. 629,957. 4 Claims. (Cl. 296—138.)

4. The combination with an automobile top, of a flexible valance depending from the edge of said top, and having a welt along its lower edge, and a curtain having a trough-like strip of rigid material at its upper edge, the material of said curtain covering said strip, said strip so covered being adapted to engage said welt.

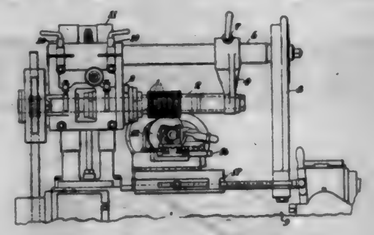


1,538,760. SHOCK-ABSORBING DEVICE FOR AUTOMOBILE VEHICLES. PAUL AIME TREFIER, Paris, France, assignor to himself and Societe P. Nicolle & Cie., Montreuil S/Bois, Seine, France. Filed Aug. 14, 1923. Serial No. 657,197. 3 Claims. (Cl. 188—130.)

1. A shock-absorber, comprising a pair of angularly-disposed arms mounted on a common pivot for relative swinging movement toward or from each other, each arm embodying a pair of spaced, parallel blades, the blades of one arm extending between those of the other arm; a pair of plates interposed between the adjacent blades of the first- and second-named arms and rigidly secured to the inner faces of the latter; a disk interposed between said plates and rigidly connected with the blades of the first-named arm; and a friction ring carried by said disk and constantly engaging the inner faces of the plates.

1,538,761. GRATE STRUCTURE. DONALD. S. VAN WAGENEN, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Benjamin F. Watkins, Philadelphia, Pa. Filed Feb. 23, 1921. Serial No. 447,199. 15 Claims. (Cl. 110—74.)

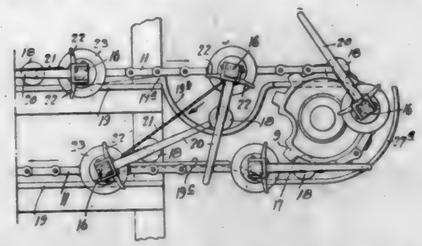
1. In a grate structure, an element adapted to be placed side by side and end to end with like elements to form a fuel-supporting surface, said element having at each end and at the side a substantially wedge-shaped spacer lug the point of which projects upwardly and lies at the end edge of the element.



1,538,762. MACHINE FOR ARRANGING PAPERS, CARDS, AND LIKE ARTICLES. SYLVANUS PERCIVAL VIVIAN, Chelsea, London, England. Filed Jan. 3, 1923. Serial No. 610,536. 8 Claims. (Cl. 40—28.)

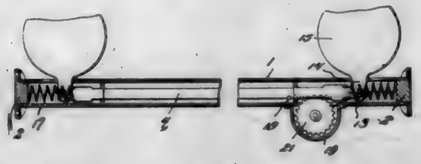
1. A machine for fanning out papers, cards, and the like articles, to exhibit the end margins of every such article in a continuous series, including means for subjecting the articles to a traveling movement, means cooperating with said first mentioned means to flex and reflex said articles during travel, and means for applying pressure to alternate sides of the articles during their flexing and reflexing.

1,538,763. METHOD OF MAKING MILLING CUTTERS. PAUL F. VOKAL, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 30, 1922. Serial No. 532,669. 9 Claims. (Cl. 76—101.)



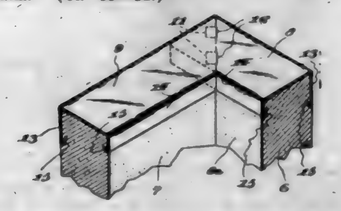
1. The method of forming a screw-slotting cutter having sharp pointed teeth provided with radial cutting faces, which consists in rotating a blank, in providing a spiral fluted hob having rows of teeth, the teeth in each row being staggered with respect to those in each adjacent row, in rotating the hob in timed relation to the rotation of the blank, and in effecting feeding movement between the blank and the hob.

1,538,764. CONVEYER FOR ENAMELING OVENS. JOHN R. WALD, Huntingdon, Pa. Filed Sept. 24, 1924. Serial No. 739,624. 11 Claims. (Cl. 198—150.)



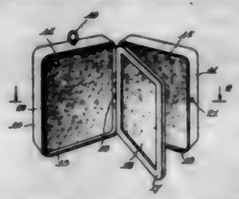
1. Conveyer apparatus comprising a continuous belt having superposed horizontal flights, trays pivotally

connected to said belt, means for normally maintaining said trays in horizontal position, means for tilting a tray of the upper flight downwardly to discharge the



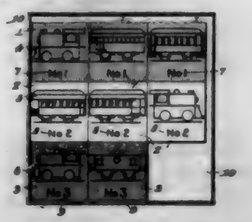
contents thereof, and means for tilting a tray on the lower flight upwardly from the plane of said flight, to receive said contents.

1,538,765. DIRIGIBLE HEADLIGHT. BURFOOT S. WARD, Cape Charles, Va. Filed June 4, 1924. Serial No. 717,765. 2 Claims. (Cl. 240—62.)



1. A dirigible headlight structure comprising a tube, cleats closing the ends of the tube and adapted to be applied to the fenders of an automobile machine, a bar movably mounted in the tube, said bar being provided at its side with a series of teeth, sleeves disposed over the end portions of the bar and having circular portions which bear upon the inner surface of the tube, the sleeves having flanges which are disposed along the sides of the bar and around the ends thereof, springs interposed between the cleats and the flanges of the sleeve, means for moving the bar, and lamps pivotally mounted and having arms which engage the sleeves.

1,538,766. LAUNDRY TUB. ERWIN O. WARNDORFF, Chicago, Ill., assignor to The Concrete Fixtures Company, Chicago, Ill. Filed Apr. 30, 1923. Serial No. 635,656. 1 Claim. (Cl. 68—31.)



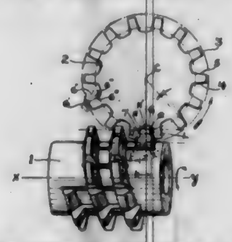
In a metallic rim for molded receptacles, the combination with a metallic section having one end portion squared and provided with spaced obliquely extending openings, of a second section having one end extending obliquely and overlapping the squared end of the first section, the obliquely extending end of said section being provided with tongues extending through said openings and bent back to securely connect the two sections, said sections having side walls provided with inturned flanges, the squared end of the first section and one side wall of the same being flatly engaged with the inner surface of one of the side walls of the second section.

1,538,767. FINGERPRINTING DEVICE. GEORGE H. WATSON, Medina, N. Y. May 5, 1924. Serial No. 711,149. 4 Claims. (Cl. 91—54.4.)

1. As a new article of manufacture, a printing device including a casing consisting of movably connected sections defining compartments, an inking pad in one of said compartments, and an ink eradicating element in the remaining compartment.

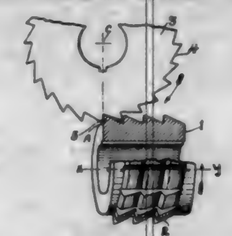
1,538,768. PUZZLE. ORSON E. WHEATON, St. John, N. Dak. Filed Feb. 24, 1923. Serial No. 620,981. 4 Claims. (Cl. 273—157.)

4. A puzzle comprising a rectangular receptacle, a pair of independent outer and an independent intermediate set of blocks slidably mounted in said receptacle, the number of the blocks of one outer set being less than the number of the blocks of the other set, said sets of blocks to be arranged in sidewise opposed relation, and each of the blocks of each set having its outer face provided with the pictorial representation of a part of a railway train whereby when the blocks of each set are slid to cooperative relation with respect to each other each set of blocks will form the complete pictorial representation of a railway train, the pictorial representation of the parts of a railway train on the blocks of the intermediate set of blocks being oppositely disposed with respect to the pictorial representation of the parts of a railway train on the outer sets of blocks whereby when the sets of blocks are assembled the complete pictorial representation of the train formed by the inner set of blocks will extend in an opposite direction with respect to the pictorial representation of the trains formed when the other sets of blocks are in cooperative position.



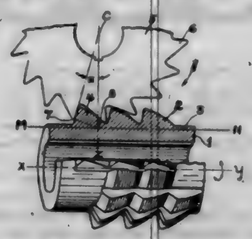
1,538,769. TIE MOUNT AND CARRIER. JOHN WESLEY WHITE, Butte, Mont. Filed June 18, 1924. Serial No. 720,850. 6 Claims. (Cl. 24—56.)

1. A tie mount and carrier constructed of wire and formed to provide a tie mount to permit the formation of a knot thereon, said tie mount involving resiliently connected front and rear sections the sections being



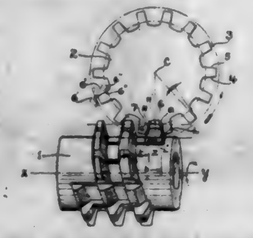
mounted for relatively resilient connection and the rear section being formed to provide relatively lateral resiliency, whereby the tie mount is adapted to exert pressure in at least two independent directions on the knot.

1,538,770. HOB. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1922. Serial No. 609,941. 25 Claims. (Cl. 29—103.)



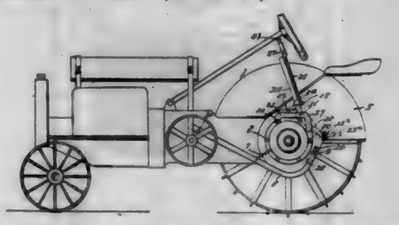
1. A hob for milling sprocket wheels, comprising teeth arranged in the form of a thread and having two formed cutting edges located on different teeth, the lead on the two sides of the hob teeth being different and the thickness of the teeth being progressively less from one end to the other end of the hob.

1,538,771. HOB. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1922. Serial No. 609,942. 24 Claims. (Cl. 29—103.)



1. A form hob, comprising teeth arranged in the form of a thread and having only one finishing cutting edge, the teeth having substantially straight cutting edges inclined with respect to the hob axis and the finishing cutting edge being located at one end of the hob.

1,538,772. HOB. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1922. Serial No. 609,943. 8 Claims. (Cl. 29—103.)

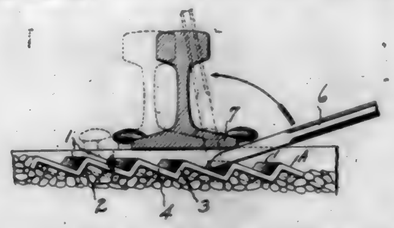


1. A hob having one finishing cutting edge and comprising teeth arranged in the form of a thread on a cylindrical body portion, the teeth having substantially straight cutting edges inclined with respect to the hob axis and the finishing cutting edge being located at the end of the hob.

1,538,773. METHOD OF HOBBING BLANKS. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1922. Serial No. 609,944. 10 Claims. (Cl. 90—4.)

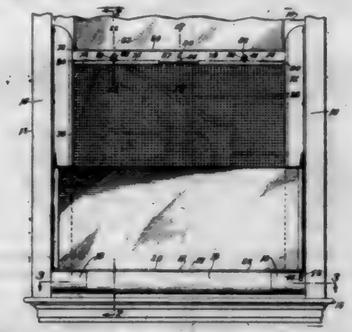
1. The method of cutting a blank, which consists in providing a hob having formed cutting edges, in locating the hob and the blank with respect to each other so that opposite sides of adjacent tooth spaces are finished in the same angular position of the blank, and in rotating the hob and the blank with respect to each other.

1,538,774. CLUTCH-LEVER CONTROL. JOSEPH WINKLER, Elkader, Iowa. Filed Nov. 23, 1923. Serial No. 676,599. 1 Claim. (Cl. 74—31.)



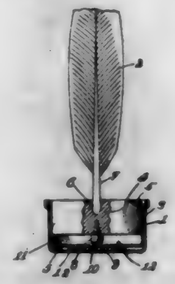
In a clutch lever control, a clutch lever, means for holding the clutch lever normally elevated at its outer end, an anti-friction roller on the clutch lever, a link having a slot to receive the anti-friction roller, a lever having ears, a plate trunnioned on the ears and having an aperture to receive the end of the link, means for securing the link to the plate, and means for holding the lever at different positions of adjustment.

1,538,775. TRACK LINER. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1923. Serial No. 682,769. 7 Claims. (Cl. 254—44.)



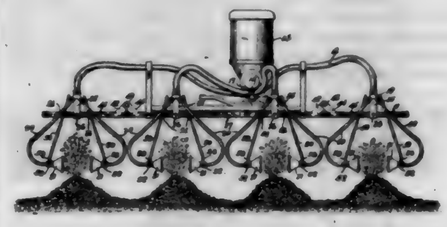
1. A corrugated fulcrum plate, the corrugations forming on its underside a series of spaced anchoring shoulders.

1,538,776. TRACK LINER. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1923. Serial No. 682,770. 6 Claims. (Cl. 254—44.)



1. A track liner plate having on its upper face a fulcrum shoulder extending diagonally across the plate.

1,538,777. ADJUSTABLE WINDOW SCREEN. ANTON ZEMAN, Camden, N. J., and GEORGE W. NEMEC, Philadelphia, Pa.; said Nemec assignor to said Zeman. Filed Dec. 11, 1920. Serial No. 429,941. 1 Claim. (Cl. 156—39.)

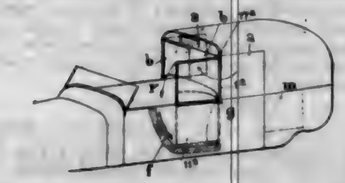


The combination with a window frame of a sash slidably mounted therein, a substantially tubular casing transversely mounted within said frame, said casing having a longitudinal screen opening and comprising, end sections of substantially U-shaped cross section with the upper and lower edges thereof beaded for longitudinal slidable adjustment, and an intermediate section of similar shape and correspondingly beaded for slidable longitudinal adjustment in relation to said end sections, transversely disposed end walls closing the opposite ends of said casing, laterally projecting ears on said end walls engaging the casing end sections, means adapted to securely fasten said ears to the end sections, a back wall longitudinally slidably mounted on said casing, said back wall comprising end sections turned over on one edge to form substantially U-shaped guides for longitudinal adjustment, and an intermediate section of substantially L-shaped cross section adapted for longitudinal adjustment in relation to said back wall end sections, a spring influenced roller rotatably mounted within said casing, a screen mounted on said roller adapted to be withdrawn from or redrawn into said casing thereby, uprights of substantially L-shaped cross section attached to opposite sides of the window frame, a downwardly extended wall on said upright provided with a hooked ear portion, a second wall adjacent the first mentioned wall spaced therefrom and having its lower end beaded, said hooked ear portion and beaded portion of said walls being adapted to clamp the end sections of the casing to the uprights, means adapted to detachably clamp the free end of said screen to said slidable window sash, manually controlled latch means adapted to restrain and lock said roller against back motion when said screen is withdrawn from the casing or be released and thereby unlock said roller for back motion when desired.

1,538,778. EXPLODING TOY. HARRY L. ADAMS, Ventnor, N. J. Filed Feb. 23, 1923. Serial No. 620,771. 1 Claim. (Cl. 46—46.)

In an exploding toy, a hammer and a feather carried thereby, the said hammer comprising a body or filler of light material having a socket in its upper side in which the quill of the feather is permanently secured, a wood screw secured in the body or filler at the center and against the underside thereof and having a rounded head projecting from said underside, and a cup-shaped sheet metal covering permanently secured on the body or filler and having a perforated bottom disposed against the head of the said screw and spaced thereby from the filler, and a cup-shaped anvil adapted for the snug arrangement therein of the sheet metal covering of the hammer.

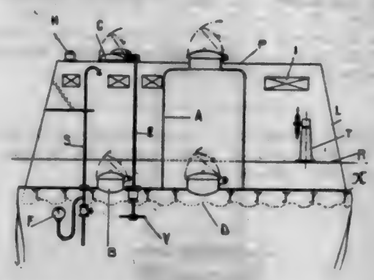
1,538,779. DUSTING MACHINE. CARL G. ALLGRUNN and EDGAR KNAPP, Middleport, N. Y., assignors to Niagara Sprayer Co., Middleport, N. Y., a Corporation of New York. Filed Oct. 26, 1921. Serial No. 510,631. 3 Claims. (Cl. 43—148.)



3. A plant dusting machine, comprising a wheeled supported platform, a receptacle supported on the platform and having a discharge nozzle having four members, a transversely extending bar at the rear end of the platform, and having two upwardly projecting brackets, a bar hinged to each end of the first bar to swing upwardly or in alinement with said bar, and each having an upwardly projecting bracket, a flexible pipe secured to each member of the nozzle and each having at its end a two-way member, secured to the upper end of each bracket, a pair of flexible pipes having nozzles at their ends and secured to each member of the first named pipes, and means for securing the nozzle carrying pipes to the said bars, whereby the nozzles of each pair of nozzles can be adjusted vertically and moved toward and from one another.

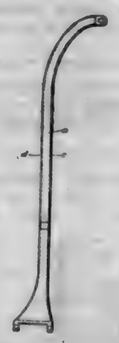
1,538,780. SILO. ADOLPH I. ANDERSON, Zumbrota, Minn. Filed July 25, 1923. Serial No. 653,798. 2 Claims. (Cl. 72—6.)

1. A silo construction comprising a reinforced outer wall of hollow tile, inwardly projecting elements thereon, sheets of insulating material suspended from said elements and disposed in spaced relation and with their vertical and horizontal edges overlapping, strips secured to said elements and between the spaced sheets, said strips being rounded to conform to the inner contour of the outer wall, metal lathing secured to the innermost sheet of insulating material by means of said projecting elements and a plastic facing on said metal lath.



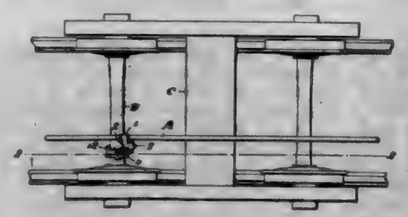
1,538,781. VEHICLE BODY. GUSTAVE BAEHR, Paris, France. Filed Jan. 27, 1922. Serial No. 532,177. 6 Claims. (Cl. 296—45.)

1. In an automobile or other vehicle, the combination with a body provided with a hinged door and a pocket in the side of the body in front of the door, and an extensible top for the body, of a pillar provided with wings and pivoted at one end to the body at the upper rear edge of the pocket to fold into the pocket or swing in an upright position in engagement with the top when extended, means for locking the upper end of the upright to the front of the top, and a window, pivotally mounted on one of the wings of the pillar to swing about the same and above the door when said pillar is in an upright position.



1,538,782. TURRET FOR SUBMERSIBLE VESSELS, SUITABLE EITHER AS A STEERING HOUSE OR WATER-BALLAST TANK. VINCENZO DE FEO, Spezia, Italy, assignor to Società Anonima Ansaldo San Giorgio, Spezia, Italy. Filed Mar. 1, 1924. Serial No. 696,227. 3 Claims. (Cl. 114—16.)

1. In submarines the combination with a watertight false turret surrounding the proper turret, of means for permitting the water to escape or enter therein, means for supplying compressed air and means for allowing said



air to escape, said false turret being thereby adapted to be utilized as desired either as a water-ballast tank or as an habitable steering and like room.

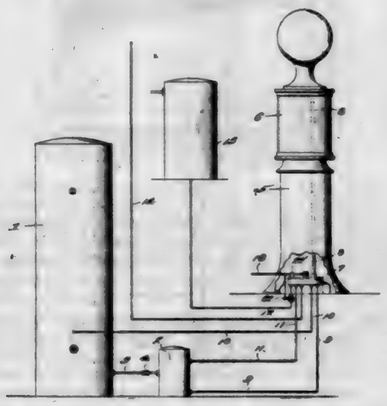
1,538,783. DAVIT ARM. KARL DINGERTZ, Alingsas, Sweden. Filed Aug. 8, 1923. Serial No. 656,376. 1 Claim. (Cl. 9—22.)

A davit arm for luffing davit made of cast steel or rolled iron and formed into a rectangular hollow section by means of welding in the longitudinal direction of the arm.

1,538,784. AUTOMATIC TRAIN CONTROL. CHARLES D. DUKE, Catlettsburg, Ky. Filed Oct. 4, 1924. Serial No. 741,622. 1 Claim. (Cl. 246—170.)

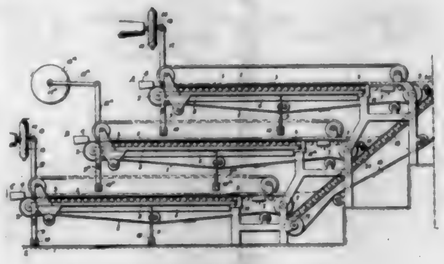
Means for stopping a train by the derailment of a truck thereof comprising a cock located in the air line, a depending member connected with the arm of the cock and having a ring-shaped lower end embracing an axle of the truck and rings clamped to the axle, one on each side of the ring part for preventing swinging movement of the depending part.

1,538,785. PYROTECHNIC ARTICLE. HENRY B. FARRR, Brooklyn, N. Y., assignor to J. Ben Decker, Elkton, Md. Filed June 18, 1924. Serial No. 720,827. 3 Claims. (Cl. 102—25.)

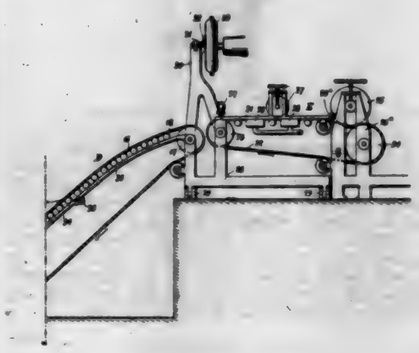


1. A pyrotechnic article in the form of a small lozenge or the like having an adherent coating edibly obnoxious, substantially as described.

1,538,786. VANITY BOX. LOUIS FELDMANN, Brooklyn, N. Y. Filed Nov. 3, 1923. Serial No. 672,566. 1 Claim. (Cl. 132—83.)



A vanity case having a cover formed with an upwardly or outwardly pressed area, said area being formed with spaced slots, and means for holding a picture or the like upon said area comprising a rim member disposable over the picture whereby to confine the same against said area, said rim member being formed with spaced depending tongues adapted to be inserted through said slots and clinched for preventing removal.

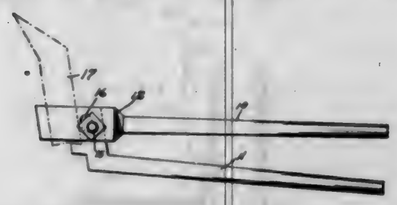


1,538,787. VALVE. OSWALD LECQUORTTE FILLMORE, Harriman, Tenn. Filed Nov. 3, 1922. Serial No. 598,938. 1 Claim. (Cl. 221—100.)

An apparatus of the class described comprising a main tank, an auxiliary tank arranged to be filled from the main tank under the action of gravity, a delivery chamber, a valve casing, a pipe connecting the same with the upper part of the delivery chamber, a pipe connecting the casing with the auxiliary tank, a pipe connecting the casing with the main tank, an air tank, a pipe connecting the same with the valve casing, an air pipe connecting the valve casing with the auxiliary tank, a vent pipe connected with the valve casing, a valve in the casing having a port therein for connecting the delivery pipe with either the pipe leading to the auxiliary tank or with the main tank and also having passages therein for connecting the air tank with the auxiliary tank or the auxiliary tank with the vent pipe, a handle for operating the valve and a valve for controlling the flow of air from the air tank into the casing, said valve being operated by the handle.

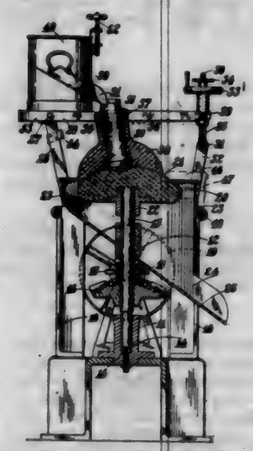
1,538,788. METHOD OF AND APPARATUS FOR MAKING MULTIPLE-PLY PAPER. EZRA B. FISH, Kansas City, Mo. Filed Nov. 1, 1921. Serial No. 512,148. 21 Claims. (Cl. 92—39.)

7. The method of making multiple-ply paper which comprises flowing paper pulp onto web-forming aprons to form a plurality of wet paper pulp webs and shaking said aprons during the formation of the webs, supplying fluid to said webs after they have been formed, superposing the webs, shaking the superposed webs while wet and uniting the webs to produce a unitary multiple-ply paper sheet.



1,538,789. FLOAT AND METHOD OF MAKING SAME. CHARLES F. FLEMMING, Akron, Ohio. Filed Aug. 26, 1921. Serial No. 495,454. 10 Claims. (Cl. 18—53.)

1. An article of manufacture composed of hard vulcanized rubber molded to the desired size and shape having a cellular structure with the walls of the cells intact, and having a substantially smooth imperforate exterior surface.



1,538,790. TONGS. JACOB S. FORNEY, Mannington, W. Va. Filed June 20, 1924. Serial No. 721,343. 1 Claim. (Cl. 81—3.)

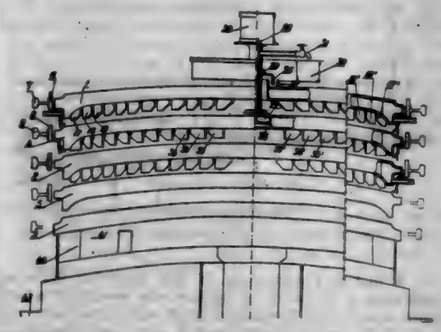
Tongs comprising a pair of handles, one of said handles being provided with an enlarged elongated slotted portion projecting forwardly therefrom and having an end wall, a jaw arranged substantially at a right angle to the corresponding end of the handle and pivoted within said slot, said jaw cooperating with said end wall of the elongated portion for clamping an object therebetween, a lug projecting from said jaw to assist

in supporting the object engaged by said tongs, and said lug being adapted to enter the slot to eject the object from the tongs upon movement of the last mentioned handle in a particular direction.

1,538,791. GRINDING MILL. WALTER FOWLER, London, England. Filed July 28, 1923. Serial No. 654,460. 5 Claims. (Cl. 83—10.)

1. In a grinding mill, the combination of a spherically-curved grinding element, means for rotating it about an axis passing through its centre of curvature, a second grinding element curved concentrically with the first element and bearing frictionally thereon, said second element being rotatable about an axis which is inclined to the axis of rotation of the first element and being driven frictionally thereby.

1,538,792. PROCESS FOR TREATING THE SURFACE OF BRONZE, BRASS, AND LIKE METALS. RICHARD WILLIAM HENRY FOX, Palmers Green, England. Filed Feb. 27, 1924. Serial No. 695,579. 7 Claims. (Cl. 91—68.)

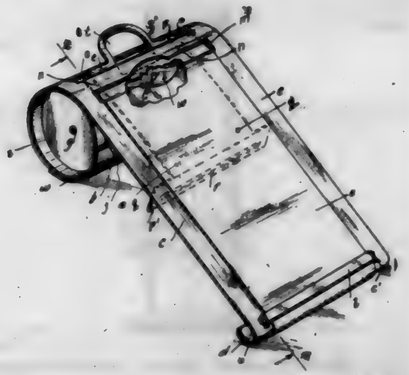


7. A process for treating bronze, brass and the like metals to produce a protective coat thereon, the appearance of which can be varied, said process consisting in abrading the metal surface to remove the unsightly products of corrosion and to expose the patinalike surface covering the unacted upon metal, then covering such patinalike surface with a coloring material of the class known as "bronze", removing the superfluous part of such coloring material, and then applying celluloid varnish and a wax coating.

1,538,793. DENSOMETER FOR TESTING FABRICS. FRANCIS E. GALLAGHER and WILLIAM M. PECKHAM, Troy, N. Y. Filed Oct. 25, 1922. Serial No. 596,841. 4 Claims. (Cl. 73—51.)

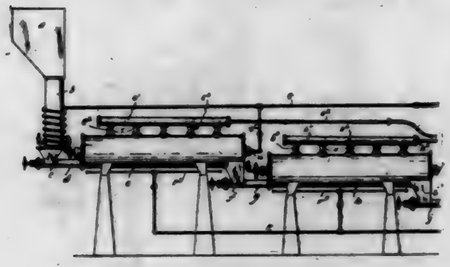
1. A device for testing material, which includes a receptacle containing liquid, a second receptacle within the first receptacle and having an open bottom and top, and means on the top of the second receptacle for stretching the material to be tested tightly thereacross, said second receptacle resting on the liquid within the first receptacle, the weight of the second receptacle, the weight of the second receptacle creating a definite pressure of gas therewithin whereby the gas within the receptacle tends to escape through the material at a definite rate in accordance with its porosity.

1,538,794. ROASTING FURNACE. LUCIEN GESCHWIND, Paris, France. Filed Sept. 19, 1923. Serial No. 663,714. 2 Claims. (Cl. 257—119.)



1. In a furnace for roasting ores having hearths of a refractory nature and circular form, which are superposed and are alternately fixed and rotating, an arrangement of furnace rakes cooled by water circulation comprising refractory hearths each consisting of two semicircular portions, a circular metallic frame supporting each hearth, a hollow diametrical metallic arm interposed between said portions of each hearth, means whereby a cooling fluid is enabled to circulate within said hollow arm and metallic rake teeth provided on said arm, which is supported by the circular frame of the hearth.

1,538,795. DESK PAD. THEODORE GENSMER, Portland, Oreg. Filed Mar. 7, 1922. Serial No. 541,630. 4 Claims. (Cl. 281—6.)

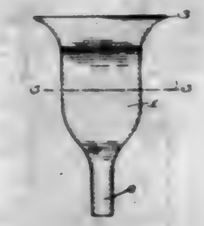


1. A desk pad consisting of a one piece sheet metal body, one end of the body terminating in a cylindrical

container, the other end terminating in a curved back support, the intermediate section of the body being flat and constituting a writing surface, said curved

back portion being provided with a transverse slot, said container having a transverse opening beneath said intermediate section, and a yielding clamping member bearing on said body.

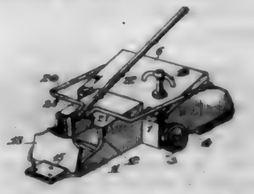
1,538,796. MULTIPLE-UNIT RETORT. G MURL GORDEN, Portland, Oreg., assignor, by mesne assignments, to American By-Products Corporation, a Corporation of Washington. Filed Nov. 22, 1921. Serial No. 516,996. 5 Claims. (Cl. 202—14.)



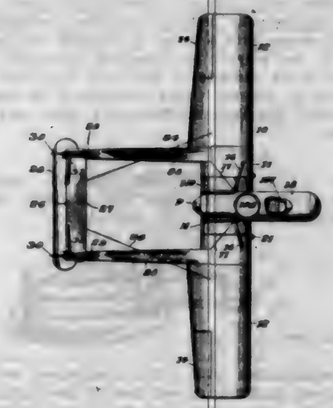
1. A distilling apparatus of the character described comprising a plurality of horizontally arranged retorts which are heated independently of each other with the ends of the retorts spaced and in step down formation, a horizontal cylindrical passage way connecting to adjacent retorts, a hopper for the passage way communicating with the preceding retort, the passage way being smaller in diameter than the retorts, a spiral screw operable in said passage way and underlying the hopper and adapted to convey material out of one retort into the other, the said spiral screw being of substantially the same diameter as the passage way and thus adapted to provide a heat seal between the retorts.

1,538,797. MEDICAMENT-INJECTING TUBE. GARRETT LAYTON GRIER, Milford, Del., assignor to The L. D. Caulk Company, Milford, Del., a Corporation of Delaware. Filed June 23, 1921. Serial No. 479,828. 4 Claims. (Cl. 128—260.)

1. A medicament-injecting tube for dental uses composed of elastic material and comprising a tubular collapsible body having a reduced nipple which is flattened on one diameter adjacent to its discharge end, the opposite end of the body being normally open and also flattened on the same diameter on which the nipple is flattened.

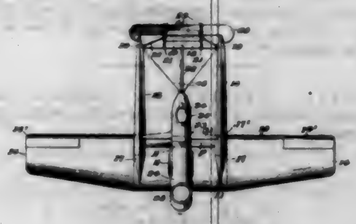


1,538,798. DENTAL-INJECTION TUBE. GARRETT LAYTON GRIER, Milford, Del., assignor to The L. D. Caulk Company, Milford, Del., a Corporation of Delaware. Filed June 23, 1921. Serial No. 479,829. 5 Claims. (Cl. 128—260.)



1. A dental injection tube comprising a collapsible body to contain a fluid substance, and a reduced nipple at one end thereof provided with a discharge opening, the opposite end of the body having a normally open outwardly flared mouth of a diameter greater than that of the body and a constriction between its flared mouth and the body which is adapted to be closed when the mouth is compressed.

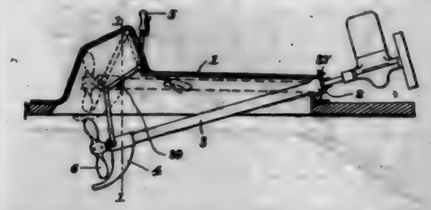
1,538,799. ASH REMOVER. CHARLES GRIFFIN, Ypsilanti, Mich. Filed May 24, 1924. Serial No. 715,738. 5 Claims. (Cl. 126—247.)



1. An ash remover including a body having inlet opening at its forward end and a discharge opening at its rear end, the former being capable of receiving the outlet end of a discharge pipe, and means pivotally mounted in said body for discharging ashes therefrom through said discharge opening.

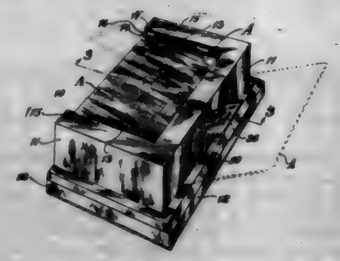
1,538,800. AIRPLANE. RANDOLPH F. HALL, Ithaca, N. Y., assignor of one-fourth to Theodore P. Hall, Wallingford, Conn., and three-sixteenths to Paul Wilson, Ithaca, N. Y. Filed May 12, 1922. Serial No. 560,884. 22 Claims. (Cl. 244—12.)

1. In an airplane, an internally braced wing including a main longitudinal wing truss, and an empenage supporting outrigger detachably mounted on, secured to, and supported from said wing truss, the wing end of said outrigger forming a composite part of said wing truss in mounted position.



1,538,801. AIRPLANE. RANDOLPH F. HALL, Ithaca, N. Y., assignor of one-fourth to Theodore P. Hall, Wallingford, Conn., and three-sixteenths to Paul Wilson, Ithaca, N. Y. Filed Nov. 14, 1922. Serial No. 600,898. 31 Claims. (Cl. 244—14.)

1. In an airplane including a main nacelle having a pusher propeller mounted at the after end thereof and a rearwardly extending outrigger, a supplemental nacelle detachably mounted and supported from said outrigger independently of said main nacelle to the rear thereof in longitudinal alinement therewith and forming a continuation of the contour of said main nacelle.



1,538,802. PROPELLER FOR BOATS. BERTRON G. HARLEY, Widewater, Va., assignor to Albert L. Ellsworth, Toronto, Canada. Filed May 19, 1922. Serial No. 562,130. 3 Claims. (Cl. 115—41.)

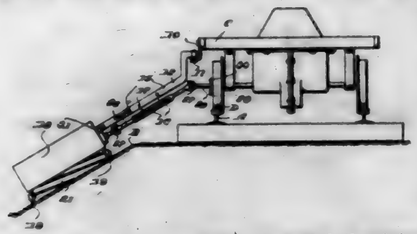
1. In a propeller device for boats, the combination with the propeller shaft and propeller and a housing for the same, of a tube pivotally supported at one end enclosing the shaft, and having journal bearings at either end, a strut pivoted in the propeller housing, a strut pivoted at one end to the aforesaid strut and at the other end to the free end of said tube, and a lever for

operating the struts arranged outside said housing and extending therethrough and rigidly connected to the strut pivoted in the housing.

1,538,803. CARD HOLDER. CHARLES K. HARRIS, New York, N. Y. Filed May 20, 1924. Serial No. 714,718. 3 Claims. (Cl. 273—148.)

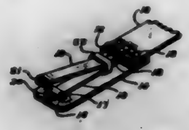
1. A card holder comprising a casing having its front opened, flanges extending inwardly from the walls of said casing, portions extending inwardly from the side walls of the casing at the open front and spaced from the flanges to form slits, and means for holding the top card of a plurality of cards in register with the slits, said means including a plate hingedly mounted at the rear of said casing, and a spring for forcing said plate toward said flanges.

1,538,804. AUTOMOBILE BUMPER. KENNETH LESTER HARRIS and CHARLES WESTERMAN HARRIS, New Brighton, Pa. Filed Oct. 7, 1924. Serial No. 742,138. 9 Claims. (Cl. 293—35.)



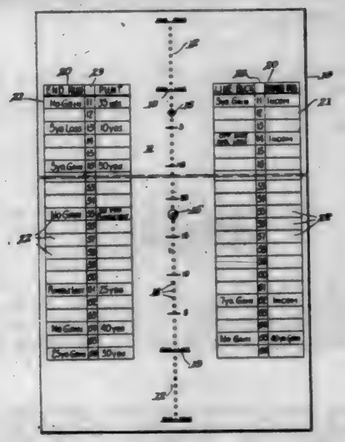
1. An automobile bumper comprising a rod, a removable and rotatable metallic casing through which the rod extends, and means for retaining the casing on the rod.

1,538,805. RAILROAD-BED-MOWING MACHINE. WILLIAM E. HARRIS, Longview, TEX. Filed Dec. 28, 1922. Serial No. 609,529. 3 Claims. (Cl. 56—231.)



1. A road bed mowing device for attachment to a track vehicle, comprising brackets on the track vehicle, longitudinally adjustable arms pivoted on said brackets, and a mower carried by said arms and pivotally mount-

ed with respect thereto whereby to be capable of vertical swinging movement to correspond with and accommodate inequalities in the surface traveled over, the



mower including a frame, rollers journaled therebelow, a rotary cutter journaled in the frame and a flexible drive shaft operatively connected with an axle of the track vehicle and connected with said rotary cutter.

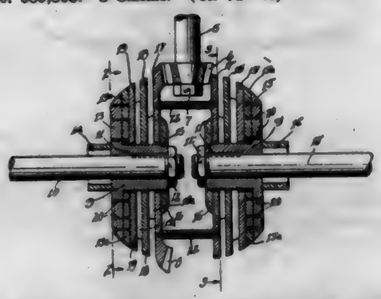
1,538,806. GARTER. DAVID HAWES, Philadelphia, Pa. Filed July 7, 1922. Serial No. 573,289. 2 Claims. (Cl. 24—260.)

1. A garter clasp comprising in combination a protecting strip, a pair of clamping jaws, a guiding strap formed on said protecting strip for engaging over one of said jaws adjacent to its free end, said jaws being resilient and tensioned to normally spread them, the jaw other than the one engaged beneath said strap having its free end bent transversely and extended beyond the free end of the strap engaged jaw, and a confining ring slidable along said jaws.

1,538,807. INDOOR-FOOTBALL GAME. CARL HEAD, Decatur, Ill. Filed Apr. 12, 1922. Serial No. 551,911. 2 Claims. (Cl. 273—94.)

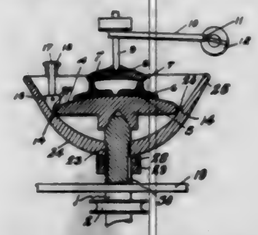
2. A game device comprising a game board having a playing surface designed to represent a football field, the surface being marked to represent the points forming or constituting the successive stations and playing points of a football game, in combination with movable markers designed to be placed upon the playing points and moved in conformity with possible plays of a football game, a guide chart provided directly upon the board at opposite sides of the playing surface including columns having headings corresponding to the possible plays, said columns being subdivided into spaces bearing indicia as to penalties, together with distances pertaining thereto, advantages, the columns being furthermore inscribed opposite said spaces with a series of numbers, and means operable by the players for obtaining a number corresponding to the numbers on the chart, said means including dice of different colors intended to be read in their multiple relation, one indicating units and the other tens.

1,538,808. CAKE AND PASTRY SERVER. ARTHUR HEDDEN, Portland, Oreg. Filed Nov. 23, 1922. Serial No. 602,796. 4 Claims. (Cl. 294—1.)



1. The combination with a table implement such as a knife of an auxiliary serving member branching and offset from the plane of the handle of said implement thence extending substantially parallel with said plane, said offset straight portion being so proportioned that its extremity is located inward of the top of said implement.

1,538,809. HAIR CURLER. BEULAH LOUISE HENRY, New York, N. Y. Filed June 29, 1923. Serial No. 648,578. 6 Claims. (Cl. 132—44.)

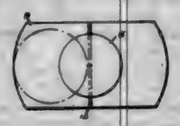


1. A hair curler formed of a single piece of seamless hollow elastic tubing, and mating fastening devices sealing the tubing inwardly of the respective ends thereof prior to bringing the mating fastening elements into co-acting engagement.

1,538,810. DIFFERENTIAL. FREDERICK JOSEPH HEDDLE, Chicago, Ill. Filed Jan. 31, 1924. Serial No. 689,805. 3 Claims. (Cl. 74—7.)

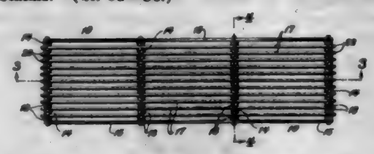
2. In a device of the type described, a pair of axially alined axles, a drive shaft at right angles thereto, a gear on said drive shaft, a plate mounted loosely on each of said axles, said plates being rigidly secured together, a gear integral with one of said plates and arranged to mesh with said first named gear, a plate rigidly secured to each of said axles, and intermediate plates between said rigidly secured plate and said loosely mounted plates, each of said plates having lugs arranged to engage corresponding lugs on adjacent plates for transmitting power from said drive shaft to said axles.

1,538,811. LENS GRINDING APPARATUS. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1920. Serial No. 370,724. 1 Claim. (Cl. 51—263.)



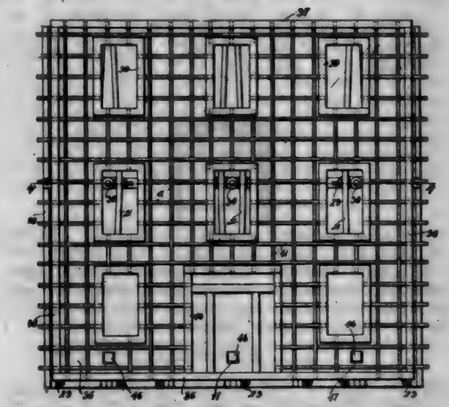
A lens grinding tool including a threaded spindle, a lap portion mounted upon the upper end thereof, an abrasive receiving bowl having a central threaded opening within its bottom for adjustably mounting said bowl, a web portion formed integral with said bowl upon the interior thereof and adapted to fit tightly against the faces of the lap portion, said web portion being curved upwardly at its inner edge to form an abrasive receiving groove and means for retaining said bowl in an adjusted position upon the spindle.

1,538,812. BIFOCAL. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 25, 1921. Serial No. 455,525. 5 Claims. (Cl. 88—54.)



1. The process of producing a multifocal lens consisting in forming one visual field of the lens in a continuous surface, placing a protective coating over said surface, and subsequently forming a second surface on the lens by grinding through the protective coating and into the body of the lens.

1,538,813. BIFOCAL LENS. MAX A. LAARS and HARRY W. HILL, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 22, 1922. Serial No. 589,809. 6 Claims. (Cl. 88—54.

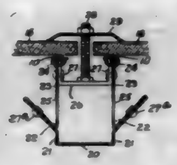


1. A multifocal lens blank comprising a major portion having a vent formed therein, and a segment secured to the major portion over said vent.

1,538,814. SIFTING DEVICE. OLAF C. HOFF, Brooklyn, N. Y. Filed Mar. 29, 1924. Serial No. 702,947. 2 Claims. (Cl. 83—56.)

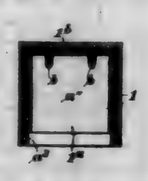
1. A sifting device comprising a plurality of spaced transverse members, rails secured to the ends of said transverse members for holding the same in longitudinal alignment, said transverse members having semi-circular grooves formed in the upper surface thereof and openings between the grooves, rods for reception in the aligned grooves of said transverse members, bolts passing through said openings and having beveled heads for co-action with said rods, certain of said beveled heads co-acting with the rods on opposite sides of the respective openings, and a nut associated with the free end of each of said bolts for holding said heads in engagement with said rods.

1,538,815. BUILDING APPARATUS. PERCIVAL N. HUNTER, Sawtelle, Calif. Filed Nov. 7, 1923. Serial No. 673,359. 8 Claims. (Cl. 25—1.)



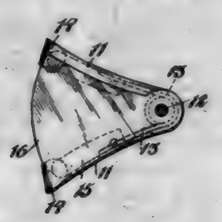
4. An apparatus of the character described comprising a stationary frame, a movable frame pivoted upon one edge thereof and adapted to have a wall built thereon, and screw means for swinging said movable frame into vertical position, and means on the movable frame for holding the wall structure against movement with respect thereto, said means consisting of screw members carried by the movable frame, nut means engaging said screw members, and foot pieces screwed upon the screw members and engageable by portions of the wall structure.

1,538,816. COLOR PHOTOGRAPH OR FILM AND METHOD OF PRODUCING SAME. FREDERIC E. IVES, Philadelphia, Pa. Filed Feb. 15, 1923. Serial No. 619,187. 19 Claims. (Cl. 95—2.)



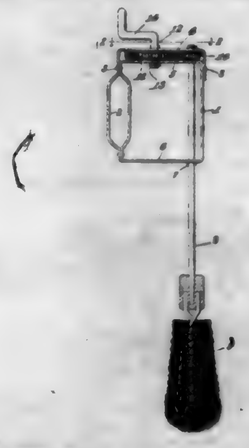
1. In photographic color print making, the production of a silver image which is converted in part to silver ferrocyanid, followed by reconverting the silver ferrocyanid to silver bromid and then exposing to light under another negative and developing a second silver print which is subsequently converted into a color print.

1,538,817. SKYLIGHT. ALFRED MELVILLE JAMES, Dunedin, New Zealand. Filed Jan. 5, 1924. Serial No. 684,651. 2 Claims. (Cl. 108—16.)



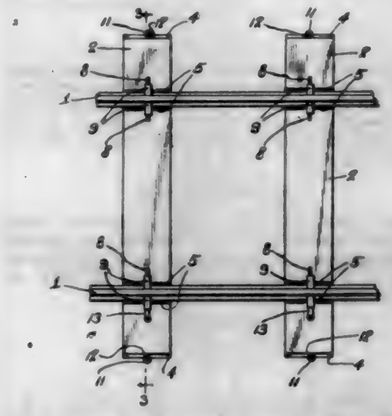
2. In a skylight having sides whose lower ends are bent to form a flashing and being so formed within the skylight as to provide condensation channels, the combination with at least one substantially U-shaped glazing bar the sides of which are formed to provide condensation channels and the upper edges of which are bent to form grooves, of substantially U-shaped stiffening brackets secured to said bar, asbestos cord in said grooves, a cover for the skylight supported by the asbestos cord, and a flashing secured to the stiffening brackets and adapted to hold the cover firmly in position.

1,538,818. BATTERY BOX. JOHN F. JOHNSTON and GEORGE W. BULLEY, Akron, Ohio, assignors to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 25, 1921. Serial No. 472,427. 6 Claims. (Cl. 136—29.)



6. A rigid structure having impervious hard rubber inner and outer walls and an intermediate layer of cellular hard rubber vulcanized thereto, with the walls of the cells intact and their interiors substantially void.

1,538,819. CLASP FOR WATCH BRACELETS. JAMES ROBERT KAY, South Lawrence, Mass. Filed Sept. 23, 1924. Serial No. 739,376. 3 Claims. (Cl. 24—237.)



1. A clasp for use on a watch bracelet to connect the same with the loops of a wrist watch, said clasp including side arms pivotally connected at one end, and a spring acting on said arms tending to spread the same, said arms having the material thereof at their free ends returned at the under side to form hooks disposed with their side edges toward each other and with the bills of the hooks parallel with each other, the terminals of the hooks being disposed in the direction of the pivot ends of said arms, said spring permitting the movement of the arms toward each other to vary the distance between said hooks.

1,538,820. BRUSHING DEVICE. CHARLES A. KELLY, Hinsdale, N. H. Filed Sept. 6, 1924. Serial No. 736,285. 1 Claim. (Cl. 15—25.)

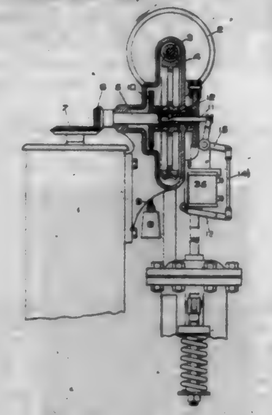
A brushing device comprising an open rectangular body having one of its upright portions shaped to form a hand grasp and also having an intermediate cross bar adjacent to and spaced from its top bar, a snaft journaled and held against endwise movement in said top bar and intermediate bar and also in the lower bar of the body and having fixed to its upper portion a spur gear interposed between the top bar and intermediate bar of the body, a brush carried by and rotatable with the said shaft, a second shaft journaled and held against endwise movement in the top bar and intermediate bar of the body and having a crank, and a spur gear fixed to the second-named shaft and interposed between said bars of the body and meshed with the gear on the shaft.

1,538,821. TIE. THOMAS F. KENNEDY, Boston, Mass. Filed Apr. 4, 1924. Serial No. 704,238. 2 Claims. (Cl. 238—79.)

1. A railroad tie formed of metal and having ribs on its upper face, the ribs being arranged in pairs with each pair forming a rail receiving space, two pairs of jaw members pivoted in the tie and passing through the upper face thereof for engaging the bases of the rails, rods movably mounted in the tie and having their

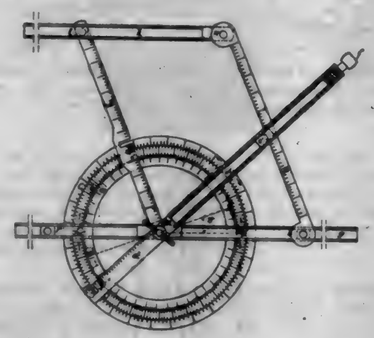
ends passing from the ends of the same, each rod being connected with a jaw member of each pair of jaw members, springs on the rods for normally holding the rods in a position with the jaw members gripping the rails and handles on the outer ends of the rods for adjusting the same.

1,538,822. GOLF APPARATUS. WILLIAM M. KENNEDY, Washington, D. C. Filed Aug. 29, 1923. Serial No. 659,986. 6 Claims. (Cl. 273—34.)



2. Golf apparatus comprising a liner having an inverted cone therein secured at the periphery of its base to the interior of said liner with its apex above the base of said liner and having a restricted opening at said apex, combined with a marker rod having a point to be received in and supported by said restricted opening, drainage passages between said rod and said opening and an inverted cone secured to said rod at its apex with drainage openings adjacent said rod and with the periphery of its base approximately equal in diameter to that of said liner, whereby free drainage of water is secured and the entrance of trash to the lower inverted cone is prevented.

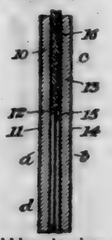
1,538,823. STORM-SASH OPERATOR AND LATCH. JOSEPH L. KILLION, Minneapolis Minn. Filed Feb. 17, 1923. Serial No. 619,783. 1 Claim. (Cl. 292—268.)



A storm sash operator and latch comprising a pair of toggle levers in parallelogram arrangement, a bracket applicable to a window sash, an anchor applicable to a window frame and having a thumb screw, and a hook-acting latch, one of the links of the toggle levers and the hook-acting latch being pivoted to the bracket and the other links of the toggle levers being pivoted to said screw, said hook-acting latch being arranged to be interlocked with the screw by a swinging movement transversely of the movement of the toggle levers, said thumb screw affording common means for simultaneously clamping the respective links of the toggle levers and the hook-acting latch the one upon the other and onto the anchor to frictionally hold the toggle levers and hook-acting latch against pivotal movement.

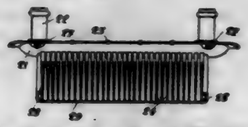
1,538,824. APPARATUS FOR AUTOMATIC SPEED CONTROL OF ELECTRIC MOTORS. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Filed June 19, 1924. Serial No. 721,098. 12 Claims. (Cl. 103—25.)

1. In a fluid pressure regulator, the combination with a motor controlling mechanism and a motor operated device for governing said mechanism, of an automatic clutch, associated with said device and adapted to disengage the motor operated device from the motor controlling mechanism on a failure of the motor operated device to control the motor controlling mechanism, and means to return the motor controlling mechanism to its neutral position when disengaged from the motor operated device.



1,538,825. APPARATUS FOR DETERMINING THE DATA FOR THE LAYING OF GUNS INDIRECTLY. ARIE KOOIMAN, The Hague, Netherlands. Filed Apr. 23, 1924. Serial No. 708,539. 3 Claims. (Cl. 33—75.)

2. Apparatus for providing the data for the laying of guns indirectly, consisting of two graduated concentric circular rings, a main ruler to which one of said rings is fixed, a slidable pin on the main ruler on each side of the ring center, other rulers coacting with the main ruler to form the sides of a parallelogram, one of the other rulers being pivoted to the main ruler in the ring center, the ruler opposite the last mentioned ruler being pivoted to one of said slidable pins, the ruler opposite the main ruler having pivoted and slidable connection with the adjacent rulers respectively whereby to adjust the length of the main ruler and the opposite ruler, all of the rulers being graduated, a fifth

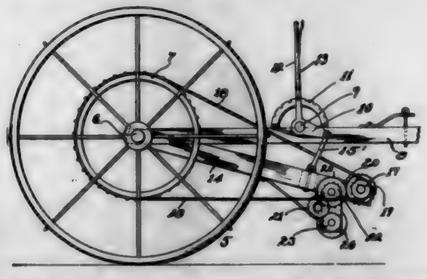


ruler rotatably mounted on the common center and fixed to the other ring, and a pin slidably mounted on the fifth ruler, substantially as described and for the purposes set forth.

1,538,826. ELASTIC WEBBING. MAX KOPS, Riverdale, N. Y., assignor to Kops Bros. Inc., a Corporation of New York. Filed May 31, 1924. Serial No. 715,799. 13 Claims. (Cl. 154—48.)

13. An elastic webbing having an elastic section and an inelastic section composed of strips of material each comprising a sheet of rubber and a layer of knitted silk fabric vulcanized to both sides thereof, an inelastic fabric member in the inelastic section of the webbing, and stitches connecting the edges of the strips of material and the said inelastic fabric member.

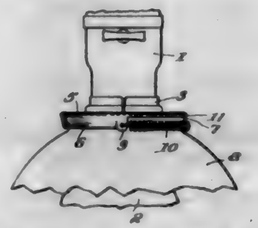
1,538,827. RADIATOR. ALEXANDRE LAMBLIN, Paris, France. Filed July 6, 1922. Serial No. 573,172. 6 Claims. (Cl. 184—104.)



1. A cooling element for oil or similar lubricating product radiators, such element having a transverse section with an enlarged part in which the lubricant circulates constantly in normal working, this enlarged part communicating with a very attenuated part, in which the lubricant can congeal over a more or less great expanse, according to the conditions of cooling.

1,538,828. CARROUSEL SWING. GEORG LAMMERMANN, Nuremberg, Germany. Filed Dec. 13, 1922. Serial No. 606,654. 5 Claims. (Cl. 272—41.)

1. A carrousel-swing including a passenger-carrying support, and a suspending device therefor including a suspending structure; said structure including the combination of means for suspending the same and the support so as to permit swinging of the support, a member rotatable about the axis of said suspending means, a rotatable grooved disc, and means for causing simultaneous rotation of the disc and said rotatable member, said means including a flexible member engaging the groove of the disc, and guiding devices on the rotatable member also engaged by the flexible member, said guiding devices for holding the flexible member to the groove of the disc, whereby when said flexible member is pulled, the disc is rotated, the rotatable structure is also rotated and the flexible member is nevertheless maintained in engagement with the groove of the disc.

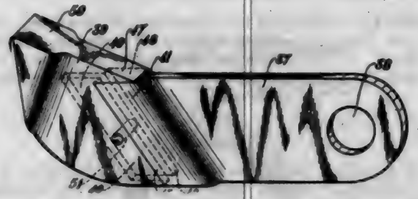


1,538,829. WEED PULLER. PETER N. LARSON, Stockton, Calif. Filed June 28, 1923. Serial No. 648,325. 10 Claims. (Cl. 55—66.)

1. A weed puller comprising a pair of oppositely driven co-acting rolls, occupying substantially the same horizontal plane, and a deflector correlated to said rolls and arranged in the same vertical plane with one of said rolls to cause the weed to be deflected into the space between said co-acting rolls for effective pulling engagement therewith.

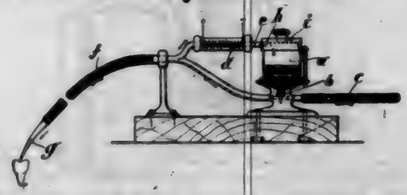
6. A weed puller comprising a pair of oppositely driven rolls, and a deflector roll arranged in co-acting relation thereto, each of said rolls consisting of independently driven sections, and means for driving said sections.

1,538,830. SPRING SHADE HOLDER. ANDREW LASKY, Scranton, Pa. Filed Oct. 20, 1924. Serial No. 744,731. 2 Claims. (Cl. 240—129.)



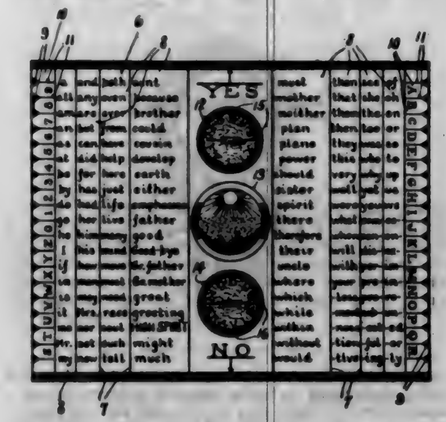
2. A shade holder for electric lamp bulbs, comprising a disk having an inwardly directed peripheral flange of a length less than one-half of the circumference of the disk, said flange having its ends extended to provide ears, a helical spring having its ends secured to the ears, and the periphery of the disk, beyond the flange, being slightly inturned to provide a lip.

1,538,831. CENTRIFUGAL HAMMER. GEORGE P. LUCAS, Jersey City, N. J. Filed Aug. 19, 1922. Serial No. 582,887. 3 Claims. (Cl. 83—11.)



1. A hammer for a centrifugal device comprising an arm provided adjacent one end thereof with an opening for pivotal suspension, said arm extending at one of its

lateral faces substantially rectilinearly for its entire length, the opposite end of said arm having a projection, and a removable head formed of material of greater refractory character than the material of said arm, said head having at one end thereof a groove extending sub-



stantially the full length of said opposite end of said arm constructed to be received within said projection of said arm, said head further including a projection extending laterally of said arm when said head is assembled on said arm and in face to face engagement with said lateral longitudinally extending face of said arm.

1,538,832. METHOD AND APPARATUS FOR EFFECTING GOLD OR TIN DENTAL STOPPINGS. CHARLES E. LUCE, Stuttgart, Germany. Filed Mar. 9, 1923. Serial No. 624,034. 2 Claims. (Cl. 32—32.)

1. An apparatus for treating and delivering gold dental stoppings, comprising a receptacle for the material in a finely divided condition, a pressure conduit for delivering the material in its original finely divided condition from the receptacle directly to the tooth, and means for heating the material during such delivery to render the particles of the material cohesive, said heating means forming a part of said conduit.

1,538,833. GAME. WALLACE W. LONG, Detroit, Mich. Filed Oct. 17, 1923. Serial No. 669,123. 1 Claim. (Cl. 273—161.)

A device of the class described comprising a base, a post at each side thereof, means for removably supporting each post, a table movably mounted on the base and a chart carried by the table, said chart being divided into columns and having words and characters in the columns, the end columns having subtsantially triangular spaces of different colors therein, said subtsantially triangular spaces being alternately arranged and are designed to indicate the words and characters in the columns when that part of the table carrying the substantially triangular spaces engages a post, the central column carrying the words "Yes" and "No," one at each end thereof, and a pair of circles, one for indicating rotary movement in one direction and the other rotary movement in the opposite direction.

1,538,834. COLLAR. ARTHUR H. MCCARREL, Washington, D. C. Filed June 13, 1923. Serial No. 645,178. 7 Claims. (Cl. 139—386.)

1. As an article of manufacture, a turned-down collar having a curved fold line and made from a closely woven multiply fabric in which the warp threads run transversely across the fold line, and the filling threads follow the curvature of said fold line, the number of warp threads and filling threads to the inch being uniform throughout the collar.

1,538,835. LOOM. ARTHUR H. MCCARREL, Washington, D. C. Filed June 13, 1923. Serial No. 645,179. 6 Claims. (Cl. 139—188.)

1. In a loom, the combination with a reed, of a lay and reed cap having curved means for securing the upper and lower ribs of the reed so that the dents of the reed develop a substantially cylindrical surface, a shuttle, and means for propelling the shuttle in an arcuate path formed by said cylindrical surface.

1,538,836. WOVEN FABRIC. ARTHUR H. MCCARREL, Washington, D. C. Filed June 13, 1923. Serial No. 645,180. 9 Claims. (Cl. 139—386.)

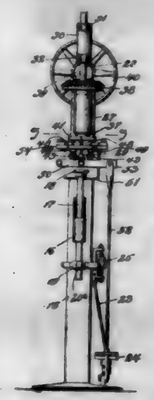
1. As an article of manufacture, a flat level closely woven multiply fabric for collars in which the warp threads run straight along the length of the fabric and the successive filling threads describe a succession of uniform continuous arcs of equal radii, each extending from selvage to selvage of the fabric.

1,538,837. MANUFACTURE OF ALUMINUM SULPHATE. ARTHUR J. MOXHAM, Great Neck, N. Y., assignor, by mesne assignments, to J. P. Laffey, trustee, Wilmington, Del. Filed July 25, 1922. Serial No. 577,462. 1 Claim. (Cl. 23—123.)

The process of treating potash-alum which consists in first driving off the water and then separating the sulphates by dissolving the potassium sulphate in strong sulphuric acid and then separating the aluminum sulphate residue from the solution.

1,538,838. CHEMICALLY-PREPARED IRON-BEARING MATERIAL. ARTHUR J. MOXHAM, Great Neck, N. Y., assignor, by mesne assignments, to J. P. Laffey, trustee, Wilmington, Del. Filed Aug. 14, 1922. Serial No. 581,908. 4 Claims. (Cl. 252—1.)

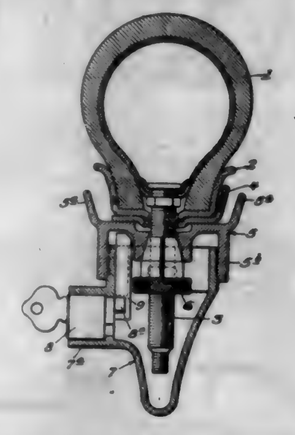
1. A material suitable for the manufacture of iron and steel which is substantially free of silica and water and contains oxides of iron and other metals resulting from the decomposition by heat of mixed sulfates chemically prepared from an iron ore.



1,538,839. METHOD FOR THE PRODUCTION OF ALUMINUM HYDROXIDE. ARTHUR J. MOXHAM, Odessa, Del., assignor, by mesne assignments, to J. P. Laffey, trustee, Wilmington, Del. Filed Dec. 7, 1923. Serial No. 679,269. 16 Claims. (Cl. 23—143.)

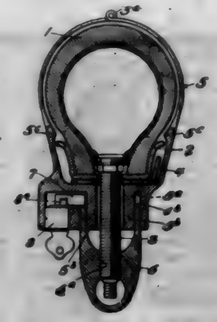
1. The process of extracting alumina from minerals containing it, which involves first treating the mineral to obtain a solution of aluminum sulfate and then adding metallic iron to the solution to decompose the sulfate and precipitate aluminum hydroxide.

1,538,840. CHEMICALLY-PREPARED IRON-BEARING MATERIAL. ARTHUR J. MOXHAM, Odessa, Del., assignor to Electro Company, a Corporation of Delaware. Original application filed Aug. 14, 1922, Serial No. 581,908. Divided and this application filed Nov. 14, 1924. Serial No. 749,936. 3 Claims. (Cl. 252—1.)



1. A material suitable for the manufacture of iron and steel which is substantially free of silica and water and contains ferric oxide and oxides of manganese, resulting from the decomposition by heat of mixed sulfates chemically prepared from an iron ore.

1,538,841. CAN-MAKING MACHINE. WALTER L. RUTKOWSKI, St. Louis, Mo., assignor to R. C. Can Company, St. Louis, Mo., a Corporation. Filed Mar. 10, 1922. Serial No. 542,721. 3 Claims. (Cl. 113—20.)

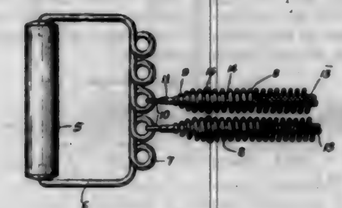


1. In a machine of the class described, a support for a can and can end, a crimping tool, means for bodily rotating the tool around the supported can and can end, a lever for supporting the tool, a cone carried by the axis of the tool, an open ringshaped element having an inclined inner surface for engagement with said cone and means for moving the ringshaped element to effect movement of the tool in a crimping direction.

1,538,842. TIRE LOCK. THEODORE D. STANLEY, Detroit, Mich., assignor to Leland Lock Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 18, 1920. Serial No. 431,683. 16 Claims. (Cl. 70—129.)

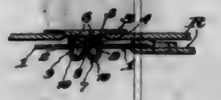
1. A device of the class described comprising, in combination, a lock-housing member and a cooperative member detachably-connectable therewith; said lock-housing member containing a lock and lock-controlled means for engagement with said other member to lock the two members together; means whereby one said member may be fastened to the valve-stem of a pneumatic tire before applying the other member in place, and said other member adapted to provide a cap or cover for the valve-stem and its fastening means.

1,538,843. TIRE LOCK. THEODORE D. STANLEY, Detroit, Mich., assignor to Leland Lock Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 18, 1920. Serial No. 431,684. 8 Claims. (Cl. 70—122.)



1. A device for locking a pneumatic tire to a tire holder, comprising a holder-engaging member having a passage for the valve stem of the tire and having projections to embrace the tire holder; a screw cap adapted to be screwed upon the valve stem; said member adapted to be held applied to the holder by said screw cap; and means for locking said cap to said member.

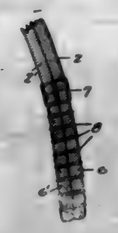
1,538,844. PROGRESSIVE EXERCISER. HENRY W. TITUS, New York, N. Y., assignor to Mary Weimar, Brooklyn, N. Y. Filed Mar. 13, 1923. Serial No. 624,712. 2 Claims. (Cl. 272—79.)



1. A handle for exercisers comprising a grip, a plurality of wire members arranged therein, a plurality of eyes in each of said wire members and off-sets in each of said wire members said offsets impinging one upon the other to retain said eyes away from each other.

1,538,845. PROGRESSIVE EXERCISER. HENRY W. TITUS, New York, N. Y., assignor to Mary Weimar, Brooklyn, N. Y. Filed Mar. 21, 1923. Serial No. 626,448. 4 Claims. (Cl. 272—79.)

1. An exerciser comprising a plurality of elastic members, one within the other and a cover upon one said member and means for securing each end of the other said member to said cover to prevent the movement of said members beyond their elastic limit.



1,538,846. RIBBON-BRACELET CLASP. CHARLES R. TOST, Centerdale, R. I., assignor to The Hadley Company, Providence, R. I. Filed Oct. 9, 1924. Serial No. 742,519. 2 Claims. (Cl. 24—213.)

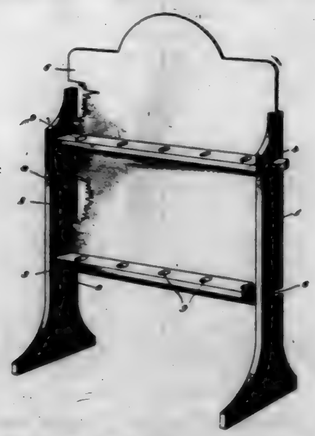
2. In a clasp, a female member having an opening, a male member having a slot, and a head having sides and a depending part interposed between and spaced from the sides, the sides having shoulders and legs which latter extend through the slot in abutting relation and are clinched to the male member so as to hold the shoulders engaged therewith.

1,538,847. REVERSIBLE HAT. ROY C. WHEELER, Berkeley, Calif. Filed Nov. 6, 1922. Serial No. 599,416. 3 Claims. (Cl. 2—175.)

3. A unitary reversible hat comprising twin crown elements and twin brim elements superimposed one upon the other and made of similar material, said twin brim elements abutting the crown elements edge to edge and lying substantially flush with the crown elements to produce a smooth exterior surface on both sides of the juncture of the brims and crowns, connecting means for

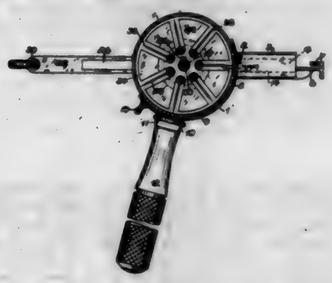
the crowns and brims which permit quick reversibility of the hat and brim to thereby expose different sides of the crown and brim elements, substantially as described.

1,538,848. RECEPTACLE AND CLOSURE THEREFOR. JOHN L. DUNNOCK, Baltimore, Md., assignor of one-half to Harry O. Brawner, Baltimore, Md. Filed June 6, 1924. Serial No. 718,216. 2 Claims. (Cl. 215—44.)



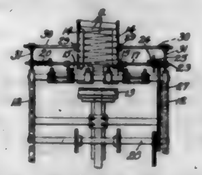
1. The combination with a bottle cap having a skirt provided with a series of spaced lugs projecting inwardly of the skirt; of a bottle having a neck provided with a similar series of projections on its outer face, each of said projections consisting of a portion extending longitudinally of the neck from the base of said neck to the mouth and a lateral portion extending from one side of the first portion circumferentially of the neck toward the adjacent projection and terminating in spaced relation to the adjacent projection whereby said projections form a series of substantially L-shaped grooves each having a vertical leg opening at the mouth of the neck to receive a respective lug and a horizontal leg into which said lug engages, the circumferential portion of each projection having the side toward the base of the neck curved to form a cap tightening cam, said groove being suddenly deepened at its inner end to provide a lug receiving recess at the inner end of the horizontal leg of each groove and extending radially of the neck into the material thereof.

1,538,849. DISPLAY STAND. GEORGE EGER, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed July 18, 1923. Serial No. 652,289. 1 Claim. (Cl. 211—14.)



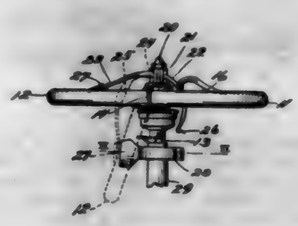
A display stand comprising a pair of standards, a back, and a cross bar, each standard having a vertical groove in its inner side opening through the top of the standard and provided with a horizontal recess extending from its rear edge and intersecting and extending for-

wardly from said vertical slot, said cross bar having notched opposite ends adapted to fit in the horizontal recesses forwardly of the vertical grooves of the stand-



ards and interlock with the latter, said back adapted to slide downwardly in the grooves and behind said notched ends of the cross bar to lock the same in position.

1,538,850. SAFETY RAZOR. ALBERT EMANUEL GINSBERG, Liverpool, England. Filed Apr. 13, 1923. Serial No. 631,796. 11 Claims. (Cl. 30—12.)



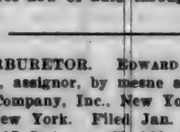
1. A safety razor which comprises a casing adapted to revolubly hold a plurality of shaving blades; a guard; and means whereby a shaving blade, in said casing may be radially carried to position for use, or withdrawn into said casing.

1,538,851. ASSEMBLING MECHANISM FOR BOX-MAKING MACHINES. HAROLD J. GOSS, Nashua, N. H., assignor to The Lake Erie Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1924. Serial No. 718,147. 6 Claims. (Cl. 93—55.)

1. Mechanism for assembling boxes, comprising a throat, means for successively pushing boxes into said throat, and means for alternately shifting the boxes in opposite directions as they enter said throat.

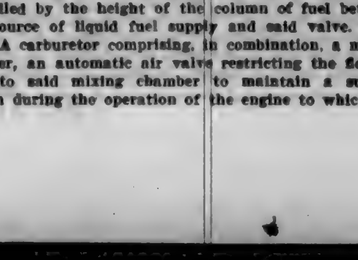
1,538,852. ADJUSTABLE LOCKING DEVICE FOR STEERING WHEELS. CARL ARTHUR HAGBERG, Wichita, Kans., assignor to Fold-O-Lock Steering Wheel Mfg. Corporation, Wichita, Kans., a Corporation of Kansas. Filed Jan. 30, 1922. Serial No. 532,886. 9 Claims. (Cl. 74—33.)

1. Locking means for steering gear comprising, in combination with a fixed steering column, a steering wheel formed with a movable segment, a locking element carried by said movable segment, and a companion locking element carried by said steering column and movable into different positions about the axis of said column, thereby adapting said companion element for locking engagement with the element carried by said movable segment regardless of the position of said wheel with reference to the axis of said steering column.



1,538,853. BELT GUARD. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Shaper Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 1, 1924. Serial No. 729,621. 6 Claims. (Cl. 74—55.)

3. In a device of the class described, a circular housing adapted to be rotatably attached to a support and having a circumferential arcuate slot in its circular side, a pair of hollow casings extending from the housing overlying and in registry with the slot, each having a removable side wall, said walls opposingly related, said casings adapted to be angularly adjusted toward and away from each other and further adapted to be brought together to form a single chamber, when said side walls are removed.

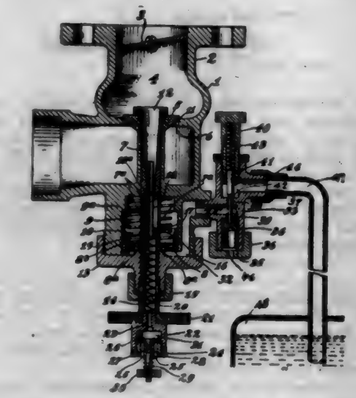


1,538,854. STEERING-WHEEL MARKER. CHESTER A. HULL, Peru, Ind., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1924. Serial No. 744,734. 3 Claims. (Cl. 116—31.)

1. A steering wheel marker comprising a stiff one-piece C-shaped metal clip longitudinally channeled on its inner side to provide sharp edges adapted to bite into a wheel rim around which the device is sprung, the outer side

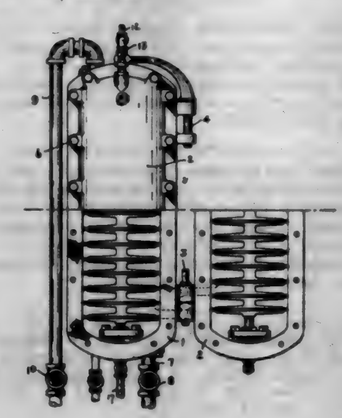
of said clip being beveled at its edges to prevent the driver's hands from catching thereon and having a tendency to laterally displace the clip.

1,538,855. FUMIGATING APPLICATOR. RALPH M. JACKSON, La Habra, Calif. Filed Sept. 29, 1924. Serial No. 740,568. 2 Claims. (Cl. 299—97.)



1. A portable fumigating applicator adapted to be carried by hand, including a supply receptacle for fumigating fluid, base means, supporting means attached to said base means, vertically disposed pump measuring and discharging means for measuring and discharging said fluid from said receptacle the measurement thereof representing a plurality of units, vertically disposed lever means for actuating said pump means said lever being supported by said supporting means, a measure controlling member for controlling the said lever means and for determining the unit measurement of the said measuring means, atomizing nozzle means laterally spaced from the said pump means, and fluid conducting means for connecting said nozzle means with said pump means, and a positive acting manually operated valve means associated with said nozzle mean and co-operating with said lever and pump means, said valve adapted to control the free flow of fluid through the said nozzle means.

1,538,856. CARBURETOR. EDWARD KNAUSS, Mount Vernon, N. Y., assignor, by mesne assignments, to K. P. Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 16, 1920. Serial No. 351,857. 17 Claims. (Cl. 261—72.)



1. A carburetor comprising in combination a fuel nozzle, a conduit leading from said fuel nozzle to a source of liquid fuel supply, a valve adapted to cut off the flow of liquid fuel through said conduit, automatic means for closing said valve when the carburetor is not in action and opposing automatic means actuated by the vacuum in the conduit between said nozzle and said valve adapted to open said valve to varying degrees against the resistance of the first mentioned automatic means, the degree of opening of said valve being in part controlled by the height of the column of fuel between said source of liquid fuel supply and said valve.

12. A carburetor comprising, in combination, a mixing chamber, an automatic air valve restricting the flow of air into said mixing chamber to maintain a suction therein during the operation of the engine to which the carburetor is attached, a fuel port delivering into said mixing chamber, a source of fuel supply the level of which varies both above and below said fuel port, a variable valve in the fuel passage between said source and said port, and means operated by suction derived from said mixing chamber and existing between said

valve and said port for controlling the position of said valve to assist in maintaining a delivery of fuel which changes for each change in position of said air valve but which is constant for each position of said air valve regardless of changes in the relative heights of said source of supply and said port.

1,538,857. HEATER. ARTHUR H. LIGHT, Oakland, Calif. Filed Oct. 9, 1922. Serial No. 593,481. 4 Claims. (Cl. 257—218.)

1. A heater comprising a chamber formed of co-operating section members each provided with a supply pipe for a heating fluid and a plurality of relatively flat hollow heating units supported from said pipe, the units in one of said members adapted to pass between the units of the other member and the outer surfaces of the units forming a tortuous passage for other fluid to be heated when the parts are assembled in operative relation, ports for the supply of heating fluid from the pipes to the units, discharge ports from each unit and a discharge passage for expended fluid, and inlet and outlet connections to said chamber for said other fluid.

1,538,858. FABRIC AND PROCESS OF MAKING SAME. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Original application filed Jan. 12, 1918, Serial No. 211,661. Divided and this application filed Apr. 22, 1918. Serial No. 229,891. 3 Claims. (Cl. 106—37.)

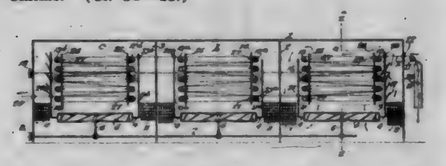
1. A process consisting of intimately mixing hydrous nitrocellulose and a liquid aromatic phosphate in the proportion of approximately 40 parts of the phosphate to 100 parts of the nitrocellulose, extracting the moisture from said mixture, incorporating in such mixture more than 60 parts of additional liquid aromatic phosphate by the aid of a volatile solvent, and applying the resulting composition in the form of a thin sheet to a supporting fabric.

1,538,859. CELLULOSE COMPOSITION AND PROCESS. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Apr. 24, 1922. Serial No. 556,311. 11 Claims. (Cl. 106—37.)

1. A composition of reduced inflammability containing a cellulose ester and an aromatic phosphate and in close association therewith aluminum phosphate.

1,538,860. COMPOSITION. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Mar. 29, 1923. Serial No. 628,435. 12 Claims. (Cl. 106—37.)

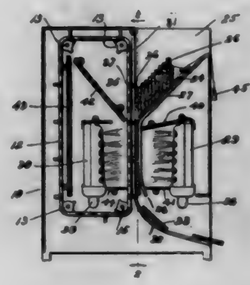
1. A composition comprising a cellulose derivative, a plasticizing agent therefor comprising an aromatic phosphate and a fire-retarding agent comprising magnesium di-hydrogen ortho-antimonate.



1,538,861. PYROXYLIN COMPOSITION. WILLIAM G. LINDSAY, Newark, N. J. Filed July 2, 1923. Serial No. 649,172. 12 Claims. (Cl. 134—79.)

1. A composition comprising pyroxylin and a plasticising agent therefor comprising a fatty acid ester of secondary butyl alcohol.

1,538,862. CELLULOSE COMPOSITION. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed June 6, 1924. Serial No. 718,228. 13 Claims. (Cl. 106—37.)



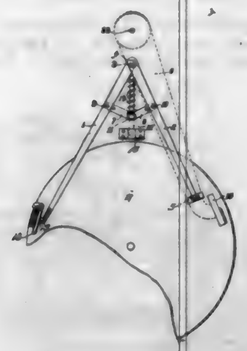
9. A tough consolidated non-inflammable cellulose composition containing cerium oxalate.

1,538,863. WARP DRIER. EDGAR B. KERST, Providence, R. I., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1924. Serial No. 750,585. 8 Claims. (Cl. 34—48.)

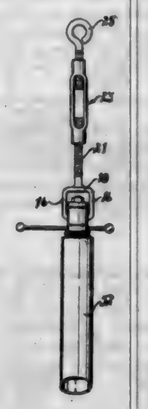
6. The combination in a warp drier, of a drying compartment having a horizontal partition near the bottom thereof, said partition having a fan opening; a fan located in the opening; means for driving the fan; vertical partitions spaced from the ends of the compartment; heating pipes in the spaces between the vertical partitions and the ends of the compartment; two series of rollers located in the space between the partitions, said rollers being spaced apart to allow the warps to pass around the rollers; and vertical and horizontal separators at the said rollers for separating the strands of warps.

1,538,864. TOASTING MACHINE. HARRY S. MORRISON, Auburn, R. I. Filed Jan. 29, 1924. Serial No. 689,382. 8 Claims. (Cl. 126—41.)

1. In a portable toasting device, a pair of heating elements, a carrier for passing a slice of bread vertically between said elements at a predetermined speed whereby it is toasted on both sides, and means for engaging and positively withdrawing the toasted slices from said carrier.



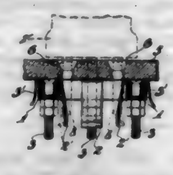
1,538,865. PORTABLE AMPLIFIER FOR RADIO SETS. HERMAN P. PORTER, Washington, D. C. Filed Oct. 28, 1924. Serial No. 746,320. 2 Claims. (Cl. 181—27.)



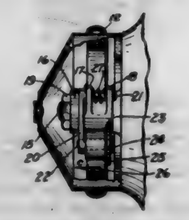
1. As a new article of manufacture, a sound amplifier of the character described, comprising an independent and disconnected structure formed with a horizontally positioned hollow circular body member having a solid imperforate concavo-convex rear end deflecting wall, a smooth, empty and unobstructed circular interior surface extending throughout its length, an open front portion of sufficient area to permit the insertion of loosely placed acoustic receivers therein, said instruments being so disposed within said circular interior as to allow the sound waves to freely emanate therefrom and to cause the sound emanating from the structure to be amplified by said amplifier, and a supporting base.

1,538,866. SOUND RECORDING AND REPRODUCING MACHINE. HAROLD ALFRED ROOMES, Cardiff, Wales. Filed Sept. 19, 1924. Serial No. 738,626. 5 Claims. (Cl. 274—1.)

2. A speed controlling device for a sound recording and reproducing machine using disk records and having a sound arm, comprising a pair of guide rods pivotally mounted at a common center adjacent the axis of oscillation of the sound arm and adapted to lie at opposite sides of the center of the record, speed control means carried by a guide rod and engageable with the record, the other guide rod being connected to the sound arm, a slide rod fixedly arranged in a line dividing the angle between said guide rods, a block slidable upon said slide rod, and links pivotally connecting said guide rods and block whereby movement of the sound arm toward the center of the record causes corresponding movement of the arm carrying the speed control means.

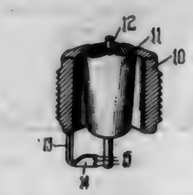


1,538,867. PIPE-SUPPORTING MEANS AND MORE ESPECIALLY TO PIPE LIFTERS. PETER J. GARVIN, New York, N. Y. Filed Sept. 17, 1923. Serial No. 663,286. 1 Claim. (Cl. 294—86.)



Means for lifting and alining fluid conduits comprising hoisting means provided with fine adjustment for purposes of alinement and bifurcated to pivotedly engage a body, said body provided with socket means receiving the extremities of said bifurcated means and provided with a longitudinal bore journalling a rotatable arbor, said rotatable arbor provided with a bearing section engaging said bore, an enlarged portion engaging the end of said body, a reduced portion receiving a thrust collar engaging the other end of said body and a series of threaded portions adapted to engage the interior of the conduit and to cut into the walls thereof for securing the conduit thereto that the same may be lifted and by means of said pivoted, lifting and journalled means correctly alined and secured.

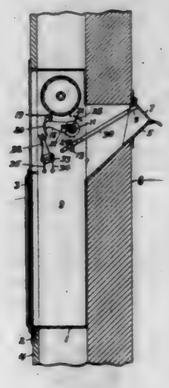
1,538,868. HOLDER FOR THERMIONIC VALVES. MALCOLM COOPER, Balham, England, assignor to The H. T. C. Electrical Co: Limited, London, England, a British Company. Filed Aug. 26, 1924. Serial No. 734,292. 3 Claims. (Cl. 173—328.)



1. A holder for thermionic valves with a plurality of pins or legs and suitable for fixing to a panel, comprising a ring of insulating material, contact springs each with one arm extending outwards, holed for external connection and secured to the said ring at a suitable interval from the adjacent springs so as to coincide with the positions of the valve legs and holes in the panel, and with the other arm projecting into and through the ring and longitudinally aligned with and inwardly inclined towards the corresponding valve leg and curved from the same centre, a bolt through the outwardly extending arm of each contact spring fitted with nuts, a metal insert to accommodate each bolt and screws for fixing the ring to the panel.

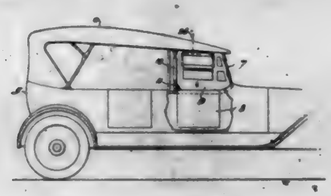
1,538,869. TIMER. HENRY W. MUHLEISEN, Los Angeles, Calif., assignor to W. S. Rush & Co., Los Angeles, Calif., a Partnership consisting of W. S. Rush, E. S. Rush, and B. C. Graves. Filed Feb. 7, 1921. Serial No. 443,067. 6 Claims. (Cl. 200—26.)

2. In a timer, the combination of: conducting sections insulated from each other and cooperating to form an annular track; members rotating inside and about the axis of said track; a roller carried on said members; a flange on said roller; and means for holding the periphery of said roller against the inner surface of said track and the flange of said roller against the edge of said track.



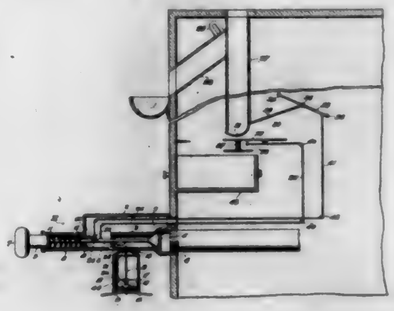
1,538,870. SPARK PLUG. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Mar. 8, 1920. Serial No. 364,015. 4 Claims. (Cl. 123—169.)

1. In a spark plug of the class described, an external hollow metallic shell or casing; an outer electrode oblong in cross section carried by said shell and projecting from



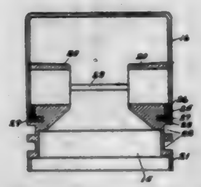
the inner end thereof, and the arrangement of which electrode is such that its longer dimension extends circumferentially of the end of said shell or casing; and a central electrode supported by an insulating member secured in place within said shell; the free end of said outer electrode being bent substantially at right angles to the fixed portion thereof, and twisted through an angle of substantially ninety degrees, and the extremity of which outer electrode extends substantially parallel with and lies adjacent the said central electrode and is provided with a plurality of sparking points or teeth.

1,538,871. MAIL BOX. HOMER KRICK, Fort Wayne, Ind., assignor of one-half to William H. Scherer, Fort Wayne, Ind. Filed Apr. 2, 1923. Serial No. 629,318. 3 Claims. (Cl. 232—19.)



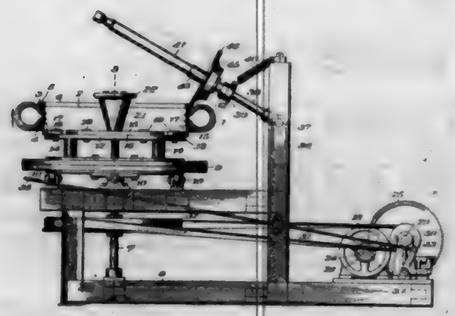
1. In a mail receptacle, a box having an inlet chute; a hinged lid closing the chute; a revolubly adjustable stud mounted in said box; an actuating member mounted on the stud and having a laterally projecting jaw and radial arm; a hammer mounted on said stud and having a jaw engageable by the jaw on the actuating member; a guide pin extending between the hammer and the actuating member and being adjustably movable with said stud; a spiral spring on said stud having fixed relation at one end therewith, and at its other end with said hammer; a signal means with which the hammer has operable relation; and means connecting said lid with the arm on the actuating member.

1,538,872. CURTAIN-STRETCHER ROD. WILFRED R. MILNER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 10, 1921. Serial No. 476,488. 5 Claims. (Cl. 296—139.)



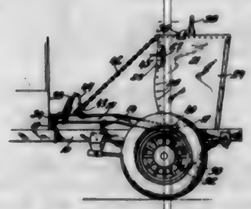
4. In vehicle curtain construction, the combination of a curtain, reinforcing bars extending along the upper and lower edges respectively of said curtain, and a curtain rod comprising telescoping sections and spring means for extending said sections, said sections being detachably engaged with said bars to support and stretch the curtain, and detachable by longitudinal movement of the sections in a direction to compress said spring means.

1,538,873. COIN-CONTROLLED DISPENSING MECHANISM. EZEKIEL MASON ROBERTS, St. Louis, Mo. Filed Sept. 11, 1922. Serial No. 587,568. 2 Claims. (Cl. 194—32.)



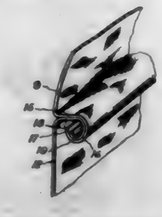
1. In a device of the class described, a reciprocating member, a lock for said reciprocating member, and means for operating said lock including a coin chute, a coin trap, said coin trap being pivoted at one extremity and having lateral arms extending therefrom, the opposite extremity being cupped to form a coin receiver, a weight carried by one of said arms, a flexible connection between the other lateral arm and the lock, a stop for said coin trap, and flexible means connecting said reciprocating member and stop to cause a downward movement of the latter upon movement of the former.

1,538,874. PISTON FOR INTERNAL-COMBUSTION ENGINES. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 18, 1922. Serial No. 530,186. 2 Claims. (Cl. 74—108.)



1. A piston comprising a sheet metal member adapted to form a head and the greater portion of the cylindrical sides thereof; a cast member provided with piston pin bosses in a restricted end portion thereof, which end portion is adapted to fit within the first member, and is provided with peripheral grooves at its other and unrestricted end; and means for securing said sheet metal member over the restricted end portion of said cast member, with the head portion thereof spaced apart from the upper extremity of said cast member, so that the cylindrical sides of said sheet metal member serve as the sole support for said head.

1,538,875. TIRE MOUNTING AND DEMOUNTING APPARATUS. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 5, 1923. Serial No. 616,920. 6 Claims. (Cl. 157—6.)



1. In a tire mounting and demounting apparatus, a rotatable support for a tire carrying rim, movable clamping means for the rim, a power shaft, and a single operative device for moving the clamping means and simultaneously connecting the support for driving relation to the power shaft.

1,538,876. TILTING-BODY VEHICLE. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 7, 1922. Serial No. 573,427. 4 Claims. (Cl. 298—10.)

1. In a dumping body vehicle of the class described, a suitable frame having oppositely disposed side members; two tracks or rails supported by said side members and extending longitudinally of the frame, and which tracks are spaced inward from the vertical planes of said side members so as to lie closer together than said members; and a tilting body narrower than said frame and resting upon said rails, and having a pouring lip at its rear end; said body being so supported that said lip is always in front of the rear ends of said side members.

1,538,877. MOTOR-VEHICLE-HOOD HINGE. GEORGE BATT, Brooklyn, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 29, 1920. Serial No. 399,844. 5 Claims. (Cl. 16—128.)

1. In a hood for motor driven vehicles, two door sections formed from sheet metal and the adjacent edges of which are bent inward to provide substantially horizontal shelf portions which contact with one another when the hood is closed, and then downward and outward to provide interengaging rolled portions extending along and continuous from one end of each section to the other, and which rolled portions provide a pivotal or hinge joint connection between said section; said rolled portions lying one within the other and the same being greater in height than in width so that the hinge connection aforesaid will be tight when the sections are in their closed condition, and loose when the sections are in their open condition.

1,538,878. HOLDER FOR WRITING IMPLEMENTS AND THE LIKE. ALBERT JAHN, Berlin, Germany. Filed Aug. 31, 1923. Serial No. 660,360. 2 Claims. (Cl. 120—103.)

1. In a pen or like holder the combination of a straight shaft with a gripping portion having a flat top surface and two downwardly converging, convex side surfaces, the gripping portion being disposed eccentrically relative to the shaft of the holder with the top surface extended towards the right so as to meet the adjoining convex surface at an acute angle, substantially as set forth.

Patents Nos. 1,538,870 to 1,539,817.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 334—No. 4. TUESDAY, MAY 26, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

(Order No. 2,904.)

U. S. Patent Office, *Washington, Apr. 14, 1925.*

Acting under the provisions of section 487 of the Revised Statutes of the United States, as amended February 18, 1922, John J. Donnelly, of 5110 Detroit Street, Cleveland, Ohio, whose registration number is 10,268, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

(Order No. 2,905.)

U. S. Patent Office, *Washington, Apr. 14, 1925.*

Acting under the provisions of section 487 of the Revised Statutes of the United States, as amended February 18, 1922, John H. Clark, of 1407 New York Avenue NW., Washington, D. C., whose registration number is 11,770, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

U. S. Patent Office, *Washington, May 1, 1925.*

Westerly Shirt Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Orent's Department Store, Inc., 1225 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered October 22, 1912, No. 88,814, to Westerly Shirt Co., of Westerly, R. I., and 23-25 East Twenty-first Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Westerly Shirt Co., at Westerly, R. I., as well as letters forwarded by the attorney of record to both of the above addresses having been returned to the respective senders by the post-office authorities as undeliverable, notice is hereby given that unless said Westerly Shirt Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, May 5, 1925.*

Dawson Metals Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Samuel R. Dawson, of 395 St. Johns Place, Brooklyn, N. Y., for registration of a trade-mark and trade-mark registered November 2, 1920, No. 136,396, to Dawson Metals Inc., 52 Vanderbilt Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Dawson Metals Inc., at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Dawson Metals Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, May 5, 1925.*

Isaac J. Silverstein, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Linen Thread Company, 96-98 Franklin Street, New York, N. Y., for registration of a trade-mark and trade-mark registered April 16, 1912, No. 86,169, to Isaac J. Silverstein, 147 Spring Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Silverstein at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Silverstein, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. Patent Office, *Washington, Mar. 30, 1925.*

The New-Tone Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of McGregor Chemical Co., 340 East Seventy-fifth Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered November 9, 1915, No. 106,988, to The New-Tone Company, 431 North Clark Street, Chicago, Ill., and a notice of such declaration sent by registered mail to The New-Tone Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless The New-Tone Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Condition of Applications Under Examination at Close of Business May 15, 1925.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 44,868; Trade-Mark Division, 2,379. Oldest new case, Nov. 17, 1924; oldest amended, Nov. 17, 1924. The dates given are 1925 except where † indicates 1924.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action: New.	Amended.	No. of applications awaiting action.
116	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Feb. 4	Feb. 20	632
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Jan. 27	Jan. 22	470
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Mar. 30	Apr. 7	298
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Traversing Hoists.	Feb 9	Jan. 20	616
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cords or Strands.	†Dec. 17	†Dec. 17	973
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemistry; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilisers; Substance Preparation; Hides, Skins and Leather; Sugar and Starch; Concentrating Evaporators.	†Dec. 26	†Nov. 26	918
312	7. JARBOE, C. G., Amusement and Exercising Devices; Toys; Optics; Photography	Jan. 15	Jan. 16	962
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Jan. 16	Jan. 2	1,434
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Jan. 29	Mar. 4	596
118	10. BARTHOLOMEW, J. A., Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumping.	Jan. 16	Jan. 21	1,001
148*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Driven, Headed, and Screw-Threaded Fastenings.	Feb. 26	Mar. 9	724
330	12. PIERCE, P. P., Machine Elements	Jan. 16	Jan. 17	732
154*	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	†Dec. 15	Jan. 17	1,157
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	Feb. 13	Mar. 5	310
329	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	Jan. 16	Jan. 20	966
240*	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	†Dec. 4	†Dec. 9	1,018
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Jan. 29	Mar. 6	386
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	†Dec. 8	†Dec. 10	822
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	†Dec. 13	Feb. 16	518
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking.	Jan. 9	Jan. 19	840
312	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	†Dec. 16	Mar. 13	445
106	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion; Game Apparatus.	Feb. 13	Feb. 14	386
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	†Dec. 24	Jan. 8	409
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Jan. 26	Feb. 2	824
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Cutlery; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Gas Separation.	Feb. 3	Mar. 7	703
225*	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	†Nov. 22	†Nov. 28	760
314	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	Feb. 2	Feb. 14	713
225	28. BENSON, A. R., Internal-Combustion Engines	Mar. 22	Mar. 21	708
160*	29. MORRIS, B. N., Abrading; Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	†Nov. 17	†Dec. 15	1,052
248	30. SULLIVAN, M. R., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Typewriting Machines.	Feb. 10	Feb. 10	897
314	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue.	Feb. 27	Feb. 24	819
249	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	Jan. 16	Jan. 16	660
152	33. WYMAN, W. L., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs; Wooden Buildings.	Mar. 10	Mar. 10	676
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track Sanders; Vehicle Fenders.	Jan. 12	Jan. 14	612
116*	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	Feb. 7	Feb. 16	625
105	36. MORTON, G. L., Automatic Weighers; Geometrical and Measuring Instruments; Force Measuring	Jan. 23	†Nov. 17	1,282
224*	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	†Dec. 1	†Dec. 4	1,202
145	38. IDE, G. B., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stoneworking; Wells.	†Nov. 17	†Nov. 21	942
220	39. COWLES, A. W., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution	Jan. 26	Feb. 13	435
360	40. OBERLIN, J. J., Baggage; Bottles and Jars; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	†Dec. 16	†Dec. 15	1,707
125	41. BROWN, J. L., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels; Wheel Substitutes	Feb. 3	Jan. 22	593
223*	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling	†Dec. 13	†Dec. 4	1,140
124*	43. HOPKINS, F. M., Baths, Closets, Sinks, and Spittoons; Sewerage; Electricity, Medical and Surgical; Medicines; Surgery; Dentistry; Artificial Body Members; Railway Draft Appliances.	†Dec. 15	†Dec. 26	872
253	44. SHAFFER, C. H., Bread, Pastry, and Confection Making; Dispensing; Dispensing Beverages; Filling and Closing Portable Receptacles; Refrigeration.	†Dec. 29	†Dec. 17	770
379	45. GILES, A. H., Journal Boxes, Pulleys, and Shafting; Lubrication	†Dec. 27	Jan. 2	791
233	46. WOLCOTT, C. L., Fluid Sprinkling, Spraying, and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers.	†Dec. 15	†Dec. 8	710
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid-Pressure Brake and Analogous Systems; Motors; Spring Devices.	Jan. 9	Jan. 8	1,306
213*	48. ROEPKE, O. B., Electricity, Conductors; Electricity, General Applications	†Nov. 17	†Nov. 17	1,702
239	49. EDINBURG, F. P., Check-Controlled Apparatus; Domestic Cooking Vessels; Fuel and Igniting Devices; Pneumatics; Velocipedes; Driers; Liquid Separation or Purification.	Jan. 17	Jan. 21	721
322	50. BLAKE, C. L., Plastic and Liquid Coating Compositions; Coating; Laminated Fabrics	†Dec. 5	†Dec. 6	1,355
240*	51. BACKUS, C. D., Radiant Energy, Wave Transmission; Electric Lamps	†Dec. 17	†Dec. 11	2,125
144	52. MORGAN, E. J., Supports; Fire Escapes; Ladders; Scaffolds; Railway Mail Delivery; Joint Packing; Pipe and Rod Joints or Couplings.	Feb. 21	Mar. 14	826
112	53. PECK, M. K., Books; Manifolding; Printed Matter; Stationery; Educational Appliances; Paper Files and Binders; Tents, Canopies, Umbrellas, and Canes; Curtains, Shades, and Screens.	†Dec. 20	†Dec. 19	1,047

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE PUTNAM.

Decided November 25, 1924.

1. SUPERVISORY AUTHORITY OF THE COMMISSIONER OF PATENTS TO REVIEW FAVORABLE DECISIONS OF THE EXAMINERS IN CHIEF.

The Commissioner has supervisory authority to review favorable decisions of the Examiners in Chief on the question of patentability.

2. INVENTION—CHANGES IN DEGREE—NOVELTY—DEPARTURE FROM PRIOR TEACHINGS OF THE ART—SCRAPPING OF OLD MACHINERY—MARKED POPULARITY.

Where claims distinguished from standard pneumatic tires by specifying a substantially reduced inflation pressure, a substantial increase in cross-section, and a substantial decrease in the ratio of wall thickness to cross-sectional diameter, and a showing was made that the tire set forth by the claims was so radically new that the tire industry was reluctant to concede its practicability, that when finally adopted it compelled many large manufacturers to substitute this tire for the one formerly used notwithstanding the necessity for making alterations at great expense, and where the new tire met with such marked favor that plans were held up and orders canceled in order to make necessary changes, *Held* that applicant's tire was new and produced a new result that was not obvious or suggested by an oversized underinflated tire.

[Note.—This application has resulted in Patent No. 1,587,879, May 12, 1925.]

APPLICATION for patent.

Question of patentability.

PNEUMATIC-TREADED VEHICLE WHEEL.

Application filed August 13, 1920, Serial No. 403,192.

Messrs. Whittemore, Hulbert & Whittemore for the applicant.

ROBERTSON, *Commissioner:*

This case is before me to determine the patentability of three claims presented on June 24, 1924.

Before considering these claims it is desirable to state the history of the application.

When the case was before the Primary Examiner, the four claims in the case were finally rejected on April 5, 1922. In response to a request for reconsideration the Examiner repeated this final rejection under date of April 3, 1923. An appeal was thereupon taken to the Examiners in Chief who, on December 21, 1923, reversed the decision of the Examiner as to the four claims then in the case and recommended that a fifth claim, referred to in the decision of the board, be also considered allowable. On appeal additional claims 6, 7, and 8 were also proposed, but the Board of Examiners in Chief did not find these claims allowable. On February 15, 1924, the applicant canceled claims 5, 6, 7, and 8 and inserted new claims 5, 6, 7, 8, and 9. These claims were presented to the Board of Examiners in Chief, who approved their allowance.

[1] The Examiner then considered this application allowable, but before the case could be sent to issue it became necessary, in view of a possible interference, to refer the case to a Law Examiner. In this way my attention was called to the case and after giving it careful consideration, under the authority of the decision of the Court of Appeals of the District of Columbia in *Moore, Commissioner of Patents*, v. *U. S. ex rel. Chott*, 40 App. D. C. 591; 192 O. G. 520; 1913 C. D. 427, a letter was sent to the applicant as follows:

My attention has been called to the claims in this application in view of a possible interference. After a careful review of them I have been unable to bring myself to the conclusion that the claims are patentable over the ordinary oversize tire, especially when the latter is used with less than the maximum pressure, a condition under which tires are often intentionally used.

While some of these claims bring out the feature of the side walls being of a thickness differing from that of the standard tire, it is nevertheless a fact that it is common in different makes of tires to have different thicknesses of side walls. An oversize tire with walls thinner than the average would seem to anticipate this feature.

Before directing the rejection of these claims under my supervisory power an opportunity will be afforded the applicant to make such showing as he sees fit to convince me that the claims involve patentable subject-matter.

Thirty days are therefore given the applicant for this purpose.

In the absence of any showing, the claims will be rejected.

In view of this action the case was set for formal hearing on June 23, 1924, and was argued orally. At this hearing, in addition to the art of record, the following publications and patents were considered:

"Journal Automobile": Vol. 29, 1913, July–August, page 298; Sept.–Oct., page 692; vol. 34, 1916, Jan.–Feb., page 194; Mar.–April, page 418; "Pneumatic Tires", by Pearson, 1922, page 247; Hawley, 1,433,008; Jeffery, 803,845; Gammeter, 1,188,062; Sloper, 1,294,318; Sloper (French), 465,626, of 1914.

In view of the hearing applicant filed on June 24th an amendment canceling all the claims previously in the case and inserted three new claims, which read as follows:

1. A pneumatic tire of normally circular cross-section and designed to carry a predetermined normal load at a substantially reduced inflation pressure, modified from standard practice for the same load by a substantial increase in cross-sectional area and a substantial decrease in ratio of wall thickness to cross-sectional diameter.

2. A pneumatic tire of normally circular cross-section and designed to carry a predetermined normal load at a substantially reduced inflation pressure, modified from standard practice for the same load by an increase of at least 50% in cross-sectional area and a substantial decrease in the ratio of wall thickness to cross-sectional diameter.

3. A pneumatic tired vehicle wheel designed to carry a predetermined load at a substantially reduced inflation pressure comprising a wheel body and a tire of normally circular cross-section but modified from standard practice for the same load and tread diameter by a substantial increase in cross-sectional area of the tire and a substantial decrease in the ratio of wall thickness to cross-sectional diameter.

In addition to the oral argument applicant was given an opportunity to file a brief and affidavits, if he so desired, to emphasize the points made in his oral argument. Accordingly, on July 16th, a

brief was filed accompanied by an affidavit of the inventor and affidavits of Howard A. Coffin, Burton S. Gier, C. C. Carton, J. B. Siegfried, John Painter, William E. Williams, and Jesse E. McBride.

Applicant, through his attorneys, strenuously presses the view that these claims define a tire so radically new that it can not be anticipated by the foregoing references or by the use of an oversize tire inflated with less than the maximum pressure; that the tire set forth by these claims is so radically new that the tire industry was reluctant to concede its practicability; that when finally adopted it compelled all the large manufacturers of tires and of the better makes of cars to substitute the tire of this application for the ones formerly used notwithstanding that it was necessary to reorganize the tire-making machinery, the wheel-making machinery, and to otherwise adapt the cars to receive the new type of tire.

The affidavits filed indicate, also, that when this type of tire was finally adopted it met with such marked favor that the plans of various car builders were held up and parts of their orders for wheels and standard tires canceled in order to make the changes found necessary for the use of the new type of tire.

The affidavit of C. C. Carlton, of the Motor Wheel Corporation, of Lansing, Mich., states that the new type of wheel called for by this tire increased in shipments from 125 in July, 1923, to 79,097 in April, 1924.

The affidavit of J. B. Siegfried states that the total production of wheels by his corporation during the calendar year of 1923 was over two million, exclusive of "Fords"; that of this number less than one per cent were for use with balloon tires; and that since January 1, 1924, the ratio of wheels designed for balloon tires to wheels designed for standard tires has shown such an increase that for the first five months of the calendar year 1924 more than 25 per cent of the passenger-car wheels made by his corporation, exclusive of Fords, was for use with balloon tires, and that orders and specifications for delivery during the months of July, August, and September, 1924, show that more than 50 per cent of the total production of wheels manufactured by his corporation, exclusive of Fords, was for balloon tires.

The affidavit of John Painter, formerly sales manager of the Disteel Wheel Corporation, with respect to this invention states that the large manufacturers "were largely very skeptical, even going so far as to ridicule the idea and declaring it to be nonsensical."

The affidavit of W. E. Williams, consulting engineer and an expert in patent causes, states that when the applicant read a paper suggesting use of tires of large cross-section and lower inflation pressure "the discussion which followed in relation to Mr. Putnam's paper, outside of deponent's own remarks, was adverse to what Mr. Putnam proposed."

The affidavit of J. E. McBride, of the Palmer-Bee Company, states that the total amount "of money represented in mold equipment for large tire manufacturing plants runs into the hundreds of thousands and even millions of dollars;" that any change in standard sizes makes the discarding of molds necessary and, hence, means great additional investment for the manufacturing of new molds for such changed standards.

Consideration of the foregoing facts, including the phenomenal increase in the use of this type of tire, the necessity of making new molds costing hundreds of thousands or even millions of dollars, the consequent changing of machinery to provide different sizes of wheels, different mud guards, and even changed steering gear, etc., brings me to the conclusion that the tire of this application discloses more than is found in the prior art and more than is disclosed by the use of an oversize tire using less than normal pressure. In considering this last I have not overlooked the fact that one writer refers to the fact that air pressure with oversize tires might be decreased as the cross-sectional area is increased, as:

> For example, a load which requires a 60-lb. pressure on a 3½ in. tire requires only a 48-lb. pressure on a 4-in. tire, or 42 lb. for 5 in. Also a heavier load, requiring 80 lb. for 3½ in. requires 62 for 4 in., 56 for 5 in., 40 only for 6 in. This diminishing inflation is in accordance with common sense.—C. E. Manierre in "The Automobile," January 27, 1916, p. 194.

[2] Briefly stated, my conclusion therefore is that applicant's tire is new, both in size and structure, and produces a new result that was not obvious or suggested by making an ordinary or standard tire oversize and inflating it to a pressure less than normal.

Considering the three claims filed on June 24th, I find that claims 1 and 2 define a structure that differs from an ordinary tire in its substantial increase in cross-sectional area and a substantial decrease in ratio of wall thickness to cross-sectional diameter, and in its adaptation designed to carry a normal load at a substantially reduced inflation pressure. These two claims define the invention in terms to distinguish from the prior art of record and are deemed allowable.

Claim 3 is for a combination of a vehicle wheel and a tire of the balloon type defined by claims 1 and 2. The combination of a vehicle wheel and a pneumatic tire is, of course, old. In the present case the invention is in the tire per se, and it does not form a new combination to mount such a tire on a vehicle wheel with which it is intended to be used. The entire novelty in this claim, except for the wheel, is set forth by claims 1 and 2. Claim 3 must be and is held not to set forth any patentable novelty over what is already defined by claims 1 and 2.

Claims 1 and 2 are allowed, and claim 3 is held to be unpatentable.

Supplemental Decision, February 28, 1925.

Applicant has filed a request that the third claim held unpatentable in my decision of November 25, 1924, be canceled and a new claim 3 be inserted in its place.

The new claim reads as follows:

> 3. A pneumatic tired vehicle wheel designed to carry a predetermined load at substantially reduced inflation pressure and with a materially decreased total weight of tire and wheel body; modified from standard practice by a substantial increase in cross-sectional diameter of the tire with a decrease in ratio of wall thickness thereto and a substantial decrease in the ratio of wheel body to tire in both radial dimension and weight.

A careful examination of this claim shows that it includes limitations not found in the third claim for which the new claim is substituted. In view of the fact that the construction set forth by this claim is said to have the advantages referred to in the argument filed in the paper inserting the claim, I am willing to resolve such doubts as I have in favor of the applicant. The advantages set up in applicant's argument seem real, but the question arises whether these advantages are not those which would necessarily result from modifying the wheel to adapt it to receive the tire which is the subject matter of allowed claims 1 and 2. It may be that these advantages, obvious now that the combined wheel and tire have been put into use, would not be apparent even to one skilled in the art except, as applicant urges, as a result of the exercise of invention in making up not only the tire of claims 1 and 2, but the combined wheel and tire of claim 3. At any rate, there has been such a revolution in the art that I have, as above stated, decided in favor of the applicant.

Claim 3, however, should be amended to make more definite what applicant has urged at the oral hearing. To state the matter in another way, the word "reduced" in line 2 of new claim 3 is not sufficiently definite. If said word is canceled and the words *below standard* are inserted in lieu thereof, the claim may be considered allowable.

Court of Appeals of the District of Columbia.

TUPELO COTTON MILLS *v.* AMERICAN BLEACHED GOODS CO., INC.

No. 1,719. Decided April 6, 1925.

TRADE-MARKS — DECEPTIVE SIMILARITY — REPRESENTATIONS OF SCARLET TANAGER AND BLUEBIRD.

Where each mark consists of a bird with red breast and outstretched wings, one having black tail and wings and the other blue tail, wings, head, and back, the words and accessories being somewhat different in the two marks and one mark having a circle surrounding the bird, concurrent use of these marks on goods of the same descriptive properties *Held* "likely to cause confusion in the mind of the public or to deceive customers," even though they might be easily distinguishable by ornithologists.

APPEAL from Patent Office. Affirmed.

Mr. Myron G. Clear for Tupelo Cotton Mills.

Mr. Frederick Bachman and *Mr. Douglas H. Kenyon* for American Bleached Goods Co., Inc.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

This is an appeal from a decision of the Patent Office in a trade-mark cancellation proceeding.

The marks of the parties are applied to goods of the same descriptive properties. Appellee's mark, adopted and used extensively since 1907, consists of a bird, wings outstretched, just leaving a twig, the body of the bird being red and its wings and tail black. In a circle surrounding this bird, which is said to be a representaton of a scarlet tanager, are the words "Pride of the West—India Linon." Appellant's mark, adopted in 1917, consists of a bird perched on a twig, with wings outstretched and carrying in its mouth a string, from which is suspended a disk bearing the word "Tupelo." In the drawing the breast of this bird, said to be a representation of a bluebird, is lined for red, while the head, back, tail and wings are lined for blue.

The Assistant Commissioner ruled that the concurrent use of these two marks was "likely to cause confusion or mistake in the mind of the public or to deceive purchasers", within the meaning of the Trade-Mark Act, and hence that appellant's mark should be cancelled. In this ruling we concur. *Coca-Cola Co.* v. *Chero-Cola Co.*, 288 O. G. 432; 1921 C. D. 239; 51 App. D. C. 27; 273 Fed. 755; *Canterbury Candy Makers* v. *Brecht Candy Co.*, 320 O. G. 3; 1924 C. D. 204; 54 App. D. C. 82; 294 Fed. 1013. Appellant suggests that these two birds are easily distinguishable. They might be by ornithologists, but the purchasing public includes comparatively few persons who have particular knowledge of birds. To the average person these goods would be bird goods and would not be known as bluebird or tannger goods.

The decision is affirmed.

Affirmed.

ADJUDICATED PATENTS.

(C. C. A. III.) The May patent, No. 1,036,290, for sausage casing, *Held* not infringed. *Wolf, Sayer & Heller* v. *Patent Casing Co.*, 4 F. (2d) 57.

(C. C. A. III.) The May patents, Nos. 1,063,713 and 1,063,714, for sausage casing and method of making same, *Held* invalid. *Wolf, Sayer & Heller* v. *Patent Casing Co.*, 4 F. (2d) 57.

(D. C. Minn.) The Furber patent, No. 1,114,246, for temperature-controlling apparatus for internal-combustion engines, claims 1 to 4, inclusive, and claims 5, 6, and 8 *Held* valid and infringed. *Detroit Motor Appliance Co.* v. *Burke*, 4 F. (2d) 118.

TRADE-MARKS CANCELED.

40,604. Remedies for the diseases of the throat and chest. Terpinol Tablet Co., Philadelphia, Pa. Registered June 16, 1908. Canceled April 8, 1925.

70,777. Soap. Mary E. Taylor, Dallas, Tex. Registered September 29, 1908. Canceled March 28, 1925.

111,542. Fluid for sealing punctures in pneumatic tires. David Sabel, New York, N. Y. Registered July 25, 1916. Canceled April 27, 1925.

145,074. Steel pulleys. Dodge Sales & Engineering Co., Mishawaka, Ind. Registered July 26, 1921. Canceled April 27, 1925.

148,538. Overalls and work shirts. Standard Overall Company, Baltimore, Md. Registered November 15, 1921. Canceled April 27, 1925.

161,284. Pile fabrics in the piece. The Salt's Textile Manufacturing Company, Bridgeport, Conn. Registered November 7, 1922. Canceled April 8, 1925.

165,063. Receptacles. Sylvanus W. Long, New York, N. Y. Registered March 6, 1923. Canceled April 8, 1925.

184,333. Cotton piece goods cloths. E. Milius & Company, New York, N. Y. Registered May 20, 1924. Canceled April 27, 1925.

184,713. Boots and shoes of leather and combinations of leather, fabric, and rubber. Reynolds, Drake & Gabell Co., North Easton, Mass. Registered May 27, 1924. Canceled March 28, 1925.

187,039. Dress, negligee, and work shirts. Boston Store of Chicago, Inc., Wilmington, Del., and Chicago, Ill. Registered July 22, 1924. Canceled April 8, 1925.

191,806. Ladies' coats. Harry Kitzinger, doing business as Harry Kitzinger & Company, New York, N. Y. Registered November 18, 1924. Canceled April 27, 1925.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 26, 1925.

[VOL. 334. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 160,020. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) OSCAR W. H. NELSON, Lynn, Mass. Filed Mar. 1, 1922.

Ski-Cycle

Particular description of goods.—Toy Coasters with or without Wheels.
Claims use since 1922.

Ser. No. 169,271. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE ALLEN MANUFACTURING COMPANY, Hartford, Conn. Filed Sept. 11, 1922.

No claim is made for the registration of the end of a set screw per se. The mark consists of six triangles at the corners of the bottom of a hexagonal socket in the head end of the article.
Particular description of goods.—Machine Screws and Threaded Metal Plugs Having Socketed Head Ends.
Claims use since Jan. 1, 1917.

Ser. No. 171,074. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FORTUNE PRODUCTS COMPANY, Chicago, Ill. Filed Oct. 23, 1922.

FORTUNE

Particular description of goods.—Chocolate, Particularly Chocolate for Cooking Purposes.
Claims use since on or about Feb. 1, 1922.

Ser. No. 179,692. (CLASS 38. PRINTS AND PUBLICATIONS.) UNITED CANARY BREEDERS OF AMERICA, INC., New York, N. Y. Filed Apr. 25, 1923.

American Canary Journal

Particular description of goods.—Monthly Magazines.
Claims use since about Nov. 1, 1919.

Ser. No. 181,073. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SYDNEY B. HOPKINS, doing business as The Naturelle Company, New York, N. Y. Filed May 24, 1923.

NATURELLE

Particular description of goods.—Phonographs and Parts thereof and Phonograph Supplies—Namely, Disks, Diaphragms, Horns, and Amplifying Devices.
Claims use since Jan. 10, 1923.

Ser. No. 181,074. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SYDNEY B. HOPKINS, doing business as The Naturelle Company, New York, N. Y. Filed May 24, 1923.

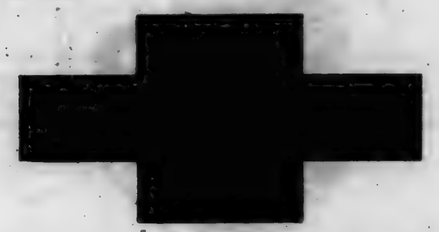
No claim is made to the representation of a portion of a phonograph and phonograph record apart from the mark shown in the drawing.
Particular description of goods.—Phonographs and Parts thereof and Phonograph Supplies—Namely, Disks, Diaphragms, Horns, and Amplifying Devices.
Claims use since Jan. 10, 1923.

Ser. No. 183,695. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE CONTINENTAL FIBRE COMPANY, Newark, Del. Filed July 26, 1923.

No claim is made to the representation of a section of the material. The trade-mark consists of two black lines arbitrarily placed in the body of the materials.

Particular description of goods.—Laminated Material for Electrical Insulation.

Claims use since June 20, 1920.



Ser. No. 184,669. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JEWEL TEA CO., INC., Chicago, Ill. Filed Aug. 18, 1923.

Particular description of goods.—Teas, Spices, Flavoring Extracts for Foods, Cocoa, Pie Filler, and Rice, Black Pepper, Ginger, Mustard, Shredded Coconut, and Gelatin Desserts.

Claims use since Aug. 7, 1923.

Ser. No. 185,155. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) EDWIN B. STIMPSON COMPANY, Brooklyn, N. Y. Filed Aug. 29, 1923.

Particular description of goods.—Bobbin Heads (Metal Heads or Washers for Each Side of Wooden Machinery Bobbins), Perforators (Machines for Perforating Check Books, Postage Stamps, Etc.), Typewriter-Ribbon Clamps, Tire Clamps, Creasing Machines (for Creasing Leather, Etc.), Eyelet Sets (Hand Sets, Also Hand Lever, Foot Lever, and Automatic Machines), Eyeleting Machines (Hand, Foot and Automatic), Grommet Sets (Hand Sets, Also Hand Lever, Foot Lever, and Automatic Machines), Grommeting Machines (Hand, Foot, and Automatic), Razor Guards, Leather-Strip-Cutting Machines, Rawhide Mallets, Sail-Makers' Needles and Needles for Lacing Footballs and the Like, Punching Machines for Punching Paper, Cardboard, Fabric, and Light Metal, Typewriter-Ribbon Hooks, Punches, and Riveting Machines (Hand, Foot, and Automatic Machines for Setting and Feeding Split, Tubular, and Side-Prong Rivets).

MIELACTA

Particular description of goods.—Chocolates, Chocolate Candy, and Bonbons.

Claims use since June 17, 1922.

Ser. No. 191,988. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. STROOCK & COMPANY, INC., New York, N. Y. Filed Feb. 7, 1924.

Desire

Particular description of goods.—Cloth in the Piece Made of Camel's Hair and Mohair.

Claims use since Apr. 26, 1923.

Ser. No. 192,320. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL DEALERS SUPPLY HOUSE, Chicago, Ill. Filed Feb. 15, 1924.

SYNCHRODYNE

Particular description of goods.—Radio Apparatus—Namely, Complete Receiving Sets, Transformers, Condensers, and Receiving-Set Kits.

Claims use since Jan. 1, 1924.

Ser. No. 193,465. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) KIENZLE UHRENFABRIKEN A. G., Schwenningen-on-the-Neckar, Germany. Filed Mar. 8, 1924.

Autograph

Particular description of goods.—Apparatus for Indicating and Recording the Mileage and Various Operations and Occurrences in the Use of Vehicles, Such as Times of Departure and Return, Stops, Backing (Reversing), Etc.

Claims use since July, 1921.

Ser. No. 194,078. (CLASS 11. INKS AND INKING MATERIALS.) PICCADILLY INK COMPANY, Baltimore, Md. Filed Mar. 19, 1924.

The word "Ink" is disclaimed apart from the other features of the mark.

Particular description of goods.—Writing Fluids for Fountain Pens and Steel Pens, Stencil Ink, Rubber-Stamp Pads, Ink for Rubber-Stamp Pads, Concentrated Ink (Tablets, Paste), Printing Ink, Lithographic Ink, Copying Ink, and Indelible Ink.

Claims use since May 1, 1922.

Ser. No. 194,105. (CLASS 12. CONSTRUCTION MATERIALS.) IRVING IRON WORKS COMPANY, Long Island City, N. Y. Filed Mar. 20, 1924.

SAFTRED

Particular description of goods.—Metal Gratings for Floorings and Staircases.
Claims use since Mar. 12, 1924.

Ser. No. 194,455. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) KLEINKNECHT & BROSE, Pittsburgh, Pa. Filed Mar. 26, 1924.

GETS-ALL

Particular description of goods.—Holding and Dispensing Apparatus for Tube Receptacles.
Claims use since Nov. 14, 1923.

Ser. No. 194,601. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BESSIE M. GISH, doing business as O-Shine-O Products Co., Chicago, Ill. Filed Mar. 28, 1924.

O-SHINE-O
NCE POLISH VER

The words "Polish" and "Shine" appearing in the drawing are disclaimed apart from the mark as shown.
Particular description of goods.—Polish for Furniture, Autos, Pianos, Painted and Enameled Woodenwork, and Painted Furniture.
Claims use since Dec. 1, 1923.

Ser. No. 194,933. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) VAUGHN E. MORRISON, doing business as V. E. M. Company, Detroit, Mich. Filed Apr. 3, 1924.

VEMCO

Particular description of goods.—Telephonic Loud Speakers and Receivers for Use with Radio Receiving Apparatus.
Claims use since on or about Sept. 25, 1923.

Ser. No. 194,955. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JAMES P. SMITH & COMPANY, New York, N. Y. Filed Apr. 3, 1924.

ALVAREZO

Particular description of goods.—Olives and Paprika.
Claims use since about 1907.

Ser. No. 195,916. (CLASS 38. PRINTS AND PUBLICATIONS.) SPECTRO-CHROME INSTITUTE, Philadelphia, Pa. Filed Apr. 21, 1924.

SPECTRO-CHROME

Particular description of goods.—Magazine Published Monthly.
Claims use since July 20, 1922.

Ser. No. 197,082. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) POLYMET MANUFACTURING CORPORATION, New York, N. Y. Filed May 27, 1924.

E-Z
FONE PLUG

No claim is made to the exclusive use of the words "Fone Plug" apart from the mark shown on the drawing.
Particular description of goods.—Electrical Attachment Plugs.
Claims use since about Mar. 15, 1924.

Ser. No. 197,083. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) POLYMET MANUFACTURING CORPORATION, New York, N. Y. Filed May 27, 1924.

"E-Z STAT"

Particular description of goods.—Rheostats.
Claims use since about Mar. 15, 1924.

Ser. No. 197,985. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BAY SPECIALTY COMPANY, Martinez, Calif. Filed June 3, 1924.

ART KRAFT

Particular description of goods.—Electric-Lighting Fixtures, Particularly Wall Brackets and Chandeliers.
Claims use since Jan. 1, 1922.

Ser. No. 198,131. (CLASS 45. BEVERAGES, NONALCOHOLIC.) SIGMUND L. GOLDMAN, doing business as Red Sun Products Co., Chicago, Ill. Filed June 5, 1924.

Portobella

Particular description of goods.—Nonalcoholic Maltless Beverage Sold as a Soft Drink and Coloring Extracts and Syrups for Making the Same.
Claims use since Apr. 28, 1923.

Ser. No. 198,139. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) IMPERIAL POLISH CO., Philadelphia, Pa. Filed June 5, 1924.

Particular description of goods.—Furniture Polish.
Claims use since Jan. 1, 1887.

Ser. No. 198,728. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANK C. BELIER, doing business as Frank C. Belier & Co., Turlock, Calif. Filed June 18, 1924.

Strongheart

Particular description of goods.—Fresh Deciduous Fruits, Fresh Citrous Fruits, Fresh Cantaloupes.
Claims use since Feb. 1, 1924.

Ser. No. 198,956. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) NATIONAL CARBON COMPANY, INC., New York, N. Y. Filed June 21, 1924.

MASTER

Trade-mark "Master."
Particular description of goods.—Electric Batteries.
Claims use since Oct. 1, 1915.

Ser. No. 199,851. (CLASS 37. PAPER AND STATIONERY.) SCHWAN-BLEISTIFT-FABRIK A.-G., Nuremberg, Germany. Filed July 10, 1924.

Auto

Particular description of goods.—Lead, Coloring, Copying, and Slate Pencils; Mechanical Lead Pencils, Marking Charcoal; Chalk for Writing, Drawing, Tailoring, and Billiards; Lead, Charcoal, and Chalk Holders; and Lead and Colored Refills.
Claims use since 1913.

Ser. No. 200,111. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JACOB MILLER'S SONS CO., Philadelphia, Pa. Filed July 16, 1924.

BOTANELLE

Particular description of goods.—Flannel of Cotton and Wool, Cotton Goods, Silk Goods, Linen Goods, and Mixtures of Cotton and Silk and Linen and Silk, All in the Piece.
Claims use since May 6, 1924.

Ser. No. 200,169. (CLASS 17. TOBACCO PRODUCTS.) MRS. HENRY ALLEN, Topeka, Kans. Filed July 18, 1924.

MOKANA

Particular description of goods.—Cigars.
Claims use since July 10, 1923.

Ser. No. 201,202. (CLASS 17. TOBACCO PRODUCTS.) JOHN A. MCADOO, Charlotte, N. C. Filed Aug. 9, 1924.

CHIMNEY ROCK

Particular description of goods.—Cigars, Cheroots, Stogies, and Little Cigars.
Claims use since Apr. 11, 1924.

Ser. No. 203,367. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BONWIT, TELLER & COMPANY, New York, N. Y. Filed Oct. 3, 1924.

No claim is made to bottles generally as a part of the trade-mark.
Particular description of goods.—Perfumes.
Claims use since Aug. 29, 1924.

Ser. No. 203,523. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) GEORGE R. KEITH, doing business as The C K Company, San Francisco, Calif. Filed Oct. 7, 1924.

CK

Particular description of goods.—Piston Rings.
Claims use since June 30, 1923.

Ser. No. 203,703. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WEST SIDE CREAMERY COMPANY, Tracy, Calif. Filed Oct. 10, 1924.

Vogue

Particular description of goods.—Dairy Products—Namely, Ice Cream, Milk, Butter, Cottage Cheese, Ice-Cream Mix (a Liquid Used in the Making of Ice Cream), and Condensed Milk.
Claims use since July 1, 1923.

Ser. No. 204,101. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) KRASCO MANUFACTURING COMPANY, Chicago, Ill. Filed Oct. 18, 1924.

MONARCH

Particular description of goods.—Radio Receiving Sets.
Claims use since Mar. 15, 1924.

Ser. No. 204,116. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) R. A. C. RADIO CO., New York, N. Y. Filed Oct. 18, 1924.

R·A·C

Particular description of goods.—Electrical Apparatus, Machines, and Supplies, as Follows: Radio Receiving Sets and Parts Thereof, Radio-Frequency Amplifiers, Loud Speakers; Detector Amplifier, and Vacuum Tubes; Vacuum-Tube Sockets, Radio and Audio Frequency Transformers, Rheostats, Grid Leaks, Grid Condensers, Inductance and Coupling Coils, Fixed and Variable Condensers, Insulators, Crystal Detectors and Mountings, Antennæ and Antennæ Equipment, Antennæ Protectors, Loop Antennæ, Telephone Plugs and Jacks, and Electrical Switches.
Claims use since June 1, 1923.

Ser. No. 204,195. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PRESSCRAFT MANUFACTURING COMPANY, Terre Haute, Ind. Filed Oct. 20, 1924.

ROAD PILOT

The color lining in the drawing represents black with shadow outlines for the letter.
Particular description of goods.—Electrical Light and Signal Control Switches Especially Adapted for Use on Automobiles.
Claims use since May 4, 1924.

Ser. No. 204,351. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) COOK LABORATORIES, INC., Chicago, Ill. Filed Oct. 24, 1924.

Carpule

Particular description of goods.—Hypodermic Syringes and Needles and Syringe Outfits.
Claims use since about March, 1922.

Ser. No. 204,352. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) HENRY C. CORNETTA, East Boston, Mass. Filed Oct. 24, 1924.

CODA

Trade-mark consists of the word "Coda."
Particular description of goods.—Change of Attachments and Mechanisms for Automatically Cutting Off the Light in Moving-Picture-Projecting Machines.
Claims use since July 22, 1921.

Ser. No. 204,394. (CLASS 38. PRINTS AND PUBLICATIONS.) MACE E. CHARLESTON, Seattle, Wash. Filed Oct. 25, 1924.

Crystalike

Particular description of goods.—Photographic Prints.
Claims use since May 1, 1918.

Ser. No. 204,927. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FRED M. PAGE, doing business as Fred M. Page & Co., Lynn, Mass. Filed Nov. 6, 1924.

EXETTE
WONDER CLEANER

Express disclaimer is made to the word "Cleaner."
Particular description of goods.—Cleaning Powder and General Household Cleaning Preparation in Powdered Form.
Claims use since Oct. 6, 1924.

Ser. No. 204,948. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) ALMOND SMASH CO., INC., Baltimore, Md. Filed Nov. 7, 1924.

SUBURBAN CLUB

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverage.
Claims use since May 1, 1924.

Ser. No. 205,090. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SHEPARD-POTTER COMPANY, INC., Plattsburg, N. Y., assignor to Thermiodyne Radio Corporation, Plattsburg, N. Y., a Corporation of Delaware. Filed Nov. 10, 1924.

Thermiodyne

Particular description of goods.—Radio Receiving Sets and Parts Thereof.
Claims use since June 2, 1924.

Ser. No. 205,092. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROSS T. SMYTH & CO. LIMITED, Liverpool, England. Filed Nov. 10, 1924.

ROSE AND CROWN

Particular description of goods.—Wheat Flour.
Claims use since 1891.

Ser. No. 205,271. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HALLIWELL ELECTRIC CO., INC., New York, N. Y. Filed Nov. 14, 1924. Under ten-year proviso.

HALLIWELL

Particular description of goods.—Electric Hair Driers.
Claims use since 1880.

Ser. No. 205,425. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) W. A. LAWRENCE CO., INC., Poughkeepsie, N. Y. Filed Nov. 17, 1924.

WALCO

Elas-Tricot

No claim is made for "Tricot" apart from the mark shown by the drawing.

Particular description of goods.—Wide Elastic Fabric Suitable for Making Corsets, etc.

Claims use since Nov. 12, 1923.

Ser. No. 205,692. (CLASS 37. PAPER AND STATIONERY.) FORT HOWARD PAPER COMPANY, Green Bay, Wis. Filed Nov. 22, 1924.

PULL-ONE

Particular description of goods.—Toilet Paper, Paper Towels, Paper Napkins, and Crêpe Paper.

Claims use since July 1, 1922.

Ser. No. 205,780. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) B. A. RAILTON CO., Chicago, Ill. Filed Nov. 24, 1924.

In the drawing illustrating the trade-mark the shaded portion contained within the inner circle designates a black or brown color and the shaded portion contained between the inner circle and the outer circle indicates a red color.

Particular description of goods.—Nonalcoholic, Maltless Sirups for Making Soft Drinks.

Claims use since about July, 1922.

Ser. No. 205,795. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) STANDARD IMPORTS LIMITED, Montreal, Canada. Filed Nov. 24, 1924.

Particular description of goods.—Canned Fish.

Claims use since 1908.

Ser. No. 205,917. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) C. A. GAMBRILL MANUFACTURING COMPANY, INCORPORATED, Ellicott City, Md. Filed Nov. 28, 1924.

Particular description of goods.—Self-Rising Flour.

Claims use since Aug. 15, 1924.

Ser. No. 205,920. (CLASS 37. PAPER AND STATIONERY.) GRAHAM PAPER COMPANY, St. Louis, Mo. Filed Nov. 28, 1924.

ZIGZAG

Particular description of goods.—Wrapping Paper.

Claims use since November, 1924.

Ser. No. 206,064. (CLASS 12. CONSTRUCTION MATERIALS.) DIXIE FIREPROOFING CO., Macon, Ga. Filed Dec. 1, 1924.

SUPER

Particular description of goods.—Fire Brick.

Claims use since Jan. 1, 1923.

Ser. No. 206,074. (CLASS 39. CLOTHING.) KNITWEAR PROMOTERS, INC., New York, N. Y. Filed Dec. 1, 1924.

Particular description of goods.—Knitted Sweaters for Men, Women, and Children.

Claims use since Nov. 1, 1924.

Ser. No. 206,656. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) COLONIAL STEEL COMPANY, Pittsburgh, Pa. Filed Dec. 13, 1924.

BEAVER

Particular description of goods.—Steel Plates and Bars, Crucible, Electric, and High-Grade Open-Hearth Castings and Forgings.

Claims use since May 10, 1910.

Ser. No. 206,663. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE FULLER BRUSH COMPANY, Hartford, Conn. Filed Dec. 13, 1924.

Fuller

No claim is made to the representation of the name "Fuller" except in the manner shown.

Particular description of goods.—Vanity Cases Made of Celluloid or Similar Material and Containing Rouge and Face Powder.

Claims use since about Oct. 1, 1923.

Ser. No. 206,765. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ERNEST G. BROOKMAN, doing business as Brookhill Products Co., Los Angeles, Calif. Filed Dec. 16, 1924.

Particular description of goods.—Medicated Mineral Water, Sunburn Cream, Facial Cream, Tooth Powder, Tooth Paste, Suppositories, Antiseptic Mineral Powder, and Preparations for the Treatment of Appendicitis, Blood Poisoning, Boils, Bronchitis, Bruises, Burns, Bunions, Catarrh, Carbuncles, Congestion, Cuts, Contusions, Croup, Colds, Eczema, Erysipelas, the Eyes, Fevers, Goiter, Grippe, Hay Fever, Hemorrhoids, Inflammations, Itch, Jaundice, Locomotor Ataxia, Lumbago, Neuritis, Sores, Paralysis, Piles, Pleurisy, Pneumonia, Quinsy, Rash, Scalds, Sciatica, Tonsilitis, Typhoid, Ulcers, Varicose Veins, and Wounds.

Claims use since June 2, 1924.

Ser. No. 206,784. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) HELLER BROTHERS COMPANY, Newark, N. J. Filed Dec. 16, 1924.

Electric

Particular description of goods.—Tool Steel.

Claims use since Aug. 1, 1892.

Ser. No. 206,795. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) MARKWELL MANUFACTURING CO., INC., New York, N. Y. Filed Dec. 16, 1924.

Markwell

Particular description of goods.—Box Trucks.

Claims use since about February, 1920.

Ser. No. 206,910. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MACDOWELL BROTHERS, Ogdensburg, N. Y. Filed Dec. 18, 1924.

DIABAN
DIABETIC
FLOUR

Applicant disclaims the descriptive words "Diabetic Flour" apart from the other features of the mark shown on the drawing.

Particular description of goods.—Self-Rising Flour.

Claims use since Apr. 1, 1924.

Ser. No. 206,925. (CLASS 38. PRINTS AND PUBLICATIONS.) HARRY WORCESTER SMITH, Lordvale, North Grafton, Mass. Filed Dec. 18, 1924.

—For the Sake of Sport in America—

Particular description of goods.—Section Heading for Printed Matter in a Magazine or Other Periodical.

Claims use since Dec. 30, 1922.

Ser. No. 207,256. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MICHELE PEREGO, Renate, Milan, Italy. Filed Dec. 26, 1924.

Giulia

Particular description of goods.—Cotton Blankets, Bed Covers, Coverlets, and Bedspreads.

Claims use since May 1, 1924.

Ser. No. 207,301. (CLASS 12. CONSTRUCTION MATERIALS.) THE J. E. HARRIS COMPANY, Wooster, Ohio. Filed Dec. 27, 1924.

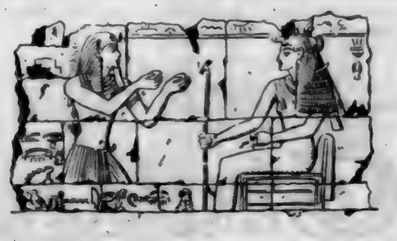
WOOSTER SEALKOTE ROOFING

No claim is made herein broadly to the words "Wooster" and "Roofing" apart from the mark shown in the drawing so far as the present registration is concerned.

Particular description of goods.—Asbestos Compounds for Waterproofing Roofs and the Like.

Claims use since May 15, 1924.

Ser. No. 207,431. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) E. A. WILLIAMS & SON, INC., Jersey City, N. J. Filed Dec. 29, 1924.



Petitioner hereby disclaims the words "E. A. Williams & Son Manufacturers," "Babbitt Metal," "Jersey City," and "New Jersey" and the representation of the ingot apart from the mark as shown by the drawing.

Particular description of goods.—Babbitt Metal.

Claims use since Jan. 1, 1900.

Ser. No. 207,604. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) EDMUND WEIDNER, Berlin, Germany. Filed Jan. 2, 1925.

Particular description of goods.—Soaps, Especially Medical and Cosmetic Soaps.

Claims use since May 1, 1924

Ser. No. 207,674. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) B. GROSSER SONS, INC., Boston, Mass. Filed Jan. 5, 1925.

NOL-LOS

Trade-mark consists of the fanciful compound word Nol-los. No claim is made to the words "No loss."

Particular description of goods.—Variable Air Condensers.

Claims use since about Dec. 1, 1923.

Ser. No. 207,699. (CLASS 38. PRINTS AND PUBLICATIONS.) WESTERN LITHOGRAPH COMPANY, Los Angeles, Calif. Filed Jan. 5, 1925.

WELCO

Particular description of goods.—Advertising Signs—Namely, Transparent Signs Adhering to the Surface to Which They Are Applied; Window Transparencies—Namely, Substantially Transparent Papers Having Printing Thereon and Rendered Adhesive, so as To Be Affixed to Glass.

Claims use since January, 1919.

Ser. No. 207,861. (CLASS 28. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) EAGLE PENCIL COMPANY, New York, N. Y. Filed Jan. 9, 1925. Under ten-year proviso.

AUTOMATIC

Particular description of goods.—Pen Knives.

Claims use since about Dec. 1, 1883.

Ser. No. 207,870. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) I. C. CANDY CO., Brooklyn, N. Y. Filed Jan. 9, 1925.

Kinks

Particular description of goods.—Caramels.

Claims use since August, 1922.

Ser. No. 207,913. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE BARRETT COMPANY, New York, N. Y. Filed Jan. 10, 1925.

F-C-F

Particular description of goods.—Fuel Derived from Pitch for Metallurgical Purposes.

Claims use since about Dec. 12, 1924.

Ser. No. 207,914. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) EUGENE BAZNER, Newark, N. J. Filed Jan. 10, 1925.

CROSS-WORD-PUZZLE

Particular description of goods.—Rings, Brooches, Bracelets, and Stick Pins.

Claims use since December, 1924.

Ser. No. 208,031. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) AMERICAN CABLE COMPANY, INC., Wilmington, Del., and New York, N. Y. Filed Jan. 13, 1925.

TRU-LOC

Particular description of goods.—Attachments and Fittings for Wire Rope, Comprising Sockets, Eyes, Sleeves, Shackles, Clevises, Hooks, Ferrules, Clamps, Yokes, and Ball Ends.

Claims use since Dec. 10, 1924.

Ser. No. 208,066. (CLASS 38. PRINTS AND PUBLICATIONS.) RADIO CORPORATION OF AMERICA, New York, N. Y. Filed Jan. 13, 1925.

PHOTORADIOGRAM

Particular description of goods.—Pictures, Drawings, and Facsimiles Transmitted by Radio.

Claims use since Nov. 30, 1924.

Ser. No. 208,162. (CLASS 28. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ROMORT MANUFACTURING COMPANY, Oakfield, Wis. Filed Jan. 15, 1925.

ROMORT

Particular description of goods.—Free Air and Water Stations for Use of Automobiles, Foot Accelerators for Automobile Engines, Compressed-Air Blowguns for Use in Machine Shops, Etc., and Engine or Motor Cleaning and Grease-Removing Spray Guns for Spraying a Cleansing Liquid, such as Kerosene, by the Use of Compressed Air.

Claims use since June 14, 1923.

Ser. No. 208,222. (CLASS 37. PAPER AND STATIONERY.) CHARLES L. BUSSING, New York, N. Y. Filed Jan. 17, 1925.

Al. B. Careful

Particular description of goods.—Printed Matter Sold to Consumers as Such—Namely, Letterheads, Envelopes, Post Cards, Time Cards, Blotters, and Report Cards.

Claims use since July 22, 1924.

Ser. No. 208,361. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HERMAN P. PORTER, Washington, D. C. Filed Jan. 20, 1925.

"RADIO-WONDER"

Particular description of goods.—Portable Amplifiers Used in Connection with Radio Sets of Various Kinds.

Claims use since December, 1924.

Ser. No. 208,371. (CLASS 37. PAPER AND STATIONERY.) AMERICAN TABLET CO., Green Bay, Wis. Filed Jan. 21, 1925.

Atco Pencraft

Particular description of goods.—Tablets, School Papers, and Writing Papers.

Claims use since Dec. 20, 1924.

Ser. No. 208,381. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIKEN DR. JOACHIM WIERNIK & CO. AKTIENGESELLSCHAFT, Berlin-Waidmannslust, Germany. Filed Jan. 21, 1925.

Pregl

Trade-mark consists of the word "Pregl."

Particular description of goods.—Watery Solution of Iodides and Iodates for Use as an Antiseptic.

Claims use since June 30, 1922.

Ser. No. 208,382. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIKEN DR. JOACHIM WIERNIK & CO. AKTIENGESELLSCHAFT, Berlin-Waidmannslust, Germany. Filed Jan. 21, 1925.

Presojod

The trade-mark consists of the word "Presojod."

Particular description of goods.—Watery Solution of Iodides and Iodates for Use as an Antiseptic.

Claims use since Mar. 9, 1922.

Ser. No. 208,427. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ADOLPHE SCHLOSS FILS & CIE., Paris, France. Filed Jan. 21, 1925.

Particular description of goods.—Soaps.

Claims use since Dec. 1, 1924.

Ser. No. 208,437. (CLASS 15. OILS AND GREASES.) SPARTON OIL COMPANY, INC., Philadelphia, Pa. Filed Jan. 21, 1925.

Particular description of goods.—Lubricating Oil (Machine Oil and Motor Oil and Engine Oil), Cylinder Stock Oil, Black Oil, Set Grease, Axle Grease, Pitch Grease, Cup Grease, Gear Grease, Cable Grease, Transmission Grease, Roll Grease, Fiber Grease, Cutting Lubricants, Soluble Oil Employed as a Lubricant, Gasoline, Naphtha, Kerosene, Fuel Oil, Black Fuel Oil, Gas Oil, a Compound of Tallow and Cylinder Oil (Employed as a Lubricant), Refined Paraffin Wax, and Lard Oils.

Claims use since May 27, 1924.

Ser. No. 208,532. (CLASS 39. CLOTHING.) ABRAHAM PURSCH, New York, N. Y. Filed Jan. 23, 1925.

Particular description of goods.—Wearing Apparel for Men, Boys, and Children—Viz, Suits in One, Two, Three, and Four Piece Garments and Overcoats.

Particular description of goods.—Poultry Foods—Namely Laying Mash and Scratch Grains.

Claims use since Jan. 15, 1925.

Ser. No. 208,827. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HIL SANDSTEIN, Leipzig, Germany. Filed Jan. 29, 1925.

Locopan

Trade-mark consists of the word "Locopan."

Particular description of goods.—Wound Disinfectant Containing Mercury.

Claims use since Aug. 4, 1919.

Ser. No. 208,985. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) INDIANA LAMP COMPANY, Connersville, Ind. Filed Feb. 2, 1925.

ILCO

Particular description of goods.—Electric Automobile Lamps.

Claims use since December, 1910.

Ser. No. 209,011. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE VITAMINE PRODUCTS COMPANY, St. Louis, Mo. Filed Feb. 2, 1925.

Vita-Pep

Particular description of goods.—Digestive Tonic.

Claims use since Oct. 14, 1921.

Ser. No. 209,017. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH A. ALLEGRETTI, Bradford, Pa. Filed Feb. 3, 1925.

CROSS-WORD

Particular description of goods.—Ice Cream.

Claims use since Oct. 1, 1924.

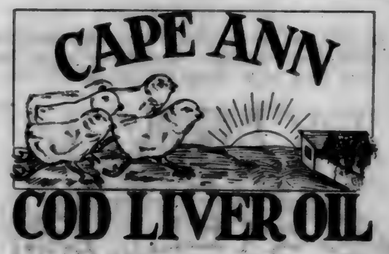
Ser. No. 209,038. (CLASS 38. PRINTS AND PUBLICATIONS.) IMPLEMENT TRADE JOURNAL COMPANY, Kansas City, Mo. Filed Feb. 3, 1925.

Implement & Hardware Trade Journal

Particular description of goods.—Weekly Magazine.

Claims use since Dec. 1, 1924.

Ser. No. 209,147. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) STRAUSS-ECKARDT CO., INC., New York, N. Y. Filed Feb. 5, 1925.



No claim is made to the words "The House of Service."

Particular description of goods.—Dolls, Blocks, Dominoes, Mechanical Toys, Trumpets, Whistles, Toy Watches, Toy Horns, Noise-Making Toys; Parlor Board Games—Namely, Dominoes, Lottoes, and Checkers; and Paper Games—Namely, House That Jack Built and Steeplechase; Hallowe'en Toys—Namely, Pumpkins, Black Cats, Masks, Paper Blow-Outs, Wood Crickets, Witches, Party Favors, Paper Hats, and Costume Bells; and Easter Toys—Namely, Rabbits, Paper Eggs, Cotton Chicks, Rabbits and Carts, Biscuits, and Hens.

Claims use since Jan. 1, 1923.

Ser. No. 209,157. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHAS. M. COX CO., Boston, Mass. Filed Feb. 6, 1925.

No claim is made to the words "Cape Ann" and "Cod Liver Oil" apart from the mark shown in the drawing.

Particular description of goods.—Poultry Tonic.

Claims use since Jan. 14, 1925.

Ser. No. 209,202. (CLASS 42.. KNITTED, NETTED, AND TEXTILE FABRICS.) CHENEY BROTHERS, South Manchester, Conn. Filed Feb. 7, 1925.

Cote Gazelle

Particular description of goods.—Woven, Knitted, Netted, Textile, and Pile Fabrics in the Piece Comprised in Whole or in Part of Silk.

Claims use since Jan. 31, 1925.

Ser. No. 209,271. (CLASS 10. FERTILIZERS.) BADISCHE ANILIN- & SODA-FABRIK, Ludwighafen-on-the-Rhine, Germany. Filed Feb. 9, 1925.

Leuna-Salpeter

Trade-mark consists of the word "Leuna-Salpeter." No claim is made to the word "Salpeter" apart from the mark shown.

Particular description of goods.—Fertilizers.

Claims use since June, 1923.

Ser. No. 209,338. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FAIRCHILD BROS. & FOSTER, New York, N. Y. Filed Feb. 10, 1925.

SEISAL

Particular description of goods.—Savory Condimentary Food Accessory Designed to Compensate for Deficiency of Mineral Elements Which May Occur in Ordinary Available Diet, Principles Which Are Essential to Normal Metabolism and Health.

Claims use since Jan. 1, 1926.

Ser. No. 209,424. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) MUELLER, HEATH & SONS, INC., New York, N. Y. Filed Feb. 11, 1925.

La Sirène

Trade-mark consists of the words "La Sirene."

Particular description of goods.—Artificial Pearl.

Claims use since Oct. 25, 1922.

Ser. No. 209,485. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) MANHATTAN BEAD CHAIN Co., New York, N. Y. Filed Feb. 12, 1925.

No claim is made to the words "Pearls" and "Guaranteed Indestructible" apart from the mark shown in the drawing.

Particular description of goods.—Imitation-Pearl Necklaces.

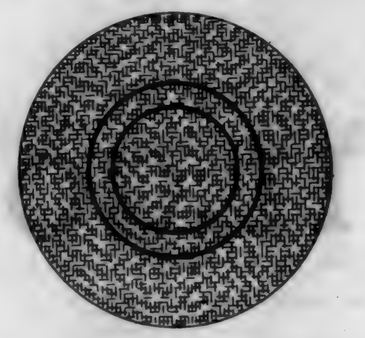
Claims use since Jan. 1, 1915.

Ser. No. 209,517. (CLASS 15. OILS AND GREASES.) WILLHELM OIL COMPANY, St. Paul, Minn. Filed Feb. 12, 1925.

Wunderlube

Particular description of goods.—Lubricating Oils and Greases.

Claims use since on or about June 1, 1924.



Ser. No. 209,620. (CLASS 12. CONSTRUCTION MATERIALS.) THE CONTINENTAL CLAY PRODUCTS COMPANY, Washington, D. C. Filed Feb. 16, 1925.

MAR-VEL

Particular description of goods.—Clay Products—Namely, Brick, Hollow Tile, and Sewer Pipe.

Claims use since Dec. 5, 1924.

Ser. No. 209,625. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) DAVID N. CRAWFORD doing business as The Crawford Press, South Weymouth, Mass. Filed Feb. 16, 1925.

The lining appearing on the drawing indicates a color, such as yellow.

Particular description of goods.—Bottle-Top Wrappers.

Claims use since November, 1922.

Ser. No. 209,650. (CLASS 37. PAPER AND STATIONERY.) GRAHAM PAPER COMPANY, St. Louis, Mo. Filed Feb. 16, 1925.

RAPID BOND

The word "Bond" is disclaimed apart from the mark as shown in the drawing.

Particular description of goods.—Printing and Writing Paper Commonly Employed for Mimeographing, Printing, and Writing Purposes.

Claims use since Dec. 1, 1920.

Ser. No. 209,663. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WM. E. HOOPES & SONS Co., Woodberry, Baltimore, Md. Filed Feb. 16, 1925.

GREEN STRIPE

Trade-mark consists of the words "Green Stripe" underlined by three green stripes. The drawing is lined for green.

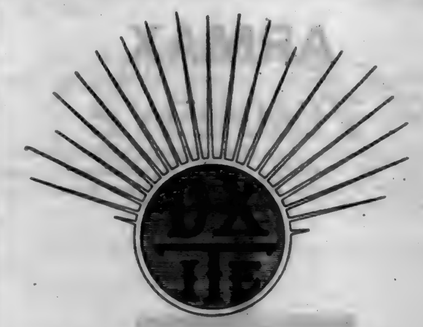
Particular description of goods.—Stitched Belting Duck, Cotton-Duck Paper Felts, Oil-Press Cloth, Cider-Press Cloth, Cotton Cloths, Cotton Twills, Filter Blanket Cloth, Army Belting Fabrics, Netted Fabrics, Leno-Weave Cloths, Knitted Cotton Fabrics, Knitted Cotton Padding, and Cotton Duck All in the Piece; Woven Cotton Tubes, Cotton Sponge Cloths, Cotton Scrub Cloths, and Cotton Dishcloths.

Claims use since Feb. 12, 1925.

Ser. No. 209,667. (CLASS 12. CONSTRUCTION MATERIALS.) ILLINOIS ASBESTOS PRODUCTS COMPANY, Chicago, Ill. Filed Feb. 16, 1925.

Particular description of goods.—Insulating Material Adapted to be Combined with Water and Thereafter to Expand and Hydraulically Set to Form a Rigid Cellular Structure.

Claims use since Nov. 26, 1924.



Ser. No. 209,712. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BENSIE WESSON, doing business as Uncle Jerry Sausage Co., Chicago, Ill. Filed Feb. 16, 1925.

Particular description of goods.—Sausage and Sausage Meat.

Claims use since February, 1923.

Ser. No. 209,761. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ARTWA RADIO PANEL Co., New York, N. Y. Filed Feb. 18, 1925.

Particular description of goods.—Radiopanels.

Claims use since Jan. 2, 1925.

Ser. No. 209,770. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE BROADCASTER CORPORATION, Chicago, Ill. Filed Feb. 18, 1925.

BROADCASTER

Particular description of goods.—Radio Receiving Apparatus—Namely, Complete Radio Receiving Sets.

Claims use since about Jan. 10, 1922.

Ser. No. 209,825. (CLASS 37. PAPER AND STATIONERY.) THE CHAS. M. WEEKS Co., Walden, N. Y. Filed Feb. 18, 1925.

"NAMON"

Particular description of goods.—Pencils.

Claims use since Feb. 1, 1923.

Ser. No. 209,851. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. H. KAHN & COMPANY, New York, N. Y. Filed Feb. 19, 1925.

ESKANO CLOTH

No claim is made to the word "Cloth" apart from the mark shown.

Particular description of goods.—Cotton Cloth—Namely, Plain Colored Heavyweight All-Cotton Wash Material in the Piece.

Claims use since Nov. 25, 1924.

Ser. No. 209,888. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WINCHESTER REPEATING ARMS CO., New Haven, Conn. Filed Feb. 19, 1925.

ARMAX

Particular description of goods.—Batteries and Electric Hand Lamps.
Claims use since about Aug. 31, 1921.

Ser. No. 209,951. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH N. THOMPSON, doing business as George Thompson & Son, New Rochelle and New York, N. Y. Filed Feb. 20, 1925.

Particular description of goods.—Fresh Oysters and Clams.
Claims use since Feb. 14, 1925.

Ser. No. 209,952. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH N. THOMPSON, doing business as George Thompson & Son, New Rochelle and New York, N. Y. Filed Feb. 20, 1925.

SEA CROSS

Particular description of goods.—Fresh Oysters.
Claims use since Feb. 14, 1925.

Ser. No. 209,972. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) C. BRUNO & SON, INC., New York, N. Y. Filed Feb. 21, 1925.

GLEE CLUB

Particular description of goods.—Stringed Instruments—Namely, Ukuleles, Banjos, Mandolins, Guitars, Zithers, and Banjo Ukuleles.
Claims use since Feb. 7, 1925.

Ser. No. 209,999. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LYTTON, INC., Chicago, Ill. Filed Feb. 21, 1925.

WAV-O-DYNE

The lining of the drawing is to indicate shading and not to indicate any color.
Particular description of goods.—Radio Sets Adapted for Combination with Phonographs, Radio Receiving Sets, Loud Speakers, Transformers, Rectifiers, and Head Receiving Sets.
Claims use since about October, 1924.

Ser. No. 210,043. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SAMUEL CAPLOE, Boston, Mass. Filed Feb. 24, 1925.

Sunday's Candies

Applicant disclaims the descriptive word "Candies" apart from the other features of the mark.
Particular description of goods.—Candy.
Claims use since October, 1922.

Ser. No. 210,113. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN E. BENNETT, San Francisco, Calif. Filed Feb. 25, 1925.

ORO-NATA

Particular description of goods.—Bath Salts.
Claims use since Jan. 2, 1925.

Ser. No. 210,124. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE HOBART MANUFACTURING COMPANY, Troy, Ohio. Filed Feb. 25, 1925. Under ten-year proviso.

Hobart

Particular description of goods.—Electric Coffee Mills, Electric Meat and Food Choppers, Electric Bone Grinders, Electric Tool Grinders, Electric Bread Crumbers, Electric Vegetable Slicers, and Electrically-Driven Mixing Machines for the Preparation of Food Products.
Claims use since November, 1889.

Ser. No. 210,206. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) WHITE CROSS TEXTILE COMPANY, Brooklyn, N. Y. Filed Feb. 26, 1925.

The cross shown in the drawing is not printed in red or upon a red background.
Particular description of goods.—Babies' Diapers.
Claims use since Feb. 19, 1925.

Ser. No. 210,229. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HERBERT H. FROST, INCORPORATED, Chicago, Ill. Filed Feb. 27, 1925.

"The Stradivarius of Radio"

Particular description of goods.—Loud Speakers and Amplifying Horns for Radio Apparatus.
Claims use since Jan. 13, 1923.

Ser. No. 210,244. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) MARTIN-COPELAND COMPANY, Providence, R. I. Filed Feb. 27, 1925. Trade-mark consists of the word "Mar-Co."

MAR-CO

Particular description of goods.—Parts for Radio Receiving Sets—Namely, Phone Plugs, Jacks, Bezels, Knife Switches, Vacuum-Tube Sockets, Rheostats, Battery Switches, Inductance Switches, Vacuum-Tube-Socket Adapters, Variable Grid Leaks, Potentiometers, Variable Air Condensers, Phone-Plug Connecters, Crystal Detectors, Resistance-Coupled Amplifiers, and Audio-Frequency Transformers.
Claims use since about May, 1922, on phone plugs; since about June, 1922, on jacks and bezels; since about August, 1922, on knife switches; since about November, 1922, on vacuum-tube sockets; since about December, 1922, on rheostats; since about January, 1923, on battery switches; since about April, 1923, on inductance switches; since about May, 1923, on vacuum-tube-socket adapters; since about July, 1923, on variable grid leaks; since about December, 1923, on potentiometers; since about January, 1924, on variable air condensers; since about April, 1924, on phone-plug connecters; since about May, 1924, on crystal detectors; since about September, 1924, on resistance-coupled amplifiers; and since about November, 1924, on audio-frequency transformers.

Ser. No. 210,321. (CLASS 31. FILTERS AND REFRIGERATORS.) SUPERIOR SASH & DOOR CO., doing business as Syphonix Company, Superior, Wis. Filed Feb. 28, 1925.

Particular description of goods.—Show-Case Refrigerators.
Claims use since Dec. 1, 1924.

Ser. No. 210,347. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) CALIFORNIA METAL ENAMELING CO., Los Angeles, Calif. Filed Mar. 2, 1925.

CAMEO

Particular description of goods.—Signs—Namely, Porcelain Enameled Signs.
Claims use since 1918.

Ser. No. 210,370. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, INC., Chicago, Ill. Filed Mar. 2, 1925.

NILOSITE

Particular description of goods.—Radio Receiving Sets, Loud Speakers and Units, Transformers, Tuning Units, Plugs, Variable Condensers, Jacks, Dials, and Sockets.
Claims use since Jan. 10, 1925.

Ser. No. 210,371. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, INC., Chicago, Ill. Filed Mar. 2, 1925.

DYNOLA

Particular description of goods.—Radio Receiving Sets, Loud Speakers and Units, Transformers, Tuning Units, Plugs, Variable Condensers, Jacks, Dials, and Sockets.
Claims use since Dec. 10, 1924.

Ser. No. 210,372. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTRICAL RESEARCH LABORATORIES, INC., Chicago, Ill. Filed Mar. 2, 1925.

TOROCOIL

Particular description of goods.—Radio Receiving Sets, Loud Speakers and Units, Transformers, Tuning Units, Plugs, Variable Condensers, Jacks, Dials, and Sockets.
Claims use since Dec. 8, 1924.

Ser. No. 210,373. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES). ELECTRICAL RESEARCH LABORATORIES, INC., Chicago, Ill. Filed Mar. 2, 1925.

TOROFLEX

Particular description of goods.—Radio Receiving Sets, Loud Speakers and Units, Transformers, Tuning Units, Plugs, Variable Condensers, Jacks, Dials, and Sockets.
Claims use since Dec. 8, 1924.

Ser. No. 210,384. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GUMP BAKING COMPANY, Detroit, Mich. Filed Mar. 2, 1925.

Min's Cookies
Satisfying

Disclaimer is made apart from the mark shown of the words "Cookies" and "Satisfying." The shade lines are for shading only and do not indicate color.
Particular description of goods.—Cookies.
Claims use since Jan. 6, 1925.

Ser. No. 210,385. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GUMP BAKING COMPANY, Detroit, Mich. Filed Mar. 2, 1925.

Uncle Bim's Cakes
Satisfying

Disclaimer is made to the words "Cakes" and "Satisfying" apart from the mark shown. The shade lines are used for shading only and not to indicate color.
Particular description of goods.—Cakes.
Claims use since Jan. 6, 1925.

Ser. No. 210,386. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GUMP BAKING COMPANY, Detroit, Mich. Filed Mar. 2, 1925.

Andy's Donuts
Satisfying

Disclaimer is made to the words "Donuts" and "Satisfying" apart from the mark shown. The shade lines are for shading only and not to indicate color.
Particular description of goods.—Doughnuts.
Claims use since Jan. 6, 1925.

Ser. No. 210,393. (CLASS 12. CONSTRUCTION MATERIALS.) LACLEDE-CHRISTY CLAY PRODUCTS COMPANY, St. Louis, Mo. Filed Mar. 2, 1925.

FLINTMIX

Particular description of goods.—Factory Cement and Bricks.
Claims use since Nov. 1, 1923.

Ser. No. 210,394. (CLASS 12. CONSTRUCTION MATERIALS.) LACLEDE-CHRISTY CLAY PRODUCTS COMPANY, St. Louis, Mo. Filed Mar. 2, 1925.

FIFTYNINE

Particular description of goods.—Factory Cement and Bricks.
Claims use since Feb. 9, 1925.

Ser. No. 210,558. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) B. ILLFELDER & CO., New York, N. Y. Filed Mar. 5, 1925.

Particular description of goods.—Parlor Board Game Played with Pieces.
Claims use since Jan. 21, 1925.

Ser. No. 210,570. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WARNER MOORE & CO., doing business as Dunlop Mills, Richmond, Va. Filed Mar. 5, 1925. Under ten-year proviso.

DUNLOP MILLS

Particular description of goods.—Wheat Flour, Feeds for Livestock, Middlings, Feeds for Poultry, Corn, Barley, and Alfalfa.
Claims use since 1853.

Ser. No. 210,584. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) A. STEIN & COMPANY, Chicago, Ill. Filed Mar. 5, 1925. Sec. 5b, act of 1905, as amended 1920.

PARIS

Particular description of goods.—Narrow Elastic.
Claims use since Jan. 1, 1924.

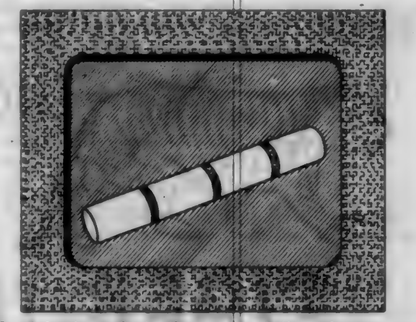
Ser. No. 210,614. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARROW-TAYLOR BUTTER COMPANY, INC., Kansas City, Mo. Filed Mar. 6, 1925.

Blue Bay
Nut

No claim is made to the word "Nut" appearing in the drawing apart from the trade-mark as shown.
Particular description of goods.—Oleomargarine.
Claims use since November, 1919.

Ser. No. 210,631. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) TALENS & SON, INC., Irvington, N. J. Filed Mar. 6, 1925.

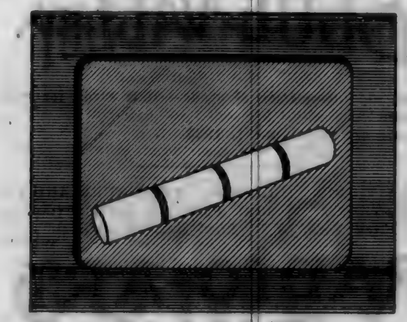
REMBRANDT



Particular description of goods.—Artists' Colors, Oil and Water Colors, Wet or Dry, Moist, or Semimoist.
Claims use since 1906.

Ser. No. 210,649. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) DULUTH SHOW CASE COMPANY, Duluth, Minn. Filed Mar. 7, 1925.

TINY GLIDER



Applicant disclaims the word "Glider" apart from the mark shown in the drawing. The drawing is lined for red.
Particular description of goods.—Children's Sleds.
Claims use since Dec. 1, 1924.

Ser. No. 210,661. (CLASS 17. TOBACCO PRODUCTS.) NEVIL MONROE HOPKINS, doing business as Stratsy Tobacco Company, New York, N. Y. Filed Mar. 7, 1925.

No claim is made to the representation of a cigarette apart from the mark shown. The drawing is lined for gold and buff.
Particular description of goods.—Cigarettes.
Claims use since Mar. 1, 1925.

Ser. No. 210,662. (CLASS 17. TOBACCO PRODUCTS.) NEVIL MONROE HOPKINS, doing business as Stratsy Tobacco Company, New York, N. Y. Filed Mar. 7, 1925.

No claim is made to the representation of the goods apart from the mark as shown. The trade-mark is lined for blue and buff.
Particular description of goods.—Cigarettes.
Claims use since Mar. 1, 1925.

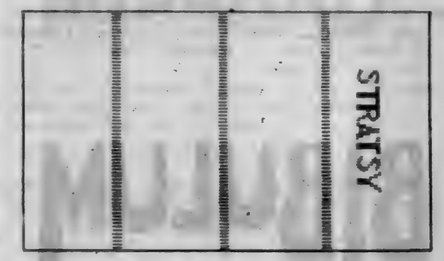
Ser. No. 210,675. (CLASS 86. MUSICAL INSTRUMENTS AND SUPPLIES.) LIBERTY RAWHIDE MFG. CO. INC., Chicago, Ill. Filed Mar. 7, 1925.

Lily White Brand

No claim is made to the word "Brand" appearing in the drawing apart from the mark as shown.
Particular description of goods.—Drumheads, Banjo, and Tambourine Heads.
Claims use since 1919.

Ser. No. 210,724. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM J. GORDON, doing business as General Beverage and Products Co., Lancaster, Ohio. Filed Mar. 9, 1925.

OLD FAITHFUL



Particular description of goods.—Malt Extract for Food Purposes.
Claims use since Aug. 7, 1922.

Ser. No. 210,745. (CLASS 38. PRINTS AND PUBLICATIONS.) OHIO FEDERATION OF WOMEN'S CLUBS, Cleveland, Ohio. Filed Mar. 9, 1925.

The BUCKEYE

Particular description of goods.—Monthly Magazine.
Claims use since August, 1923.

Ser. No. 210,791. (CLASS 17. TOBACCO PRODUCTS.) NEVIL MONROE HOPKINS, doing business as Stratsy Tobacco Company, New York, N. Y. Filed Mar. 10, 1925.

The trade-mark consists of the word "Stratsy" and three bands of blue encircling the cigarette at regularly-spaced intervals. The drawing is lined in space relation for blue color.
Particular description of goods.—Cigarettes.
Claims use since Mar. 1, 1925.

Ser. No. 210,816. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) UNITED STATES FUEL COMPANY, Salt Lake City, Utah. Filed Mar. 10, 1925.

BLACK HAWK COAL

The word "Coal" is disclaimed apart from the mark as shown.
Particular description of goods.—Coal.
Claims use since 1912.

Ser. No. 210,840. (CLASS 37. PAPER AND STATIONERY.) GILBERT PAPER CO., Menasha, Wis. Filed Mar. 11, 1925.

Marquette

Particular description of goods.—Bond Paper.
Claims use since Jan. 1, 1909.

Ser. No. 210,878. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) MILTON D. BARKANN AND EMANUEL M. WEINBERG, New York, N. Y. Filed Mar. 12, 1925.

BIBULUM

Particular description of goods.—Dental Products Made of Paper or the Like Used for Aseptic Dressing, Packing, and Absorbent.
Claims use since September, 1923.

Ser. No. 210,879. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) MILTON D. BARKANN AND EMANUEL M. WEINBERG, New York, N. Y. Filed Mar. 12, 1925.

ASEPTIC BIBULUM Superior to DENTAL COTTON GAUZE OR PAPER

In the drawing the words "Aseptic" and "Superior to Dental Cotton Gauze or Paper" are disclaimed.
Particular description of goods.—Dental Products Made of Paper or the Like Used for Aseptic Dressing, Packing, and Absorbent.
Claims use since September, 1923.

Ser. No. 210,892. (CLASS 37. PAPER AND STATIONERY.) EBERHARD FABER PENCIL COMPANY, Brooklyn, N. Y. Filed Mar. 12, 1925.

TIGER

Particular description of goods.—Rubber Erasers.
Claims use since August, 1923.

Ser. No. 210,905. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. KAHAN & SONS PRODUCTS COMPANY, St. Louis, Mo. Filed Mar. 12, 1925.

BLUE VALLEY

Particular description of goods.—Malt Sirup for Food Purposes.
Claims use since June 1, 1923.

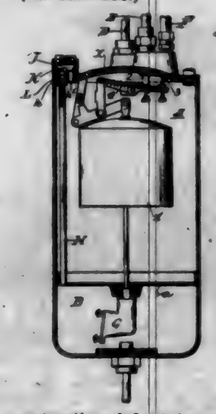
46,767. ANTIFRICTION OR BABBITT METAL. Registered October 10, 1905. FINDLAY & BATTLE, New York, N. Y.; Richmond, Va.; London, England; Paris, France; and Montreal, Canada. Renewed October 10, 1925, to Glacier Metal Company, Richmond, Va., a Corporation of New York, successor.

46,782. COTTON SHEETINGS AND DRILLINGS. Registered October 10, 1905. BRANDON MILLS, Greenville, S. C., a Corporation of South Carolina. Renewed October 10, 1925.

46,832. TEAS. Registered October 10, 1905. GRAND UNION TEA CO., Brooklyn, N. Y., a Corporation of New Jersey. Renewed October 10, 1925.

46,833. COFFEE. Registered October 10, 1905. GRAND UNION TEA CO., Brooklyn, N. Y., a Corporation of New Jersey. Renewed October 10, 1925.

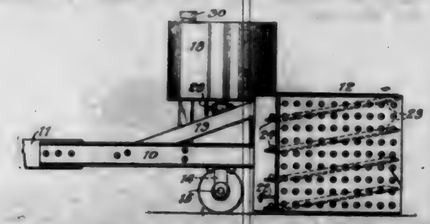
46,848. CANNED FRUITS AND VEGETABLES. Registered October 10, 1905. CHARLES E. MOODY & CO. Renewed October 10, 1925, to Charles E. Moody & Co. Inc., Boston, Mass., a Corporation of Massachusetts, successor.



46,930. TOILET CREAM. Registered October 17, 1905. THE ARTESIA CREAM COMPANY, Waco, Tex., a Corporation of Texas. Renewed October 17, 1925.

47,072. PIANOS. Registered October 24, 1905. HAMILTON ORGAN COMPANY, Chicago Heights, Ill. Renewed October 24, 1925, to The Baldwin Company, Cincinnati, Ohio, a Corporation of Ohio, assignee.

REISSUES



MAY 26, 1925.

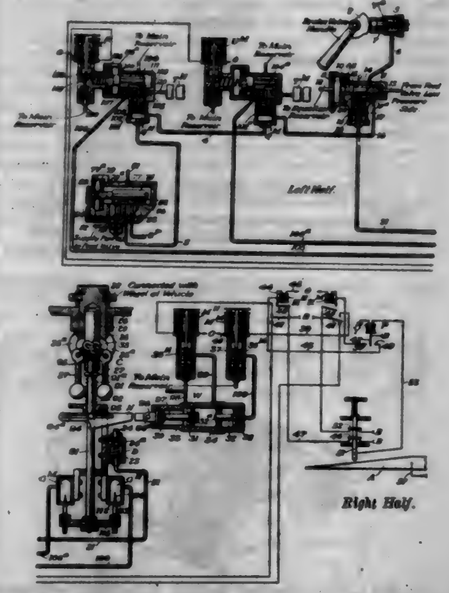
16,080. VACUUM FUEL FEEDING DEVICE FOR INTERNAL-COMBUSTION ENGINES AND THE LIKE. CHARLES E. BURTON, Oak Park, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 26, 1925. Serial No. 11,891. Original No. 1,432,381, dated Oct. 17, 1922, Serial No. 545,657, filed Mar. 22, 1922. 8 Claims. (Cl. 103—236.)

3. In the construction defined in claim 1, foregoing, an air inlet passage to the delivery chamber leading into said additional or second mentioned passage between said valve device and said delivery chamber, and a one-way seating valve in said air inlet passage opening inward and seating against outward movement through said air inlet passage.

16,081. SNOW MELTER AND PLOW. FRANK A. CONNOLLY, Pompton Lakes, N. J. Filed Apr. 8, 1925. Serial No. 21,723. Original No. 1,526,903, dated Feb. 17, 1925. Serial No. 725,591, filed July 12, 1924. 14 Claims. (Cl. 37—12.)

2. In a machine of the character described, a plow head comprising a receptacle and a plate forming the front wall of the receptacle, said plate being formed with ports for the admission of snow into the receptacle, said receptacle being formed with lateral ports for the discharge of snow.

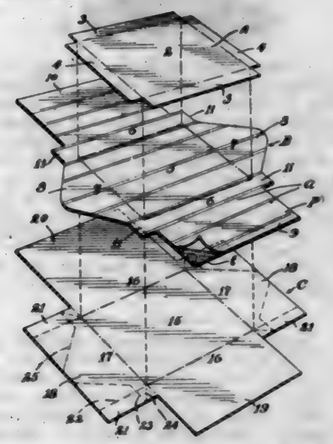
5. In a machine of the character described, a plow head comprising a fire box having heat generating means therein, and a plate forming the front wall of the plow head, the plate being formed with ports for the admission of snow to the heat generating means.



11. A method of melting snow which consists in shredding the snow and exposing the shreds to the hot gases of a burner.

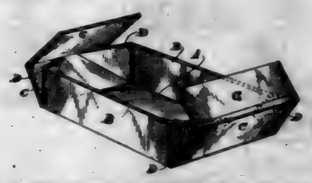
16,082. SHOE AND METHOD OF MAKING THE SAME. AMOS MADSON, Pontiac, Ill., assignor, by mesne assignments, to Norway Welt Patents Trust, a Trust Estate. Filed May 6, 1920. Serial No. 379,424. Original No. 1,265,100, dated May 7, 1918, Serial No. 204,079, filed Nov. 26, 1917. 20 Claims. (Cl. 36—17.)

7. In a shoe, a sole having a heel seat of reduced width providing shoulders, and having a marginal channel extending forwardly from said shoulders, an upper having portions fitting in said channel and a portion turned under the heel seat in rear of said shoulders, a welt secured to the upper within said channel and turned outwardly over the sole, a heel lift secured to the heel seat underneath the turned under portion of the upper, the shank edge of the lift having an upper beveled surface, the sole and welt being beveled at said shoulders to overlap said beveled surface of the lift, and securing means fastening the welt to the sole and extending rearwardly to engage through the beveled portion of the lift.



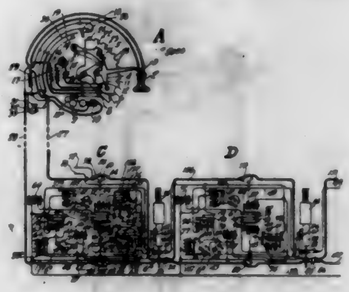
16,083. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. FRANK H. NICHOLSON, Philadelphia, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1924. Serial No. 734,809. Original application filed Dec. 21, 1918, Serial No. 267,773. Renewed July 14, 1921, Serial No. 484,759. Original No. 1,405,552, dated Feb. 7, 1922. 26 Claims. (Cl. 246—74.)

4. Railway traffic controlling apparatus comprising a railway vehicle, a fluid pressure reservoir thereon, means



on the vehicle controlled from the trackway for maintaining a constant pressure in said reservoir or for initiating a change in said pressure according to traffic conditions in advance, means on the vehicle for causing the rate of variation of the pressure in said reservoir to be dependent upon the speed of the vehicle, and brake application means on the vehicle controlled by the pressure in said reservoir.

16,084. TOBACCO PACKAGE OR CONTAINER. JONATHAN PETERSON, Brooklyn, N. Y., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1924. Serial No. 755,116. Original No. 1,512,000, dated Oct. 14, 1924, Serial No. 652,064, filed July 17, 1923. 7 Claims. (Cl. 206—46.)



1. As a new article of manufacture, a thin and approximately flat tobacco package for convenient pocket use, which dispenses with a metal container and has sufficient strength and stiffness to protect the tobacco contents, comprising an inner tray of sheet material of substantial stiffness, a quantity of tobacco substantially filling the tray, an inner wrapper including metalfoil substantially enclosing the tray and tobocco and having top flaps movably overlying the tobacco contents, and an outer paper wrapper of substantial thickness formed and secured about the tray and inner wrapper and having closure means arranged for repeated opening and closing and including an outer flap, said closure means being constructed and arranged to be folded down flat upon the package top with said outer flap uppermost, to completely cover and close the package.

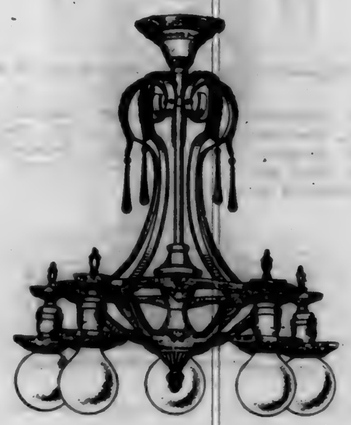
16,085. COLLAPSIBLE FOLDING BOX. STAFFORD F. SUTHERLAND, Philadelphia, Pa., assignor to Sutherland Collapsible Paper Box Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 9, 1925. Serial No. 1,501. Original No. 1,443,055, dated Jan. 23, 1923, Serial No. 470,328, filed May 17, 1921. 10 Claims. (Cl. 229—23.)

7. The herein described method of forming collapsible boxes which comprises applying a facing material to a box blank, folding the side walls of the box blank and facing material carried thereby onto the bottom of the box blank, and attaching locking flaps to the ends of the facing material.

16,086. NONGROUNDED OR METALLIC LINE-CIRCUIT SYSTEM. RAYMOND H. BURFIEND, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Company, a Corporation of Illinois. Filed Aug. 30, 1920. Serial No. 407,036. Original No. 1,299,119, dated Apr. 1, 1919, Serial No. 309,021, filed Apr. 18, 1907. 75 Claims. (Cl. 179—18.)

1. A telephone exchange system comprising a telephone line, an automatic switch provided with a switch shaft supported for both endwise and rotary motion, means for closing the two sides of the line together to move the shaft endwise, means including a line relay responsive to such closing of the line for giving the shaft a step-by-step endwise motion, suitable means for rotating the shaft after it has been moved endwise, means for cutting off the line relay while the shaft is in its rotated position, and means for restoring the shaft to normal position by the opening of the line.

16,087. SWITCH. LOUIS A. M. PERLAN, Beloit, Wis., assignor to Absolute Con-Tac-Tor Corporation, a Corporation of Illinois. Filed Mar. 16, 1925. Serial No. 16,068. Original No. 1,471,199, dated Oct. 16, 1923, Serial No. 404,913, filed Aug. 20, 1920. 11 Claims. (Cl. 200—152.)

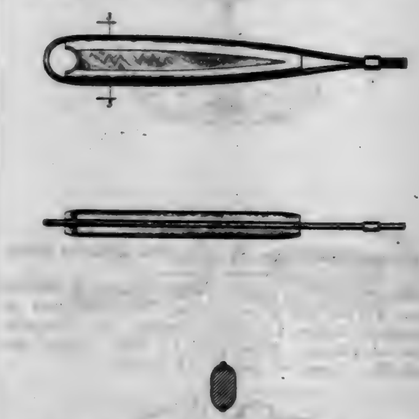


1. An electrical contactor comprising an hermetically sealed tubular glass container, a pair of spaced electrodes disposed at one end thereof and between which the electric circuit is adapted to be made and broken, a leading-in wire fixed to and independently supporting each of said electrodes, and a body of conducting fluid for bridging said electrodes at predetermined times, said leading-in wires extending to the exterior of said container and being permanently hermetically sealed in the walls thereof, the end of said container furthest from said electrodes being depressed inwardly and extended in tubular form towards said electrodes and one of said leading-in wires extending through said inwardly depressed end and hermetically sealed in the inner end thereof.

DESIGNS

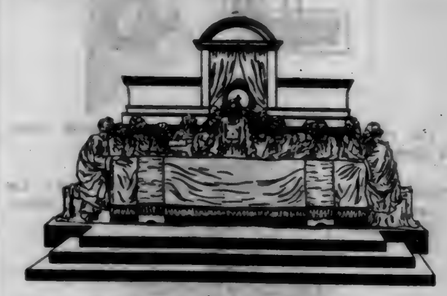
MAY 26, 1925.

67,390. ELECTRIC-LAMP FIXTURE. SAMUEL J. AARON, Brooklyn, N. Y. Filed Apr. 1, 1925. Serial No. 12,977. Term of patent 3½ years.



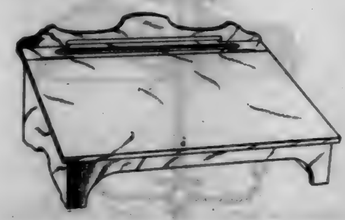
The ornamental design for an electric lamp fixture, as shown.

67,391. SHADE FOR ELECTRIC LIGHTS. MAURICE W. BELMUTH, Brooklyn, N. Y., assignor to Oscar O. Friedlaender Co., New York, N. Y., a Copartnership. Filed Dec. 13, 1924. Serial No. 11,092. Term of patent 7 years.



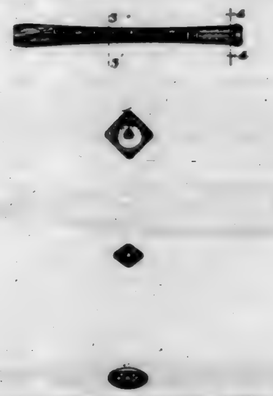
The ornamental design for a shade for electric lights, as shown.

67,392. HANDLE. JOHN L. BENNETT, Decatur, Ill., assignor to U. S. Manufacturing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Apr. 17, 1923. Serial No. 5,840. Term of patent 14 years.



The ornamental design for a handle, as shown.

67,393. ALTAR. PATRICK H. BRADLEY, St. Louis, Mo. Filed Mar. 1, 1923. Serial No. 5,340. Term of patent 7 years.



The ornamental design for an altar, as shown.

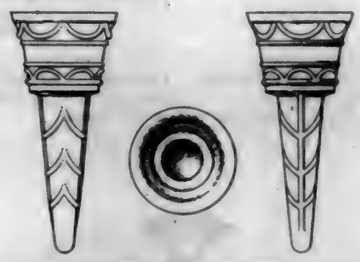
67,394. LAP DESK. FRANK S. CORNWELL, New York, N. Y. Filed July 1, 1924. Serial No. 10,023. Term of patent 7 years.

The ornamental design for a lap desk as shown.

67,395. CIGARETTE HOLDER. KENNETH I. DAVIS, Lorton, Va. Filed Mar. 14, 1924. Serial No. 8,925. Term of patent 7 years.

The ornamental design for a cigarette holder as shown.

67,396. POCKET SAVINGS BANK. GEORGE H. DEATON and WALTER E. NUNN, Chicago, Ill., assignors to George H. Deaton & Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1921. Serial No. 483,979. Term of patent 14 years.



The ornamental design for a pocket savings bank, as shown.

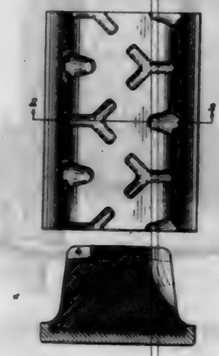
67,397. LIGHTING-FIXTURE SUPPORT. JOHN DE LEO, New York, N. Y. Filed Oct. 17, 1924. Serial No. 11,093. Term of patent 7 years.

The ornamental design for a lighting fixture support as shown.

67,398. ICE-CREAM CONE. JAMES DENARO, Cambridge, Mass. Filed Nov. 5, 1924. Serial No. 11,293. Term of patent 7 years.

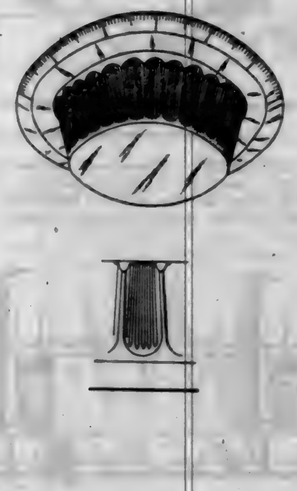
The ornamental design for an ice-cream cone as shown.

67,399. CASKET-HANDLE SOCKET. EDWARD DRINKUTH, Cincinnati, Ohio, assignor to The Cincinnati Coffin Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1925. Serial No. 12,832. Term of patent 3½ years.



The ornamental design for a casket handle socket, as shown.

67,400. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners, trading as Klebanoff and Grossman, New York, N. Y. Filed Apr. 3, 1925. Serial No. 12,999. Term of patent 3½ years.

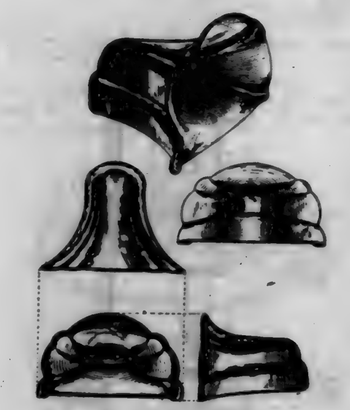


The ornamental design for a finger ring as shown.

67,401. RESILIENT TIRE. ALBERT HARGRAVES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 26, 1925. Serial No. 12,492. Term of patent 14 years.

The ornamental design for a resilient tire, as shown.

67,402. RADIODIAL. GEORGE W. HEATH, East Orange, N. J. Filed Sept. 12, 1924. Serial No. 10,762. Term of patent 7 years.

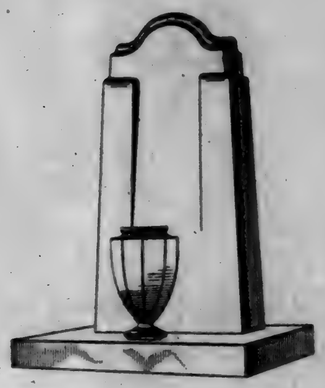


The ornamental design for a radiodial as shown.

67,403. RAILROAD-CROSSING LIGHT. ARTHUR KARLOW, Mayville, Wis. Filed Mar. 1, 1924. Serial No. 8,792. Term of patent 14 years.

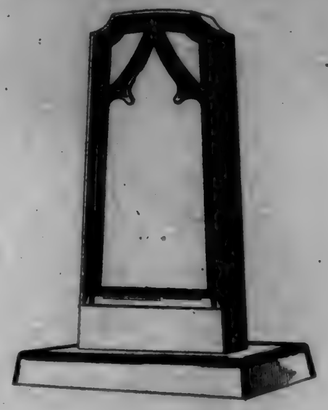
The ornamental design for a railroad crossing light, as shown.

67,404. SOUND-REPRODUCER HORN. HERBERT S. KIRK, New Castle, Pa. Filed Feb. 24, 1925. Serial No. 12,456. Term of patent 14 years.



The ornamental design for a sound reproducer horn, as shown.

67,405. CANDLESTICK. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Jan. 26, 1924. Serial No. 8,415. Term of patent 3½ years.

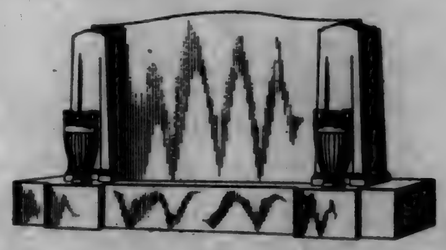


The ornamental design for a candlestick as shown.

67,406. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio, assignor to McBee-Ladewich Company, Mansfield, Ohio, a Partnership. Filed Apr. 9, 1925. Serial No. 13,076. Term of patent 7 years.

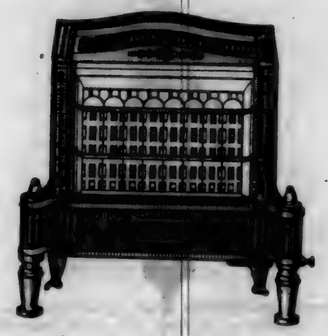
The ornamental design for a monument as shown.

67,407. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio, assignor to McBee-Ladewich Company, Mansfield, Ohio, a Partnership. Filed Apr. 9, 1925. Serial No. 13,077. Term of patent 7 years.



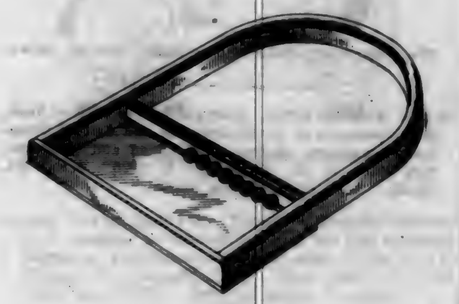
The ornamental design for a monument as shown.

67,408. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio, assignor to McBee-Ladewich Company, Mansfield, Ohio, a Partnership. Filed Apr. 9, 1925. Serial No. 13,078. Term of patent 7 years.



The ornamental design for a monument as shown.

67,409. MONUMENT. EDWARD G. LADEWICH, Mansfield, Ohio, assignor to McBee-Ladewich Company, Mansfield, Ohio, a Partnership. Filed Apr. 9, 1925. Serial No. 13,079. Term of patent 7 years.

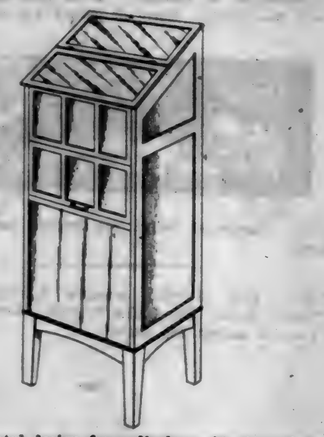


The ornamental design for a monument as shown.

67,410. RADIANT HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa., assignor to Lawson Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 12, 1925. Serial No. 12,697. Term of patent 14 years.

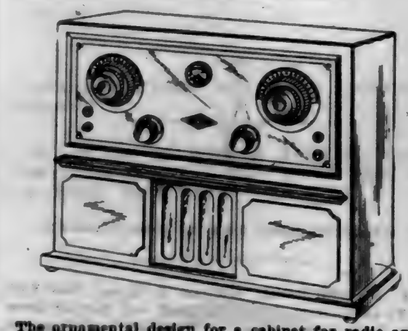
The ornamental design for a radiant heater, substantially as shown.

67,411. BABY TRAY. DAVID W. LYNCH, Lancaster, Pa. Filed Mar. 31, 1925. Serial No. 12,968. Term of patent 7 years.



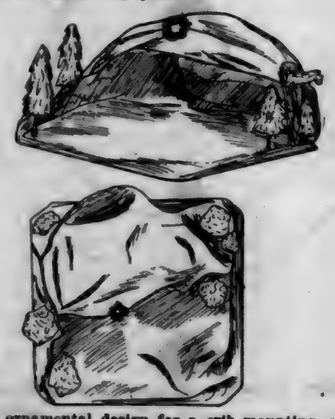
The ornamental design for a baby tray as shown.

67,412. MIRROR FRAME. SAMUEL J. MOLNER, Chicago, Ill., assignor to Illinois Moulding Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1925. Serial No. 12,825. Term of patent 3½ years.



The ornamental design for a mirror frame, as shown.

67,413. DISPLAY CABINET. HARRY MORRIS, Chicago, Ill. Filed Mar. 23, 1922. Serial No. 1,344. Term of patent 14 years.



The ornamental design for a display cabinet as shown.

67,414. CABINET FOR RADIO APPARATUS. MICHAEL MORRIS, Brooklyn, N. Y. Filed Mar. 28, 1925. Serial No. 12,952. Term of patent 7 years.

The ornamental design for a cabinet for radio apparatus, as shown.

67,415. CRIB MOUNTING. JULIA M. MURRAY, St. Louis, Mo. Filed Apr. 10, 1923. Serial No. 5,765. Term of patent 3½ years.

The ornamental design for a crib mounting, as shown and described.

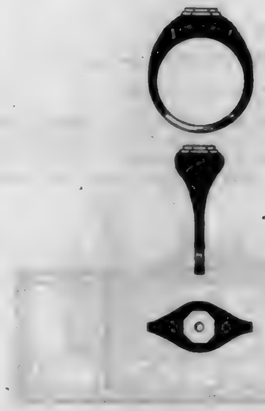
67,416. LEATHER. FRED E. MYERS, Joplin, Mo., assignor to The Meeker Company, Joplin, Mo., a Corporation of Missouri. Filed Mar. 21, 1925. Serial No. 12,812. Term of patent 3½ years.

The ornamental design for leather, substantially as shown.

67,417. TOY GOOSE. ANDREW WALTER SCOTT, Jr., Venice, Calif. Filed May 6, 1924. Serial No. 9,492. Term of patent 3½ years.

The ornamental design for a toy goose, as shown.

67,418. FINGER RING. MICHAEL E. SOMAN, New York, N. Y.; assignor to David Klebanoff and Samuel Grossman, Copartners, trading as Klebanoff and Grossman, New York, N. Y. Filed Apr. 3, 1925. Serial No. 13,000. Term of patent 3½ years.



The ornamental design for a finger ring as shown.

67,419. FINGER RING. MICHAEL E. SOMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners, trading as Klebanoff and Grossman, New York, N. Y. Filed Apr. 3, 1925. Serial No. 13,001. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

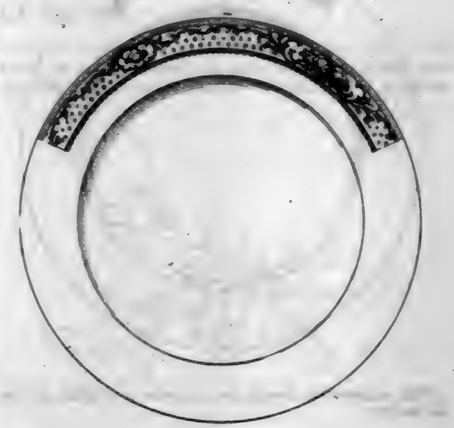
67,420. FINGER RING. MICHAEL E. SOMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners, trading as Klebanoff and Grossman, New York, N. Y. Filed Apr. 3, 1925. Serial No. 13,002. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

67,421. SELF-LUMINOUS LOCATOR FOR LIGHTING FIXTURE OR SIMILAR ARTICLE. ALEXANDER SPROUL, New York, N. Y. Filed Apr. 4, 1922. Serial No. 1,529. Term of patent 3½ years.

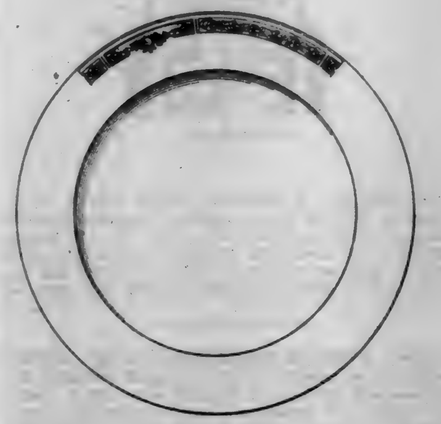
The ornamental design for a self-luminous locator for lighting fixtures or similar articles, as shown.

67,422. DOLL. VICTOR C. THOMPSON, Los Angeles, Calif. Filed Apr. 4, 1925. Serial No. 13,022. Term of patent 3½ years.



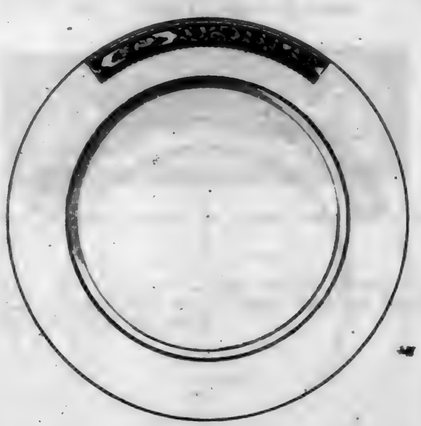
The ornamental design for a doll as shown.

67,423. WALL LANTERN. ERNEST A. WALKER, Newark, N. J., assignor to William Goldberg and Abe Goldberg, trading as a Copartnership under name of The G. & G. Fixture Co., Newark, N. J. Filed Mar. 17, 1925. Serial No. 12,748. Term of patent 7 years.



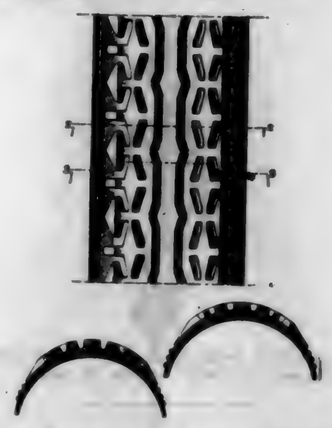
The ornamental design for a wall lantern, as shown.

67,424. PLATE OR SIMILAR ARTICLE. CHARLES WEISS, New York, N. Y. Filed Mar. 3, 1925. Serial No. 12,555. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

67,425. PLATE OR SIMILAR ARTICLE. CHARLES WEISS, New York, N. Y. Filed Mar. 3, 1925. Serial No. 12,557. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

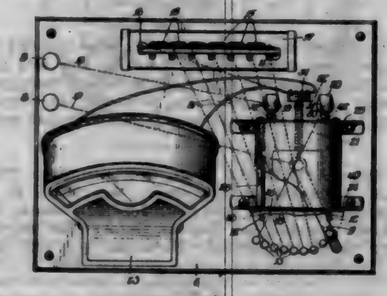
67,426. PLATE OR SIMILAR ARTICLE. CHARLES WEISS, New York, N. Y. Filed Mar. 3, 1925. Serial No. 12,558. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

67,427. NONSKID-TIRE TREAD. CHARLES G. MILLER, Charlotte, N. C., assignor to McClaren Rubber Company, Charlotte, N. C., a Corporation of Delaware. Filed Dec. 24, 1924. Serial No. 11,779. Term of patent 14 years.

The ornamental design for a nonskid tire tread substantially as shown.

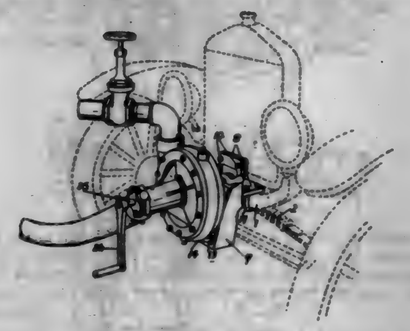
PATENTS



GRANTED MAY 26, 1925.

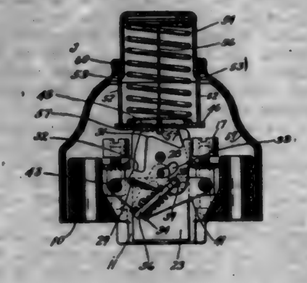
1,538,879. PYROTECHNICAL DEVICE. MILTON M. ADLER, Newark, N. J. Filed Apr. 17, 1923. Serial No. 632,664. 1 Claim. (Cl. 102—22.)

A pyrotechnical device, comprising a casing, adapted to provide a hollow enclosed interior, a lozenge of detonating pyrotechnical composition loosely disposed within said casing, adapted to produce intermittent detonations when ignited a fuse-element having one end affixed to said lozenge of pyrotechnical composition, said casing having an opening in the top wall thereof through which the free end of said fuse-element may project exteriorly from said casing, and the side walls of said casing having ventilating perforations to admit air into the interior of said casing.



1,538,880. ELECTRIC FURNACE. HENRY R. BARKMEYER, Chicago, Ill. Filed Aug. 7, 1924. Serial No. 730,570. 10 Claims. (Cl. 204—64.)

1. In an apparatus of the class described, a muffle, a support therefor, an opening in the muffle extending outwardly from the heating chamber thereof, and a therme-couple fixed with respect to the support and adapted to enter the heating chamber through said opening when the muffle is moved to operative position on the said support.

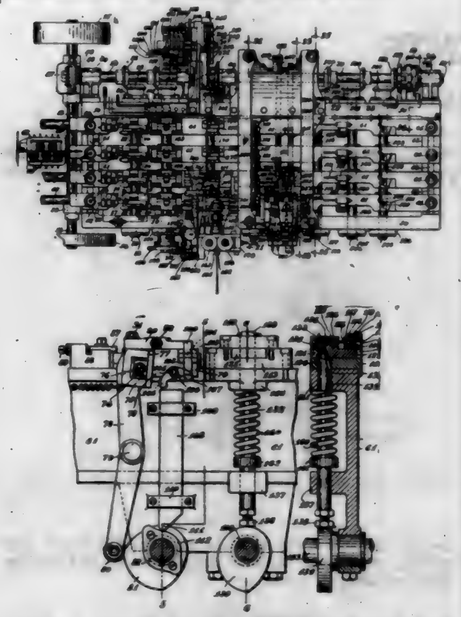


1,538,881. POWER ATTACHMENT FOR MOTOR VEHICLES. BEN D. BARRON, Jackson, Mich. Filed Dec. 7, 1923. Serial No. 679,236. 8 Claims. (Cl. 180—53.)

8. The combination with a chassis frame and driving shaft, of a supporting frame mounted on said chassis frame, a pump mounted on said supporting frame and provided with a shaft carried by said frame, a thrust

member for said pump shaft carried by said frame, and driving connections for said pump shaft to said driving shaft including a clutch.

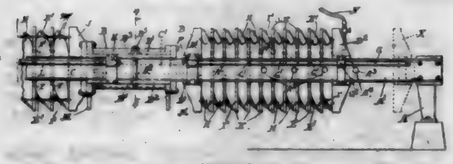
1,538,882. DOUBLE-POLE SWITCH. ALBERT H. BATES, Elgin, Ill., assignor to The Hoover Company, a Corporation of Ohio. Filed Apr. 18, 1923. Serial No. 632,921. 3 Claims. (Cl. 200—68.)



1. In a snap action mechanism, a pole piece comprising a U-shaped actuated member pivotally mounted adjacent the free end of the side arms thereof, a non-conducting member secured to and carried by each side arm and contact members carried by the ends of said non-conducting members which hold them in spaced rotation.

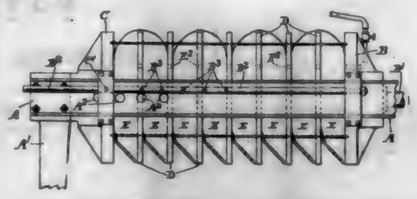
1,538,883. BIRD-CAGE-FORMING MACHINE. JOSEPH H. BARTLEY, Bridgeport, Conn., assignor to O. Lindemann & Co., New York, N. Y., a Firm composed of Otto Lindemann, Oscar Lindemann, and Henry O. Lindemann. Filed Feb. 16, 1923. Serial No. 619,251. 100 Claims. (Cl. 140—71.)

1. In a machine of the character described, means adapted to intermittently feed a bar or the like, means adapted to produce spaced wire receiving portions for receiving wires or the like transversely therethrough, and means adapted to intermittently feed said wires or



the like intermittently and endwise into relation with said spaced receiving portions of the bar in the intervals between the intermittent feed of the bar.

17. In a machine of the character described, means adapted to intermittently feed a bar or the like, means for perforating said bar in the intervals between the intermittent feed thereof comprising a stationary die disposed at one side of the bar, a punch disposed at the other side of the bar and adapted to be moved transversely thereof to co-operate with the die and perforate the bar, means adapted to operate the punch in the intervals between the intermittent feed of the bar, and means adapted to intermittently thread wires or the like through said perforations in the intervals between the intermittent feed of the bar.

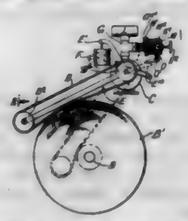


74. In a machine of the character described, means adapted to intermittently feed a bar or the like having spaced portions for receiving wires or the like transversely therethrough, means adapted to intermittently feed said wires or the like into relation with said spaced receiving portions of the bar in the intervals between the intermittent feed of the bar, and auxiliary feed means adapted to be intermittently engaged with the transverse wires to draw the bar through the machine.

1,538,884. HYDRAULIC PRESS. JOHN J. BERRIGAN, Chicago, Ill., assignor of one-third to John B. Berrigan and one-third to Katheryne P. Malon, both of Chicago, Ill. Filed Nov. 14, 1923. Serial No. 674,608. 8 Claims. (Cl. 100—50.)

1. In a press, a plurality of pressing assemblies, and a single pressure applying means adapted to operate alternately on each of said pressing assemblers, the other remaining stationary during that operation.

1,538,885. PRESS. JOHN J. BERRIGAN, Chicago, Ill., assignor of one-third to John B. Berrigan and one-third to Katheryne P. Malon, both of Chicago, Ill. Filed May 7, 1924. Serial No. 711,548. 13 Claims. (Cl. 100—50.)



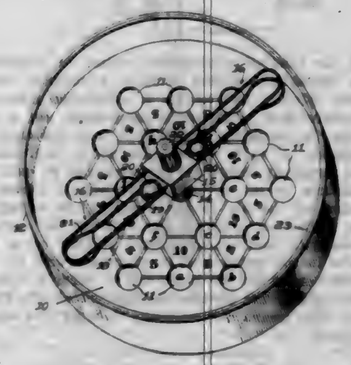
1. In combination with a press, platens and partitions between them, a filter bag having two open ends and overlying a partition and having one end on each side thereof, the two ends of the bag freely communicating with each other.

11. In a press, a pair of platens and a plurality of partitions therebetween, filter bags each having two open ends and being supported between said partitions, one end of each bag lying on one side of the partition and the other end lying on the opposite side of said partition, the two ends of the bag communicating to permit free movement of the contents from one end to the other, means for filling them, means for compressing first one end of the press and for causing re-expansion of that end of the press and for compressing the other end.

1,538,886. PRESS. JOHN J. BERRIGAN, Chicago, Ill., assignor of one-third to John B. Berrigan and of one-third to Katheryne P. Malon, both of Chicago, Ill. Filed Aug. 28, 1924. Serial No. 734,558. 12 Claims. (Cl. 100—50.)

1. In a press, partitions within said press mounted for movement, and supports which normally hold said partitions during pressing, said supports shaped throughout a portion of their length so as to permit the contents of said press and said partitions to fall from said press.

1,538,887. APPARATUS FOR CONTROLLING TENSION. CHARLES E. CARPENTER, New York, N. Y. Original application filed Oct. 18, 1921, Serial No. 508,547. Divided and this application filed Oct. 18, 1921. Serial No. 508,548. 6 Claims. (Cl. 242—75.)



1. The combination with means for advancing web or strand-like material, of means controlling the tension of said material comprising a pump, driving means therefor engaging the material and thereby driving the pump at a speed proportional to that at which the material is advanced and means tending to maintain constant the force required to drive the pump not with standing variations in pump speed.

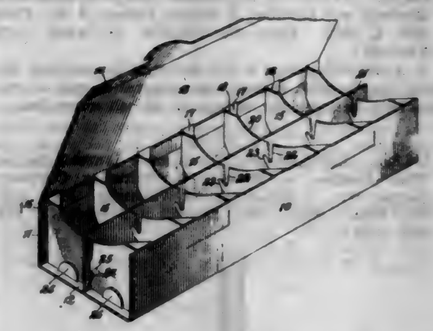
1,538,888. COMBINATION WEATHER STRIP AND CASEMENT-WINDOW ADJUSTER. FRANCIS B. COLTON, Forest Hills, N. Y. Filed Mar. 8, 1918, Serial No. 221,162. Renewed Apr. 18, 1925. 11 Claims. (Cl. 20—69.)

1. In combination, a sash provided with a spring metal strip, a normally hidden weatherstrip spring pressed laterally against said spring metal strip and movable in relation thereto, a cooperating sill having a slot, and additional means in said slot to receive such weatherstrip for providing a weather tight connection between said sash and said sill.

1,538,889. GAME. WILLIAM C. FARNUM, Winchendon, Mass. Filed Aug. 15, 1923. Serial No. 657,553. 8 Claims. (Cl. 273—179.)

1. A game, comprising a board having ball-receiving pockets formed in its upper face about a central point, a wall surrounding the board for preventing balls from escaping therefrom, and a ball whirler rotatably mounted upon said board and comprising an outwardly extending arm having a ball runway and a shallow ball seat at the outer end of the runway and an opening for the ball directly below the ball when it is held against said seat, whereby rotation of the arm throws a ball outwardly along the runway against the seat where it is held by centrifugal force until this force is overcome by gravity.

1,538,890. INK FOR GLASS. MARK N. FREDENBURGH, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 31, 1923. Serial No. 628,174. 19 Claims. (Cl. 134—28.)



12. An ink suitable for printing on vitreous articles comprising a metallic oxide decomposable to produce an opaque metallic body, a low fusing point enamel and a vehicle containing only a small amount of residual carbon on decomposition.

1,538,891. DOLL'S HEAD. ARTHUR FRISCH and MORRIS A. FRISCH, Brooklyn, N. Y., assignors to Samuel Marcus, Brooklyn, N. Y. Filed July 18, 1921, Serial No. 484,276. Renewed Apr. 11, 1925. 8 Claims. (Cl. 46—40.)

1. In a doll's head the combination of an eye hanger, and a pair of eyes revolubly mounted in said hanger, said hanger having an operative bearing and a temporary bearing from either to the other of which said eyes are shiftable.

1,538,892. EGG CARTON. GEORGE S. GAYLORD, Menasha, Wis. Filed July 19, 1923. Serial No. 652,577. 3 Claims. (Cl. 229—29.)

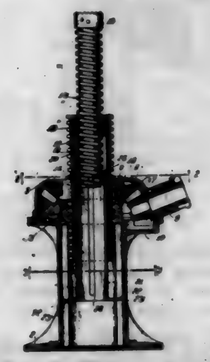
1. In a carton, a series of transverse partitions hingedly connected to opposite sides of the carton and movable from positions in a common horizontal plane to positions in spaced vertical planes, the maximum depth of said partitions being greater than the distance between the hinge connections of adjacent partitions.

1,538,893. MANUFACTURE OF IRON AND STEEL ALLOYS. WALTER BURNETT HAMILTON, Birkdale, and THOMAS ALLEN EVANS, Manchester, England. Filed Nov. 2, 1923. Serial No. 672,274. 4 Claims. (Cl. 75—45.)

1. A process of making an alloy containing iron and chromium, consisting in charging a furnace with suitable metal, forming a reception slag which carries an ore containing chromium and iron oxides, adding to the furnace an ore containing chromium and iron oxides and substantial proportions of silica admixed with a sufficient quantity of a reducing agent exothermic in respect to said oxides to reduce substantially all the reducible oxides including the silica, contained in the ore so added, whereby the silicon reduced from the silica expends itself in reducing the chromium oxide contained in

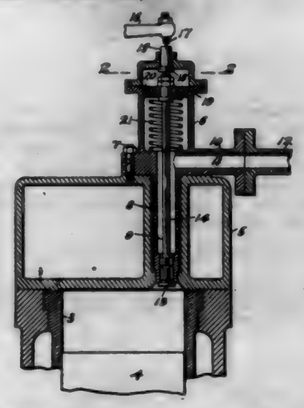
the reception slag, thereby to produce an alloy containing the desired percentages of iron and chromium and substantially free from silicon, substantially as described.

1,538,894. BUCKLE. WILLIAM E. HATHEWAY, Bridgeport, Conn. Filed Dec. 1, 1922. Serial No. 604,271. 1 Claim. (Cl. 24—191.)



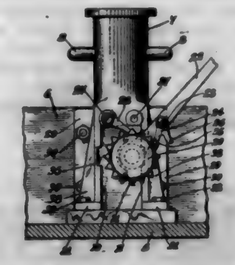
In a buckle, a sheet metal frame having a relatively wide flat and solid floor with attenuated ends and a lever supporting bar integrally connected at each of its ends to the attenuated ends of the floor, said connections of the lever supporting bar being disposed at points substantially central of the width of the floor and extending directly from the floor ends with their side faces at approximately right angles to the floor and their end faces at obtuse angles to the floor to have a relatively divergent relation, the said floor being formed to be embraced by an end portion of the webbing and with the other end portion of the webbing disposed on the first named end of the webbing and having its side edges received between the relatively divergent inner end faces of the said connections, and a lever on said bar having teeth which latter force both layers of the webbing against the floor at points between the inner and outer longitudinal side edges of the floor.

1,538,895. ELECTRIC BATTERY. ALCAN HIRSCH, New Rochelle, and RAYMOND F. BACON, Pelham, N. Y. Filed Feb. 3, 1923. Serial No. 616,824. 8 Claims. (Cl. 136—38.)



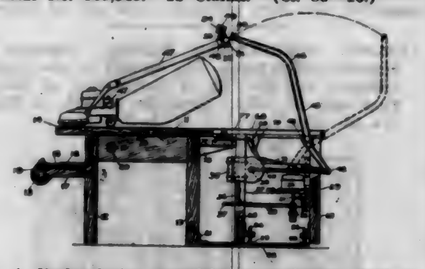
1. A dry cell having a non-mercurial depolarizing material and metallic mercury disseminated therein to substantially maintain the voltage of the cell under load.

1,538,896. LIFTING JACK. GUNNAR JENSEN, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 14, 1924. Serial No. 732,023. 3 Claims. (Cl. 254—102.)



3. A lifting jack comprising a hollow standard, a stationary nut in the upper end of the standard, a pair of screws each of substantially the same height as the standard, and adapted to nest within one another and within the standard, the outer screw being in the form of a sleeve exteriorly threaded to mesh with the nut, and interiorly threaded at its upper end to mesh with the inner screw, means for rotating the outer screw, and a tubular member positioned between the inner and outer screws and provided with a longitudinally extending slot, there being a projection on the lower end of the inner screw movable in the slot, and a projection on the lower end of the tubular member movable in a vertical slot in the standard, whereby the tube and inner screw are vertically movable with respect to the standard and each other, but none of these parts can rotate.

1,538,897. STARTING VALVE FOR INTERNAL-COMBUSTION ENGINES. OLAV EGKIL JORGENSEN, New York, N. Y. Filed Apr. 19, 1920. Serial No. 374,899. 4 Claims. (Cl. 60—16.)



4. In an internal combustion engine, in combination with a cylinder, a casing forming a chamber opening into said cylinder and having a connection adapted to communicate with a source of compressed air, a starting valve for normally shutting off said chamber from the cylinder, a valve stem with which said starting valve is integrally formed, a guide member on said valve stem slidable in the casing and formed to permit free circulation of the air in the chamber, an actuator, a plunger projecting through the wall of the casing to cooperate with said actuator, said plunger being freely suspended in the casing wall in alignment with the valve stem and headed on its inner end to form a valve for normally closing the opening through which the plunger projects, and means for normally holding the starting valve closed.

1,538,898. BITT. CHARLES KULMAN, Brooklyn, N. Y., assignor of one-half to Harold F. O'Brien, Brooklyn, N. Y. Filed May 18, 1924. Serial No. 712,975. 12 Claims. (Cl. 254—176.)

1. A bitt comprising a metal post-like structure having an opening in the bottom portion thereof, and a windlass journaled in said opening, and means whereby said windlass may be journaled on either side of two opposite sides of said opening.

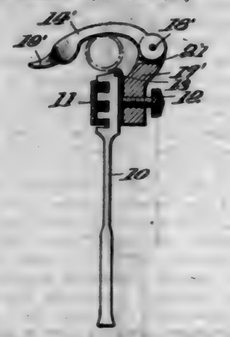
1,538,899. DISPLAY DEVICE. RAYMOND M. LANGLEY and PHILIP G. GRAP, Chicago, Ill., assignors, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed June 19, 1922. Serial No. 569,345. 12 Claims. (Cl. 35—16.)

1. A display-device comprising a stationary platform, a movable platform provided with a mechanism adapted to reciprocate a suction-cleaner, and means to shift the movable platform relative to the stationary platform.

1,538,900. CLOTHES POST. JAMES W. S. LOUGHLIN, Newark, N. J. Filed May 19, 1923. Serial No. 640,277. 2 Claims. (Cl. 68—12.)

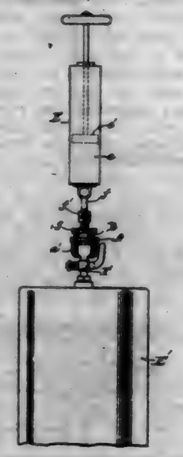
1. A clothes-post comprising a main body, a head-piece connected with the upper end of said main body comprising a hook member having a plurality of radially projecting upturned hook-portions, and a guard member associated with said hook-member having a plurality of radially projecting horizontal guard fingers to extend between the free ends of adjacent hook-portions.

1,538,901. APPARATUS FOR TRANSPORTATION AND UTILIZATION OF LIQUEFIED GASES. JAMES DOUGLAS MACMAHON, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed Jan. 6, 1925. Serial No. 833. 5 Claims. (Cl. 105—362.)



1. The combination of a car having a series of containers for liquefied gas mounted thereon, each container having an outlet, the intake of which lies below the level of the liquid therein, a valve for controlling the rate of flow through the outlet, and a heating unit mounted on the car in heat exchange relationship to the containers and movable to different positions on the car.

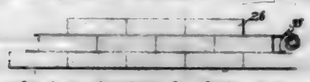
1,538,902. CORE AND METHOD OF MAKING CONDUITS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Apr. 20, 1923. Serial No. 633,408. 9 Claims. (Cl. 25—128.)



1. A core for molding conduits of great length comprising a series of non-collapsible sections arranged to be successively removed one at a time from one end of the conduit.

1,538,903. GLASS-TUBE CUTTER. ADAM OGINT, Brooklyn, N. Y. Filed Oct. 27, 1923. Serial No. 671,152. 3 Claims. (Cl. 49—52.)

1. A cutter for glass tubes comprising, in combination, means for holding the head of a cutter member, means pivoted on said cutter member holding means and partially encircling the glass tube and to be pressed by the hand against the tube in the cutting operation.

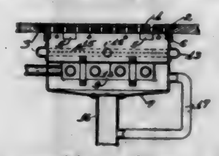


1,538,904. MEANS FOR DECARBONIZING ENGINE CYLINDERS. WILLIAM HURLEY OSTERHOUDT, New York, N. Y., assignor to Charles F. Kinsman, New York, N. Y. Filed Nov. 15, 1921. Serial No. 515,211. 5 Claims. (Cl. 123—198.)

1. In a device for introducing a decarbonizing agent into engine cylinders, a two-part coupling one of which

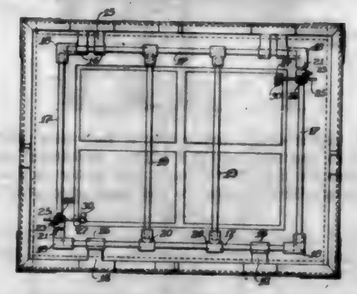
is a shell cut away for lateral application to a priming cock, and the other part is a plug screwed into said shell, combined with a forcing device attachable to said plug.

1,538,905. REFRACTORY STRUCTURE. LE GRAND PARISH, Mountainview, N. J. Filed Aug. 12, 1921. Serial No. 491,700. 9 Claims. (Cl. 72—37.)



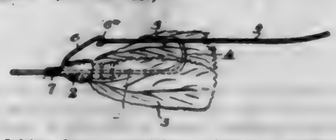
1. A refractory structure for fireboxes composed of a plurality of refractory units with preformed units of fusible material between said refractory units.

1,538,906. POTENTIAL INDICATOR. RICHARD J. PARISIAN, Battle Creek, Mich., assignor to The Wiginton Company, Kalamazoo, Mich. Filed Oct. 25, 1920. Serial No. 419,504. 3 Claims. (Cl. 171—95.)



1. In a potential indicator, the combination of a case comprising a cylindrical body and caps detachably secured in the ends thereof, said body and caps being of insulating material, a solenoid core fitted within said body and supported in a spaced relation to both ends thereof providing top and bottom chambers, said body having a longitudinal slot opening into said top chamber, a core loosely reciprocating within said coil and projecting into said top chamber and provided at its outer end with a finger-like pointer disposed in said slot, a coiled spring disposed on said core between the upper end of said coil and said pointer whereby the core is yieldingly supported, the outer end of the slot constituting a stop limiting the outward movement of said core, there being a scale for direct current disposed at one side of said slot and a scale for alternating current disposed at the other side of said core, and flexible cords disposed through the bottom cap and connected within the bottom chamber to the leads of said coil.

1,538,907. HEATED SANITARY DEVICE. ADOLPH P. RITTER, Chicago, Ill. Filed Sept. 26, 1921. Serial No. 503,466. 4 Claims. (Cl. 15—237.)

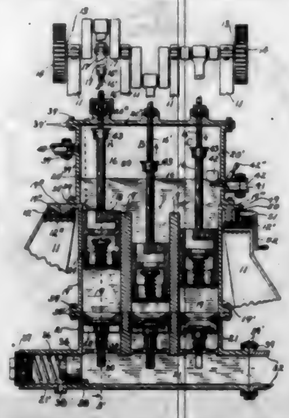


2. A grating comprising a frame, a removable grid adapted to fit within said frame having both longitudinal and transverse bars, filler strips above said bars having dovetail slidable engagement with said bars, the filler strips having their upper surface substantially flush with the upper surface of said frame whereby the frame prevents detachment of the filler strips from said bars.

1,538,908. REGISTERING TABLE. THEODORE C. SCHULTZ, River Forest, Ill., assignor to The Tribune Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1922. Serial No. 590,861. 3 Claims. (Cl. 33—184.5.)

1. A photographic layout table comprising a flat top, a glass plate over the same, standards secured to and arising from the rim of the same that have tubular supports, rods carried by said supports, and extending substantially parallel to the top of said table, carriers consisting of bosses adjustably mounted on said rods, needle supporting bars adjustably mounted in said carriers, said bars having vertical tubes, screws adjustable vertically in said tubes, and needles secured in said tubes and depending axially in the lower ends of the same.

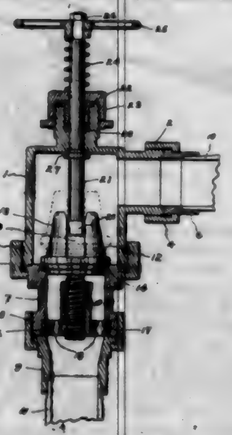
1,538,909. FISHING LURE. JESSE P. SHANNON, Lake Geneva, Wis. Filed Nov. 1, 1924. Serial No. 747,143. 5 Claims. (Cl. 43—40.)



1. A fishing lure comprising a hook, a resilient arm secured to the shank of the hook above the hooked end thereof and terminating forwardly of and in line with the barbed end of the hook in an attaching member adapted to engage one end of a strip of pork rind or the like, and means associated with the barbed end of the hook for securing said strip intermediate its ends.

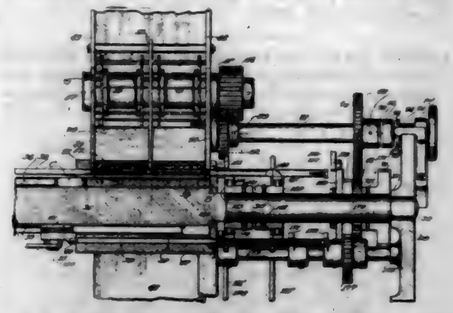
1,538,910. PROCESS OF PREPARING ACID PHOSPHATE. WILLIAM E. STOKES, Rockville Center, N. Y., assignor to Royal Baking Powder Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1923. Serial No. 614,679. 3 Claims. (Cl. 71—7.)

1. A process for preparing monobasic phosphate comprising dehydrating a solution of monobasic phosphate containing some free phosphoric acid and mixing with the substantially dry product thereof, substantially dry calcium carbonate.



1,538,911. APPARATUS FOR PROPELLING LIQUIDS. BURT E. TAYLOR, Mount Vernon, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 20, 1923. Serial No. 633,404. 15 Claims. (Cl. 103—178.)

1. In a vacuum pump, an air-tight reservoir for the liquid; means adapted for maintaining a constant vacuum pressure in the upper portion thereof and above the normal level of the liquid; means for supplying and introducing liquid thereto including means within the reservoir automatically controlling said supply to maintain a predetermined normal liquid level; an air-tight conduit for the liquid extending from said reservoir to



the place of delivery of the liquid; a piston operating wholly within, and having a therethrough passage for the liquid communicating with, said conduit; a valve slidable within the piston normally closing said passage; and means to reciprocate the piston whereby the valve is actuated by the piston movement to alternately close and open said passage.

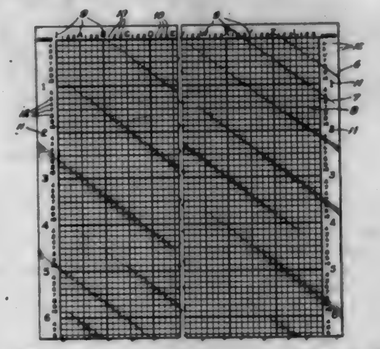
1,538,912. VALVES, INCLUDING CONDUITS FOR LIQUIDS. BURT E. TAYLOR, Mount Vernon, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1923. Serial No. 680,423. 8 Claims. (Cl. 251—48.)

3. A valve construction comprising, in combination, a conduit section, a second conduit section separably connected therewith having a valve seat formed on the upper inner rim thereof, a coacting valve reciprocable in said first conduit section, having a downwardly projecting threaded stud, means comprising a spindle removably connected with said valve to rotate same, and means, comprising a non-rotatable nut coacting with said stud and having a liquid passage therethrough, said nut being removably secured to said second conduit section, to actuate and hold the valve in any predetermined position relatively to said valve seat.

1,538,913. FILLING MACHINE. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 22, 1920. Serial No. 425,904. 11 Claims. (Cl. 226—14.)

1. A machine for inserting pencil leads into containers having a plurality of parallel compartments, which comprises a shaft having a plurality of sets of longitudinally extending grooves in the periphery thereof, the number of grooves in each set corresponding to the number of compartments in said containers, the said grooves being of such a size as to receive a predetermined number of leads; means for successively filling said grooves as said shaft rotates, comprising a hopper having a slot therein extending parallel with said grooves and in close proximity to the periphery of said shaft; a second hopper; means between said hoppers for causing short leads to be separated from the long and for conveying long leads from said firstnamed hopper to said second hopper; a filling drum for receiving and holding containers with their openings in registry with one end of said grooves; a receiving drum; means for transferring said containers from said receiving drum to said filling drum; plungers reciprocably mounted on said shaft and slidable in said grooves; means for reciprocating said plungers as said shaft rotates to displace the leads from said grooves; and means for displacing said containers from said filling drum.

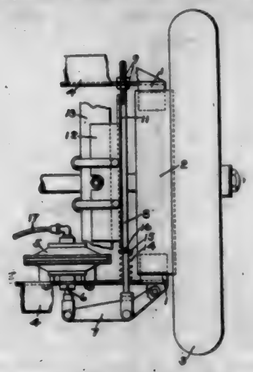
1,538,914. STRAW HAT. THOMAS J. WATTS, Baltimore, Md., assignor to The Townsend Grace Company, a Corporation of Maryland. Filed Dec. 10, 1924. Serial No. 754,893. 7 Claims. (Cl. 2—193.)



1. A braid for the flexible portion of men's sailor hats and the like, the same consisting of a strip of a fine smooth braided straw and a strip of coarser braided straw of roughened distinctive outline, the two being placed parallel, one partially overlying the other, and a through and through longitudinal seam connecting the two together, forming a braid of standard width having one roughened edge and one smooth edge portion.

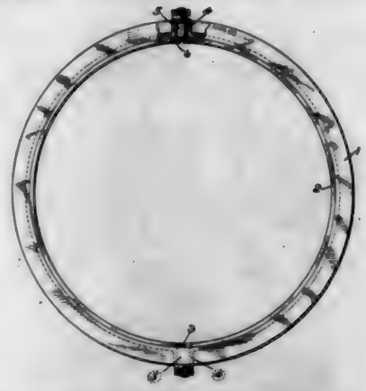
1,538,915. PROCESS FOR FINISHING AUTOMOBILE BODIES. CHARLES H. WIDMAN, Detroit, Mich. Filed Sept. 26, 1924. Serial No. 740,017. 6 Claims. (Cl. 296—28.)

6. A process of finishing an automobile body which consists in first forming the various pieces of the body



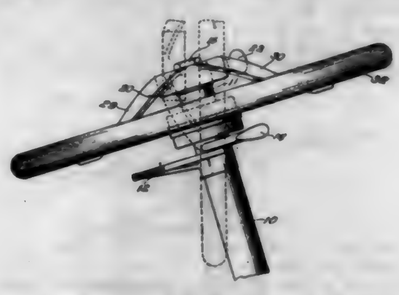
casing, then cleaning the same, then applying an undercoating containing iron oxide to the pieces, then subjecting pieces to a relatively high heat, then assembling pieces to a body frame and then applying a finishing coating, of a pyroxylin finish.

1,538,916. METHOD AND MEANS FOR TELEGRAPHING PHOTOGRAPHS. WILLIAM HENRY WISNER, Chicago, Ill., assignor to The Tribune Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1923. Serial No. 672,089. 3 Claims. (Cl. 178—7.)



1. The method of descriptive transmission of pictures consisting of initially transmitting a brief preliminary description of the images in the picture and their relative locations whereby the receiver may first visualize the general concept of the picture to be transmitted; then transmitting the lines of the images as they appear through a cross-lined screen that is supported upon the picture and has line identifying indicia upon its margins; and thereafter progressively delineating the so transmitted lines and points upon a sheet bearing corresponding lines and indicia.

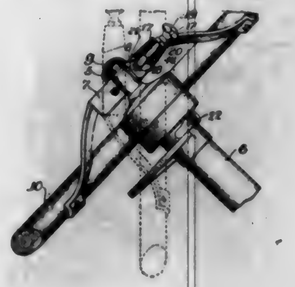
1,538,917. AUTOMOTIVE BRAKE MECHANISM. JOHN R. BARTHOLOMEW, Montclair, N. J., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,712. 2 Claims. (Cl. 188—152.)



1. In an automotive brake, the combination with a brake rigging including opposite brake beams, of a fluid pressure brake chamber carried by one brake beam and having a brake operating rod extending through an opening in the supporting brake beam, a tie rod connected to the other brake beam and extending through an opening in the brake chamber supporting brake beam, and a lever connected to said brake beam and to the tie rod and the operating rod.

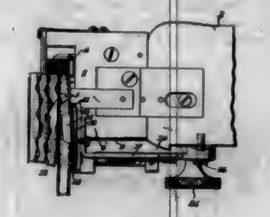
1,538,918. BRAKE-DRUM LINING. JOHN R. BARTHOLOMEW, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 13, 1923. Serial No. 631,839. 1 Claim. (Cl. 188—218.)

The combination with a brake drum, of a split one-piece brake lining mounted in said drum and having a cone-shaped recess straddling the joint in the lining and a bolt having a cone-shaped head engaging said recess for securing said lining to the drum.



1,538,919. TILTING STEERING WHEEL. PERRY S. BAUER, Chicago, Ill. Filed Sept. 22, 1921. Serial No. 502,837. 1 Claim. (Cl. 74—33.)

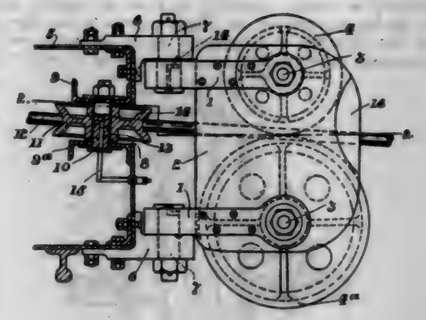
The combination of a steering shaft, a radial head fixed on the shaft and projecting at opposite sides thereof, a spoked steering wheel having a hub provided with a radial bifurcation of substantially the shape and size of the head and snugly receiving the same, a pivot member extending through the head and the sides of the bifurcated portion of the hub and located between the steering shaft and the open end of the bifurcation, the head being provided with an upright slot receiving the pivot member and permitting vertical bodily movement of the steering wheel preparatory to tilting thereof on the pivot member, the adjacent end walls of the bifurcation and head being shaped to permit tilting of the steering wheel on the pivot member, and a locking member extending through the hub opposite the open end of the bifurcation and into locking engagement with the head.



1,538,920. TILTING STEERING WHEEL. PERRY S. BAUER, Chicago, Ill. Filed Jan. 15, 1923. Serial No. 612,605. 2 Claims. (Cl. 74—33.)

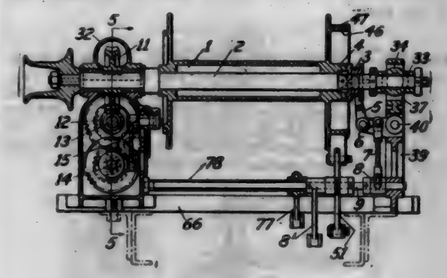
1. In combination, a steering wheel having a bifurcated hub, the inner end of said bifurcation being U-shaped and beveled from top to bottom, a steering shaft, a head on said shaft and received within said bifurcation, said head having one end curved and beveled

to correspond with the inner end of said bifurcation and to fit snugly therein, and a pivot passing through said head and the sides of said bifurcation.



1,538,921. GUIDE FOR STRAW-BRAID-SEWING MACHINES. RUDOLPH BECKER, North Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 2, 1924. Serial No. 710,499. 5 Claims. (Cl. 112—15.)

1. In a straw-braid sewing machine, the combination with stitch-forming mechanism including a laterally vibrating needle, of a dividing blade disposed in a vertical plane substantially bisecting the path of vibration of said needle, and yielding means for holding one edge of a strip of braid of variable width continuously in engagement with said dividing blade.

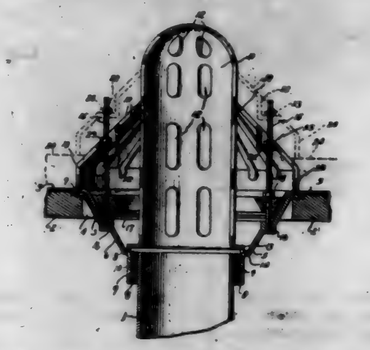


1,538,922. GUIDE OR FAIR-LEAD FOR THE DRAG ROPE OF A DRAG-LINE EXCAVATOR. HUBERT OSWALD BEDGOOD, Glasgow, Scotland, assignor to Lobnitz & Company Limited, Renfrew, Scotland. Filed May 6, 1924. Serial No. 711,483. 4 Claims. (Cl. 254—190.)

1. A fair-lead for the drag-line of a drag line excavator, having, in combination with the hollow platform of the excavator horizontally disposed guide pulleys located within said platform, said platform having an opening therein through which the drag-line passes, means supporting the guide pulleys horizontally side by side within the platform, brackets projecting from the

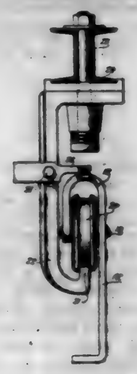
platform, bifurcated hinge pieces pivotally connected to said brackets, and vertically disposed pulleys mounted on the bifurcated hinge pieces.

1,538,923. WINCH FOR MOTOR VEHICLES. ROBERT S. BOLGER, New York, N. Y. Filed Dec. 26, 1924. Serial No. 758,310. 5 Claims. (Cl. 254—166.)



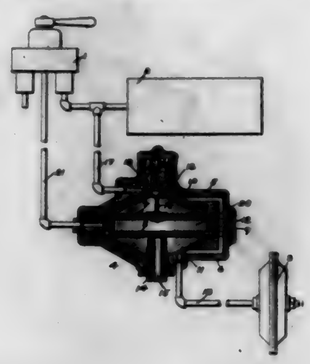
1. In a unitary variable speed winch structure adapted to be moved as a unit, a winch drum, a driving shaft for said drum, a gear on said shaft, an auxiliary shaft, a plurality of gears of different pitch diameters on said shaft, one of said gears meshing with said gear on the drum driving shaft, a third shaft, a plurality of companion gears thereon adapted to mesh with certain of the gears on said auxiliary shaft, a reversing idler gear adapted to mesh with certain of the gears on said auxiliary shaft and said third shaft, means for selectively meshing certain of the gears on said auxiliary shaft with certain of the others gears, a housing enclosing said gears, side frames for said winch, said housing forming part of said side frames.

1,538,924. ROOF SUMP. EDWARD W. N. BOOSEY, Detroit, Mich. Filed Jan. 31, 1924. Serial No. 689,701. 7 Claims. (Cl. 183—31.)



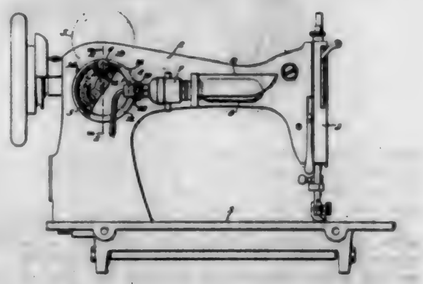
1. A roof sump comprising a basin adapted for connection with a drain conduit, the basin being provided

with a conical inner face, a series of threaded rods supported vertically in the basin, an annular member apertured to receive the rods and movable longitudinally thereof, the annular member having a conical face extending parallel with the conical face of the basin, a flashing or roofing extending between the conical faces of the annular member and basin, a series of nuts carried by the threaded rods adapted to be turned down to bindingly secure the flashing or roofing between the



conical faces of the annular member and basin, an upright apertured member extending over the drain conduit, a conical member having a central aperture through which the upright member extends and provided with a series of smaller apertures through which the upper ends of the rods extend, a series of nuts carried by the said rods adapted to be turned down to bindingly engage the edge of the conical member against the roofing, the conical member being provided with a series of apertures open to the basin.

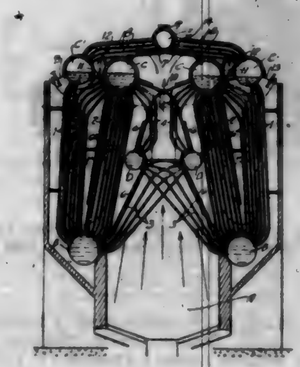
1,538,925. CONVEYING APPARATUS. HENRY B. BUCKHAM, Chicago, Ill., assignor to The Albright-Nell Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 12, 1920, Serial No. 388,504, now Patent No. 1,481,790, dated Jan. 29, 1924. Divided and this application filed Dec. 27, 1920. Serial No. 430,087. 8 Claims. (Cl. 104—90.)



1. The combination with a single trackway of a fixed double trackway having one end in juxtaposition with respect to said single trackway, a container movable on both said trackways, means for suspending said container from said trackways, said means being adjacent each end of said container to maintain said container in alignment with sid single trackway, and means for permitting the transfer of the container from one character of trackway to the other.

1,538,926. FLUID-PRESSURE BRAKE. CHRISTOPHER P. CASS, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1923. Serial No. 626,672. 2 Claims. (Cl. 303—28.)

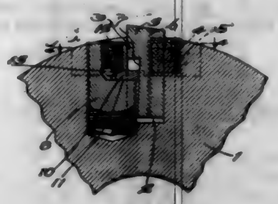
1. The combination with a brake chamber, of a valve for controlling the supply of fluid under pressure to said chamber, a flexible diaphragm for operating said valve, a flexible diaphragm for controlling a port through which fluid is exhausted from said chamber, a chamber intermediate said diaphragms, said diaphragms being operated by an increase in pressure in said diaphragm chamber for opening said supply valve and for closing said exhaust valve, and means for controlling the fluid pressure in said diaphragm chamber.



1,538,927. LIGHTING ATTACHMENT FOR SEWING MACHINES. DANIEL H. CHASON, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 8, 1924. Serial No. 711,812. 3 Claims. (Cl. 240—2.)

1. The combination with a sewing machine frame having the usual apertured hollow arm and arm-side cover-plate, of an apertured plate interposed between said arm and arm-side cover-plate, and an electric lamp-socket carried by said apertured plate.

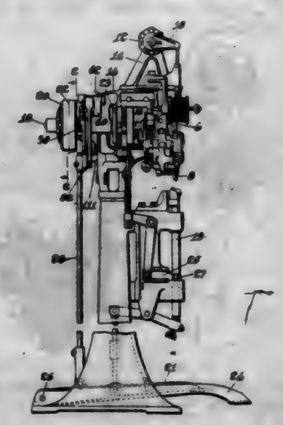
1,538,928. WATER-TUBE BOILER. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed May 10, 1920. Serial No. 380,285. 4 Claims. (Cl. 122—326.)



1. A water tube boiler of the type in which the combustion chamber is adapted to be fired from the front end and from the rear end of the boiler, comprising separate and distinct units arranged at the front and rear ends of the combustion chamber and each composed of a mud drum, elevated cross drums and banks of upright water tubes that connect said cross drums with said mud drum, separate banks of crossed tubes in the combustion chamber each of which is connected at its lower end to the mud drums of one of the units, separate submerged

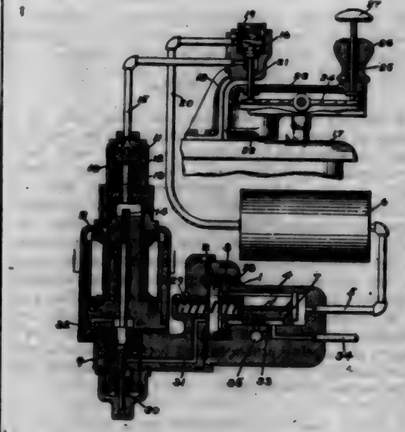
water drums connected with the upper ends of said crossed tubes, and banks of up flow tubes leading from said submerged drums and so arranged that the water which is supplied to the submerged drum of one unit will circulate through one of the elevated drums of the other unit, said crossed tubes being spaced apart double the usual distance

---



1,538,929. CUTTING TOOL. GERARD A. DE VLIEG, Janesville, Wis. Filed Mar. 13, 1922. Serial No. 543,444. 10 Claims. (Cl. 29—105.)

1. In a tool structure, the combination with a tool holder formed with a tool receiving recess; of a tool inserted within said recess; a block carried by the tool holder and movable therein laterally of and against a side of the tool to fix it in assembly with the holder; means for moving the block against the tool; and a carrier for said means and in threaded connection with the holder, the tool receiving recess having an enlargement that receives said carrier.

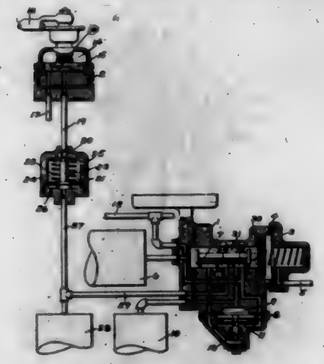


1,538,930. STARTING AND STOPPING MECHANISM. RENÉ E. DUPLESSIS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,229. 16 Claims. (Cl. 192—12.)

1. In a mechanism of the class described, a shaft, a loose and a fixed clutch member on the shaft, a collar on the shaft, a wedge member normally movable on the collar to force the latter against the loose clutch member to move the latter into operative connection with the fixed clutch member, and means for relatively displacing the wedge member and the collar so that the wedge

member, when it is operated in the manner which normally causes operation of the clutch, cannot operate on the collar to effect clutching of the loose and fixed clutch members.

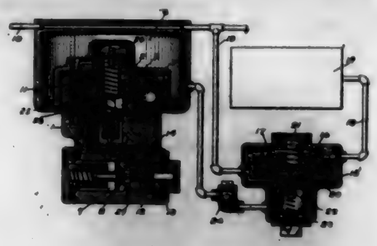
1,538,931. MAGNET-CONTROLLING DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1923. Serial No. 624,749. 4 Claims. (Cl. 303—18.)



1. The combination with a valve device for effecting an application of the brakes, of a magnet, a valve operated upon deenergization of said magnet for effecting the operation of said valve device, and means under the control of an operator for preventing the movement of said valve upon deenergization of said magnet.

1,538,932. TRAIN-CONTROL DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 24, 1922. Serial No. 723,015. 7 Claims. (Cl. 303—18.)

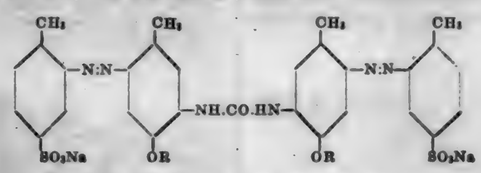
1. The combination with a brake application valve device and a brake valve device for controlling the



release of the brakes, of means controlled by said application valve device for controlling communication through

which the release of the brakes is effected by manipulation of said brake valve device.

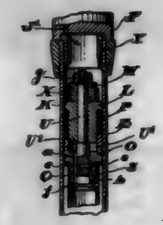
1,538,933. BRAKE-PIPE VENT VALVE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 24, 1924. Serial No. 722,016. 6 Claims. (Cl. 303—82.)



1. In a fluid pressure brake, the combination with a brake pipe and an auxiliary reservoir, of a valve device subject to the opposing pressures of the brake pipe and a chamber for controlling the venting of fluid from the brake pipe, and means subject to the opposing pressures

of the brake pipe and the auxiliary reservoir for controlling the charging of said chamber with fluid under pressure.

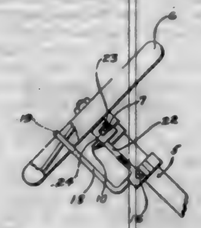
1,538,934. DISAZO DYES CONTAINING A DIPHENYLUREA NUCLEUS. LEON W. GELLER, Hamburg, N. Y., assignor to National Aniline & Chemical Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1924. Serial No. 709,686. 4 Claims. (Cl. 260—77.)



1. As new products, the azo dyestuffs having in the shape of their sodium salts the following probable formula:

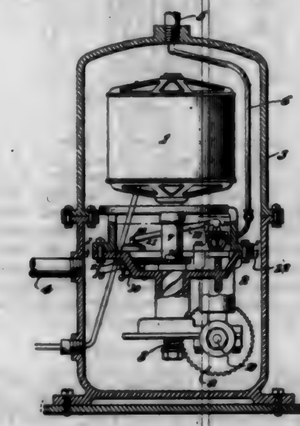
where R denotes alkyl group, such as CH_3, C_2H_5, etc., being ureas of aminazo compounds obtainable by coupling diazotized 3-amino-4-methylbenzene-1-sulfonic acid into 4-alkoxy-3-amino-1-methylbenzene, yielding upon reduction with stanous chloride and hydrochloric acid, 3-amino-4-methylbenzene sulfonic acid and 2.2'-dialkoxy-4.4'-diamino-5.5'-dimethyldiphenyl urea which upon hydrolysis is further decomposed into 2.5-diamino-4-alkoxytoluene and carbonic acid; said azo dyestuffs in the shape of their dry and pulverized sodium salts being yellowish brown powders soluble in water with a yellow color, and soluble in concentrated sulfuric acid with a bluish red color which on dilution with ice produce a reddish brown precipitate; and dyeing unmordanted cotton yellow shades which are capable of being discharged to a white by the action of sodium hydrosulfite.

1,538,935. FEEDING MECHANISM FOR ROCK DRILLS. HARRY V. HAIGHT, Sherbrooke, Quebec, Canada, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 2, 1923. Serial No. 649,083. 5 Claims. (Cl. 74—109.)



1. A fluid pressure piston, comprising a cup shaped main hollow piston head, a cylindrical cap having limited longitudinal movement in said hollow head, the body portion of said cap being guided in the head cavity by the walls of the head, said cap having a flange at its outer end, packing material in the recess formed between the said cap flange and the main head, a guide bolt having an enlarged neck forming a shoulder, a bolt shank passing through the said cap, and means for rigidly securing the bolt in the cap, the neck of the bolt extending inwardly into the main piston head, stops on the main piston head, and a stop on the bolt neck cooperating

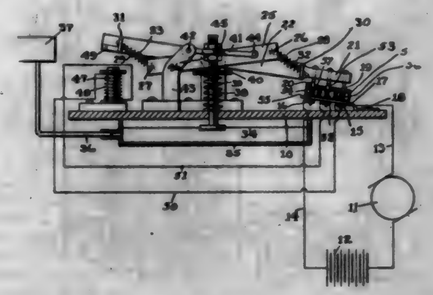
with said stops on the main piston head for limiting the longitudinal movement of the bolt and cap relatively to the main piston head.



1,538,936. AUTOMOBILE LOCK. RAY HESS, Chicago, Ill. Filed Mar. 14, 1924. Serial No. 699,271. 3 Claims. (Cl. 70—126.)

1. An automobile lock comprising a clamp consisting of a pair of pivotally connected sections, a lock for securing the sections about the steering column of an automobile, one of the sections being provided with an upwardly extending member having a recess to receive one of the spokes of a steering wheel, and arms having

branches provided with recesses to receive the control levers adjacent the steering wheel.

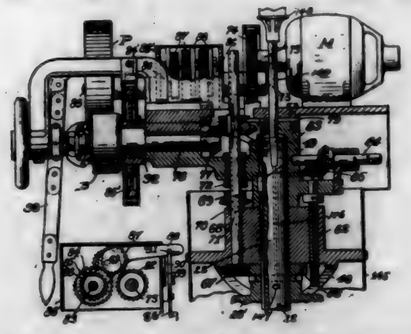


1,538,937. MECHANICAL UNLOADING DEVICE FOR COMPRESSORS. CLARENCE M. HOLLEY and EARL P. OSWALD, Detroit, Mich., assignors, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Dec. 24, 1919, Serial No. 347,134. Renewed Apr. 6, 1925. 5 Claims. (Cl. 230—24.)

1. In a fluid pressure system, the combination with a compressor having a high and a low pressure line, of a casing or chamber forming part of the low pressure line and enclosing the compressor, an inlet valve of the compressor opening to the chamber, a discharge valve for the compressor opening directly to the high pressure line, a motor in the chamber, and a centrifugally operated means within the chamber driven by the motor and acting to hold the inlet valve open to the chamber until the motor has attained a predetermined speed of operation.

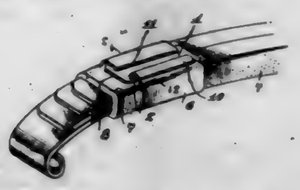
4. A mechanical unloading device for fluid compressors comprising the combination with a compressor having a spring closed inlet valve, an electric motor for operating the compressor, of a lever pivotally mounted upon the compressor head having one end engaging the valve stem, a plunger or rod at the opposite end of the lever, a centrally apertured housing in which the rod is movable longitudinally, a gear on the said housing, a gear on the motor shaft meshing therewith, and means operated through centrifugal force caused by rotation of the gear and housing to release the rod and lever to permit normal operation of the inlet valve, said centrifugally operated device being adapted when idle or operating below a predetermined speed to cause movement of the lever to open the inlet valve against the tension of the valve spring.

1,538,938. SWITCH CONSTRUCTION. GEORGE E. HULSE, New Haven, Conn., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 15, 1922. Serial No. 536,611. 21 Claims. (Cl. 200—144.)



1. In construction of the general nature of that herein described, in combination, a pair of contacts adapted to control the opening and closing of an electric circuit, means for moving one of said contacts into and out of circuit-closing relation with respect to the other, an electromagnet connected across said contacts, thereby to be energized by the potential drop across the arc formed between said contacts as said operating means moves one of said contacts out of circuit-closing position with respect to the other, means responsive to the energization of said electromagnet for relatively rapidly moving said contact away from the other, and means responsive to the actuation of said last-mentioned means by said electromagnet for disconnecting said electromagnet from one of said contacts.

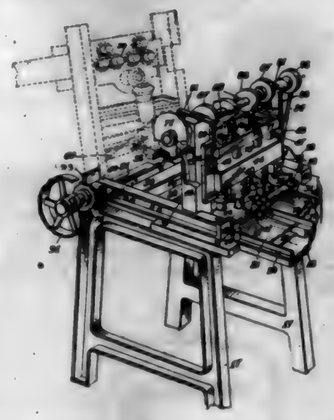
1,538,939. SEWING-MACHINE SHUTTLE. EDGAR D. HUME, Collingswood, N. J., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Aug. 21, 1923. Serial No. 658,495. 2 Claims. (Cl. 112—238.)



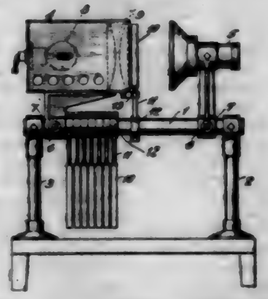
1. In combination, a sewing-machine shuttle body having a central post and a seat surrounding the inner end of the post; a bobbin case having a tubular post receiving the shuttle post; and a bobbin-controlling adjunct including a sleeve loosely surrounding and adapted to rotate on the tubular post, and provided with a flange bearing on said seat, a stop collar embracing and adapted to rotate with the sleeve and formed to closely fit the interior of a bobbin cop tube, so that the collar is adapted to rotate with the bobbin, a centrally apertured disk surrounding and freely movable on the sleeve between the said flange and the stop collar, and a dished spring bearing at its central portion on the said flange and at its marginal portion on the disk, the spring acting in opposite directions to press the sleeve flange inwardly against the said seat, and to press the disk outwardly against the inner end of a bobbin, so that the outer end of the bobbin is pressed against the head of the bobbin case, the said stop collar being arranged to be out of contact with said disk when the said adjunct and a bobbin are installed in the shuttle, and to contact with the disk, and limit the movement thereof by the spring in the absence of a bobbin.

1,538,940. APPARATUS FOR APPLYING CLOSURES TO RECEPTACLES. ARON JOHNSON, Brooklyn, N. Y. Filed Jan. 10, 1921. Serial No. 436,146. 4 Claims. (Cl. 226—84.)

1. In apparatus for applying closures to receptacles, the combination of a fixed shaft; a rotatable receptacle supporting table concentric with said shaft; closure applying devices rotatably mounted on the shaft and to have longitudinal reciprocable movement and adapted to have longitudinal adjustment on the shaft relative to the table; means to couple the closure applying devices with the table to rotate therewith and permit of adjustment of said devices relative to the table and maintain the driving connection between the same; a cam mounted on the shaft and connected to the closure applying devices to participate in the longitudinal adjustment thereof, and with which cam said devices co-operate to impart the closure applying movement thereto, driving means supported upon the shaft in fixed position and operatively connected to the closure applying devices; a lead screw carried by the support for the driving means having threaded connection with the cam; and means to rotate said lead screw to adjust the cam with the connected closure applying devices on the shaft for the purpose specified.



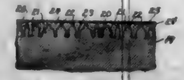
1,538,941. BUCKLE. JAMES MADISON JACKSON, Parkersburg, W. Va. Filed July 10, 1924. Serial No. 725,199. 1 Claim. (Cl. 24—23.)



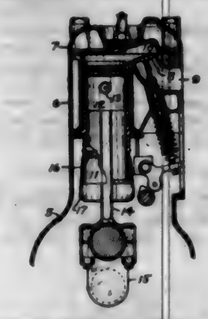
A fastener of the character described comprising a substantially flat body having a pair of substantially parallel marginal edges, said body having an elongated portion thereof struck laterally therefrom adjacent to one of said marginal edges to provide an elongated attaching strip and having a slot formed therein adjacent to the other of said marginal edges, the portion of the body extending between said slot and the adjacent marginal edge being offset from the same side of the body as said first named attaching strip.

1,538,942. APPARATUS FOR CUTTING DISKS FROM SHEETS. ARON JOHNSON, Brooklyn, N. Y. Filed Apr. 10, 1922. Serial No. 551,202. 5 Claims. (Cl. 144—28.)

1. In apparatus for cutting disks from sheets, a perforated, sheet supporting table; tubular cutters; a pivoted frame to rotatably and reciprocably carry the cutters in alinement with the perforations in the table and yieldingly urged in one direction; said frame being adapted to be swung with the cutters toward and away from the table; a shaft journaled in the frame, carrying cams operative to move the cutter carrying means in the opposite direction; means to feed the sheet transverse to the cutters and during the receding movement thereof comprising rollers arranged in opposed pairs, one pair forward and the other pair rearward of the cutters; a toothed sector; means to rock the sector during the reciprocating movement of the cutters; pinions loose on the shaft of one of the feed rollers of each pair of rollers meshing with said sector; means operative to connect said pinions to the roller shaft when the sector is rocked in one direction and to disconnect the same therefrom when the sector is rocked in reverse direction, and means carried by the frame and operative from the cam shaft to rock the sector during the receding movement of the cutters, said means being adapted to be moved out of and into operative relation with the sector as the frame is moved away from and toward the table

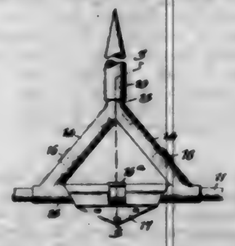


1,538,943. PROJECTION DEVICE. BURNHAM W. KING, East Orange, N. J., assignor to Julius King Optical Company, a Corporation of New York. Filed Feb. 20, 1922. Serial No. 537,831. 14 Claims. (Cl. 88—28.)



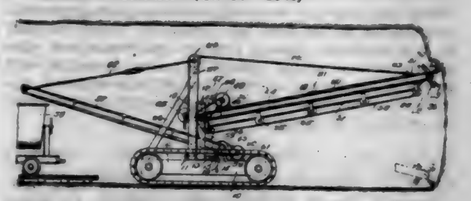
5. In the art of optical projection, a projecting device having relatively adjustable sections, a rod by means of which one of the sections is adjustable relatively to the other, and a plurality of object carriers rotatably and slidably carried by said rod, whereby said carriers may be brought individually into projecting relation with respect to said sections in any variable order of sequence.

1,538,944. SILVER-REENFORCED SILVER-PLATED FLATWARE FOR TABLE USE. THOMAS B. LASHAR, Fairfield, Conn., and THOMAS H. LASHER, Chicago, Ill., assignors to Associated Silver Co., Chicago, Ill., a Corporation. Filed Jan. 26, 1923. Serial No. 614,982. 7 Claims. (Cl. 30—22.)



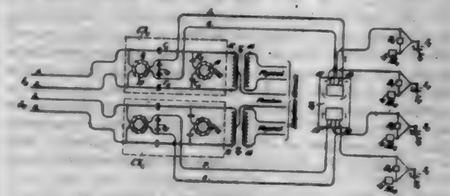
1. An article of manufacture, consisting of a base portion having recesses with interspersed elevations having slender terminals, a silver binder filling the said recesses and covering the said terminals, and a plated outside face.

1,538,945. BAFFLE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Oct. 5, 1923. Serial No. 666,852. 10 Claims. (184—3.)



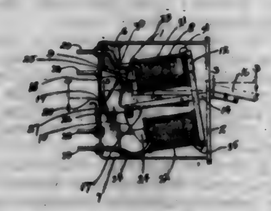
1. In an engine having a cylinder, a piston, a crank shaft, and a connecting rod connecting said piston and crank shaft, an oil baffle comprising a cup-shaped member having resilient sides adjacent the open end forming the attaching means of said member to said cylinder, and an opening in the closed end of said member for the passage of said connecting rod.

1,538,946. LIGHTNING-ROD CONNECTER. IRA M. MOORE, Hamburg, N. Y. Filed June 16, 1922. Serial No. 568,719. 4 Claims. (Cl. 173—81.)



1. A lightning rod connecter, comprising a vertically-divided foldable frame, including an approximately circular base-portion split lengthwise on its upper side and adapted to be folded about a conductor-cable, opposing side portions extending upwardly from the edges of said base-portion and each consisting of a pair of upwardly-converging leg-sections of semicircular cross section joined at their upper ends by a semicircular neck section, the opposing neck-sections and leg-sections abutting against each other and forming neck and leg-members of circular cross section when the sides of said base-portion are closed against the conductor-cable, and means for securing said neck and leg sections together.

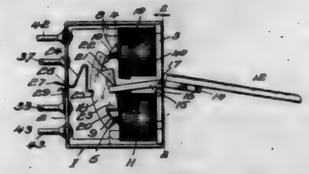
1,538,947. EXCAVATING APPARATUS. WILLIAM J. NEWMAN, Chicago, Ill. Filed Dec. 26, 1924. Serial No. 758,160. 4 Claims. (Cl. 37—190.)



1. In a machine for excavating soft clay or the like, the combination of a conveyor, a shaft mounted adjacent to one end of the conveyor, means for turning said shaft, a substantially U-shaped cutter blade secured to the shaft and adapted to cut out slices of clay or material, and a paddle mounted at the rear of the cutter blade and rotating therewith, said paddle being adapted to coact with the blade for throwing the slices of excavated material onto the conveyor.

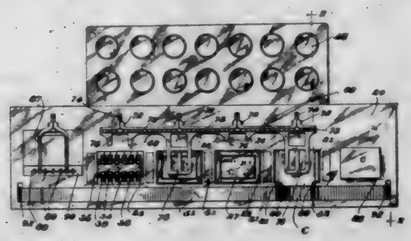
1,538,948. TRANSFORMER. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 2, 1920. Serial No. 427,902. 3 Claims. (Cl. 179—3.)

1. In a signaling system adapted for the simultaneous transmission of telephone and telegraph signals, the combination with a line circuit of a terminal telephone circuit and a plurality of terminal telegraph circuits, a composite set adapted to guide the telephone and telegraph signaling currents into their respective terminal circuits, and a transformer having a winding individual to and in series with each telegraph circuit, the said windings being so inductively coupled and poled that the transmission of a telegraph impulse through one of them will induce an impulse in a second winding of such magnitude and in such direction as to minimize the current set up in the circuit with which the said second winding is connected by the transmission of the signaling impulse over the circuit with which the said first mentioned winding is connected, due to the admittance between the said circuits.



1,538,949. ELECTRIC-CIRCUIT-CONTROLLING DEVICE. OSBORNE I. PRICE, Frederick, Md., assignor, by mesne assignments, to The W. H. Reisner Mfg. Co., Hagerstown, Md., a Corporation of Maryland. Filed Apr. 23, 1924. Serial No. 708,526. 6 Claims. (Cl. 200—88.)

1. An electric circuit controlling device comprising in combination a support, a stationary armature secured

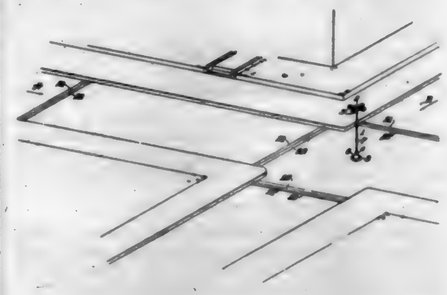


in one side of said support and having a pole face on each side of a central section thereof, a frame, a pair of solenoids carried adjacent opposite ends of said frame and pivotally mounted in a line passing through said central section forming a magnetic circuit for each of said solenoids passing through said frame and said pole faces and spring means operative to retain said frame in a position in which one of said magnetic circuits has a minimum overall length for closing or opening an electrical circuit.

1,538,950. CIRCUIT-CONTROLLING DEVICE. OSBORNE I. PRICE, Frederick, Md., assignor, by mesne assignments, to The W. H. Reisner Mfg. Co., Hagerstown, Md., a Corporation of Maryland. Filed May 24, 1924. Serial No. 715,741. 5 Claims. (Cl. 200—98.)

1. An electric circuit controlling device, comprising in combination a U-shaped frame, a magnetic member closing one end of said frame, a pair of electromagnets carried by said member, said magnets having arcuate pole tips disposed in the same curved line, an arcuate armature pivotally mounted between said electromagnets and having arcuate faces at each end thereof corresponding to the shapes of the pole tips, an indicator connected with said armature, and spring means for controlling the movement of said armature and said indicator to either of two positions whereby an electric circuit may be opened or closed and visible indication of the condition of the said circuit secured.

1,538,951. STENCILING APPARATUS. WILLIAM PRINGLE, Richmond Hill, N. Y. Filed Apr. 1, 1924. Serial No. 703,506. 25 Claims. (Cl. 101—115.)



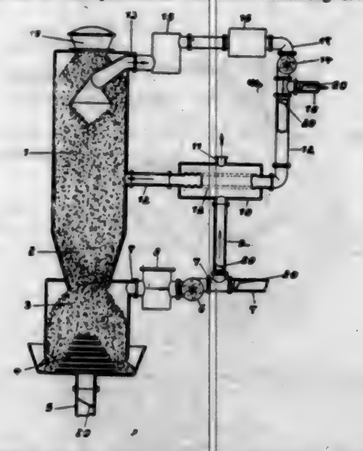
1. A stenciling apparatus comprising a substantially horizontal stencil, an air brush beneath the stencil for spraying fluid upwardly upon the under side thereof, and means for actuating the air brush.

8. A stenciling apparatus comprising a plurality of stencils, color projecting means beneath the stencils, conveyor means for successively positioning cards upon the respective stencils, means for alternately actuating the conveyor means and color projecting means whereby the latter will be actuated when the cards are positioned on the stencils.

22. The method of applying colors to an article which consists in projecting sprays of fluids of different nature under pressure upwardly through a stencil simultaneously to different portions of the under surface of the article.

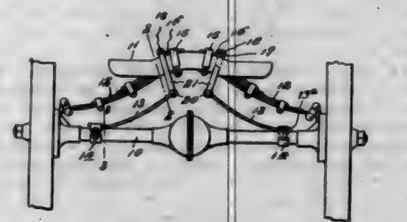
1,538,952. TRAFFIC SIGNAL. ALFRED W. RAM, Washington, D. C., assignor to William H. Finckel, jr., trustee, Washington, D. C. Filed June 29, 1921. Serial No. 481,814. 14 Claims. (Cl. 177—337.)

1. In a traffic signal, the combination with intersecting traffic lanes, of signal means for controlling traffic across the intersection, and vehicle actuated means for controlling said signal means, whereby not more than a predetermined number of vehicles may pass in one direction before the signal means is actuated to signal approach of vehicles in an intersecting direction.



1,538,953. TICKET FOR USE IN MERCHANDISING CAMPAIGNS. WALTER T. RAYMOND, St. Louis, Mo. Filed Oct. 12, 1923. Serial No. 668,214. 3 Claims. (Cl. 283—1.)

1. A group of checks for the purpose described, each of which is provided with a representation of a clock face, and clock hands, the clock hands of the different checks being disposed differently so as to represent different fractions of time.

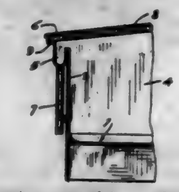


1,538,954. METHOD OF DISTILLING SHALE AND SIMILAR BITUMINOUS FUELS. HANS ROSENTHAL, Berlin, Germany, assignor to Julius Pintsch, Aktiengesellschaft, Berlin, Germany. Original application filed Mar. 24, 1922, Serial No. 546,430. Divided and this application filed Feb. 4, 1925. Serial No. 6,850. 1 Claim. (Cl. 202—16.)

A method of distilling oil shale and similar bituminous fuels by means of internal heating, consisting in wholly or partly burning in a special pre-heater the gas resulting from the gasification of the shale residue, said gas giving off in the pre-heater the heat resulting from its

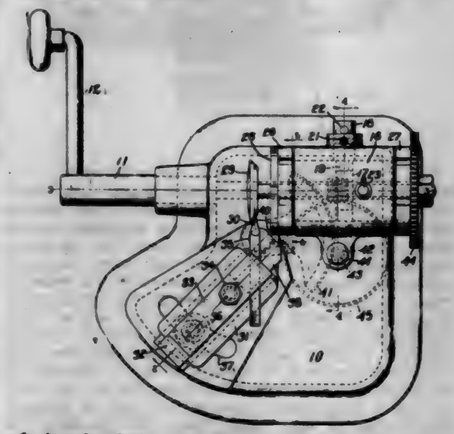
combustion on to a gas, which continuously circulates through the fuel and acts as a heat transmission means.

1,538,955. SHOCK ABSORBER. LOUIS B. SCHELL, Tampa, Fla., assignor of one-half to D. B. Mills, West Tampa, Fla. Filed Nov. 6, 1922. Serial No. 599,300. 2 Claims. (Cl. 267—45.)



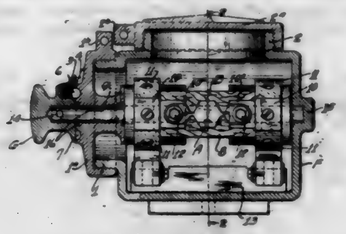
1. The combination with a vehicle axle, spring and bolster, of a shock absorber comprising means to provide a pair of bearings upon said bolster, a pivot pin through each bearing, a pair of link devices pivotally suspended from each pivot pin, the links of each pair being separated by said bolster, a pair of resilient spring bars each having one end pivotally supported between the lower ends of a pair of links and having their other ends extended in opposite directions and resting upon said axle, and clamp devices engaging the extended end of each bar to secure the same to said axle.

1,538,956. PROCESS OR METHOD AND APPARATUS FOR SPINNING OR TWISTING AND WINDING YARN. DAVID S. SEAMAN, Providence, R. I. Filed Dec. 4, 1924. Serial No. 753,881. 13 Claims. (Cl. 242—1.)



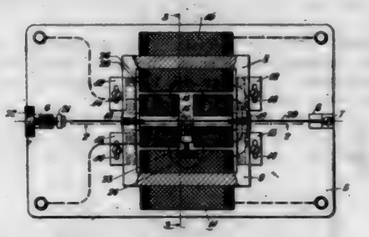
1. The process of winding yarn from a series of bobbins in one continuous length upon a single receiver, which consists in spinning or twisting the yarn upon a series of bobbins with the trailing end exposed, transferring the series of full bobbins to a flexible carrier having bobbin holders disposed to support the bobbins in parallel relation, tying the trailing end of the yarn of one bobbin to the leading end of the yarn on another bobbin successively thruout the series, transferring the flexible carrier to a winding machine constructed to support the carriers so that the ends of the series of bobbins extend in a radial direction towards the winding point, then winding the yarn successively from the bobbins to a single receiver in one continuous length.

1,538,957. FRUIT EVAPORATOR. MARY PARKER SMITH, Denver, Colo. Filed Feb. 25, 1924. Serial No. 694,870. 1 Claim. (Cl. 34—41.)



A fruit evaporator comprising a box-like casing having an inclined glass top, a gutter applied exteriorly to the top portion of the shorter upright side wall of the structure, the lower portion of the glass top projecting laterally beyond the said wall and over-hanging the gutter, the said wall being shortened at the top to leave a space between its upper edge and the glass cover, said space establishing communication between the casing chamber and the gutter, the outer wall of the gutter extending upwardly above the inner wall thereof and forming a support for the adjacent overhanging part of the glass top, and forming therewith a tight joint, the gutter having an outlet for water of evaporation which passes thereto from the under surface of the glass.

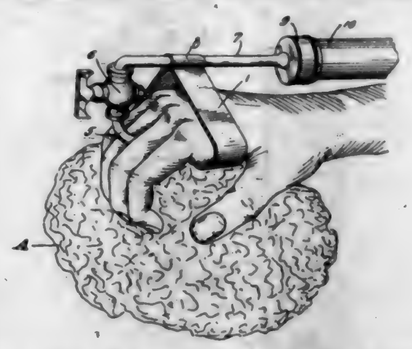
1,538,958. VALVE LATHE. ULRICH STEINER, Lima, Ohio, assignor to Steiner Brothers, Lima, Ohio, a Partnership. Filed Mar. 22, 1922. Serial No. 545,725. 12 Claims. (Cl. 82—1.)



1. A valve lathe comprising a work holder, a tool slide for moving the tool across the face of a valve, a holder supporting said tool slide, said holder being pivotally adjustable to vary the path of the tool slide, means whereby the work holder may be moved axially to move the valve toward and away from the path of the tool, common driving means for rotating the work holder and moving the tool slide in one direction, and manual means for resetting the tool slide, substantially as set forth.

1,538,959. MULTIPLE FUSE AND FUSE HOUSING. JOSEPH TEIPEL and WILLIAM F. EXNER, St. Louis, Mo., assignors to Mancha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 26, 1922. Serial No. 597,220. 5 Claims. (Cl. 200—125.)

1. A multiple fuse, comprising a housing, a carrier in said housing provided with a plurality of fuses, one opening in said housing through which said fuses can be inspected, another opening in said housing through which the carrier can be removed from the housing, movable closures for said openings, and means for locking said closures together.

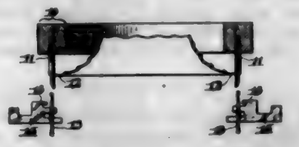


1,538,960. ALTERNATING-CURRENT RELAY. ELMER O. THOMPSON, Tompkinsville, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 19, 1922. Serial No. 576,048. 6 Claims. (Cl. 200—93.)

6. A relay comprising a base, yokes adjustably supported thereon having their poles facing each other, windings for said yokes through which direct current may flow, a pair of spools including windings therefor through which alternating current may flow, an armature positioned longitudinally of said yokes and centrally of said spools, the field produced in the magnetic system by said alternating current having two air gaps in multiple whereby a lower reluctance and a correspondingly increased magnetic flux is created for said armature, a spring member mounted on said base with which said armature is adapted to make contact, the amplitude of movement of said armature at the point of contact being greater than at the point of magnetic pull exerted by said yokes, means for adjusting the tension of said armature, and means for adjusting said spring member.

1,538,961. SPRAY. CHARLES W. TOBERT, Oklahoma City, Okla. Filed Oct. 27, 1924. Serial No. 746,160. 2 Claims. (Cl. 299—141.)

1. A spray device of the class described comprising a rigid supporting member of loop shape and adapted to be placed over the hand of a user, a spray nozzle on the member for resting in the palm of the hand and a supply pipe supported by the top of the member



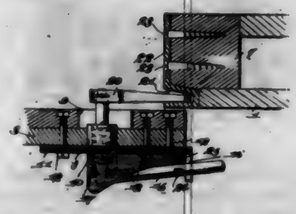
and having a curved portion passing between the fingers of the hand of the user and connected with the nozzle.

1,538,962. AIRPLANE-FUSELAGE CONSTRUCTION. LOWELL C. WEINBERG, Dayton, Ohio. Filed Jan. 20, 1922. Serial No. 530,628. 1 Claim. (Cl. 244—30.)

In fuselage construction, longérons having fixed gussets at intervals in the length thereof, in combination with rectangular truss units comprising side and cross members, said cross members being arranged beyond the extremities of said side members to provide exterior recesses to receive said longérons, diagonal gussets at each corner of said truss units for securing the side and cross members together, said truss units each in complete form being applied to the longérons and gussets and fastened to said gussets.

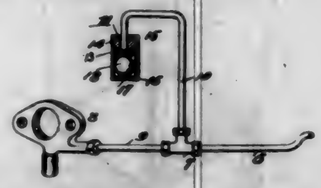
1,538,963. METHOD OF AND MEANS FOR TRANSFERRING KNITTED WEBS. LOUIS N. D. WILLIAMS, Ogonts, Pa. Filed Dec. 14, 1922. Serial No. 606,789. 4 Claims. (Cl. 66—32.)

1. The method of transferring the stitches of knitted webs from the points of a transfer device to the needles of a knitting machine, which consists in projecting the web holders to engage all the stitches and retain the same on the needles while the transfer device is withdrawn.



1,538,964. WAVE FILTER. OTTO J. ZOBEL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 15, 1921. Serial No. 437,527. 11 Claims. (Cl. 178—44.)

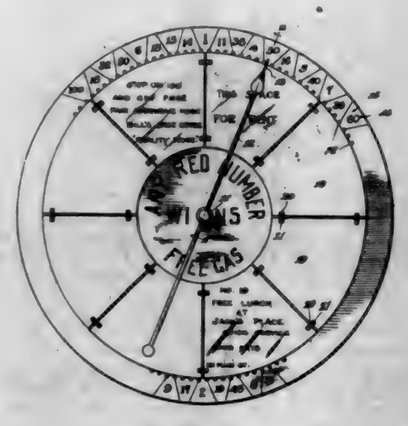
8. A wave-filter having one or more half-sections of a certain kind and one or more half-sections introduced from a different wave-filter having the same characteristic impedance and the same critical frequencies and



a different attenuation characteristic outside the free transmitting range.

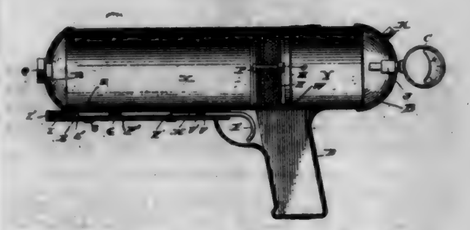
1,538,965. BOX-CAR-DOOR LATCH. THOMAS W. ALLEN and LON A. WYATT, Memphis, Tenn. Filed Apr. 30, 1924. Serial No. 709,984. 6 Claims. (Cl. 292—202.)

1. A latch for car doors, comprising a tubular casing adapted to be positioned in a transverse opening in a car door, a latch bolt supported by the tubular casing for axial movement to and from position to extend beyond the inner face of the car door, a handle at the outer end of the latch bolt, spring means urging said latch bolt continuously toward position to extend beyond the inner face of the car door, and cooperative stop elements respectively carried by said latch bolt and said latch casing for limiting the movement of said latch bolt in response to the actuation of said spring.



1,538,966. VALVE. CLEMENTE L. ARAGON, Maitland, Colo. Filed Mar. 25, 1924. Serial No. 701,804. 2 Claims. (Cl. 251—121.)

1. A valve device for a gas engine comprising a cylindrical body provided with an externally threaded portion, said portion provided with a pocket and a passage leading axially from the pocket upwardly through the body, a tube extending through said passage and having its inner end provided with an annular flange seated in said pocket of the threaded portion, an apertured cap casing threaded at one end upon said threaded portion, and a ball in said cap casing movable longitudinally therein between the aperture of the cap and pocket of said body.

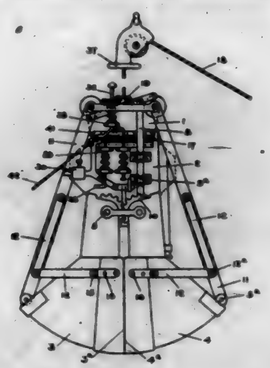


1,538,967. ADVERTISING GAME. EDWIN A. BOARDMAN, Centralia, Wash. Filed Aug. 17, 1923. Serial No. 657,940. 5 Claims. (Cl. 273—141.)

1. An advertising game including a game board having a series of pegs upstanding therefrom, a series of numbers upon the game board identifying said pegs, a revoluble pointer carried by the board and provided at one end with a flexible tip to cooperate with the pegs, a series of advertising cards removably mounted upon the board and bearing numbers comprised in said series of numbers, shields overlying said cards, screws

threaded into the board between the cards, and bowed spring clamps swiveled upon said screws to bear at their ends against said shields holding the shields and said cards in position.

1,538,968. FIRE EXTINGUISHER. GEORGE W. BURKE, Jr., Dayton, Ohio. Filed Dec. 3, 1920. Serial No. 428,006. 4 Claims. (Cl. 299—92.)

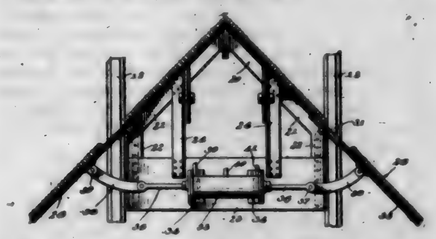


1. A fire extinguisher comprising a horizontal fluid container of general cylindrical shape, a pistol grip attached thereto at a point inward of the ends thereof, the length of said container being substantially equal to the length of the fire extinguishing, a trigger located adjacent to and in front of the grip, means for causing an expelling force on the fluid in the container, and a valve beneath the forward portion of the fluid container adapted to be operated by said trigger to release the fluid in the container.

1,538,969. GRAB. NORMAN IVAN DURBRIDGE BURKE, Auckland, New Zealand, assignor of one-half to Thomas Philip Somerville, Auckland, New Zealand. Filed Jan. 5, 1924. Serial No. 684,644. 3 Claims. (Cl. 37—186.)

1. In a grab of the type operated by a single rope or chain on the block and tackle principle, an upper sheave block, a lower sheave block, a frame below the latter, a pair of gravity catches pivoted on the frame and adapted to engage the lower block for securing the frame and block together, a latch engageable with one of said catches for temporarily securing the same against move-

ment, a roller arranged on the latch, a sliding rod mounted on the lower block and having an arm engageable with said roller for temporarily preventing the move-

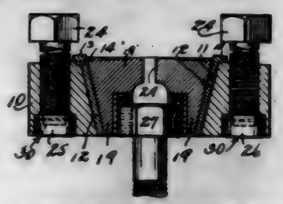


ment of the latch, a spring surrounding said rod for normally holding said arm in position to prevent the actuation of the latter, and an actuating member for the latch arranged on the upper block.

1,538,970. CLOTHESPIN. REDMOND E. BUSBY, Allen, Okla. Filed Nov. 1, 1924. Serial No. 747,296. 3 Claims. (Cl. 24—253.)

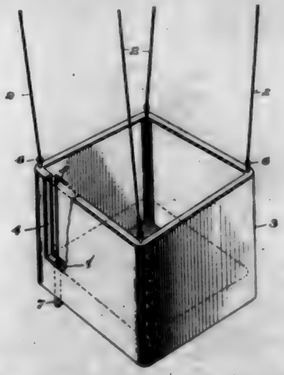
2. A clothes pin, comprising a pair of channel-shaped jaws arranged back to back, ears struck from the flanges of each jaw and bent towards the opposite jaw, a pivot pin connecting the ears of the two jaws, and a spring for normally throwing the jaws into closed position.

1,538,971. BALLAST-DRESSING MACHINE. SOLON FRANCIS CLAPP, Temple, Tex. Original application filed Aug. 4, 1922, Serial No. 579,678. Divided and this application filed Sept. 11, 1923. Serial No. 662,149. 2 Claims. (Cl. 15—78.)



2. A sweeper unit for railroad tracks, comprising a V-shaped frame, a wing hinged to each end of the V-shaped frame, a cylinder supported by said frame, a pair of pistons for said cylinder, connections between said wings and pistons, and means whereby an expansible fluid may be utilized for reciprocating said pistons and thereby enabling said wings to be swung outwardly and inwardly.

1,538,972. ELECTRIC HEATER. OTTMAR CONRADTY, Nuremberg, Germany. Filed Feb. 17, 1925. Serial No. 9,876. 2 Claims. (Cl. 201—63.)

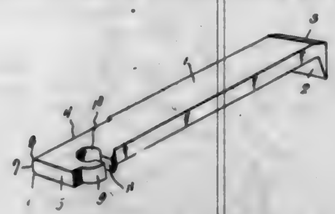


1. As new articles of manufacture, electric resistances with a coating of metallic chromium on the ends thereof.

1,538,973. BOLT-PULLING DEVICE. FRANK C. COURSON, Altoona, Pa. Filed Sept. 23, 1922. Serial No. 590,196. 3 Claims. (Cl. 29—86.1.)

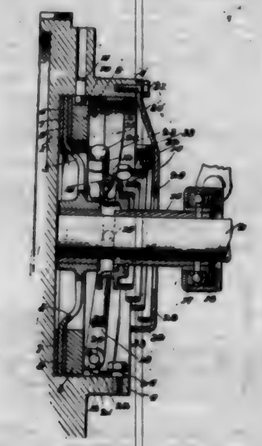
1. A bolt pulling device comprising a head having a central inclosed opening provided with downwardly and inwardly inclining end walls, and also having threaded openings terminating in enlarged socket portions open at the bottom face of the body, said openings being located between the said inclined walls of the central opening and the ends of the body, screws adapted to be inserted in said threaded openings having swivelled bearing feet arranged in said sockets, and bolt-head clamping portions detachably fitted in said central opening and cooperating with the inclined walls to grip the bolt-head upon the upward movement of the body.

1,538,974. WATER BALLAST FOR BALLOONS. HARRY C. CRAY, Dayton, Ohio. Filed May 29, 1923. Serial No. 642,257. 2 Claims. (Cl. 244—30.)



1. An observation basket for balloons and the like having the upright walls thereof comprised of spaced partitions to provide a ballast tank, and valve means associated with the tank.

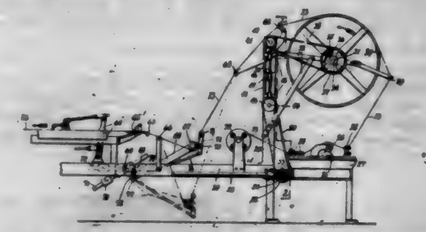
1,538,975. SAW-SET GAUGE. RAYMOND K. CROMER, Jefferson, Tex., assignor of one-half to J. E. Vaughan, Jefferson, Tex. Filed July 14, 1924. Serial No. 725,917. 1 Claim. (Cl. 76—71.)



A saw gauge comprising a flat metal bar, one longitudinal edge of which constitutes a straight-edge for slidably contacting the body portion of the saw blade, the outer end of said straight edge being formed with a

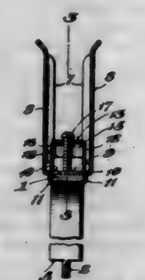
plurality of beveled surfaces for gauging the set of the saw teeth, said beveled surfaces being comparatively short and disposed in longitudinal alinement with the longitudinal axis of the bar, the beveled surfaces merg-

ing into each other and the degree of bevel of the surfaces varying with respect to each other, and a notch formed in the last-named edge of said bar and providing a clearance space between the straight-edge proper and said teeth gauging bevels.



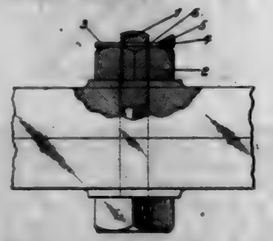
1,538,976. CLUTCH. FRANCIS S. DENNEEN and COURTNEY N. MITCHELL, Cleveland, Ohio. Filed Nov. 4, 1920. Serial No. 421,747. 12 Claims. (Cl. 192—68.)

3. In a clutch, the combination with driving and driven elements having cooperating clutch members, of clutch-actuating means comprising a plurality of levers for operating said clutch members, a closure member for said clutch members, a ring mounted independently of said closure member, and means coacting with said ring to provide adjustment of the fulcrums of said levers by the rotation of said ring with respect to said levers.



1,538,977. PAPER-FEED DEVICE. MARTIN FEYBUSCH, New York, N. Y., and PAUL W. FLEISCHER, Weehawken, N. J., assignors to New Jersey Machine Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 17, 1921. Serial No. 508,355. 5 Claims. (Cl. 271—24.)

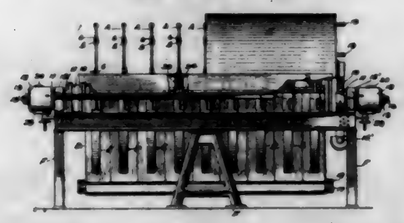
1. In a device of the class described, a frictional feed member moving continuously in one direction, intermittently feeding mechanism to which said member delivers the material fed, a movable tension device engaging the material between said member and said intermittently feeding mechanism to normally pull said material into feeding engagement with said member, said tension device comprising a pivotally mounted lever having a roller for engaging said material mounted thereon at a substantial distance from the pivotal point of said lever,



and a counter balancing weight connected with said lever and a stop to arrest said tension device so as to discontinue the feeding engagement of the material with said frictional feed member.

1,538,978. MATCH-BOX HOLDER. ROBERT G. FLEMING, Newark, N. J., assignor to The Smokador Manufacturing Company Inc., Bloomfield, N. J. Filed Apr. 17, 1924. Serial No. 707,078. 10 Claims. (Cl. 206—20.)

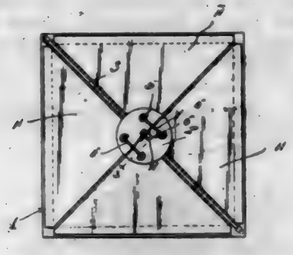
6. A device for attaching match box holders to supports without perforation of the latter, including in combination with a support having opposed edges and a match box holder seated on the support, means in the holder having parts engaged with said opposed edges of the support and a screw for forcing the holder against the support and for simultaneously causing said parts to be engaged with and against the respective opposite edges of the support.



1,538,979. LOCK WASHER. JOHN E. FOX, St. Louis, Mo. Filed July 16, 1923. Serial No. 651,782. 1 Claim. (Cl. 151—30.)

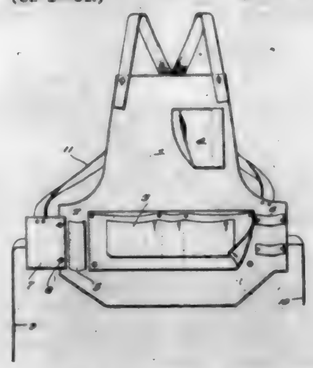
A detachable and replaceable lock washer comprising a body portion having a hole therethrough to receive the end of a bolt and having a notch therein extending from the hole toward one side edge, a relatively long bendable tongue integral with the outer side edge of the body portion beyond the end of said notch and in alignment with said notch and adapted to be bent over and downwardly

in inverted relationship in which the inner end is in said notch and in engagement with the threads of the bolt and the outer portion near the edge of the body is raised and forms an engageable portion above the body for engagement in releasing the tongue from the bolt.



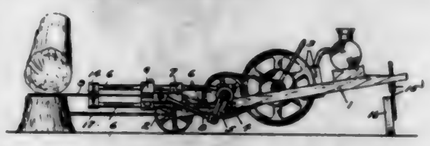
1,538,980. CONTINUOUS VACUUM FILTER. ALBERT LEGRAND GENTER, Salt Lake City, Utah, assignor to United Filters Corporation, Salt Lake City, Utah, a Corporation of Delaware. Filed Apr. 9, 1918. Serial No. 227,519. 30 Claims. (Cl. 210—200.)

1. A filtering apparatus having a rotatable shaft, a plurality of filter discs supported thereon in spaced relation to one another, and a tank in which said discs rotate, said tank including a chamber extending longitudinally of the shaft and adapted to receive the discs collectively, and a plurality of longitudinally spaced chambers communicating with said unitary chamber and adapted to receive the discs individually.



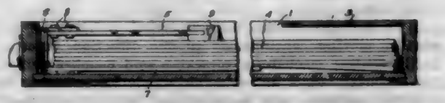
2. In a filtering apparatus, a central shaft including a plurality of conduits extending the length of said shaft and located around the same, means to space said conduits radially from said shaft, and a plurality of independent filter disks detachably mounted upon said shaft surrounding said spacing means and including a plurality of sections communicating with said conduits.

1,538,981. RODENT TRAP. WILLIAM GILLINGHAM, Wheeling, W. Va. Filed Aug. 29, 1924. Serial No. 734,851. 2 Claims. (Cl. 43—70.)



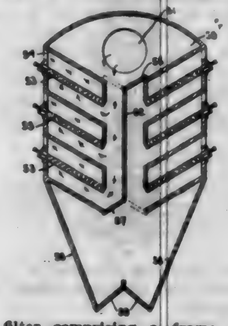
1. An animal trap comprising a substantially rectangular frame, a plurality of substantially triangular doors pivotally connected to the side bars of the frame, a discular plate supported at the center of the frame and having its peripheral edge overlying the inner ends of the doors to limit the upward swinging movement thereof, a pair of shafts mounted in bearings upon said plate, said shafts being provided at their outer ends with catches engaging the inner ends of said doors, bait hooks connected with said shafts for rotating them in one direction, spring means connected to the shafts for rotating them in an opposite direction, and spring means cooperating with the doors for automatically returning them to set position after each operation.

1,538,982. MECHANIC'S APRON. ELI GRANT GLOVER, Kaw, Okla. Filed Mar. 8, 1924. Serial No. 697,792. 1 Claim. (Cl. 2—51.)



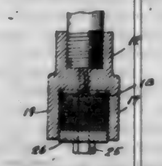
A mechanic's apron comprising a body adapted to be disposed over the breast and abdomen of the wearer, said body having opposed side flap portions adjacent its bottom adapted to be disposed over the hips of the wearer, a plurality of horisontally aligned tool holding pockets disposed between and in alignment with said flap portions, a separate piece of material detachably connected with one of said flap portions, shoulder straps connected at their upper end with the corresponding end of said body, and crossing each other between their ends and connected at their lower ends with said piece of material and one of said flap portions, and body encircling straps connected with said piece of material and said last named flap portion respectively.

1,538,983. TREE-FELLING ATTACHMENT FOR PORTABLE SAWS. JOHN F. GORMAN, San Francisco, Calif. Filed Aug. 11, 1921. Serial No. 491,562. 3 Claims. (Cl. 143—68.)



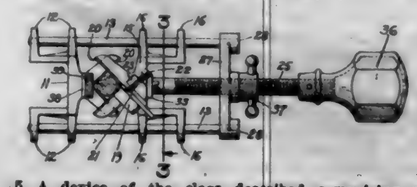
1. A tree felling mechanism comprising a portable frame, a support at one end of said frame to act as a fulcrum, the said frame having a ground wheel support at the other end to permit its lateral movement, saw operating mechanism on said frame, and means for attaching and holding a saw blade operatively in a horizontal plane and projecting forwardly from said frame, whereby the movement of said frame laterally at one end operates to feed said saw laterally in a horizontal plane, substantially as described.

1,538,984. FILING TRAY. HARRY C. GOWRAN, Two Rivers, Wis., assignor to Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Nov. 16, 1923. Serial No. 675,083. 4 Claims. (Cl. 129—26.)



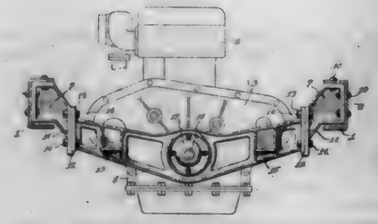
1. The combination with a tray; of a depressor inclusive of three substantially parallel sections arranged abreast with the intermediate section formed of flexible material in hinged connection with the end sections which are formed as boards, the width of the intermediate section approximating the depth of the tray; and a weighting border upon the front end of the front section of said depressor.

1,538,985. GAS-CLEANING APPARATUS. OSCAR V. GREENE, Cleveland, Ohio. Filed Aug. 17, 1921. Serial No. 493,160. 7 Claims. (Cl. 183—59.)



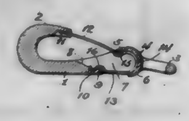
1. A gas filter comprising a frame, a plurality of relatively coarse woven wire screens mounted therein under tension; a plurality of other finer screens mounted upon and between said tensioned screens, and means adapted to jar said screens.

1,538,986. CIRCUIT INTERRUPTER. TALMA T. GREENWOOD, Templeton, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed Sept. 1, 1922. Serial No. 585,670. 17 Claims. (Cl. 200—166.)



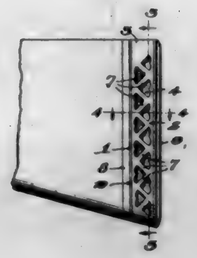
16. In an electric switch, the combination of a brush holder having a bottom wall and spaced side walls, a brush member carried by said holder on the bottom wall and between the side walls thereof, said brush member having laminæ formed with reflexed lateral portions, and clamping means including bolts passed through said brush member and threaded in said brush holder and a pressure plate disposed between said bolts and the brush member arranged to force the reflexed lateral portion of the laminæ of said brush member into edgewise contact with the side walls of said holder.

1,538,987. WOODEN-DOWEL-PIN CUTTER. MARCUS GULLHOLM, St. Paul, Minn. Filed Oct. 1, 1924. Serial No. 741,008. 6 Claims. Cl. 142—56.)



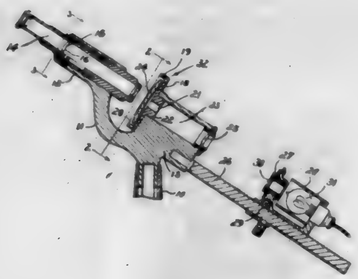
5. A device of the class described comprising relatively movable jaws, each composed of a series of diverging fingers arranged in groups, the fingers of the same group being spaced apart in parallel relation and the fingers of one jaw being adapted to pass between the opposite fingers of the other jaw and thereby provide a comparatively wide range of adjustment to increase or decrease the size of the opening between the jaws, said jaws being adapted to slide upon the stick as it is rotated between them and having a plurality of guiding bearings on the surface of the stick, and a knife blade having a cutting edge mounted to engage and turn the stick to a form circular in cross-section as it is rotated.

1,538,988. MOTOR-SUSPENSION SUPPORT. JOHN C. HAGGART, Jr., Alma, Mich., assignor, by mesne assignments, to Detroit Patents Holding Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 26, 1923. Serial No. 664,878. 1 Claim. (Cl. 180—64.)



In a vehicle chassis wherein an engine is supported with its crank shaft below the plane of the chassis, a transverse supporting member comprising fixedly held chassis parts extending inwardly and downwardly from the sides of the chassis, a detachable interposed part connecting said fixedly held parts, said interposed part being of the eye beam construction with its rear face affording a trunnion for the engine, and a starter shaft bearing carried by the front face of said interposed part.

1,538,989. SNAP HOOK. HORACE G. HANCOCK, New Britain, Conn., assignor to North & Judd Manufacturing Company, New Britain, Conn. Filed May 21, 1924. Serial No. 714,932. 3 Claims. (Cl. 24—233.)



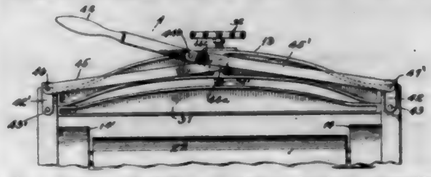
3. A snap hook comprising a body having a web constituting its back end, said web having a concave front face, a transverse inturned lip at the upper forward end of said web, the body having a longitudinal slot in front of the web, a transverse bead at the lower end of the front wall of the slot and a transverse groove in said wall immediately in front of said bead, and a tongue consisting of a spring strip doubled on itself and having its bight seated snugly in the concave face of said web, there being a transverse kink in the upper branch of the spring to be engaged by said transverse inturned lip, and the lower branch of the spring terminating in reverse bends engaging over said bead and in said groove respectively.

1,538,990. RECOIL PAD. FRANK D. HAWKINS, Sioux Falls, S. Dak. Filed Nov. 10, 1924. Serial No. 748,954. 5 Claims. (Cl. 42—74.)

1. In a rubber recoil pad for gun stocks, a pair of sections each having spaced inner and outer walls, solid end parts connecting the walls, cellular connections between the walls, a central soft rubber strip interposed between the inner sides of the sections and engaged therewith, and inner and outer rubber strips secured to the respective inner and outer walls and to the inner and outer longitudinal edges of the central strip.

1,538,991. ATTACHMENT FOR LENS-EXAMINING INSTRUMENTS. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 8, 1923. Serial No. 673,517. 2 Claims. (Cl. 88—56.)

1. In an optical instrument of the character described, means for determining the optical center of a lens, and a lens carrier placed in the field of said means, comprising a holder for the lens allowing a determined amount of play between the holder and the edges of the lens, and an aperture in line with the optical center determining means.



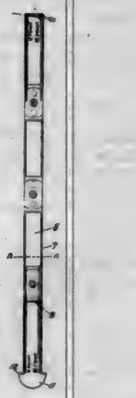
1,538,992. FLASH LIGHT AND RECHARGING DEVICE FOR THE BATTERY THEREOF. NEVIL MONROE HOPKINS, New York, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Dec. 20, 1920. Serial No. 432,021. 9 Claims. (Cl. 240—8.5.)

1. A portable electric lighting device comprising an electric lamp and a storage battery in circuit therewith having a vent, in combination with means for charging said battery, and means adapted to electrically connect said charging means to said storage battery only when

the vent of said battery is arranged so as to prevent discharge of electrolyte therefrom during the gassing incidental to charging.

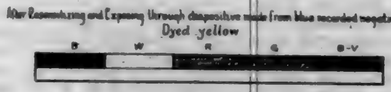
1,538,993. CLOTHES WRINGER. LOUIS JUDELSON, New York, N. Y. Filed Apr. 22, 1922. Serial No. 555,947. 2 Claims. (Cl. 68—32.)

2. A wringer including a frame having supporting standards, a shaft journalled in said standards and carrying a wringing roller, a second shaft arranged above the first shaft carrying a wringing roller, springs bearing on said second shaft, a tension bar extending between said standards and having its end bearing on said springs, an upper cross-bar arranged between the standards and located above the tension bar, releasable means pivotally mounted on relatively stationary parts of the wringer for securing the cross bar in fixed position with respect to said parts, means positioned between the cross bar and the tension bar for adjusting the effective compression of the springs, and a single means for simultaneously releasing and re-setting said first mentioned means.



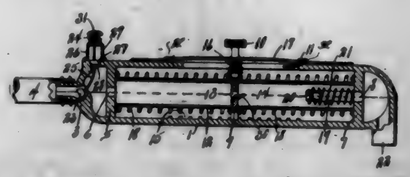
1,538,994. MOUNTING STRUCTURE. CARL H. KAMM, Two Rivers, Wis., assignor to Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Oct. 20, 1923. Serial No. 669,857. 1 Claim. (Cl. 248—41.)

A mounting structure including an elongated block having an angular recess formed in and extending along



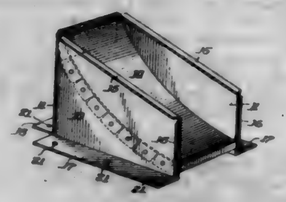
one long side thereof, a second angular recess formed in and extending along an adjacent long side of this block, the bases of these recesses being in angular relation and having a common dividing edge extending along the block; a second elongated block received in the first recess of the first block and itself having an angular recess formed in and extending along one of its long sides and whose base is substantially in the plane of the base of the second angular recess in the first block whereby the angular recess in the second block constitutes a widening continuation of the second angular recess in the first block, the wall of the recess in the second block that is angular to the base of this recess overhanging this recess base; the base of the second recess of the first block and the base of the recess in the second block sloping backwardly and a coiled spring structure anchored to the two blocks and extending across the base of the first recess in the first block.

1,538,995. TYPESETTER'S SCALE. LADISLAS LAKATOS, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,024. 3 Claims. (Cl. 33—105.)



1. In a printer's rule, in combination, two or more longitudinal sections of equal lengths arranged with adjacent ends overlapped, pivots connecting said overlapped ends and lying flush with the outer faces thereof whereby the sections may be folded flat one upon the other, means in connection with said sections for automatically locking them either in extended position or in folded position, each one of the sections alongside each of its longitudinal edges being provided with a different printer's scale adapted to measure a different size of printing type.

1,538,996. COLOR PHOTOGRAPHY. LEOPOLD D. MANNES and LEOPOLD GODOWSKY, Jr., New York, N. Y. Filed Oct. 4, 1921. Serial No. 505,266. 4 Claims. (Cl. 95—2.)

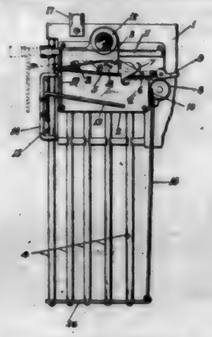


1. The method of producing a color photograph from suitable color selection negatives which consists in first forming one color image within the body of a layer of material containing a light-sensitive substance by the action of a portion only of said substance, then forming a second color image within the same layer of material by the action of a further portion of the light-sensitive substance, and thereafter resensitizing said layer of material and producing a third color image in the body of the same layer of material by the action of the resensitizing substance.

1,538,997. AIR GAUGE AND AUTOMATIC SIGNAL FOR PNEUMATIC TIRE FILLERS. JONAS E. MAPLES, Fort Worth, Tex. Filed May 26, 1923. Serial No. 641,568. 3 Claims. (Cl. 152—11.5.)

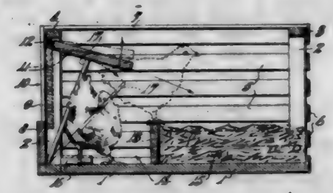
1. A combined filling and testing device for inflating pneumatic tires comprising a casing provided with a partition at its receiving end and a partition near the discharge end and passages through said partitions, said casing having a longitudinal slot in one side and a scale adjacent to said slot and having a rack in the interior of the other side, a perforated-spring-actuated gauge movable in said casing to be spaced nearer to or further from said partitions to be determined by the quantity of pressure required, elastic tubes attached to said gauge and to said partitions constituting the passage for air between said partitions, said gauge being held in position by said rack, a flexible testing tube in said passage at said discharge end attached to the partition and provided with a valve, and a lug carried by said gauge adapted to open said valve for testing purposes.

1,538,998. VEHICLE STAY BLOCK. CHARLES L. MICHOD, Chicago, Ill., assignor, by mesne assignments, to E. S. Evans & Company, Incorporated, Detroit, Mich., a Corporation of Delaware. Filed Feb. 8, 1924. Serial No. 691,339. 8 Claims. (Cl. 188—32.)



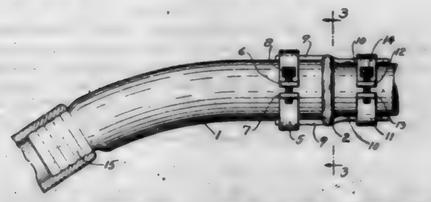
1. In a device of the class described, a box shaped member having its top and one end open, means adapted to fasten said member to a floor, and a transverse member connecting the side walls of the member and forming, with the open ends of the side walls, a receptacle adapted to receive a portion of a vehicle wheel when the wheel stands in upright position on the floor.

1,538,999. MAIL-MARKING MACHINE. JOHN A. MITCHELL, Newark, N. J., and LAWRENCE J. ZAHN, Long Island City, N. Y., assignors to The International Postal Supply Company, Brooklyn, N. Y. Filed May 13, 1924. Serial No. 713,094. 8 Claims. (Cl. 271—87.)



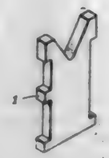
1. In a stacker mechanism for a mail marking machine, a mail stop member, a longitudinally slidable member

carrying said stop member, and another member having first a sliding motion and then a rotary motion for



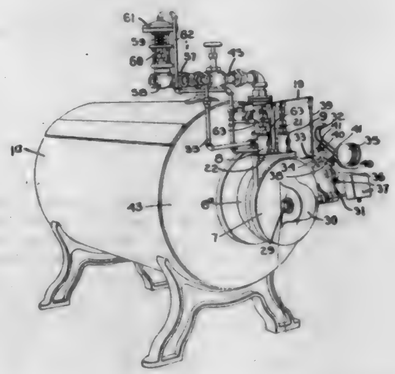
moving said longitudinally slidable member and said stop member.

1,539,000. TRAP NEST. ALBERT NEWTON PETERS, Crane, Mo. Filed Jan. 8, 1924. Serial No. 685,027. 3 Claims. (Cl. 119—49.)



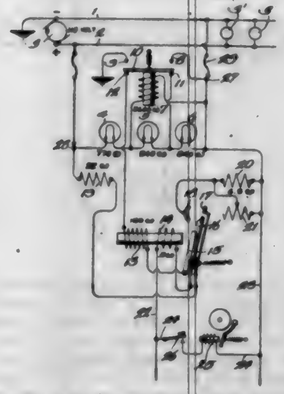
3. A convertible trap nest comprising a housing having an entrant end, a division board positioned for dividing the housing into a rear nest confining space and a front space of size permitting free walking about and inspection by the hen, a trap door swingably connected to the top of the entrant end, the said door being of a length for terminating at a point between the entrant end and the division board to restrict the passage thereover when the said door is held open or set, means preventing the outward movement of the door when closed, means for holding the door to its open or set position and automatically releasable upon contact of the hen with the door in passing over the division board, said holding means being adjustable for holding the door at varied set positions and for wedge-securing it to the locked-opened position when desired.

1,539,001. EMERGENCY CONNECTION. JOHN P. STEEPLE, Seattle, Wash. Filed Apr. 13, 1922. Serial No. 552,141. 1 Claim. (Cl. 285—82.)



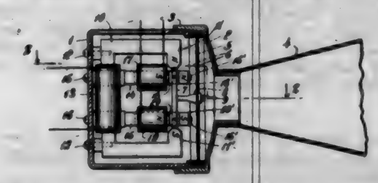
A coupling comprising a piece of flexible tubing having a bead with slots through it around the exterior of one end, an adjustable clamp with arms extending from it through the slots in the bead and inside of the bead, and another clamp attached to the outer ends of the arm, said arms having teeth, the points of which slant toward the coupling, on the inner surfaces of their outer ends.

1,539,002. LOW-QUAD MATRIX. ADAM G. TRASOK, ALEXANDER L. RILEY, and OLIVER C. FORTUNE, Kansas City, Mo. Filed Oct. 31, 1921. Serial No. 511,673. 3 Claims. (Cl. 199—47.)



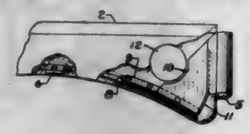
1. The combination with a mold cavity and a guide groove in horizontal alinement therewith; of a quad matrix consisting of a metallic plate of uniform thickness throughout and having a type mold confronting edge provided intermediate its ends with a lateral projection formed integrally with the matrix and immovable with respect thereto, said projection being adapted to completely fill the width of the mold space of a type mold when the matrix is applied thereto, the guide groove in the mold plate being of greater cross sectional dimensions than the intermediate projection whereby said intermediate projection fits freely therein.

1,539,003. STEAM TRAP. WILLIAM R. TEMPLETON, Roslindale, Mass. Filed May 25, 1922. Serial No. 563,561. 1 Claim. (Cl. 137—101.)



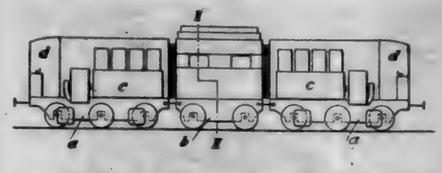
In a steam trap, the combination with a casing having an inlet and an outlet, of a hollow head member separate from the casing but secured to one end thereof and provided with a valve-supporting portion, a rock shaft journalled in the head member, a float arm rigid with the rock shaft and having a float thereon operating in the casing, a unitary valve device removably secured to said valve-supporting portion and comprising a base resting on the valve-supporting portion and two separate valve casings rising from the base, a steam valve in one valve casing controlling the admission of steam to the first-named casing, a vent valve in the other valve casing for venting the first-named casing, a post rising from the base between the valve casings, a lever pivoted to said post, a connection between said lever and each valve, whereby the valves operate simultaneously but oppositely, and means for operating said lever by the movement of the float.

1,539,004. SYSTEM OF ELECTRIC-CURRENT DISTRIBUTION. CHARLES A. TURNER, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed May 26, 1924. Serial No. 715,943. 2 Claims. (Cl. 177—7.)



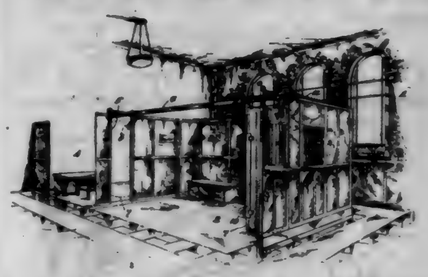
1. A system of electric current distribution including a source of current; supply mains in circuit with said source of current; a sectional resistance in bridge of the mains and including two sections in series; a relay having an energizing winding and a holding winding and having a conductor connecting one terminal of the energizing winding between said resistance sections, the armature switch of the relay having one contact connected with the remaining terminal of the energizing winding, two additional contacts, and an added contact connected with one main and connectable with said additional contacts when the relay is energized, one of the additional contacts being connected with one terminal of the holding winding and normal to the first relay contact and separable therefrom when the relay is energized; a second resistance in circuit between the other of these additional contacts and the other main; a third resistance in circuit between said added contact and the main with which this contact is connected; a supply conductor connected through the holding winding with the second resistance and the main with which the second resistance is connected when the relay is energized; a second supply conductor connected with the other main, the second and third resistances being connected serially and together in shunt of the sectional resistance when the relay is energized; a responsive device; and a switch in series with the responsive device and with the holding winding for connecting the supply conductors through said responsive device and holding winding, the responsive device and holding winding being in shunt of the third resistance when this switch is closed and the relay is energized.

1,539,005. TELEPHONE RECEIVER. CHARLES E. VAWTER, Philadelphia, Pa. Filed May 23, 1922. Serial No. 562,962. 8 Claims. (Cl. 179—119.)



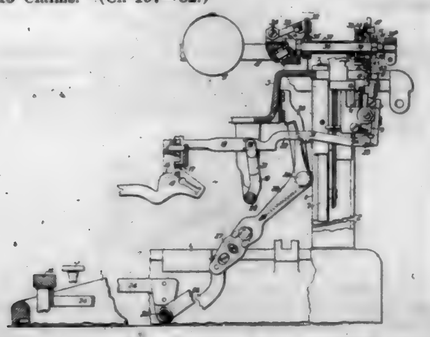
1. A device of the character described comprising a diaphragm, an armature directly connected thereto and freely suspended therefrom, a magnet at each end of said armature for exerting a magnetic force on said armature at right angles thereto, each of said magnets having two poles on opposite sides of the armature, and means separate from said magnet for strongly magnetizing said armature.

1,539,006. WINDSHIELD BASE. MAX F. WOLLERING, Highland Park, Mich., assignor to The Studebaker Corporation, Detroit, Mich., a Corporation of New Jersey. Filed Aug. 2, 1923. Serial No. 655,354. 9 Claims. (Cl. 296—84.)



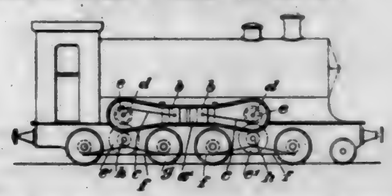
1. A windshield base formed from sheet metal into a substantially hollow shell having inwardly projecting flanges at the open end thereof, and members extending across the open end of said base and secured to said flanges to reinforce said base and provide means for securing said base to a support.

1,539,007. INTERNAL-COMBUSTION-ENGINE LOCOMOTIVE. EUGEN ZEINDEN, Bern, Switzerland, assignor to Sulzer Freres Societe Anonyme, a Corporation of Switzerland. Filed Dec. 5, 1924. Serial No. 754,084. 2 Claims. (Cl. 105—62.)



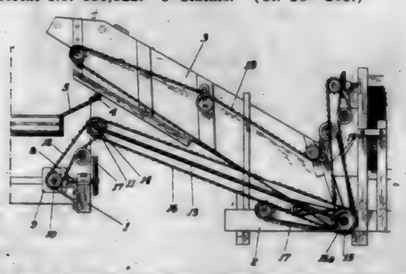
1. In an internal combustion engine locomotive the combination of at least two vehicle units, an internal combustion engine carried on each of said units, a separate vehicle unit arranged centrally between said engine-carrying units and constituting a tender therefor and couplings between said engine and tender units.

1,539,008. BANK AND CAR PROTECTIVE DEVICE. JOSEPH ZOLOTAR, Detroit, Mich. Filed Jan. 12, 1925. Serial No. 1,753. 5 Claims. (Cl. 20—1.01.)



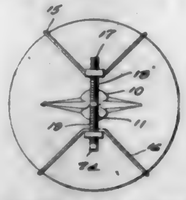
1. In combination with an enclosure having openings on opposite sides thereof, protective means against intruders, comprising a casing adapted for the enclosing of a marksman, said casing having restricted firing openings therein, and means extending between said openings movably supporting said casing whereby its location may be affected at one or other of said openings.

1,539,009. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 12, 1923. Serial No. 650,996. 15 Claims. (Cl. 197—82.)



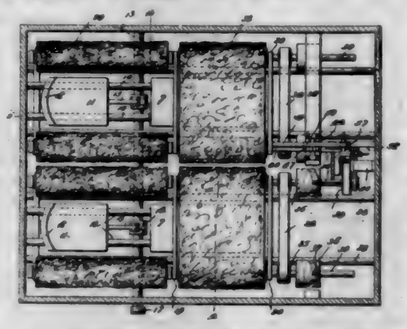
4. In a typewriting machine, the combination of a power driven carriage; an escapement mechanism which permits letter feed advance of the escapement relatively to the carriage, comprising a single escapement wheel that turns on a fixed axis, feed dogs that coact therewith, and means adapted to bring about a complete letter space advance of the escapement wheel ahead of a complete letter feed of the carriage by a power independent of that employed to move the carriage.

1,539,010. DRIVING GEAR FOR VEHICLES. JACOB BUCHLI, Baden, Switzerland. Filed Apr. 17, 1924. Serial No. 707,223. 1 Claim. (Cl. 105—37.)



In a driving gear for vehicles, opposed pistons in common cylinders, the piston pressures of which act symmetrically to the centres of the cylinders through toothed wheels and connecting rods, the toothed wheels fitted on the crankshafts meshing with corresponding toothed wheels fitted on idle shafts at both ends of the cylinders, these shafts being connected to each other and to the driving wheels of the vehicles by means of coupling rods.

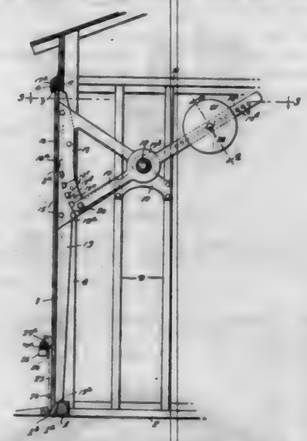
1,539,011. HEADER DRIVE MECHANISM. GEORGE H. HARRIS, Stockton, Calif. Filed July 9, 1923. Serial No. 650,322. 6 Claims. (Cl. 56—209.)



1. In a harvester having a thresher and a header projecting from one side thereof, a connecting bar pivoted on the thresher and on the header, a chain drive between the thresher and header having sprocket wheels concentric with the pivotal connections of the bar, and driving means for the header parts driven in common from the sprocket wheel on the header.

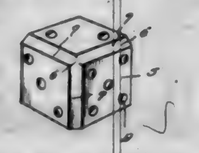
1,539,012. JAR-LID SEALER. WALTER H. HARTMAN, Jordan, Minn. Filed Apr. 16, 1924. Serial No. 706,914. 1 Claim. (Cl. 215—38.)

In a jar lid fastener of the character described, a member surrounding the neck of the jar, a pair of bails pivotally secured to the member at opposite points thereon, a bolt adapted to be arranged upon the jar lid and formed with oppositely extended threads at its ends, a nut engaged with one thread of the bolt and having an opening through which extends one bail, and a second nut having a hooked extension for engaging the other bail and adapted to be received on the other thread of the bolt.



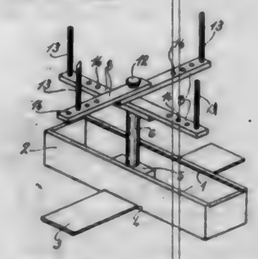
1,539,013. SHOE-POLISHING MACHINE. WALTER L. LIGHTSEY, Chicago, Ill. Filed Oct. 11, 1923. Serial No. 667,990. 5 Claims. (Cl. 15—97.)

1. In a polishing machine of the class described, a casing having a pair of foot rests mounted therein and provided with top openings through which shoes may be inserted for positioning upon said foot rest, a polishing device associated with each foot rest and embodying endless travelling polishing elements disposed at opposite sides of the rear portion of each foot rest, said polishing devices each also including an endless polishing element disposed to travel transversely of the forward portion of the shoe disposed upon the adjacent foot rest, means for imparting travelling movement to the polishing elements including rollers about which said polishing elements pass, and common shafts upon which said rollers are stationed, and means to automatically cause longitudinal reciprocating movement of the polishing devices relative to the foot rest.



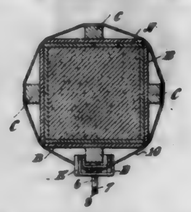
1,539,014. GARAGE DOOR. HERMAN N. MATHEN, Cleveland, Ohio. Filed Aug. 21, 1922. Serial No. 583,178. 3 Claims. (Cl. 20—16.)

1. The combination with a building having a doorway and a lintel above such doorway, said lintel having a strip of yieldable material along the lower edge thereof and a beveled seat along the inner edge thereof, and a door pivotally supported within said doorway, said door having a transverse member along its upper edge



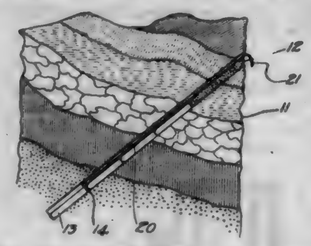
provided with a beveled seat adapted to engage the beveled seat of said lintel, said door being adapted to engage said yieldable material in full opened and full closed positions.

1,539,015. DICE. PAUL MITCHELL, Hampton Roads, Va. Filed Sept. 10, 1923. Serial No. 661,826. 1 Claim. (Cl. 273—146.)



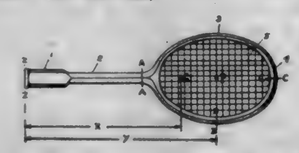
A playing dice comprising a cube having arbitrary symbols upon its faces, all of the corners of said cube being chamfered from end to end to provide beveled merging surfaces of uniform width to facilitate rolling of the dice upon a surface, the faces of the aforesaid symbols being flush with a corresponding faces of the cube to assist in the free rolling of the dice.

1,539,016. REEL. SAKUBO MIZUNO, Shimizu City, Japan. Filed Aug. 20, 1924. Serial No. 733,211. 1 Claim. (Cl. 242—115.)



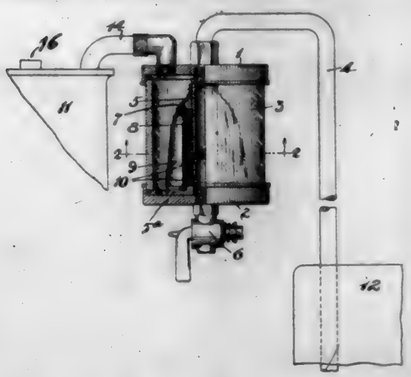
In a reel, a box having a groove in the bottom thereof, a cover plate for the box engageable in said groove, a base member arranged in the box, a prop detachably engaged in said base member, a pin carried by the upper end of the prop, a hollow bolt detachably engaged with said pin, said bolt including a flange and a nut, four arms clamped by the flange and nut, a pin carried by the flange and engaging one of the arms, said arms having a plurality of openings having outer ends thereof and studs detachably engaged in said openings, said prop, arms, bolt, and studs being adapted to be housed in the box when the reel is not in use

1,539,017. CONCRETE-FORM HOLDER. ROSS W. MORRISON, Washington, D. C. Filed Feb. 9, 1925. Serial No. 7,990. 8 Claims. (Cl. 24—68.)



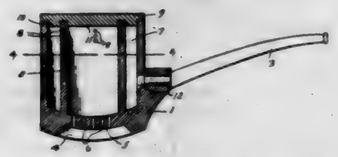
1. In a tying apparatus of the class described, the combination of a form engaging member and a rotatable member carried thereby, form embracing means secured to the rotatable member, and a member movable upon said rotatable member and adapted to engage the form engaging member for preventing the rotation of the rotatable member.

1,539,018. FUSE FOR USE WITH LIQUID-OXYGEN EXPLOSIVES. CHESTER MOTT, LUTHER E. BEDORTHA, and ROBERT J. KILLGORE, Denver, Colo., assignors, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed Apr. 14, 1924. Serial No. 706,271. 6 Claims. (Cl. 102—6.)



1. A fuse for use with liquid oxygen explosive comprising: a core containing combustible materials; and a heat absorbent sheathing over said core so applied that the gases of combustion can escape therethrough and be cooled thereby as they escape.

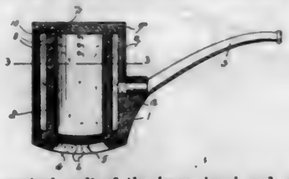
1,539,019. TENNIS RACKET. JOHN P. NIKONOW, New York, N. Y. Filed Feb. 7, 1924. Serial No. 691,174. 5 Claims. (Cl. 273—28.)



4. In a tennis racket, the combination with an oval, a gut strung in said oval, a handle, an intermediate member connecting said oval with said handle, the weight of said oval being greater than the weight of said handle with said intermediate member, said oval being of a heavier section at the end opposite to said handle.

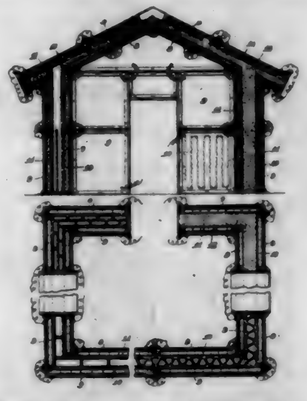
1,539,020. GASOLINE STRAINER. EMANUEL PAPASTEPANOU, Mount Vernon, N. Y., assignor to Perfection Gas Filter Corporation, Mount Vernon, N. Y., a Corporation of New York. Filed Sept. 27, 1924. Serial No. 740,207. 2 Claims. (Cl. 210—165.)

1. In a gasoline strainer, a housing comprising a top piece, a bottom piece and a cylindrical glass side piece interposed between the top and bottom and held thereby, an upright tube connecting the top and bottom pieces and having a side opening near the lower end thereof, a cylindrical filtering means surrounding the tube and extending from the bottom of the housing to a point near to the top thereof, said filtering means being spaced away from the tube and from the side wall of the housing, a supply inlet leading into the upper end of the tube, a service outlet leading through the top from the space outside of said filtering means, and a drain connected to the bottom of the housing in communication with the space within said filtering means.



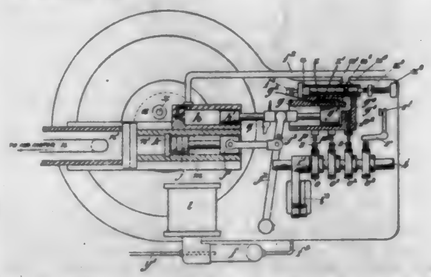
1,539,021. TOBACCO PIPE. WALTER EDWARD A. REITINGER, Paola, Kans., assignor of one-half to Jacob Ertle, Paola, Kans. Filed Apr. 8, 1925. Serial No. 21,530. 1 Claim. (Cl. 131—12.)

In a tobacco pipe, a bowl having a plurality of openings in the bottom thereof and communicating with atmosphere, an annular chamber surrounding said bowl, a cap member removably mounted on said bowl and having an annular flange adapted to seal the said chamber and a plug portion adapted to seal the mouth of the bowl, a plurality of openings in the upper portion of the inner wall of the chamber and communicating with said bowl, and a hollow stem communicating with said chamber.



1,539,022. TOBACCO PIPE. WALTER EDWARD A. REITINGER, Paola, Kans., assignor of one-half to Jacob Ertle, Paola, Kans. Filed Jan. 15, 1925. Serial No. 2,650. 1 Claim. (Cl. 131—12.)

In a tobacco pipe, an outer bowl having an opening in the bottom thereof, an inner bowl removably mounted in said outer bowl and having a plurality of openings in the bottom thereof communicating with atmosphere and provided circumferentially with laterally projecting annular flanges forming with the vertical walls of said inner and outer bowls a chamber, a cap member removably mounted on said bowls and having a plug adapted for sealing the mouth of the inner bowl, a plurality of open-

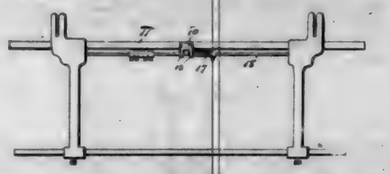


ings in the vertical wall of the inner bowl and communicating with the chamber surrounding said inner bowl, and a hollow stem piercing the wall of said outer bowl and communicating with the chamber surrounding said inner bowl.

1,539,023. METHOD OF CONSTRUCTING BUILDINGS. EDGAR F. ROBERTS, Detroit, Mich. Filed Dec. 4, 1920. Serial No. 428,311. 3 Claims. (Cl. 25—157.)

1. A process of constructing a building which consists in forming a wall in situ and of plastic clay with continuous vertical passages, providing spaced closures about said wall, and burning said wall by means of application of heat applied at the bottom of said vertical passages and between said closures and the outer surface of said wall.

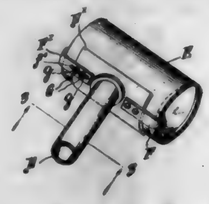
1,539,024. COMBINED INTERNAL-COMBUSTION AND COMPRESSED-AIR ENGINE. ROCHFORT WYBRANTS ROBINSON, Marlow, England. Filed Sept. 27, 1920. Serial No. 413,129. 6 Claims. (Cl. 123—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A combined internal combustion engine and air compressor including oppositely located internal combustion and air compressor units, a rock shaft common to said units, a main compressed air reservoir in communication with the air compressor, an auxiliary reservoir, an auxiliary piston adapted to be actuated by pressure supplied from said auxiliary reservoir to return the pistons of the internal combustion engine and air compressor to their outward position after their working strokes, a source of fuel supply for the internal combustion engine unit, an air line between the main compressed air reservoir and the internal combustion engine, said air line communicating with the said source of fuel supply and means controlled by the drop of pressure in the main reservoir for supplying a fuel charge to the internal combustion engine unit and igniting the same.

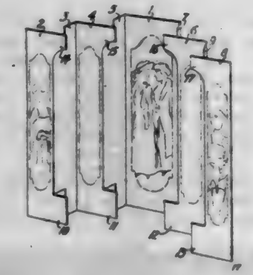
1,539,025. SIGN. DAVID E. SCHAFER and JOHN W. SCHAB, Columbus, Ohio. Filed Apr. 30, 1924. Serial No. 710,049. 2 Claims. (Cl. 40—63.)

1. A sign of the character described including an outer frame consisting of end pieces having inner grooves, one of said end pieces also having a slot therethrough, rods rigidly connecting the end pieces in spaced apart relation, guide pieces supported on the rods between the end pieces and also presenting inner grooves, sign panels and an inner frame or holder having means to detachably support the sign panels and shiftable endwise into and out of the main frame through the said slotted end piece, said holder being disposed within the grooves of the side and end pieces of the main frame and said slotted end piece of the main frame having means to engage and support the holder against accidental displacement.



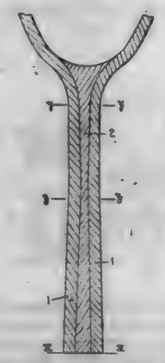
1,539,026. PROTECTOR-ROD HOLDER FOR LOOMS. W. L. STEPHENS, Douglasville, Ga., assignor to M. E. Geer, Douglasville, Ga. Filed Dec. 13, 1922. Serial No. 606,632. 1 Claim. (Cl. 139—345.)

A casting having outstanding flanges at opposite edges on one side, centrally apertured brackets integrally united and projecting from opposite side edges in spaced parallel relation on the other side, a removable tubular bearing transversely disposed between said brackets and having an end engaged in the opening of each, one end being extended beyond the bracket, to provide a guide seat for a coil spring, and a clamp-screw associated with each bracket and movable into binding engagement with the tubular bearing.



1,539,027. PROJECTILE FOR USE WITH DEPTH-CHARGE PROJECTORS. ANDREW JACKSON STONE, New York, N. Y., assignor, by mesne assignments, to American Ordnance Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 3, 1919. Serial No. 287,103. 2 Claims. (Cl. 102—3.)

1. A projectile for depth charge projectors comprising an arbor adapted to project into the barrel of the piece and to form a piston in said barrel, a saddle carried by said arbor, a container containing a main charge of high

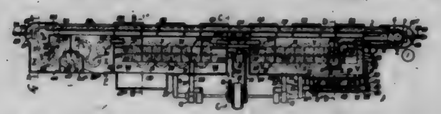


explosive and a detonator, and a pair of hooks secured to said saddle adjustable relative to each other for attaching said container to said saddle.

1,539,028. DISPLAY DEVICE. SIDNEY A. STOBER, New York, N. Y. Filed Aug. 30, 1923. Serial No. 660,107. 2 Claims. (Cl. 40—126.)

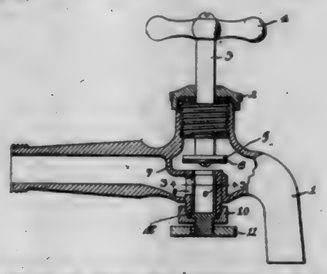
1. A display card comprising a central panel, wing panels, intermediate panels connecting said central panel with said wing panels and bottom extensions on said wing panels cut out of said intermediate panels and serving as means for stabilizing said device when set up.

1,539,029. TENNIS RACKET. PERCIVAL SURRIDGE, London, England. Filed Oct. 15, 1924. Serial No. 743,718. 3 Claims. (Cl. 273—73.)



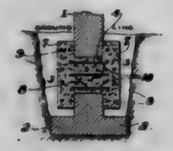
1. In a tennis racket, a frame having handle extensions the adjacent sides of which taper towards their upper and lower ends and which are widest at their said ends, a filling piece tapered to fit between the said sides, and side pieces secured over the front and rear sides of the said extensions and filling piece.

1,539,030. PRESSURE-INDICATING VALVE STEM FOR TIRE TUBES. ERNEST J. SWEETLAND, Montclair, N. J. Filed Jan. 16, 1919. Serial No. 271,883. 4 Claims. (Cl. 152—11.5.)



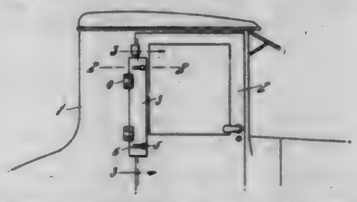
2. A pressure indicating device comprising a casing, a sleeve movable within said casing and provided with graduations, a tube having circumferentially arranged threads embedded therein for preventing lateral while permitting longitudinal extension of the tube, and a coiled spring located in the annular space between said sleeve and said tube and arranged to resist the longitudinal extension of the latter.

1,539,031. BOTTLE-WASHING MACHINE. GEORGE CRAIG THOMSON, Dunedin, New Zealand. Filed Aug. 6, 1920. Serial No. 401,820. 8 Claims. (Cl. 141—7.)



1. In a bottle washing machine, a plurality of casings spaced from each other, a drying tunnel in the space between the casings, a conveyor carrying the containers through said casings and tunnel, and means for circulating different fluids through different casings.

1,539,032. FAUCET. ALFRED C. TYTLER, San Francisco, and JOHN W. SOMERVILLE, Santa Cruz, Calif. Filed Aug. 13, 1923. Serial No. 657,171. 1 Claim. (Cl. 277—66.)

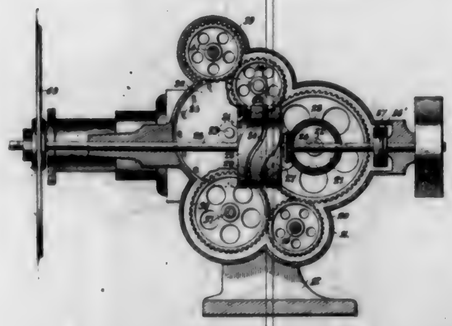


In a faucet or valve, the combination of a body, a stem working in the body and equipped with a head, inner and outer apertured barrels arranged in the body for the control of the passage of fluid past the same, one of the barrels constituting a seat and the other and inner barrel having means exterior of the body for the turning thereof, a flanged collar on the exterior portion of the inner barrel and threaded on the outer barrel, and packing confined in said collar and against the outer barrel.

1,539,033. METHOD OF AND MEANS FOR REENFORCING WALL FOUNDATIONS. JAMES ALGERNON YOUNGBLOOD, Dallas, Tex. Filed June 21, 1924. Serial No. 721,441. 6 Claims. (Cl. 61—51.)

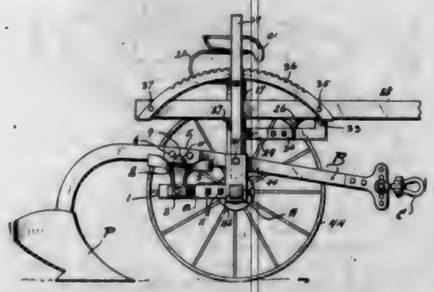
1. The method of reenforcing old walls which consists in excavating at one side of said wall down to the footing but no wider than the same, cutting a hole through the wall between the ground level and the footing, forming a band or belt of concrete against the wall between the footing and the ground level, said band or belt having an integral beam traversing the hole and adapted to transfer part of the weight of the wall to the band and to tie the latter to the wall.

1,539,034. SAFETY DEVICE DOOR. DOCTOR ALONZO YORK, Del Rio, Tex. Filed Feb. 11, 1924. Serial No. 692,090. 1 Claim. (Cl. 296—44.)



The combination with a door frame and a door hinged thereto, of an elongated plate overlying the confronting rear and adjacent face of the door and frame respectively, having hinged connection with the latter, studs carried by the door and having slidable engagement with the plate, and springs encircling the studs and engaging the plate.

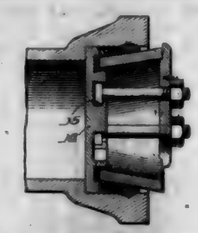
1,539,035. MEANS OF PRODUCING THE OPENINGS FOR DOORS AND WINDOWS IN THE WALLS OF BUILDINGS FROM CAST MATERIAL. FRIEDRICH ZOLLINGER, Merseburg, Germany, assignor, by mesne assignments, to Julius P. Meyer, New York, N. Y. Filed Jan. 11, 1922. Serial No. 528,459. 1 Claim. (Cl. 25—131.)



In a structure of the class described a false scaffolding including two bounding walls spaced apart, a door or window frame the members of which are of a width equal to that of the space between said walls, said frame being inserted between said walls, a boxing around the same and the boards of which boxing are provided with obliquely arranged ribs for the purpose of reinforcing the same and for the purpose of improving the hold in the concrete, these ribs being provided on the outer surface of this boxing.

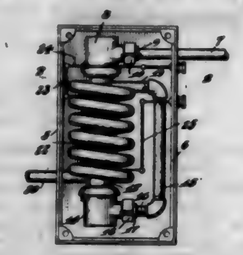
1,539,036. MOTION-PICTURE MACHINE. OLIVER J. ARNETT, Memphis, Tex. Filed Dec. 8, 1921. Serial No. 520,948. 1 Claim. (Cl. 88—17.)

In combination, a shaft, means for rotating the shaft, a shutter on said shaft, a gear element on said shaft adapted to impart an intermittent motion, a framing sprocket, means for rotating the sprocket through the intermittent gear element on said shaft, a film holding mechanism associated with said sprocket, and means on said shaft for intermittently operating said film holding mechanism.



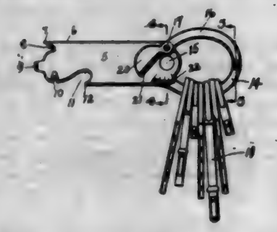
1,539,037. POTATO-LISTER RIDING ATTACHMENT. ALBIN E. BERGGREN and CHARLES M. KERR, Idaho Falls, Idaho. Filed Apr. 15, 1924. Serial No. 706,751. 4 Claims. (Cl. 97—82.)

1. A riding attachment for a beam plow comprising a wheel supported axle having a rearwardly directed arch, means for supporting the beam by said arch, plates secured to the inner portions of the side members of said arch and provided with upstanding extensions, said extensions being substantially radial to the axle proper, an upstanding arch having its extremities pivotally engaged with the upstanding extensions of the plates, a tongue secured to said second named arch, a rack carried by the tongue, a lever fixed to the axle, and a latch mechanism carried by the tongue and engageable with the rack.



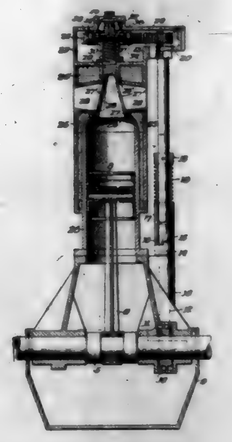
1,539,038. PIPE PLUG. JOHN A. BYERS, Chicago, Ill., and FORREST H. BLANDING, Coshocton, Ohio, assignors to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1922. Serial No. 557,012. 6 Claims. (Cl. 137—76.)

1. In a pipe plug, the combination of an imperforate plate adapted to be seated within a pipe-end and formed in its outer face with an undercut slot having a lateral opening, an open-ended frusto-conical shell seated on the plate, a removable member spanning the outer end of



the shell, and a bolt removably engaging the slot and member and adapted to clamp the shell between the plate and member.

1,539,039. WATER HEATER. JOSEPH EDWARD BLANDING, New London, Conn., assignor of nine-twentieths to Ida Frances Peck, Groton, Conn. Filed Nov. 20, 1922. Serial No. 602,285. 1 Claim. (Cl. 219—38.)



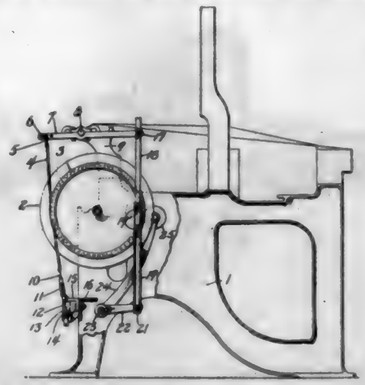
In a water heater, a casing, a pipe supported within the casing, a pipe housing the first mentioned pipe and spaced therefrom to provide a passageway, a water supply pipe leading into the casing and including a coiled portion, said coiled portion being disposed about the first mentioned pipes and arranged in spaced relation therewith, one end of the coiled portion extending downwardly and having communication at the upper end and providing an exhaust for the passageway, and an electric heating coil positioned around the pipes and disposed within the coil to heat fluid passing therethrough.

1,539,040. POCKET TOOL. ERNEST BOCCHINO, Clifton, N. J. Filed June 8, 1922. Serial No. 565,546. 1 Claim. (Cl. 7—1.)

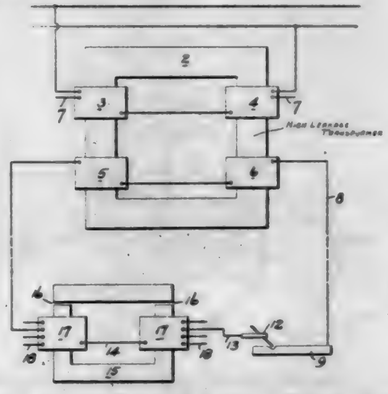
A pocket tool comprising a blank having a recess in one end thereof, an outwardly curved extension formed integral with the blank, a curved arm pivotally attached to the blank above the said recess and movable relative to the curved extension, an enlargement having a beveled edge formed with the curved arm and extending beyond the pivot, said beveled edge movable across the recess to sever an object inserted therein, and locking means located at the free ends of the respective extension and the curved arm.

1,539,041. INTERNAL-COMBUSTION ENGINE. JOHN F. CRAWFORD, Racine, Wis. Filed June 4, 1923. Serial No. 643,216. 7 Claims. (Cl. 123—190.)

1. An internal combustion engine comprising a cylinder terminating in a conformation to constitute a valve-seat, a valve seated for rotation therein having a screw-threaded stem, a nut surrounding and mating with said stem, a cap above said nut and connected thereto, yielding means interposed between said stem and cap for controlling the rotary movement of said valve stem in said nut, and means for rotating said valve.



1,539,042. CLARINET MUSIC LYRE. LEONARD JOSEPH DENNIS, Detroit, Mich. Filed Oct. 6, 1923. Serial No. 666,967. 6 Claims. (Cl. 45—68.)

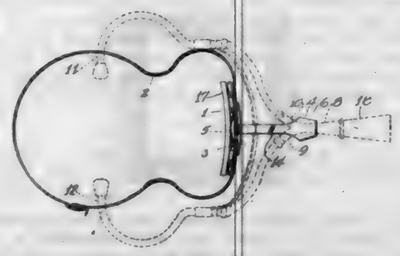


1. A music-holding lyre comprising a back member adapted to be mounted on a support; a lyre fork pivotally mounted on said back member, spring means for normally pressing the upper end of said fork against said back member; a spring catch mounted on said back member and having a portion whereby as said fork is opened the lower edge thereof will engage said spring and the latter will hold said fork in open position until the spring is disengaged from the fork by the player.

1,539,043. TENSION MECHANISM FOR LOOMS. ALFRED EDMUNDSON, New Bedford, Mass. Filed July 7, 1924. Serial No. 724,634. 5 Claims. (Cl. 139—107.)

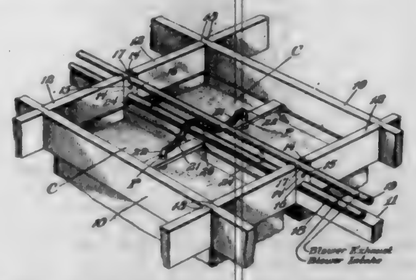
1. In tension-mechanism for looms, the combination of the warp-beam having lateral brake-drums, flexible brake-elements passing around said brake-drums, levers disposed transversely above said warp-beam and fulcrumed intermediately of their ends, the upper ends of said brake-elements being secured to said levers at one end thereof, leaf-springs secured at one end to a stationary support and at the other end to the lower ends of said brake-elements, a feeler-member including a roller adjacent the periphery of said brake-beam and moving inward, as the warp-beam decreases in diameter, to rock said levers to change the braking effect of said brake-elements, and connections between the feeler-member and the other end of said levers.

1,539,044. ALTERNATING-CURRENT WELDING APPARATUS. ROYAL E. FRICKEY, San Francisco, Calif. Filed July 18, 1921. Serial No. 485,658. 2 Claims. (Cl. 219—13.)



1. In alternating current welding system, a transformer of high leakage reactance having a primary and a secondary winding, means for connecting the secondary winding so that it supplies a welding current, and a variable reactor of comparatively small weight in the secondary circuit, whereby an operator using the apparatus may perform the control for the current at any convenient location.

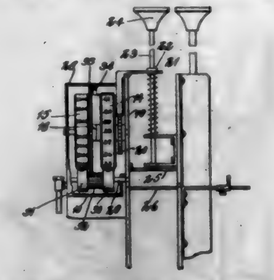
1,539,045. LINGERIE CLASP. ALVINA T. GOSSOM, St. Louis, Mo. Filed Sept. 14, 1923, Serial No. 662,648. Renewed Jan. 31, 1925. 2 Claims. (Cl. 24—85.)



1. A lingerie clasp comprising a safety pin, a strip of flexible material adapted to fold midway of its ends to include the back portion of said pin, releasable means to secure said flexible strip to said pin, and means to secure the ends of said strip together to include a strap of clothing in the manner described.

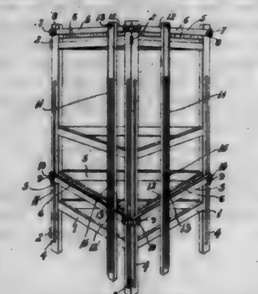
1,539,046. HOLDER FOR STETHOSCOPES. ELVIN MANN HARTLETT, Chicago, Ill. Filed Dec. 29, 1923. Serial No. 683,489. 4 Claims. (Cl. 181—24.)

1. A holder for a stethoscope comprising a plate, means for securing said plate to the head of a person, a clamp rigidly secured to said plate, said clamp having two jaws, means for moving said jaws into locking engagement with the bell of the stethoscope, the gripping surfaces of said jaws being fashioned so as to conform to the outer surface of the bell.



1,539,047. REFRIGERATING APPARATUS. ARTHUR H. HUTCHINSON, Atlanta, Ga. Filed Apr. 19, 1924. Serial No. 707,688. 5 Claims. (Cl. 62—159.)

1. In ice making apparatus having compartments for the reception of water tanks, the water tanks each being provided with an air pipe, the compartments being provided with covers, a pair of conduits associated with each tank, one of said conduits being connected with the exhaust and the other with the intake of a blower, an air hose connected at one end to the first named conduit and having its opposite end engageable with the air pipe of the water tank, the last named conduit having an opening communicating with the compartment beneath the cover thereof, the last named end of the air hose being engageable in said opening.

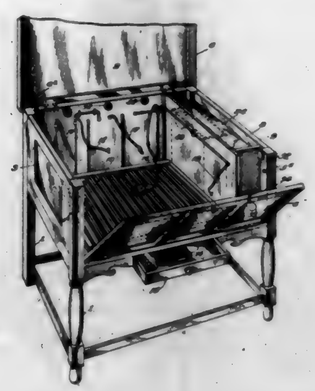


2. A division structure for ice tanks comprising parallel main division girders, intermediate girders disposed between and paralleling the main girders and having their upper surfaces disposed in a plane beneath the plane of the upper surfaces of the main girders, a conduit resting upon the upper surface of each intermediate girder, transverse partitions let into the main and intermediate girders and having their upper surfaces flush with the upper surface of the main girders, plates resting at their lower ends upon the intermediate girders and clampingly engaging adjacent ends of the upper portions of the transverse partitions, said plates being provided in their lower ends with notches permitting the passage of said conduit, said plates being provided in their upper edges with notches receiving a second conduit and supporting the same above and in spaced relation to the first named conduit.

1,539,048. COUNTER FOR STAMP-AFFIXING MACHINES. STANLEY J. KUZIEL, Holyoke, Mass. Original application filed June 28, 1924, Serial No. 723,054. Divided and this application filed Nov. 28, 1924. Serial No. 752,647. 2 Claims. (Cl. 235—142.)

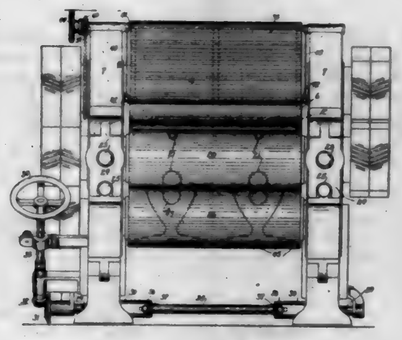
1. In a counter having parallel, independently movable bands, one bearing a suitable range of numerals, the others bearing multiples of the range of the first band, and means to impart a step-by-step motion to the first band, an arc shaped coupler provided with teeth and carried upon the lower order bands.

1,539,049. CURTAIN STRETCHER. ANNE LINTON and ELIZABETH LINTON, Philadelphia, Pa. Filed July 28, 1923. Serial No. 654,472. 1 Claim. (Cl. 45—24.)



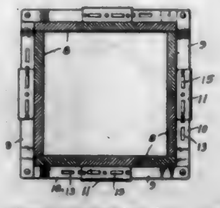
A curtain stretcher comprising a frame, a plurality of hingedly connected sections, pins carried by and located at the top of these sections, the ends of the sections being provided with vertically arranged slots, pairs of co-acting pin-carrying bars arranged horizontally across said frame, bolts passing through the bars and slots and provided with hooks on one end thereof for holding the bars in clamped relation with the curtain and holding said bars in adjusted position.

1,539,050. PISTON RING. HAROLD A. MCCHESNEY, St. James, Minn. Filed June 14, 1924. Serial No. 719,997. 5 Claims. (Cl. 74—109.)



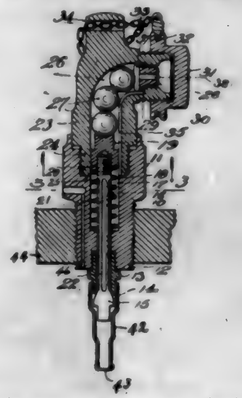
1. A piston ring comprising inner and outer ring members, the inner member acting as an expansion ring to expand the outer member, the inner member being formed in its outer face with a pair of V-shaped grooves, each having its outer wall parallel to the outer wall of the inner ring and its inner wall inclining to meet the inner wall of the other of the grooves, the outer ring member having a piston wall engaging body portion of the same thickness as the inner ring and having its inner edges abutting and conforming to the outer surface of the inner ring member.

1,539,051. RADIOCABINET. JOHN C. MCLEAN, Cleveland, Ohio, assignor to The M & M Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 23, 1924. Serial No. 739,322. 5 Claims. (Cl. 136—20.)



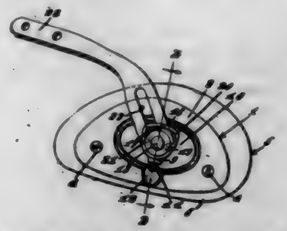
2. A radio power cabinet comprising a battery compartment having fixed back and end walls, a hinged top for said compartment, a hinged panel forming the front wall of said compartment, a slanting bottom for said compartment having a discharge opening for drippings, a battery supporting grid above the bottom of said compartment and a drip pan supported beneath said bottom.

1,539,052. CALENDERING, EMBOSSING, AND CUTTING MACHINE. JOHN ANDREW MCCROHAN and HERBERT C. ERICH, New Haven, Conn. Filed Mar. 13, 1924. Serial No. 698,955. 3 Claims. (Cl. 18—10.)



1. In a machine of the class specified, the combination with a pair of calender-rolls arranged side by side, a third calender-roll arranged directly below the second calender-roll, an embossing-roll arranged forward of and in line with the third calender-roll, a cutting-roll arranged below the embossing-roll, means for driving said rolls, said cutting-roll mounted on bearings on vertically-arranged screws, worm-gears on the lower ends of said screws, worms meshing with said worm-gears, said worms arranged on a horizontal shaft, means for coupling said worms with said shaft, and means for turning said worms.

1,539,053. CLAMP FOR CONCRETE-COLUMN FORMS. HOWARD O. MCMILLAN, Minneapolis, Minn. Filed Sept. 22, 1924. Serial No. 739,067. 12 Claims. (Cl. 144—291.)



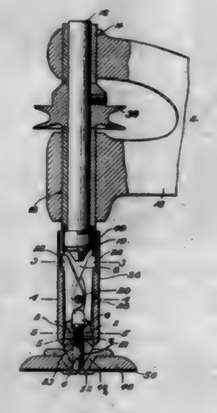
1. A column clamp comprising bars extending around the corners of a column form and overlapping at the sides of said column form, and means engaging said bars at their overlapped portions relatively to move said bars longitudinally and tighten said clamp.

1,539,054. SELF-CLOSING CHECK VALVE. CHARLES MELDAU, New York, N. Y. Filed Sept. 23, 1922. Serial No. 589,066. 3 Claims. (Cl. 137—139.)

3. In a high pressure self-closing pressure valve, a valve holding part having a spring seat therein, a spring in said seat and a valve stem in said spring, a valve stem nut on one end of said stem and a valve head at the other, a valve plug having a valve seat for said head located beyond the holding part, a valve extension on said holding part, a freely movable pressure transmitting disk in the free end of said extension and pressure transmitting members in said valve extension between said valve stem nut and said pressure transmitting disk.

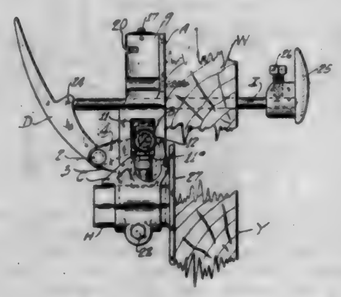
1,539,055. TRUSS PAD. ISAAC M. PEASE, Cincinnati, Ohio. Filed Apr. 19, 1922. Serial No. 555,550. 1 Claim. (Cl. 128—124.)

A device of the class described comprising a pad, a socket carried by the pad, a post threaded into the socket, holding means carried by the outer end of the post, a support retained by the holding means on the outer end of the post, and a set screw threaded into the side of the socket and engaging the post to hold the post against rotation, the pad having a seat wherein the outer end of the socket is housed, thereby to permit the support to be brought up close to the pad, the pad having a lateral channel wherein the set screw is located, thereby rendering the screw accessible notwithstanding the fact that the outer end of the socket is located in the seat.



1,539,056. SWIVEL SOCKET. ELMER M. RAY, Hominy, Okla. Filed June 25, 1924. Serial No. 722,417. 1 Claim. (Cl. 255—26.)

A device of the character described comprising a body portion having a longitudinal bore threaded and slightly tapered adjacent the lower end thereof, the opposite sides of the body portion for an appropriate part of its length being flattened to accommodate a tool for turning said body portion, said bore being divided into upper and lower portions of relatively different diameters, and an intermediate portion of slightly less diameter than the lower portion, and slightly greater than the upper portion, a socket member slidably and rotatably fitted in the lower portion of said bore, a seat snugly fitted within the intermediate portion of the bore and adapted to be engaged by the socket member, said seat being capable of being removed from the body portion through the lower end of said bore, said body portion having sight openings at the opposite sides through which said end socket member can be examined, said socket having a longitudinal bore formed with spiral grooves to provide for an effective grip on the cable for the socket member.

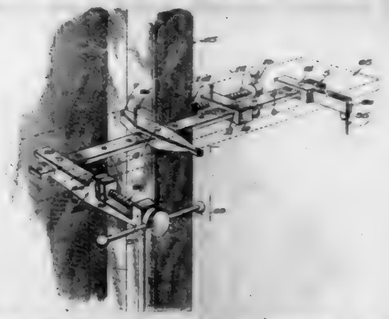


1,539,057. TOOL HOLDER. ANDREW R. RIDDERSTROM, Nahant, Mass., assignor, by mesne assignments, to Thomas C. Rowen, Swampscott, Mass. Filed May 6, 1920. Serial No. 379,250. 3 Claims. (Cl. 279—35.)

1. In combination, a rotatable tool holder having relatively movable, screw-threaded jaws adapted to occupy a normal position when not clutching a tool and a stop separated from the jaws, a tool comprising a screw-threaded stem provided with a terminal head, a hub and a disk loosely and slidably mounted on the stem, and a sandpaper sheet interposed between the disk and the head, and means for rotating the tool holder to cause the stem to be threaded into position between the jaws when the jaws occupy the normal position during the rotation of the tool holder to cause the stop to engage the hub tightly and to cause the sandpaper sheet to become tightly clamped between the disk

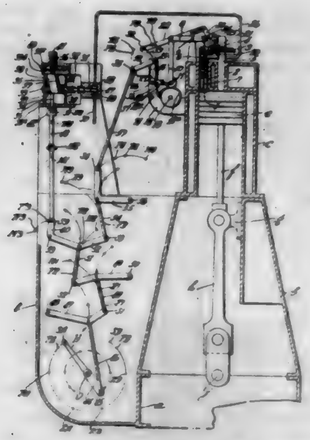
and the head, and means for separating the jaws to release the tool during the rotation of the tool holder, whereby disassociation of the tool parts is expedited by facilitating detachability from the tool holder.

1,539,058. REFRIGERATOR LOCK. ADOLPH RUBIN, St. Louis, Mo., assignor to Sieber Products Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 20, 1924. Serial No. 700,600. 18 Claims. (Cl. 292—242.)



1. A door lock, comprising a casing, a latch reciprocatingly mounted in said casing and provided with a portion that projects laterally through the casing, a keeper that co-operates with said latch to hold the door closed, a spring in the casing that exerts pressure on said latch, and a removable member on said casing arranged in such a manner that the removal of same permits said spring to be withdrawn from the casing.

1,539,059. WORKBENCH. JOHN B. SAWYERS, Gainesville, Tex. Filed June 20, 1924. Serial No. 721,255. 5 Claims. (Cl. 144—286.)



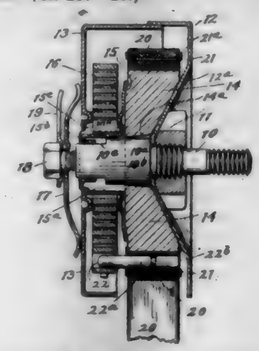
1. A portable work bench comprising a main bar, a jaw adjustably secured on the main bar, an arm adjustably secured to said bar and having a threaded opening, a feed screw threaded through said opening

and having a swivelly mounted head adapted to cooperate with said jaw in engaging a projection, sup-

porting members mounted on said bar adjacent the ends of the same, and a work-supporting plank mounted on said supporting members.

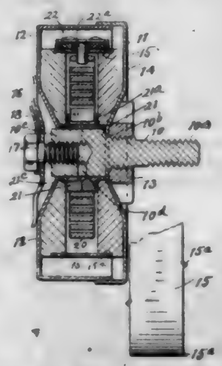
1,539,060. MANEUVERING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. JAMES A. SEYMOUR, Auburn, N. Y. Filed Mar. 15, 1924. Serial No. 699,587. 40 Claims. (Cl. 123—41.)

1. A combination of mechanisms for maneuvering internal combustion reversing engines comprising, several individual maneuvering mechanisms for effecting distinct maneuvering operations of said engine, a plurality of trains of mechanisms, each train arranged to combine a plurality of wrist plate motions in series, and an actuating member connected to said several trains of mechanism and having a range of movement during different parts of which a movement is produced at the remote end of one train while simultaneously substantially no movement is produced at the remote end of another train, each of said trains of mechanism being connected at its remote end to one or more of said individual maneuvering mechanisms.



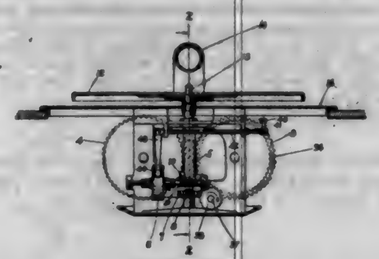
1,539,061. CHECK PROTECTOR. EDWARD D. SMITH, Erie, Pa. Filed Jan. 5, 1925. Serial No. 609. 2 Claims. (Cl. 101—20.)

1. In a check protector, a body portion including a length of sheet metal bent intermediate its ends to provide a supporting section and a perforating section, flanges formed along the edge of the supporting section, said flanges having inwardly extended portions, an ink pad and a stencil sheet adapted to be supported between the supporting sections and inwardly extended portions of the flanges, and spurs carried by the perforating



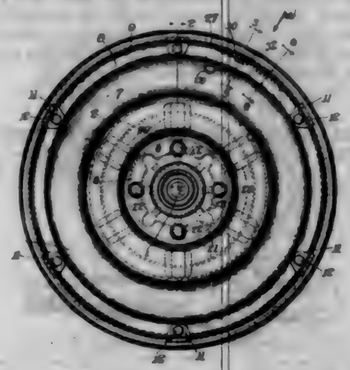
section and adapted to be moved into engagement with the stencil sheet to perforate an article positioned between the supporting section and stencil sheet and perforating section.

1,539,062. REBOUND CONTROLLER. JACOB R. SNYDER, Cleveland, Ohio, assignor to The Star Rebound Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 20, 1923. Serial No. 633,508. 13 Claims. (Cl. 267—10.)



1. In a rebound controller, a rotatable frictionally resisted drum, a belt coiled on the drum, a spring for keeping the belt taut and located at one side of the drum, the outer end of the spring being connected to the belt, and one of said parts having a positive connection with the drum.

1,539,063. REBOUND CONTROLLER. JACOB R. SNYDER, Cleveland, Ohio, assignor to The Star Rebound Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1923. Serial No. 658,198. 18 Claims. (Cl. 267—10.)



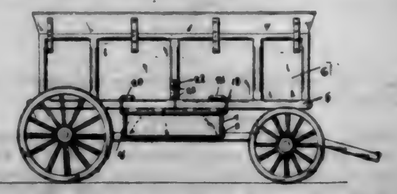
1. In a rebound controller, a rotatable drum, a strap adapted to be wound onto and unwound from the drum, a spring for winding the strap onto the drum and yieldingly resisting its unwinding, and a casing enclosing the drum and having side portions frictionally engaging the drum to resist its rotation.

1,539,064. PHONOGRAPH. EDWIN G. STAUDE, Minneapolis, Minn. Filed Sept. 27, 1920. Serial No. 412,019. Renewed Sept. 29, 1924. 3 Claims. (Cl. 192—118.)

1. The combination with a phonograph turn-table, operating motor, and tone-arm, of a plurality of gears meshing one with the other, one of said gears having a frictional connection with a part of the tone-arm, means for driving the other gear from the motor, a brake in operative relation to a part of the motor, and means operatively connecting the brake with the gears for releasing the brake when the gears move at substantially the same speed and setting the brake upon a difference in speed of the gears.

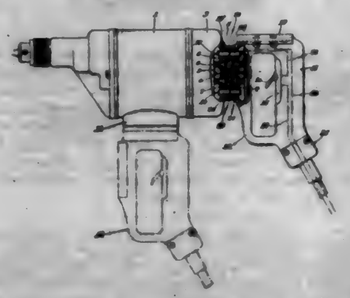
1,539,065. SHEET STEEL DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 9, 1922. Serial No. 593,876. 6 Claims. (Cl. 301—63.)

1. In a wheel of the class described, the web of the wheel composed of a concave disk reinforced on the back by a secondary disk terminating in a zone about midway from the hub to the rim and joined thereat to the main web and thence spaced asunder from the main disk web and adapted to abut laterally against a hub flange, and from this flange the said secondary disk having an outwardly inclined extending annular zone bearing on inclined bearing surfaces of the hub body, and the two disks joined together at the aperture of the hub barrel.



1,539,066. NONCLOG COLTER. FRANK D. ADAMY, Bellwood, Nebr. Filed Mar. 19, 1924. Serial No. 700,201. 2 Claims. (Cl. 97—40.)

2. The combination with a tractor plow, ground engaging wheels carried by angularly disposed portions of axles rotatably mounted, rotatable colters carried by said plow, of means for rotating said colters, said means comprising stub shafts carried by the axles in axial alignment therewith, double sprockets carried by said stub shafts, sprocket and sprocket chain connections be-

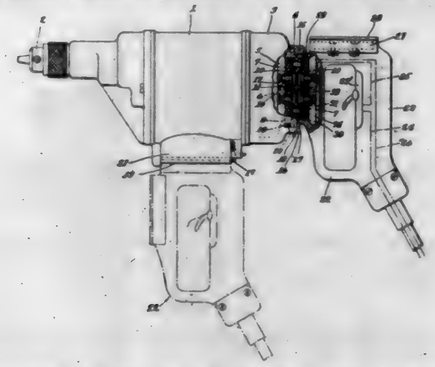


tween the double sprockets and the ground engaging wheels and sprocket and sprocket chain connections between the double sprockets and the rotatable colters.

1,539,067. DUMPING VEHICLE. HARRY T. BOYNTON, Russell, Mass. Filed Feb. 11, 1922. Serial No. 535,928. 2 Claims. (Cl. 298—38.)

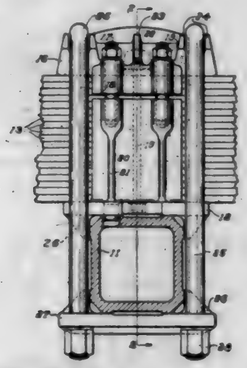
1. A dumping vehicle consisting of a wheeled body having a bed provided with an opening, a closure for said opening hinged at its inner end under the bed and adapted to occupy a normal horizontal position across said opening, means for supporting said closure in an open position so that it will constitute an inclined chute by which material may be delivered from said bed, a U-shaped member pivoted at its ends to the side of the body above the bed whereby its lower end will form a support for the closure in its normal horizontal position, and means for locking the U-shaped member in supporting position to retain the closure in horizontal position.

1,539,068. MOTOR HAND TOOL. BLUFORD W. BROCKETT, Cleveland Heights, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 29, 1923. Serial No. 615,557. 15 Claims. (Cl. 173—36.)



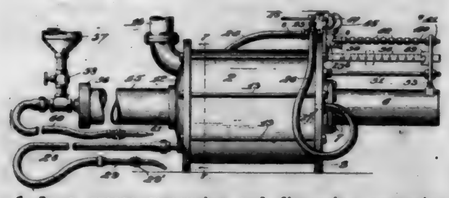
1. In combination, a motor driven tool including tool and handle members at least one of said members being provided with means permitting ready attachment of said handle in a plurality of locations on the tool.

1,539,069. HANDLE FOR MOTOR HAND TOOLS. BLUFORD W. BROCKETT, Cleveland Heights, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 29, 1923. Serial No. 615,558. 4 Claims. (Cl. 172—36.)



1. In a motor hand tool, a motor casing, a motor in said casing, a handle or grip, hand operated inter-

locking means between said casing and handle, and suitable co-operating contacts carried by said casing and

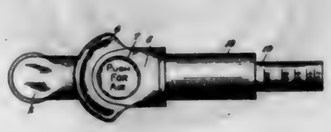


handle and arranged for co-operating engagement upon the application of the handle.

1,539,070. SPRING. RALPH H. BROWN, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 30, 1919. Serial No. 293,782. 6 Claims. (Cl. 267—52.)

2. The combination of an axle, with a multiple leaf spring, a seating member for said spring separably connected with said axle, a pressure block seated upon said spring, clamping bolts connecting said seating member and said pressure block with the spring therebetween, a clamping plate engaging said axle, and clamping bolts connecting said pressure block and clamping plate adapted to clamp the seating member removably upon said axle and also to the springs.

1,539,071. GREASE-DISTRIBUTING APPARATUS. RICHARD CALLAHAN and STEPHEN ROULEAU, Los Angeles, Calif. Filed Mar. 30, 1922. Serial No. 548,020. 6 Claims. Cl. 221—102.)



1. In a grease measuring and dispensing apparatus, a main chamber in which there is a pneumatically operated piston, an inwardly opening check valve arranged in an intake port of the chamber, a discharge means leading from the chamber at the same end thereof with the intake valve, means for supplying air under pressure between a head end of the chamber and the said piston, a separate pneumatically operated returning means connected to the piston and comprising a tubular chamber secured to said head, and a rod attached to said piston and slidably mounted in said last named head end for operating an indicating device.

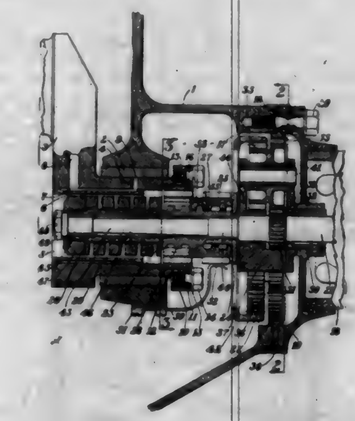
1,539,072. WINDOW-SASH LOCK. JAMES E. CARBIS, Long Island City, N. Y. Filed Oct. 18, 1924. Serial No. 744,333. 3 Claims. (Cl. 292—197.)

1. In a lock in combination with a window sash and window frame, a recessed member within the window frame; a casing recessed within a window sash; a revoluble locking bar within the casing, having a cam edge and placeable within the frame member locking the sash from movement; a revoluble forked member within the casing, the forks of which straddle the locking bar and are connected by means of a bar below the locking bar; and a member extending outside of the casing, the revoluble movement of which will remove the locking bar from the frame recess and means for returning the locking bar into locking position.

1,539,073. COMBINED NOZZLE AND PRESSURE GAUGE. CHARLES FRANCIS CARTER, Des Moines, Iowa. Filed Jan. 31, 1923. Serial No. 616,028. 1 Claim. (Cl. 152—11.5.)

An inflating device comprising a valve housing including an air hose nipple, a pressure gauge carried by the housing, valves in the housing for controlling the passage of air to a tire valve or the gauge, an operating button for the valve arranged externally of the housing, and a crescent shaped guard formed integrally with the housing and partly surrounding and extending above said operating button to protect the same.

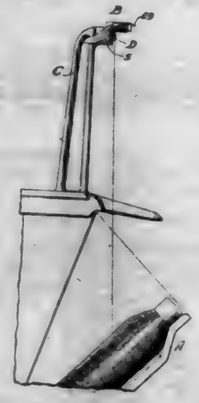
1,539,074. METALLIC FLOOR COVERING. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 17, 1921, Serial No. 515,877. Renewed Apr. 20, 1925. 3 Claims. (Cl. 15—239.)



1. A metal fabric embodying rows of units, links in fixed relation to the units of each row, the terminal portions of said links at the marginal row of units being extended beyond said units, and said extended terminal

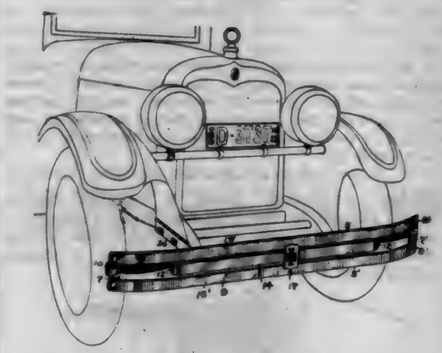
portions being notched rearwardly of the free ends thereof, and an elongated channeled member encasing

said terminal portions of the links, said member being compressed into locking engagement with said notched portions of the links.



1,539,075. ENGINE-STARTING APPARATUS. ROLAND CHILTON, Matawan, N. J., assignor, by mesne assignments, to Eclipse Machine Company, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1919. Serial No. 274,988. 27 Claims. (Cl. 74—7.)

1. In starting apparatus, in combination an engine crank shaft which is hollow at one end, a motor driven rotatable shaft extending into the crank shaft axially thereof, a driving member mounted on the driven shaft for longitudinal movement thereof into engagement with the crank shaft, and for rotary movement with such driven shaft for the rotation of the crank shaft.

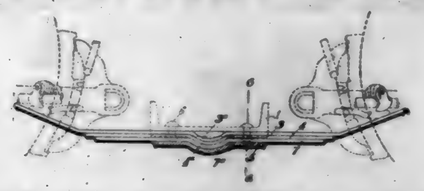


1,539,076. THREAD CLAMPING AND SHEARING MEANS. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed May 7, 1923. Serial No. 637,049. 13 Claims. (Cl. 242—35.6.)

1. The combination of a housing having a slot and a throatway leading to the slot, a clamping jaw and a shearing blade within the housing at one side of the slot, an intermediate clamping and shearing jaw pivoted within the housing to swing across the slot, said jaw having a gear segment connected thereto, a three-arm lever pivoted within the housing, a gear segment connected to said lever and meshing with the first gear segment, said lever comprising an arm extending across the slot in the path of an entering thread, and an oppositely extending arm projecting from the housing, said lever also comprising a third arm, a link connected

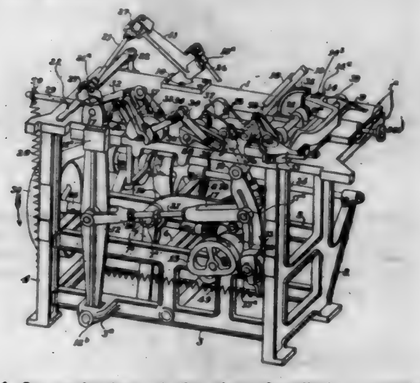
to the third arm, and a contractile spring connected to the link, said lever being arranged to be thrown slightly over center to a position where the spring serves to hold the intermediate jaw in open position.

1,539,077. AUTOMOBILE CUSHIONING FENDER. WILLIAM G. COX, Cleveland, Ohio, assignor to The Eaton Axle & Spring Company, a Corporation of Ohio. Filed Sept. 20, 1923. Serial No. 663,804. 5 Claims. (Cl. 293—55.)



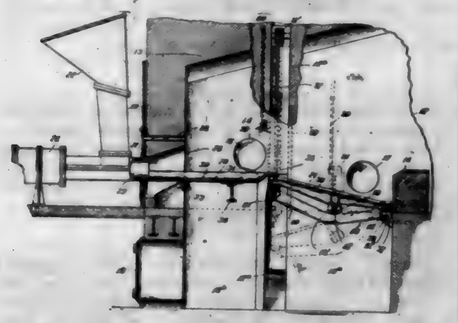
1. A cushioning fender for an automobile comprising a supporting bar having a middle impact portion and S-shaped spring portions at opposite ends of said impact portion, and impact rails connected to said bar parallelly above and below said impact portion and having their ends connected with the ends of said bar.

1,539,078. THIRD AND FOURTH POINT SUPPORT FOR BRAKE BEAMS. FREDERIC T. DE LONG, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 13, 1922. Serial No. 552,266. 8 Claims. (Cl. 188—218.)



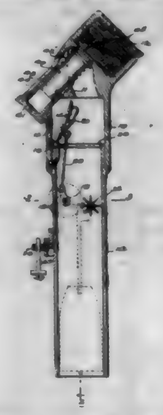
5. In a car construction, the combination with a trussed brake beam of a truck part, a safety support

for trussed brake beams secured to said truck part and comprising a plurality of nested flexible leaves of different



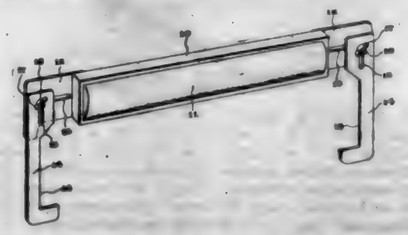
lengths arranged to provide a yielding support for the tension member of said beam, and a rigid support for the compression member of said beam.

1,539,079. SAW-SWAGING MACHINE. EDDIE C. FILSTRUP, Benton Harbor, Mich., assignor to Covel Mfg. Co., Benton Harbor, Mich., a Corporation of Michigan. Filed Dec. 10, 1921. Serial No. 521,295. 34 Claims. (Cl. 76—54.)



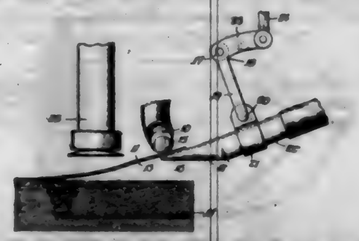
1. In mechanism of the class described, a swaging member comprising a body, a die, power actuated means to rotate said die, means to move said swaging member bodily, said die-rotating means being constructed and arranged to permit said bodily movement without actuation of said die.

1,539,080. FURNACE. FRANK E. FLEMING, Detroit, Mich., assignor to The Underfeed Stoker Company of America, Detroit, Mich., a Corporation of New Jersey. Filed Nov. 5, 1920. Serial No. 422,043. 3 Claims. (Cl. 110—32.)



2. In a furnace, the combination of fire-box walls, means for feeding fuel through the front wall, a coking plate adjacent to the front wall, a grate pivoted at its rear edge and at its front edge coacting with said coking plate, said grate comprising a frame having front and rear sills, grate bars pivoted on said sills and a transverse shaker bar connected with and arranged to operate said grate bars; means for normally elevating the front end of said grate, movable to permit the grate to descend to dumping position, and grate-shaking means located at a fixed elevation and having detachable connection with the shaker-bar.

1,539,081. AUTOMATIC NOZZLE. ERNEST G. FRITZ, Litchfield, Conn. Filed Nov. 21, 1922. Serial No. 602,420. 6 Claims. (Cl. 226—127.)

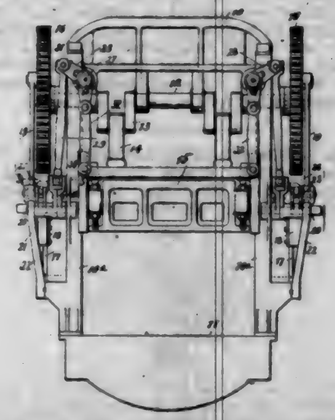


1. In an automatic nozzle, a casing, a valve in the casing for closing same, valve operating means, a float in the casing and having an upwardly extending member, means operated by the flow of liquid through the casing and adapted to engage the member of the float, and means carried by the valve operating means and with which the member of the float is adapted to egage to operate the valve operating means.

1,539,082. INVALID'S FOOT BRACE. ANNIE M. FYLER, Savannah, Ga. Filed Apr. 19, 1923. Serial No. 633,237. 1 Claim. (Cl. 5—327.)

An invalid's foot brace attachment for beds comprising an elongated padded support adapted to be disposed transversely upon the mattress of a bed in edgewise position thereon, brackets on the ends of said support formed with elongated slots extending longitudinally with respect to the support, depending arms engaged against said brackets and formed with slots arranged at right angles to said first named slots and adapted to register therewith, clamping bolts passing through the registering slots, and inward extensions on the lower ends of said arms adapted for engagement beneath the side rails of a bed, the first named slots permitting adjustment of the device for use upon beds of different widths and the second named slots permitting adjustment for use of the device upon mattresses of different thicknesses whereby the device may be held down snugly upon the mattress.

1,539,083. SHEET-SEPARATING MEANS. CARL HENDERSON, Chicago, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1922. Serial No. 533,183. 3 Claims. (Cl. 271—27.)

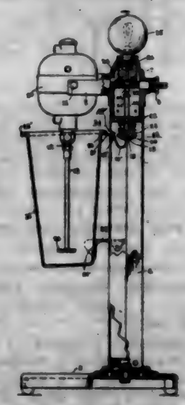


1. In sheet separating mechanism, the combination of means for separating a sheet of material from a pile, means acting directly upon a second sheet for withdrawing it from a first sheet if more than one sheet is separated at a time from the pile, and juxtaposed auxiliary means for bodily raising the top separated sheet from the pile.

1,539,084. MANUFACTURE OF IMITATION MOTHER-OF-PEARL. EDWARD F. HIGGINS, Brooklyn, N. Y., assignor to Jos. H. Meyer Bros., Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 24, 1922. Serial No. 570,730. 25 Claims. (Cl. 18—51.)

1. In the manufacture of imitation mother-of-pearl, the process which consists in incorporating the pigment of fish scales into and distributing the same throughout a mass of plastic material while the latter is maintained in a more or less fluid condition by an excess of solvent therefor.

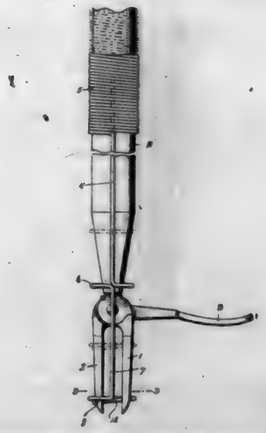
1,539,085. PRESS. HENRY J. HINDE, Toledo, Ohio, assignor to The Toledo Machine and Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 16, 1920. Serial No. 374,269. 7 Claims. (Cl. 13—38.)



1. In a press of the type having a plunger and a work-holder, a crank-shaft supported by the frame for operating the plunger and provided at its ends with twin driving gears, crank or toggle arms for actuating the work-holder and arranged on opposite sides of the frame to swing in planes parallel to the axis of the crank-shaft, means for swinging said arms comprising rods arranged at both ends of the machine, and at their upper ends having movement transmitting connections with said arms, which connections constrain the upper ends of the arms to move vertically, and in and out with reference to the ends of the frame, power transmitting means connecting the lower ends of said rods with both of said driving gears, which connections constrain the lower ends of the rods to move vertically and laterally in planes at right angles to the axis of the crank-shaft.

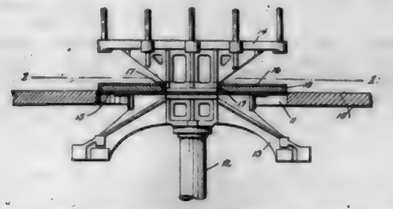
1,539,086. COMBINED WRITING INSTRUMENT. GEORGE HOFMANN and ROBERT G. SCHROEDER, Chicago, Ill., assignors to Ralph A. Bard, trustee, Chicago, Ill. Filed Feb. 2, 1922. Serial No. 533,676. 6 Claims. (Cl. 120—18.)

1. In a writing instrument of the character described, the combination with an open ended shell, of a thimble shallowly seated in said shell and relatively fixed therein, a nonrotatable feed member fixed to the inner or bottom end of said thimble, a rotatable feed member coacting with said non-rotatable feed member, one said feed member having a longitudinal slot and the other said feed member having screw thread provision, a feed nut engaging the slotted and screw-threaded feed members for movement along the relatively stationary feed member as the rotatable feed member is rotated, and a turning member, exteriorly accessible beyond the forward end of said thimble, said turning member entering said thimble for guidance therein and having provision for engagement with the rotatable feed member.



1,539,087. MIXING DEVICE. MARTIN HOUSELL, Racine, Wis., assignor to Hamilton Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Dec. 18, 1922. Serial No. 607,716. 10 Claims. (Cl. 259—135.)

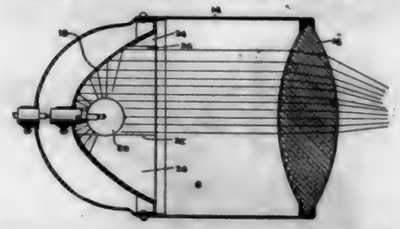
1. A mixing device, comprising a support, a switch lever extending therefrom and having means for ma-



pending a mixing receptacle thereon, an electric motor controlled by said switch and having a depending stirring member, and a mixing receptacle suspensible from said switch lever and entered by the stirring member, the weight of the mixing receptacle causing said switch lever to automatically turn on the electric current to the motor.

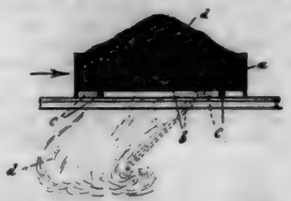
1,539,088. CLEANER ATTACHMENT. JACOB JONES, Seattle, Wash. Filed Aug. 9, 1924. Serial No. 731,194. 5 Claims. (Cl. 55—68.)

1. In combination with a weed puller comprising a handle, a stationary prong and a movable prong, a member supported for sliding movement by the handle, the lower end portion of the member being angularly disposed and extending around the prongs.



1,539,089. BAFFLE PLATE. CHARLES F. KENWORTHY, Waterbury, Conn., assignor to Charles F. Kenworthy, Incorporated, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 14, 1924. Serial No. 692,699. 3 Claims. (Cl. 266—4.)

1. A baffle plate constructed with a bottom plate; a top plate having an opening therethrough; a band around the contour of the bottom and top plates; a band within the opening in the top plate and extending to the bottom plate; and heat-resisting material between said plates, said plates being all connected together by welding or otherwise, whereby they become a single unitary structure.



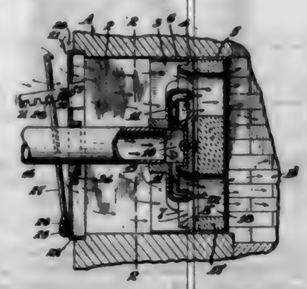
1,539,090. HEADLIGHT. ERNEST S. KING, Minneapolis, Minn. Filed Oct. 6, 1923. Serial No. 666,924. 1 Claim. (Cl. 240—41.)

A headlight comprising a casing, a double convex lens in the front of said casing, a parabolic reflector for the rear portion of said casing, a single source of light in said casing located at the focus of said reflector, a small opaque non-reflecting mask whose upper edge is substantially in contact with the upper portion of the margin of said reflector whereby rays of light are prevented from passing thru the extreme upper portion of said lens, said mask having a lower horizontally extending edge, and a large opaque non-reflecting mask substantially coextensive with the lower half of said

reflector and whose lower edge is substantially in contact with the lower portion of the margin of said reflector whereby rays of light are prevented from passing through the lower portion of said lens, said large mask having an upper horizontally extending edge.

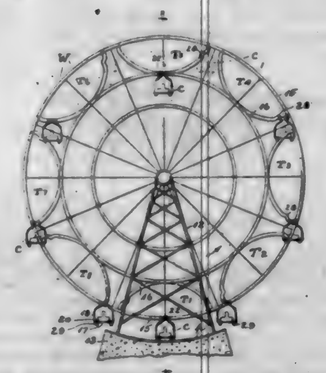
1,539,091. APPARATUS FOR LOCALIZING AND QUENCHING EXPLOSIONS IN MINES. ARNOLD KRANTS, Gelsenkirchen, Germany. Filed Mar. 12, 1924. Serial No. 698,814. 1 Claim. (Cl. 169—3.)

Apparatus for localizing and quenching explosions in mines, comprising, in combination, a box filled with rock dust and extending over the whole width of a drift, a loose bottom in said box, rollers separate from said box and bottom and mounted on rails on top of the drift and adapted to hold said bottom in its normal position, one end of said loose bottom adapted to be freed from said rollers by a short displacement of said box thereon due to the air shock preceding an explosion, substantially as and for the purpose set forth.



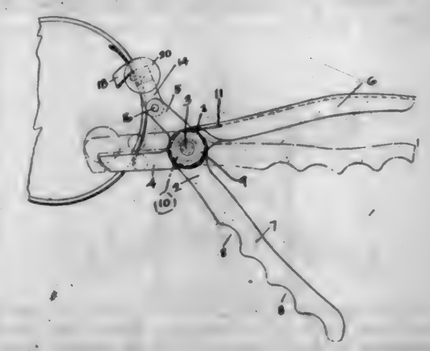
1,539,092. WINDOW-SASH LOCKING AND VENTILATING DEVICE. HENRY KRUG and JOSEPH DOOD, Cincinnati, Ohio. Filed Mar. 10, 1922. Serial No. 542,701. 1 Claim. (Cl. 292—256.)

In a device of the character described, the combination with the meeting-rails of a window, of a horizontal arm



or base-member having screw-threaded orifices at its opposite ends, a right-angled bar-arm having a guide-channel provided in its opposite vertical sides, a slide-member having flanges adapted to freely engage said channels, clamp-devices mounted on the said right-angled bar-arm, and means for regulating and sustaining the said clamp-devices in either open or in closed position, substantially as shown and described.

1,539,093. GAS BURNER. LEE B. METTLER, Los Angeles, Calif. Filed Oct. 25, 1923. Serial No. 670,770. 5 Claims. (Cl. 158—104.)



1. In a gas burner, a plate formed with a series of air intake openings having tapered walls, a gas supply manifold, a series of radiating tubes on said manifold, nozzles on said tubes arranged to discharge gas centrally of the air intake openings, a refractory block extending over said plate said block being formed with apertures which register with the small ends of the air intake openings which apertures constitute a multiple of gas and air mixing chambers.

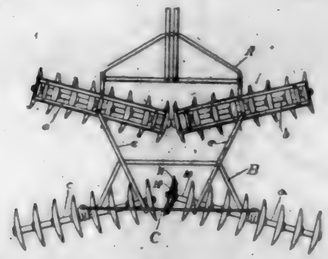
1,539,094. AMUSEMENT STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Nov. 5, 1924. Serial No. 747,905. 9 Claims. (Cl. 104—77.)

1. In an amusement structure of the class described, the combination of a wheel rotatable continuously on its horizontal axis, a plurality of local track circuits supported from said wheel adjacent to the circumference thereof, the outer sides of said local track circuits being parallel with the wheel circumference, trucks for riding each track circuit and a car suspended therefrom, and a platform for receiving a car when at the lowest point of the wheel and for supporting the car at rest while the outer side of its associated track circuit is traveling over the platform, engagement of the inner sides of the track circuits with the trucks causing the respective cars to be carried bodily with the wheel.

1,539,095. CAN OPENER. GEORGE A. PATTBERG, San Leandro, Calif., assignor to Elizabeth Pattberg, San Leandro, Calif. Filed June 15, 1922. Serial No. 568,504. 1 Claim. (Cl. 30—3.)

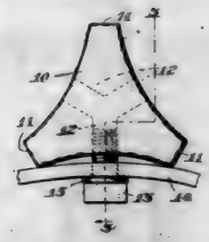
A can opener comprising, a pair of opposed handle members pivoted together; spring means for separating said handle members; a plate pivotally mounted on an end of one of said handle members, opposite the handle portion thereof, having a lateral projection thereon to detachably engage the end of the other handle member to hold the pair of handle members together; and co-operative can cutting means on the ends of the handle members, opposite the handle portions thereof.

1,539,096. WELL-CASING PROTECTOR. LEROY H. PERRY, Gardena, Calif. Filed June 25, 1924. Serial No. 722,344. 7 Claims. (Cl. 255—29.)



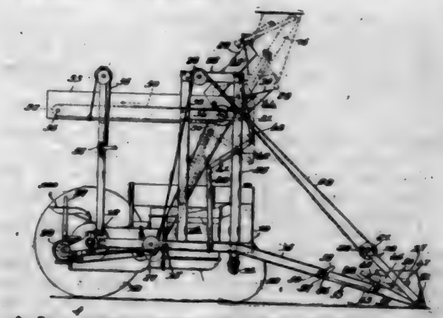
7. A well casing protector comprising; a sleeve adapted for gripping a tool string intermediate the tool string joints; and a floating collar surrounding said sleeve; said collar having an outside diameter larger than that of said joints.

1,539,097. CENTER CUTTER FOR DISK HARROWS. WALTER R. PETERSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 26, 1920. Serial No. 426,449. 8 Claims. (Cl. 55—82.)



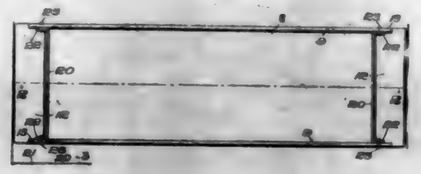
1. A tandem harrow comprising front and rear units each provided with a pair of opposed disk gangs, the gangs of the front unit having equal numbers of disks and the rear gangs having unequal numbers, the gang with the greater number having its inner disk substantially in alignment with the space between the inner disks of the front gangs.

5. The combination with the rear section of a tandem harrow comprising a pair of opposed gangs of disks, of an extension on the inner end of the axle of one of the gangs, and an auxiliary disk mounted on the end of the extension and positioned in the space between the gangs.



8. The combination with a pair of pivotally mounted disk gangs composed of inthrowing disks, such gangs converging forwardly when in working position, of an additional disk mounted on the inner end of one of the gangs on an extension of its axle and positioned substantially midway between the inner disks of the gangs.

1,539,098. THREE-WAY TRACTOR LUG. CHARLES W. ROBINSON, Auburn, N. Y., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 14, 1923. Serial No. 662,641. 13 Claims. (Cl. 301—44.)



4. A traction lug for wheel tires comprising a block having more than two ground engaging portions equidistantly spaced from each other, a face opposite each ground engaging portion and an aperture in each face, any one of said apertures adapted to selectively receive a fastening means for locking the lug to the wheel tire.

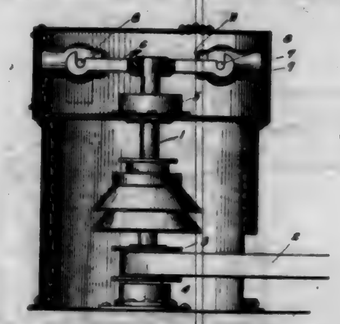
1,539,099. POWER SHOVEL. JOHN F. SULLIVAN, Medford, Mass. Filed Sept. 5, 1922. Serial No. 586,123. 9 Claims. (Cl. 214—90.)

1. In a power shovel of the class described, in combination, a chassis; levers pivoted thereto on which a scoop is mounted; a material receiving hopper adapted to be tilted; links and levers intermediate said first levers and said hopper adapted to tilt said hopper upon the actuation of said scoop; a conveyor adapted to receive material from said hopper; and means to actuate said scoop and said conveyer.

1,539,100. BRICK PALLET. CLARENCE H. YOUNG, Boston, Mass. Filed Feb. 10, 1921. Serial No. 443,986. 2 Claims. (Cl. 34—17.)

1. A pallet having a sheet metal body portion, lateral flanges and reinforcing means 20 at points removed from the ends of the pallet and extending between said lateral flanges, said reinforcing means being provided with extensions 21 extending toward the ends of the pallet, said sheet metal body portion being reversely flanged at its ends to provide a part 12 turned over and underlying said extensions 21.

1,539,101. PRESSURE GAUGE. HARRY E. ADAMS, Toledo, Ohio, assignor to The W. G. Nagel Electric Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 27, 1922. Serial No. 556,839. 2 Claims. (Cl. 73—100.)

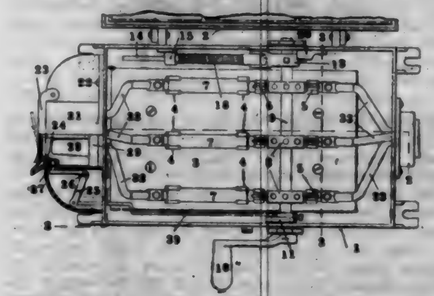


2. In a pressure gauge in combination with a Bourdon tube formed for connection at one end to a source of pressure, pressure indicating means operated by the tube, and a stop to engage said indicating means when at the starting position thereof, adjustable means to engage the free end of the tube when said indicating means is at said starting position, said adjustable means being located in juxtaposition to the free end edge of the tube thereby to prevent movement of the tube in a direction to cause same to exert pressure of the indicating means against the stop.

1,539,102. APPARATUS FOR TREATING SERUM. ELIOT R. ALEXANDER, Kansas City, Mo. Filed Feb. 17, 1923. Serial No. 619,300. 2 Claims. (Cl. 233—26.)

1. A double walled centrifugal separator container, the outer wall of which consists of an outer receptacle having substantially thick walls, and the inner wall of which consists of a receptacle having substantially thin walls adapted to bulge under excessive pressure, the inner

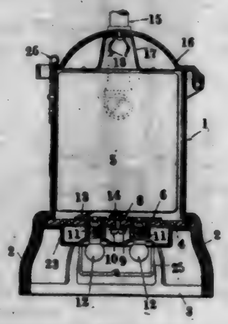
receptacle conforming substantially throughout to the inner surface of the outer receptacle with its outer surface in such proximity to the inner surface of the outer



receptacle as to prevent permanent distortion of the inner receptacle, there being sufficient space between the inner and outer walls to prevent adhesion under high centrifugal pressure.

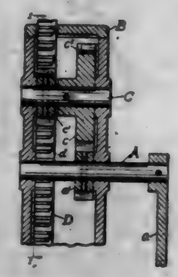
1,539,103. SCENTLESS ANIMAL TRAP. THOMAS H. ALSTON, Dulce, N. Mex. Filed Mar. 26, 1923. Serial No. 627,727. 6 Claims. (Cl. 43—92.)

1. A land-animal jaw trap of the type which is usually set concealed from view, constructed entirely of metal, and having a shiny surface composed of non-corrosive metal.



1,539,104. SWITCH. JOHN A. AMOS, St. Louis, Mo., assignor to Oliver Electric and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 29, 1922. Serial No. 557,448. 1 Claim. (Cl. 200—50.)

The combination of an electric switch, a plug receptacle connected therewith and provided with a cover, a switch operating member, a pivoted lever on the receptacle housing, one end of said lever constituting a locking member for the receptacle cover and the other end being connected to the switch operating member.

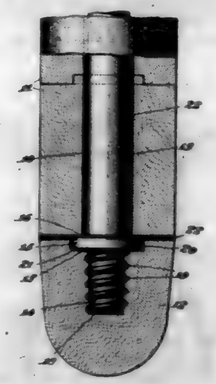


1,539,105. SIGNAL LANTERN. JOHN A. AMOS, St. Louis, Mo., assignor to Oliver Electric and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 17, 1924. Serial No. 699,879. 1 Claim. (Cl. 240—6.5.)

In an electric signalling device, the combination of a casing having a bottom closure of insulating material, two lamp sockets mounted on said closure and opening downward, an annular contact plate mounted on the upper side of said closure, a battery in the casing having one terminal engaging said contact plate, a second contact member on said closure adapted to be engaged by the other battery terminal, a switch member in electrical

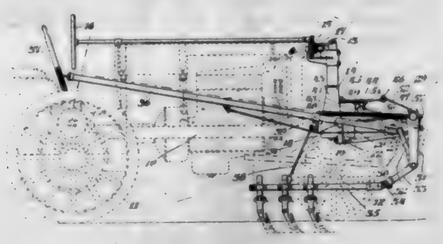
connection with said last mentioned contact member and movable to place same in circuit with a terminal of either lamp socket, the annular contact plate being so located with respect to the sockets that a terminal of a lamp inserted in either of said sockets will engage with said contact plate.

1,539,106. MEASURING-PUMP GEARING. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Aug. 8, 1924. Serial No. 730,846. 2 Claims. (Cl. 74—14.)



1. Gearing for reciprocating piston measuring pumps, comprising in combination, toothed means for driving said piston while pumping, toothed means for driving said piston in reverse, a driving shaft with a pinion secured thereto, a crank for rotating said shaft, said shaft so journaled as to be axially adjustable so that its pinion may be brought into operating contact with either the toothed pumping means or the toothed reversing means by sliding the shaft in the appropriate direction by pressure on the crank.

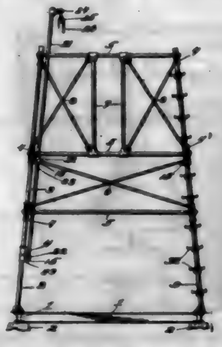
1,539,107. STOPPER ROD. SAMUEL S. BALL, Jersey City, N. J., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed June 20, 1923. Serial No. 646,534. 8 Claims. (Cl. 22—85.)



1. A stopper rod construction comprising a rod member having a supporting collar integral with and near to the lower end thereof and a threaded portion below

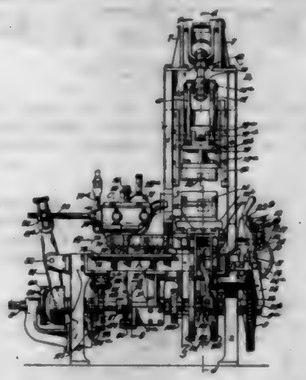
the collar, refractory sleeve means surrounding the rod member and supported by the collar, and a stopper head

made of refractory material and having integral internal threads provided in an axial recess and fitting the threaded portion of said rod.



1,539,108. IMPLEMENT ATTACHMENT FOR TRACTORS. BERT R. BENJAMIN, Chicago, and ANDREW KOWALSKY, Oak Park, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 4, 1924. Serial No. 735,740. 6 Claims. (Cl. 97—47.)

1. The combination with a machine comprising a tractor having a steering truck including an upright steering post journaled in the front of the tractor frame and a laterally shiftable implement frame carried in front of the truck; of quick detachable coupling means between the tractor and implement frame comprising supporting brackets on the tractor at each side of the steering post, coupling brackets on the implement frame including elements interlocking with the supporting brackets, and operating connections between the implement frame and steering post comprising a forwardly projecting arm fixed on the steering post, a collar pivoted on the post adjacent said arm having a forwardly extending lug, a swing bar with one end connected to said lug and its other end connected to the implement frame, and a latch mounted on said bar in position to interlock with the outer end of said arm.

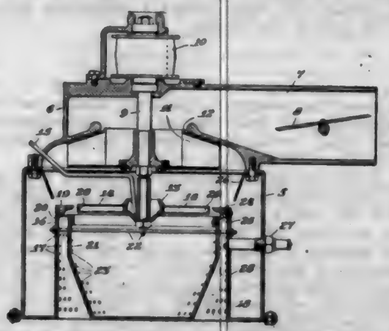


1,539,109. ERECTING CRANE AND GIN POLE. FOKKO BRANDT, Kansas City, Mo., assignor to The Brandt & Krell Engineering Company, Kansas City, Kans., a Corporation of Kansas. Filed Jan. 15, 1923. Serial No. 612,817. 9 Claims. (Cl. 189—16.)

1. The combination with a post composed of a plurality of superposed post sections, and sleeves coupling adjacent ends of adjacent sections and provided with alined lugs, of a rod having a pair of arms resting on

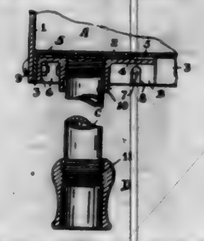
and interlocked with said lugs, and means carried by the rod for lifting and lowering objects.

1,539,110. DIE-CASTING MACHINE. ERIC CARLSON, Chicago, Ill., assignor to Stewart Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 11, 1922. Serial No. 587,263. 7 Claims. (Cl. 22—69.)



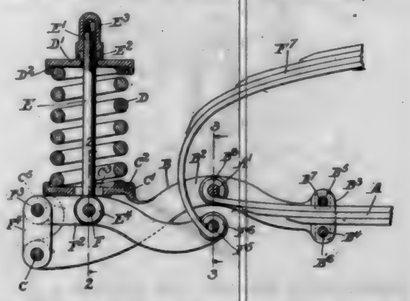
1. In a die casting machine in combination a power shaft; a continuously revolving power wheel loose on the shaft; clutch means for engaging the shaft with the wheel for rotation of the shaft by the wheel; a rotated element driven by the power shaft and making a single revolution in the complete cycle of the machine; manually operable means for operating the clutch to engage the power shaft with the wheel; automatic locking means for said manual means to maintain the parts clutched, and means carried by the rotated element for releasing said locking means at the completion of the cycle.

1,539,111. INSTANTANEOUS FUEL BURNER AND METHOD OF BURNING FUEL. CHARLES A. FRENCH and LAURANCE E. GOIT, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 8, 1922. Serial No. 566,886. 18 Claims. (Cl. 158—28.)



13. In a burner, the combination of a casing, a shaft rotatably mounted therein, two concentric perforated gratings providing an annular combustion chamber, an annular sharp edge and lip on the respective gratings coaxial with the shaft, a bowl rotatable with the shaft

and having a plurality of hollow arms terminating adjacent the sharp edge, means for supplying fuel to the bowl, means rotatable with the shaft for directing a

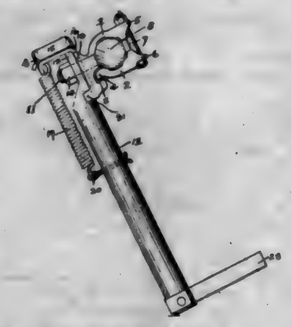


blast of air between the sharp edge and lip, means for igniting the fuel and air leaving the lip, and means for supplying additional air to the burning mixture through the perforations in the gratings.

1,539,112. SUPPORTING-LEG CONSTRUCTION. JOHN EDWARD GLOEKLER, Pittsburgh, Pa. Filed Oct. 18, 1924. Serial No. 744,435. 2 Claims. (Cl. 45—48.)

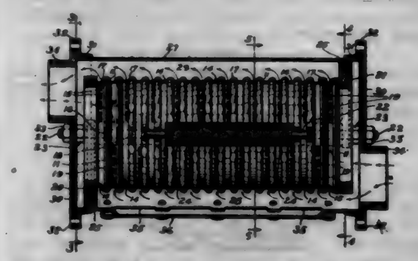
1. For use for supporting a sink, tub, table-top and the like which is characterized by a skirt portion depending below the horisontal portion of the article and forming inclosed angles at the corner of the article, the combination of a corner bracket comprising a horizontal platform which supports the horisontal portion of the article from below and a depending perimetral flange which fits from within against the skirt portion and is fixed thereto and a socket depending from the platform within the planes of the skirt portion, and a leg member having its upper end inserted in and held fixed in said socket.

1,539,113. DIRECT-SUSPENSION SHOCK ABSORBER. LEWIS P. HALLADAY, Decatur, Ill. Filed May 8, 1922. Serial No. 559,217. 8 Claims. (Cl. 267—17.)



1. An auxiliary spring for vehicles adapted for use with opposed leaf springs, comprising an extension from one of said springs, an apertured platform mounted thereon, a supplemental spring seated on said platform and means for compressing said supplemental spring, comprising a link connected to the top of said spring and passing through said platform and a lever pivoted to said link, a pivot link connection between the outer end of said lever and said extension, the inner end of said lever being pivoted to the opposed leaf spring.

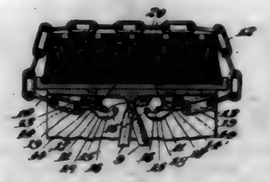
1,539,114. AUTOMOBILE BUMPER. LEWIS P. HALLADAY, Decatur, Ill. Filed Feb. 21, 1924. Serial No. 694,238. 11 Claims. (Cl. 293—55.)



1. In an automobile bumper, a plurality of impact bars arranged edge to edge, a front clamp engaging their impact faces and having hooked ends to engage their separated edges, a spacing clamp located between the bars and provided with lugs engaging notches in their opposed edges and arms engaging their rear sides and means for drawing the clamps together to hold the bars in fixed relation.

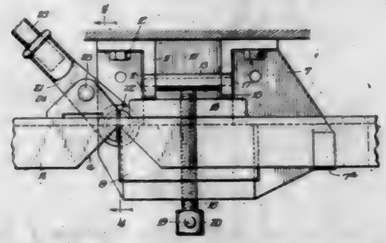
1,539,115. SUPPORT FOR MOTOR CYCLES, BICYCLES, ETC. ELDON C. HENDERSON, San Francisco, Calif. Filed Jan. 7, 1924. Serial No. 684,768. 5 Claims. (Cl. 208—79.)

1. A device, such as described, comprising a clamp attachable in an angularly inclined position to the frame on one side of a bicycle; a single support arm pivotally attached to said clamp; a spring connected, at its opposite ends, to said clamp and arm; means on said clamp to limit the downward movement of said support arm and means on said arm to engage said bicycle frame to limit the upward movement of said arm.



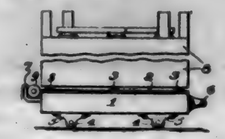
1,539,116. AIR FILTER. JEROME F. HEYN, Omaha, Nebr. Filed Dec. 8, 1924. Serial No. 754,621. 6 Claims. (Cl. 183—44.)

1. In a structure of the class described, an annular frame comprising a pair of rings having interengaged



flanges, a fabric covering extending across the face and about the edges of one of said frame-rings and having its edges clamped between the inter-engaged flanges of the rings, the other ring having a laterally perforate portion, and an inturned flange on the latter ring at the end opposite the fabric-covered face of the first ring.

1,539,117. CHAIN HOOK. EMIL IBACH, Hoboken, N. J., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1923, Serial No. 676,195. Renewed Dec. 8, 1924. 4 Claims. (Cl. 152—2.)

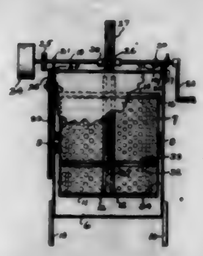


1. A hook for retaining one end of an anti-skid chain of the cross chain type and adapted for attachment to the felloe of a motor vehicle wheel comprising a base member and a hook member integral with and springing from the base member for approximately the full width of the latter, said hook member facing away from the base member for bearing the load imposed by a chain.

1,539,118. ANGLE-IRON BENDER. JOHN JENSEN, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 21, 1924. Serial No. 707,854. 4 Claims. (Cl. 153—16.)

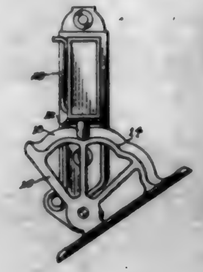
1. An angle-iron bender comprising a base having an upstanding portion providing an anvil, a lever having a clamping member pivoted at one end, said base also having a pair of spaced upright flanges between which said lever is pivotally mounted between its ends, a screw mounted to turn in the base and disposed between said flanges so as to be operable into engagement with the lower end of said lever whereby to move said clamping member toward the anvil to clamp the work therebetween, and a lever pivoted on the base to turn on an upright axis and having a part adapted to engage with the work adjacent one corner of the anvil to bend it around the anvil at such corner.

1,539,119. BATTERY SUPPORT. ALBERT T. JOHNSON, Chicago, Ill. Filed Feb. 21, 1925. Serial No. 10,737. 2 Claims. (Cl. 105—51.)



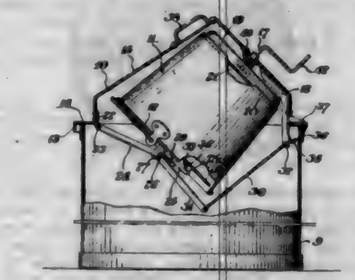
1. A battery support, comprising a base member of a size to have a storage battery rest thereon, an absorbent pad covering the upper surface of the base member and secured thereto, rollers carried by the base member on the under side thereof, a handle at the front of the base member, and hooks making a hydrometer rack at the rear of said base member.

1,539,120. TREATMENT OF ORES. HENRY W. KAANTA, El Paso, Tex., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed June 11, 1924. Serial No. 719,330. 5 Claims. (Cl. 83—85.)



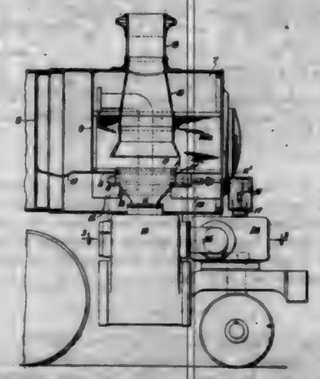
1. In the art of recovering precious metals from complex ores, the process which consists in mixing the ground ore with a cyanide solution of a strength sufficient to attack any film or coating upon the precious metal particles contained in the ore without substantial absorption of the metal particles thereof, adding a precipitant of the precious metals contained in the solution, agitating the mixture with the precipitant therein and then concentrating the metal constituents of the ore and the precipitant.

1,539,121. WASHER AND DRIER. WILLIAM O. KIDWELL, Indianapolis, Ind. Filed June 30, 1924. Serial No. 723,217. 8 Claims. (Cl. 68—18.)



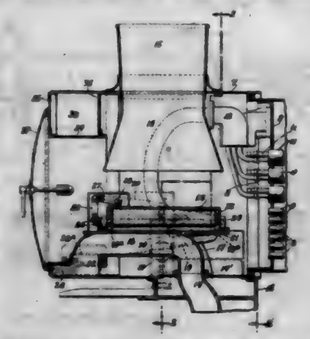
1. In a washing machine, a housing, a clothes receptacle mounted within the housing, said receptacle having a fixed bottom and a detachable top, a guide centrally mounted within and secured to the bottom of said receptacle, a presser plate slidingly carried on said guide, and detachable means of drawing said presser plate upwardly along said guide.

1,539,122. DECK-SASH SUPPORT. THOMAS A. LEECH, Chicago, Ill., assignor to The Adams & Westlake Company, a Corporation of Illinois. Filed Sept. 6, 1921. Serial No. 498,634. 5 Claims. (Cl. 16—141.)



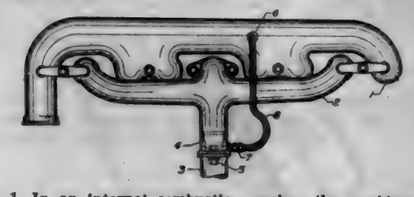
4. In a deck sash support for car windows or the like, in combination, a ratchet sector secured to one side of the sash adjacent the window frame, a trunnion for said sector having an enlarged head, a housing above said sector when the deck sash is in place and secured to the window frame, a bearing for the trunnion in the form of a hook also secured to the window frame and grooved adjacent the frame to accommodate the enlarged head of the trunnion, a bolt carried by said housing and normally projecting therefrom for engaging the ratchet sector, a flange on the outer periphery of said sector adjacent the window frame, and positive means for raising and securing said bolt out of contact with the ratchet.

1,539,123. ASH-SIFTING DEVICE. FRANK H. LEHMAN, Lebanon, Pa. Filed Sept. 21, 1921. Serial No. 502,161. 11 Claims. (Cl. 83—60.)



1. In a sifting device, a rotatably mounted disk like sifting element adapted to be disposed for rotation in a plane at a sufficient inclination to enable the material to be sifted to run downwardly thereon, a material container in the form of a pail, and means for rotatably mounting said container in partially inverted position over and above said element.

1,539,124. LOCOMOTIVE DRAFT APPLIANCE. DAVID M. LEWIS, Chicago, Ill., assignor to Lewis Draft Appliance Company, a Corporation of Illinois. Filed Aug. 18, 1921. Serial No. 493,311. 20 Claims. (Cl. 162—5.)

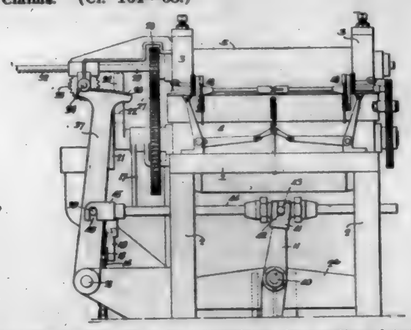


1. In a locomotive draft appliance the combination of a cylinder, an exhaust passage, a nozzle, and a receiver in parallel with the exhaust passage.

1,539,125. LOCOMOTIVE DRAFT APPLIANCE. DAVID M. LEWIS, Chicago, Ill., assignor to Lewis Draft Appliance Company, a Corporation of Illinois. Filed Aug. 18, 1921. Serial No. 493,312. 8 Claims. (Cl. 162—8.)

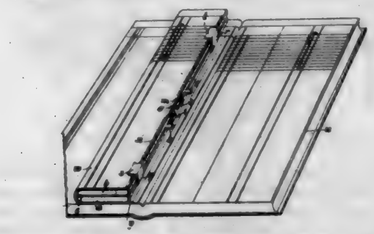
1. In a locomotive draft appliance, the combination of an elongated nozzle having its major axis longitudinal of the smoke box, a similarly shaped and disposed stack, and a volume chamber.

1,539,126. APPARATUS FOR VAPORIZING FUEL. VINCENT LINK, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Aug. 12, 1921. Serial No. 491,787. 8 Claims. (Cl. 123—119.)



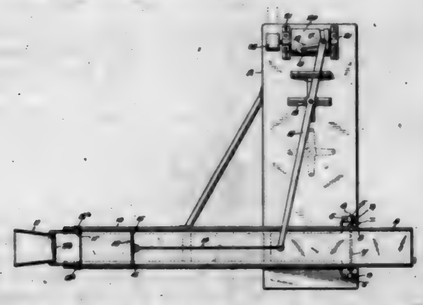
1. In an internal combustion engine, the combination of an exhaust manifold, an intake manifold positioned between said engine and a carburetor, a member positioned within said intake manifold and having a portion of its walls spaced apart from said manifold, means connected with said exhaust manifold for supplying heat by the exhaust products of combustion from said engine to the chamber formed between said member and said intake manifold, and a restricted passage leading from said chamber to said intake manifold whereby the products of combustion can escape from said chamber in such a manner as to cause an envelope of hot gas around the incoming fuel mixture.

1,539,127. VALVE STRUCTURE. CARL E. L. LIPMAN, Beloit, Wis., assignor to Lipman Refrigerator Car and Manufacturing Company, Beloit, Wis., a Corporation of Delaware. Filed July 16, 1923. Serial No. 651,719. 7 Claims. (Cl. 277—60.)



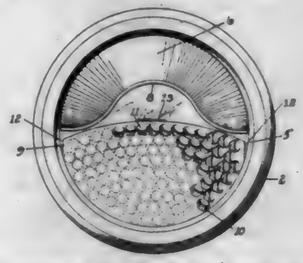
4. In a valve structure, the combination of three superposed perforated discs, valves adapted to reciprocate in the perforations of the intermediate disc and to close the ports of the lowermost disc, said uppermost disc being shaped to prevent displacement of said valves, and means for securing said discs together.

1,539,128. MEANS FOR CUTTING FABRICS. RUDOLF LOEB, Jenkintown, Pa., assignor to Loeb & Wasch Company, Inc., Camden, N. J., a Corporation of New Jersey. Filed Jan. 28, 1921. Serial No. 440,717. 7 Claims. (Cl. 164—68.)



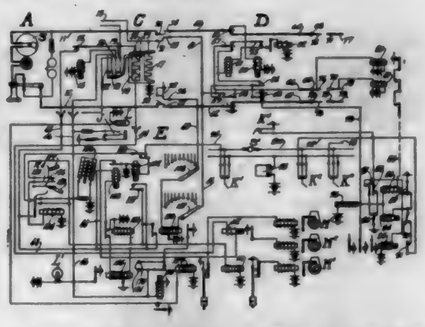
2. The combination in a machine for cutting fabrics, and like materials, of two feed rolls; a reciprocating cutter mounted in one of said rolls; means for imparting movement to the cutter; an operating arm; means for driving said arm; a cam arm having a cam slot therein, the operating arm having a pin adapted to the slot; a shaft on which the cam is mounted; and mechanism for driving the feed rolls from the shaft of the cam arm.

1,539,129. AMERICAN JOURNAL FOR BOOKKEEPING PURPOSES. RUDOLF LORENTZ, Stettin, Germany. Filed May 19, 1923. Serial No. 640,108. 9 Claims. (Cl. 281—44.)



1. In combination with the pages of a book, a holding device for folding and keeping a page folded in order to expose a part of the page beneath it for carrying over purposes, said device comprising means for gripping the page of the book in the folded position; and means for locking the page to the gripping means.

1,539,130. POWER COAL SHOVEL. OSWALD LUSCHNIG, Nokomis, Ill. Filed Feb. 28, 1925. Serial No. 12,808. 2 Claims. (Cl. 198—7.)

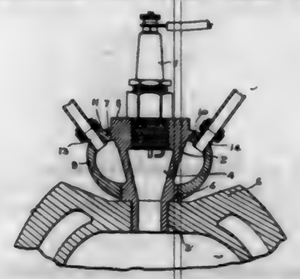


1. A power coal shovel comprising a base, an upwardly inclined chute extending at right angles to the plane of the base and hingedly supported at its upper end upon the latter, means for operatively supporting the lower end of the chute, means for reciprocating the chute back and forth and a shovel hingedly connected to the lower end of the chute, said shovel formed from a single piece of metal bent or folded back upon itself at a point intermediate its ends to form a transverse shoulder or ridge, substantially as and for the purpose specified.

1,539,131. LIGHT DEFLECTOR. CLARK V. MCCARLEY, McClure, Ohio. Filed Feb. 4, 1924. Serial No. 690,871. 1 Claim. (Cl. 240—48.4.)

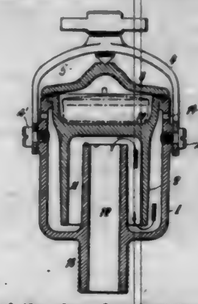
In an automobile light deflector, a member having a plurality of closely positioned discs located in contiguous areas of the lens of the lamp and extending from the face of the lens of the lamp at different angles, the planes of the discs located at different angles to the planes extending through the centers of the discs and parallel with the axis of the lamp.

1,539,132. AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 15, 1921. Serial No. 452,468. 25 Claims. (Cl. 179—9.)



1. In a telephone system, a group of subscribers' lines, a group of trunk lines, individual line switches for extending calling subscribers' lines to idle trunk lines, a meter, and circuit means responsive to the initiation of a call for operating said meter to register the total number of such calls.

1,539,133. SPARK-PLUG ATTACHMENT. ROBERT JOHN MARKLE and CARL LOUIS FALSTREM, Parry Sound, Ontario, Canada; said Falstrem assignor of his interest to Harry Newton Hocken, Toronto, Ontario, Canada. Filed Aug. 13, 1920. Serial No. 403,226. 1 Claim. (Cl. 123—169.)

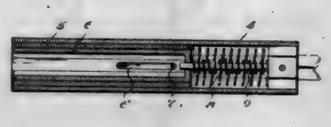


A spark plug attachment comprising a tubular member threaded to enter the engine cylinder and to receive a

plug at the outer end, said member having an annular flange at the top and a threaded flange at the bottom, a casing surrounding said tubular member having a

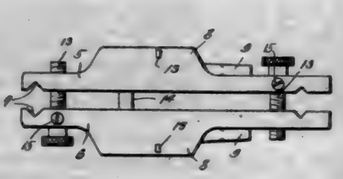
threaded orifice at the bottom to engage the threaded flange, and a recess in the top to receive the annular flange, and water circulation pipes secured to opposite sides of said casing.

1,539,134. APPARATUS FOR HEATING THE AIR ADMITTED TO THE CARBURETORS OF PETROL ENGINES. MAGNUS EFRAIM MELLGREN, Gottenborg, Sweden. Filed Jan. 27, 1923. Serial No. 615,275. 8 Claims. (Cl. 263—5.)



1. A heater of the class described having in combination a casing, a heating body mounted in said casing and having a cavity therein, a heating cartridge adapted to fit in said cavity, a closure for said cavity detachably connected to said casing, said closure having an opening therein, a handle having a longitudinal bore in alignment with said opening, and means for detachably connecting said handle to the closure.

1,539,135. STALK-END LEVELER FOR SHEAF BINDERS. EMIL MÜLLER, Dusseldorf, Germany, assignor to Rheinische Metall-Waaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Filed June 9, 1924. Serial No. 718,868. 3 Claims. (Cl. 56—169.)

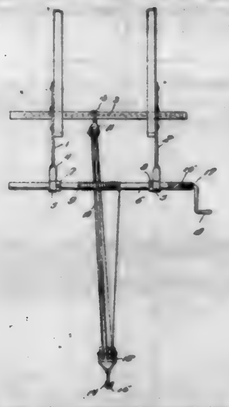


1. A stalk-end leveler for mowing and reaping machines, comprising a butt board, a driving crank connected to the butt board to oscillate the same; a leveling shield; a control rod connected with said shield; a link connected at opposite ends to the control rod and the butt board; and an operating lever for simultaneously adjusting said board and shield.

1,539,136. WRENCH. LOUIS BEARD NEEL, Port Arthur, Tex. Filed Feb. 9, 1924. Serial No. 691,843. 1 Claim. (Cl. 81—185.)

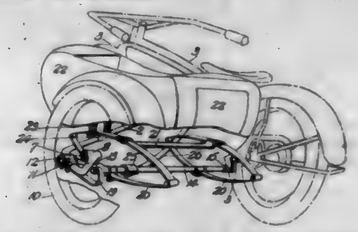
A wrench of the character described comprising an outer socket, a number of sockets nested therein, the inner sockets having slots therein, a transverse pin carried by the outer socket and passing through the slots for securing all of the sockets for operative association, a longitudinally disposed pin having one end secured and its free end passing through an opening formed in the innermost socket, a coil spring surrounding the longitudinally disposed pin for engagement with the innermost socket, and a second coil spring surrounding the spring first mentioned and cooperating therewith to urge the outer ends of the inner sockets in alignment with the outer end of the outer socket.

1,539,137. ADJUSTABLE WRENCH. GEORGE HENRY NELSON, Belvidere, Kans. Filed Sept. 21, 1923. Serial No. 664,078. 1 Claim. (Cl. 81—77.)



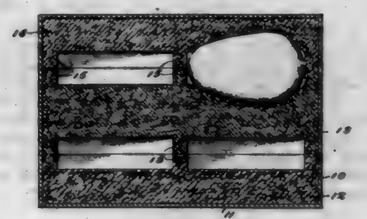
In a wrench, a pair of movable jaws, adjusting screws carried by the jaws for moving the jaws with respect to each other, flanges spaced apart and formed integral with each jaw, operating handles pivotally supported between the flanges and adapted to swing to positions in parallel relation with the jaws, said flanges having openings, pins adapted to extend through the openings and adapted to engage the operating handles to restrict movement of the operating handles, and a guide pin for holding the jaws in alignment with each other.

1,539,138. COMBINED VEHICLE BUMPER AND EXTRACTOR. NOLL M. NICHOLSON, Temple, Tex. Filed Aug. 4, 1924. Serial No. 729,998. 1 Claim. (Cl. 254—166.)



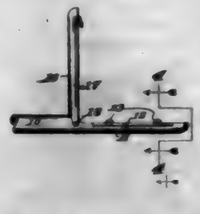
A combination automobile bumper structure comprising a pair of attaching brackets provided with bearings,

a solid cylindrical rod rotatably mounted in said bearings and adapted to function as a bumper and as a drum, said rod being provided at one end with a socket for re-



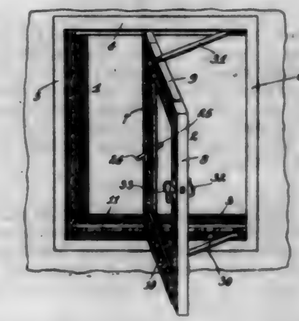
ception of the end of a removable crank handle, and stop collars slidably and adjustably mounted upon said rod and abutting the inner sides of said bearing brackets.

1,539,139. MOTOR-CYCLE SIDE CAR. JAMES ALEXANDER O'CONNOR, Essendon, Melbourne, Victoria, Australia. Filed Jan. 28, 1924. Serial No. 689,086. 4 Claims. (Cl. 208—45.)



2. In a motor cycle side car, a frame member forming a long lever, a lateral bar pivotally connected to the frame member, a side car body resiliently supported by the lateral bar, and a shock absorber disposed between the frame member and the bar, so that, when the shock absorber is operated, a slight rolling motion is communicated to the bar.

1,539,140. FILLER FOR EGG-SHIPPING CASES AND THE LIKE. WINFIELD S. PALMER, Glenburn, Pa. Filed Feb. 7, 1923. Serial No. 617,567. 3 Claims. (Cl. 217—35.)



1. As an improved article of manufacture, a body of sponge rubber or the like having regularly spaced recesses formed in a face thereof and adapted, when two such faces are opposed to form chambers slightly smaller than an egg, whereby eggs packed individually in the chambers will be cushioned and preserved from abrupt movements.

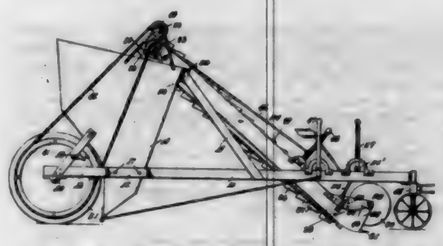
1,539,141. SAFETY-RAZOR-BLADE HOLDER. ARTHUR C. PETERSON, Los Angeles, Calif. Filed Nov. 7, 1921. Serial No. 513,263. 1 Claim. (Cl. 30—25.)

A stropping device for safety razor blades comprising a tubular handle terminating in one of a pair of clamping members, said handle member having a semicircular base and a blade projecting from one edge thereof, said blade lying in a plane passing through the edges of the base, said blade having lugs adapted to enter the holes in the razor blade; a second clamping member having a reversely curved base and a blade projecting therefrom adapted when positioned for use to lie parallel to the other blade and spaced therefrom the distance of the thickness of the razor blade, the inner end of said last member being bifurcated to straddle the handle the outer surfaces of the bases of said handle members being in the same plane as the outer surfaces of the handle, one of said bases being a continuation of a part of the handle; a rivet connecting said last member to the handle; and a catch pivoted to the outer end of one of said clamping members, said catch having a U-shaped end which when the catch is positioned for use will engage both clamping members and prevent them from separating.

1,539,142. CASEMENT SASH. ERNEST A. PETERSON, Oakland, Calif. Filed May 31, 1922. Serial No. 564,792. 3 Claims. (Cl. 20—42.)

1. A window comprising a casement and a sash, links pivoted to the casement and the sash, guide grooves in the casement, riders in said guide grooves, said riders having posts projecting therefrom which fit into sockets in said sash, a lever pivoted in said sash, and means connecting said lever and one of said posts whereby the riders may be wedged in the guide grooves.

1,539,143. DENTURE. JACOB PETRY, Pittsburgh, Pa. Filed June 30, 1922. Serial No. 571,887. 6 Claims. (Cl. 32—4.)



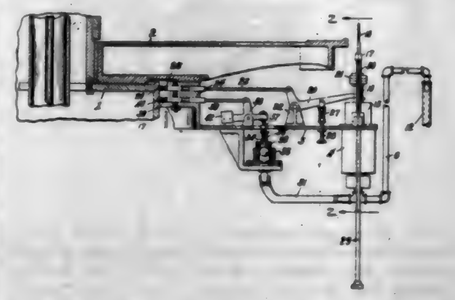
1. A denture having a depression formed therein, and a plurality of suction cups each having a member se-

cured at the bottom of said depression, at least a portion of said cups having sides that are higher than their

ends, the said sides being of such height that they will grip the sides of a ridge when the said ends are brought into engagement with the bottom of such ridge.

1,539,144. DIRT LOADER. PORT A. PRICE, Richmond, Calif. Filed Jan. 7, 1924. Serial No. 684,813. 1 Claim. (Cl. 37—8.)

A dirt elevating device including an endless inclined conveyor, a curved digging element mounted in advance of the lower end of the conveyor and adjacent thereto, guiding means between the digging element and the end of the conveyor for guiding the dirt onto the conveyor, and a packing roller mounted above the digging element and having its periphery concentric with the upper face thereof for packing the dirt immediately prior to its passage to the conveyor.



1,539,145. MACHINE FOR CONSTRUCTING REENFORCED-CONCRETE ROADS. JOHN F. ROBB, Cleveland Heights, Ohio, assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 22, 1921. Serial No. 454,535. 8 Claims. (Cl. 94—39.)

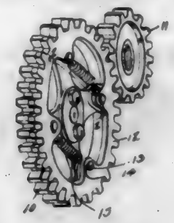
1. A machine of the class described comprising a carrier adapted to travel over a road bed, a support upon said carrier for a quantity of reenforcing material so that the latter may be dispensed for use in the road construction, a motor, and equipment operable from the motor and attachable to the reenforcement for pulling the latter into place upon the portion of the road where it is to be used.

1,539,146. AIR-CONTROL MEANS FOR GLASS-BLOWING MACHINES. ERNEST C. SCHNADER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed July 13, 1922. Serial No. 574,680. 4 Claims. (Cl. 49—18.)

1. In a machine of the class described, an air pressure pump including two telescoped hollow cylinders reciprocally movable one within the other and having a check valve controlled air inlet opening and a check valve controlled air outlet opening, the movable cylinder normally standing at the inner end of its pressure

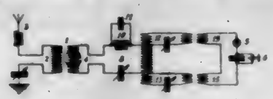
creating stroke, and a control means for the movable cylinder adapted to retain it at the outer limit of its stroke and operable to release the cylinder to permit it to have inward pumping movements of predetermined length and duration.

1,539,147. OPHTHALMIC MOUNTING. WAYNE S. SEARLES, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 22, 1922. Serial No. 583,465. 4 Claims. (Cl. 88—53.)



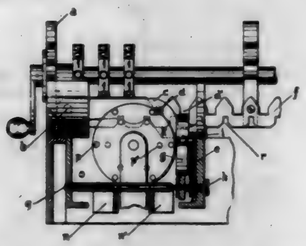
1. In an ophthalmic mounting, a lens frame having an end piece with an ungrooved hinged face, a hinge having a body member, a temple joined by said hinge to said face and provided at its joint end with a transverse groove of a depth substantially the diameter of the hinge-body to receive the same, and arms on the members of the hinge-body extending into the end piece and the temple respectively.

1,539,148. PROCESS OF MAKING ORNAMENTAL TILE. PASCAL SYLVESTER, Chicago, Ill. Filed Nov. 30, 1923. Serial No. 677,752. 2 Claims. (Cl. 18—60.)



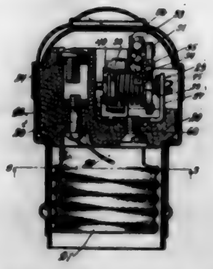
1. The method of manufacturing ornamental tiles or slabs which consists in locating on a confined flat supporting surface a grillage of metal strips arranged edgewise to form open-ended pockets, depositing over said surface and in said pockets a layer of concrete containing an ornamental aggregate, depositing on said first layer, a second layer of concrete of thickness sufficient to cover the upper edges of the strips to a substantial depth, permitting the layers to harden, removing the tile from the supporting surface, and subsequently grinding off the face of the tile and the exposed edges of the grillage.

1,539,149. SILENT-GEAR STRUCTURE. ARGYLE K. THORNBURG, Pleasantville, Iowa. Filed Nov. 13, 1923. Serial No. 674,555. 1 Claim. (Cl. 74—28.)



In a silent gear structure, a gear, a hubless gear at the side thereof having inwardly projecting lugs as shown provided with elongated slots, headed bolts projected through said slots and secured to said first gear, and springs each connected with a bolt and with a spaced lug of the second gear.

1,539,150. RECEIVING DETECTOR FOR WIRELESS TELEGRAPHY. OTTO VON BRONK, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Sept. 3, 1921. Serial No. 493,424. 6 Claims. (Cl. 250—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. The method of receiving electrical oscillations in which the incoming high frequency oscillations are used for the excitation of an alternating current dynamo possessing a natural frequency of its own comprising heterodyning the frequencies obtained by the combining of the signal frequency oscillations and the natural frequency of the dynamo, to produce an audible beat.

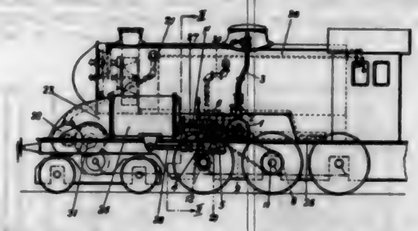
1,539,151. CALCULATING MACHINE. GEORG WOLF, Berlin, Germany, assignor to the Firm: Bing-Werke, vormals Gebrüder Bing Aktiengesellschaft, Nuremberg, Germany. Filed July 8, 1922. Serial No. 573,540. 7 Claims. (Cl. 235—63.)

2. Calculating machine comprising in combination, a machine bed, a carriage mounted on said bed for lateral displacement, a ratchet wheel mounted on said bed and gearing with said carriage, pins equidistantly mounted on said wheel and a rigid rockable key lever adapted to cooperate with said wheel in displacing said carriage, two faces being formed on said lever at an angle to one another, one face adapted to raise one pin so as to turn said wheel and another face adapted to form an abutment for the next succeeding pin so as to stop said wheel.

1,539,152. ELECTRIC SWITCH. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1919. Serial No. 327,055. 9 Claims. (Cl. 173—354.)

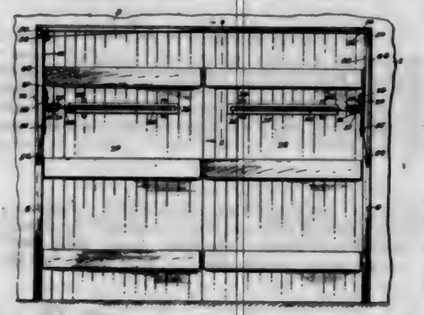
1. A switch mechanism comprising a rotatably mounted contact member, a rotatable trip member arranged to rotate with said contact member, means including a coil torsion spring for actuating said trip member and contact member, an oscillatable ratchet member, and a tubular member within said spring having an eccentric portion on one end for moving said trip member to release it and permit it to be actuated by said snap spring, said member having on the other end a ratchet portion struck up therefrom for cooperation with said oscillatable ratchet member.

1,539,153. FLOWER-VASE INSERT. ARTHUR JAMES BENNETT, Cambridge, Ohio. Filed Mar. 27, 1924. Serial No. 702,238. 7 Claims. (Cl. 47—41.)



2. A flower holding insert for vases, including a body having spaced vertical and horizontal projections on its exterior to engage the vase and prevent binding of the body in the vase, and flower stem supporting means carried by the body.

6. A flower holding insert for vases composed of a substantially cylindrical tubular body having its upper end formed with a series of solid spaced fingers that project beyond the upper end edge of the body and extend inwardly to form flower-stem receiving seats.

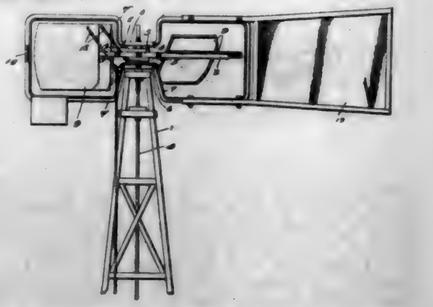


1,539,154. DRIVING MEANS FOR AUXILIARY MACHINES ON CONDENSING STEAM LOCOMOTIVES. HEINRICH BOLTSHAUSER, Zurich, Switzerland. Filed Nov. 14, 1924. Serial No. 749,959. 9 Claims. (Cl. 105—38.)

1. In a condensing steam locomotive in combination, a main driving engine, an auxiliary prime mover, auxiliary machinery, and means adapted to operatively connect said auxiliary machinery to moving parts of the locomotive adapted to drive the auxiliary machinery

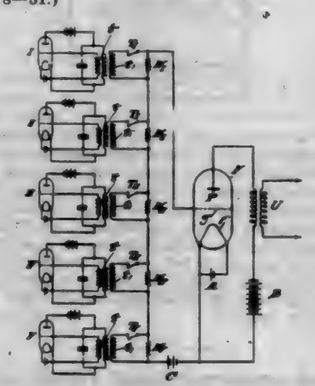
when the locomotive exceeds a certain speed of travel and to operatively connect said auxiliary machinery to said auxiliary prime mover as soon as the rate of travel falls below that limit.

1,539,155. GARAGE-DOOR OPENER AND CLOSER. HERMAN W. BRANDT, Antigo, Wis. Filed Dec. 6, 1922. Serial No. 605,202. 3 Claims. (Cl. 268—9.)



1. In a door opening and closing mechanism, in combination with the vertical door frame members and the doors hinged thereon, a plate mounted on each of said frame members, a bevel gear journalled on said plate in a vertical plane, a radial operating lever rigid with said gear, a second bevel gear journalled on said plate perpendicular to said first gear and in mesh therewith, an arm rigid with said second gear, a guide strap secured to the face of the door, a sliding connection between the outer end of the arm and said guide strap and pull cables connected with each of said operating levers for controlling the opening and closing of said doors.

1,539,156. PEACH SEEDER. JOSEPH P. BURGESS, Depauw, Ind. Filed Jan. 28, 1924. Serial No. 689,119. 1 Claim. (Cl. 146—31.)

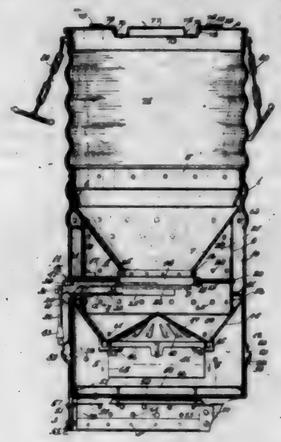


A tool for extracting seeds from peaches, comprising pivotally connected levers each having a handle at one end and a spoon shaped jaw at its other end, the two jaws being opposed, similar and imperforate, the outer surface of each jaw being smooth and curved transversely and longitudinally, the free ends of the said outer surfaces converging toward each other and the opposite ends of said surfaces converging toward the handles.

1,539,157. WINDMILL. CHARLES CHEREPES, Toledo, Ohio. Filed June 22, 1923. Serial No. 647,164. 2 Claims. (Cl. 170—29.)

2. A windmill of the class described comprising a tower, a frame rotatably mounted at the upper end thereof, a tail carried by the frame, a wheel rotatably mounted within the frame, a shaft connected with the wheel, blades hinged to the spokes of the wheel off center so that they normally occupy a vertical position, an arc-shaped track having bent ends, arms on the blades, a roller on each arm for engaging the track to move the blade into horizontal position, a movable section of track arranged in the space between the ends of the first track which acts to prevent the blades assuming a vertical position when raised, the movable section being corrugated so that it will act as a brake for the blades, manual means for raising and lowering the movable section of track, a latch for preventing retrograde movement of the wheel and a wind shield connected with the frame for shielding the horizontally arranged blades from the wind.

1,539,158. TRANSMITTER FOR MULTIPLEX ALTERNATING-CURRENT TELEGRAPHY. ARTHUR CLAUSING, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Sept. 9, 1922. Serial No. 587,150. 1 Claim. (Cl. 178—51.)

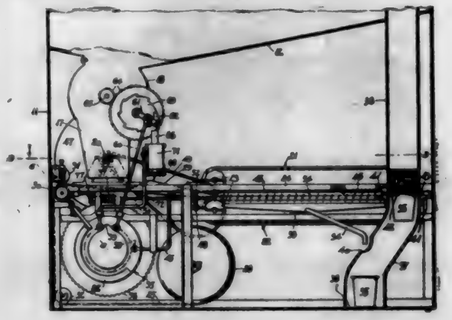


In a transmitting system for multiplex alternating current telegraphy, in combination a plurality of oscillating current transmitters each comprising a thermionic tube and its associated circuits, an aperiodic circuit for each transmitter, suitably coupled to its circuits, and containing an ohmic resistance and an operating key, and one common thermionic tube amplifier for all of said transmitters having a grid circuit in which the resistances of all of said aperiodic circuits are arranged in series.

1,539,159. COVER FOR FOOT SUPPORTS. PAUL SAMUEL COHEL, Lincoln, Nebr. Filed July 22, 1922. Serial No. 576,766. 1 Claim. (Cl. 15—265.)

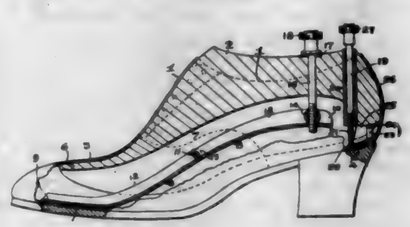
The combination with a foot support having a stepped portion at one end, of a cover for the foot support comprising a member having a stepped portion at one end, of means for preventing lateral and longitudinal movement between the cover and support comprising a peripherally continuous depending, curved, inwardly-directed, flexible support-gripping flange, integrally formed with said cover portion.

1,539,160. CAR HEATER. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Mar. 12, 1920. Serial No. 365,254. 11 Claims. (Cl. 126—156.)



1. In a heater of the class described, the combination of a casing having a combustion chamber, a fuel magazine thereabove with a bottom tapering to a discharge opening which leads into the upper end of the combustion chamber, a shell spaced from the wall of the casing and said tapered bottom and forming a draft passageway from the combustion chamber separated from the tapered bottom by an air space, and a horizontal partition mounted in said shell adjacent the lower end of the tapered bottom, and separating the air space from the combustion chamber.

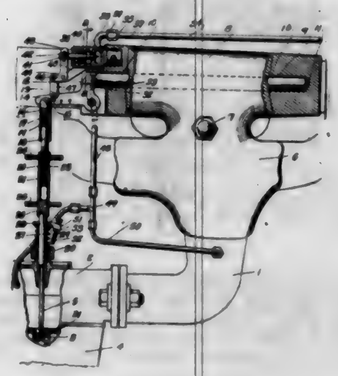
1,539,161. COIN-CONTROLLED PRESS. ANGELO COLUMBRO, Cleveland, Ohio. Filed Dec. 26, 1923. Serial No. 682,692. 19 Claims. (Cl. 225—21.)



1. A machine of the character described having means for holding a supply of articles, means for feeding a predetermined amount of the articles from said means, means for crushing and pressing the articles delivered by said feeding means, means for delivering the juice expressed by the last-named means, and automatic operating means for said second and third named means so that by one continuous operation a predetermined quantity of the articles is fed from the second named means and crushed and pressed by the third named means.

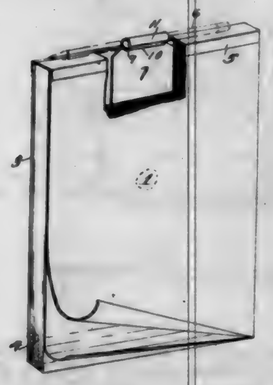
5. A machine of the character described comprising a press, operating means controlling said press, and a cup dispensing device controlled by said operating means to deliver a cup to receive the juice expressed by said press.

12. A machine of the character described having means for holding a supply of articles, controlled means for feeding a predetermined amount of the articles from said holding means, means for crushing the articles delivered by said feeding means, and a continuous press for receiving and pressing the pulp delivered by said crushing means.



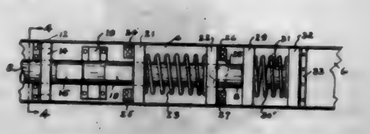
1,539,162. MECHANICAL SHOE FORM. FREDERICK E. COMSTOCK, Valparaiso, Ind., assignor of one-half to George La Force, Valparaiso, Ind. Filed Mar. 2, 1922. Serial No. 540,424. 5 Claims. (Cl. 12—128.5.)

1. In shoe forms, a specially shaped single piece last having a recess formed on the under side lengthwise thereof, a movable tongue extending from the toe portion of the last to near the heel portion thereof, said tongue being pivoted to the side walls of the recess, a threaded member pivoted to the tongue near its rear end, adjusting means cooperating with the last and the threaded member adapted to move the rear end of the tongue upward and simultaneously move the front end of the tongue downward against the shoe sole so as to move the toe portion of the last upward and thus press the last against the front of the shoe upper.



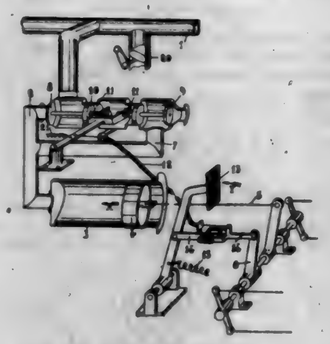
1,539,163. VALVE-OPERATING MECHANISM. WILLIAM E. CONCANNON, Kansas City, Mo., assignor of one-half to Thomas G. Concannon, Emporia, Kans. Filed Mar. 28, 1924. Serial No. 702,608. 4 Claims. (Cl. 123—25.)

1. A controlling means for carburetors for internal combustion engines comprising a block, means for securing the block to the manifolds of an internal combustion engine, a thermostatic element in the block, a carburetor controlling mechanism movable in response to the expansion action of the thermostatic element to actuate a carburetor valve to closing position, a water chamber, means for feeding water to the chamber, a pipe having ported communication with the chamber and



adapted to communicate with the intake manifold of the engine, a valve for varying the effective port area of the port communicating the pipe with the chamber and means actuated synchronously with the carburetor controlling mechanism for controlling the movement of the water port controlling valve.

1,539,164. PENCIL HOLDER. COLONEL J. CURTIS, Osage City, Kans. Filed Feb. 8, 1924. Serial No. 691,436. 1 Claim. (Cl. 281—30.)

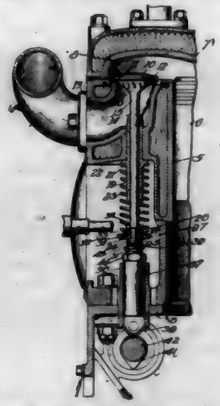


The combination with a tablet having a cardboard back and a plurality of leaves, said back being secured to the leaves by an adhesive strip at one end thereof, of a pencil holder, said holder comprising a flat metallic plate disposed between the cardboard back and the pieces of paper and adhesively joined to the inner side of the back, the outer end of said plate extending through an elongated slot in the adhesive strip, a right angularly disposed arm carried by the plate at its outer end and engaging the outer side of the adhesive strip and extending towards the front of the tablet and a pencil receiving roll carried by the right angularly disposed arm and extending rearwardly, outwardly and forwardly.

1,539,165. DRAWBAR DRAFT GEAR. GEORGE S. DE BURGER and JOHN E. BAYLESS, Indianapolis, Ind. Filed Mar. 8, 1924. Serial No. 697,842. 5 Claims. (Cl. 213—46.)

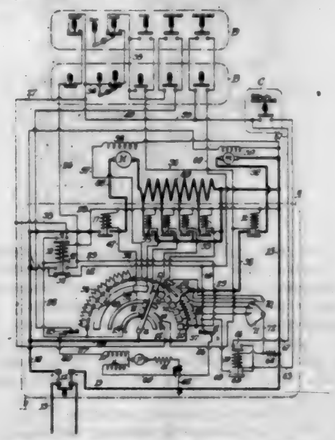
1. In a draw bar draft gear, supporting members, an integral draw bar between the supporting members, shoulders on the supporting members, driving lugs extending from the draw bar and adapted to contact said shoulders by appreciable travel of said draw bar, a guiding member rigidly carried by said supporting members slidingly carrying said draw bar and preventing the forward withdrawal of the draw bar by reason of the lugs projecting therefrom, said guiding member having slots therein to permit passage of the lugs therethrough upon axial rotation of the draw bar, and means of preventing rotation of the draw bar.

1,539,166. MOTOR BRAKE. ALBERT DEWANDRE, Liege, Belgium. Filed Jan. 12, 1924. Serial No. 685,814. 3 Claims. (Cl. 188—154.)



1. In a brake system for motors, the combination, with a suction pipe, and rodding for the brakes, of: a brake cylinder capable of being placed in communication with the suction pipe or with the atmosphere, a piston working therein and on which the engine suction acts to effect the braking operation, closure members for controlling the communication of the cylinder with said pipe and with the atmosphere, a brake-operating element, a lost-motion connection between said operating element and the brake-rodding embodying two movably-related parts, and a movable element for actuating said closure members operatively associated with said lost-motion connection so that its position depends upon the distance between the movably-related parts of said lost-motion connection.

1,539,167. VALVE. HUGO DIEL and JAMES B. FISHER, Waukesha, Wis. Filed Oct. 1, 1919. Serial No. 327,760. 5 Claims. (Cl. 251—182.)



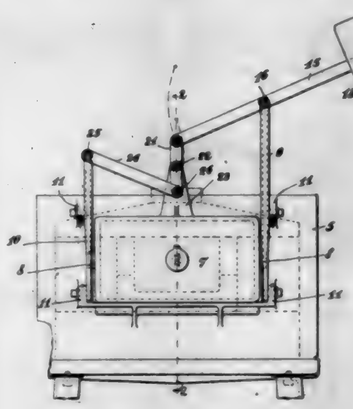
1. In an internal combustion engine, the combination of a valve passage having a valve seat, a poppet valve seating thereon, flutes milled in said valve for rotating said valve under the impulse of the fluid passing therethrough, a stem for said valve, a tappet for raising said valve, a compression spring for closing said valve, a reduced shank portion in said valve stem, said reduced shank portion forming a head on the end of said valve

stem, a thrust collar on the end of said valve-stem, said collar comprising two separable collar sections, said collar sections being bored out with different diameters to en-

gage over said reduced shank portion and over said head, said collar projecting below said valve stem for engagement by said tappet, and a washer carried by said collar for receiving the pressure of said spring.

1,539,168. MOTOR-CONTROL SYSTEM. CHARLES A. DRESSEN, New York, N. Y., assignor to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1923. Serial No. 643,831. 22 Claims. (Cl. 172—179.)

2. In a motor-control system the combination with a power-actuated controlling member for the motor circuit and a series of switches for controlling the operation of said member, of means controlled by said member, when one of said switches is operated, for automatically arresting said member at a predetermined point intermediate the ends of its path of travel and an adjustable device for variably predetermining the point at which the controlling member is so arrested.

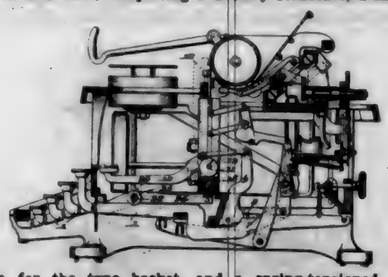


1,539,169. SPINDLE. ROBERT W. DONLEY, Philadelphia, Pa. Filed Jan. 19, 1924. Serial No. 687,317. 1 Claim. (Cl. 118—65.)

A device of the class described comprising a tubular support having a ball seat at its upper end and a threaded lower end, a nut engaging the screw threads for attaching the support to a platform, a grease cup threaded to the lower end of the support and adapted to force lubricant through the support to the ball seat, a ball in the seat, a holder having a socketed pulley member at

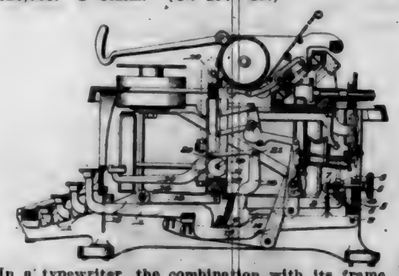
its lower end for receiving the upper part of the support so that the holder will rest upon the ball, said pulley member having an annular groove adjacent its lower end and a latch member connected with a part on the support and engaging the groove.

1,539,170. DOOR-OPERATING MECHANISM. WILLIAM BARTON EDDISON, Irvington, N. Y., assignor to The Surface Combustion Co., Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1919. Serial No. 326,925. 2 Claims. (Cl. 268—8.)



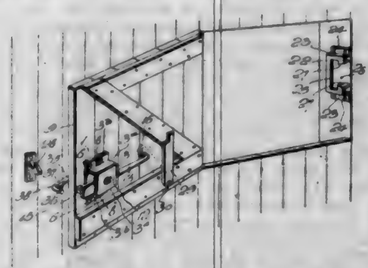
1. In a door operating mechanism, the combination of a door, vertical parallel guides for said door, said guides having their upper ends at different vertical levels, a pivot carried by said door, and levers connecting said pivots to the upper ends of said guides and forming a straight line motion whereby a straight line lifting movement may be applied to said door by applying force to one of said levers.

1,539,171. TYPE-BASKET SHIFT FOR TYPEWRITERS. HALCOLM ELLIS, Newark, N. J. Original application filed Feb. 5, 1919, Serial No. 275,118. Divided and this application filed Feb. 19, 1923. Serial No. 620,088. 2 Claims. (Cl. 197—74.)



1. In a typewriter, the combination with a shiftable type basket, and means for limiting its play, of a pair of operating key levers for shifting the type basket, a

shaft to which said key levers are connected, the key levers and shaft comprising a unitary structure, a lifting

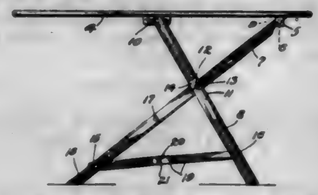


arm for the type basket, and a spring-tensioned lost-motion upright connection between the shaft and the arm.

1,539,172. KEY-LEVER TENSION FOR TYPEWRITERS. HALCOLM ELLIS, Newark, N. J. Original application filed Feb. 5, 1919, Serial No. 275,118. Divided and this application filed Feb. 19, 1923. Serial No. 620,089. 1 Claim. (Cl. 197—33.)

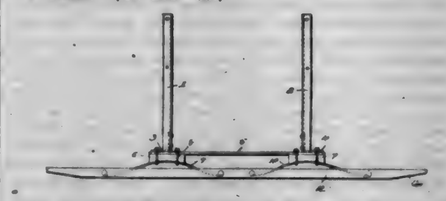
In a typewriter, the combination with its frame, and key levers, of a swinging plate hinged on the frame and disposed above the key levers, a single rod carried by said plate above, and crosswise of, the key levers, suspension coil springs connecting said rod to the several key levers, and an adjusting screw engaged with the frame and plate, adapted to shift said plate to thereby simultaneously adjust the tensions of all of the springs.

1,539,173. DOOR AND GATE FASTENER. WILLIS J. FAIRBANK, Soldier, Kans. Filed July 7, 1924. Serial No. 724,676. 5 Claims. (Cl. 292—214.)



1. A latch comprising a base, a latch lever pivoted on said base in laterally spaced relation therewith, said latch lever having a lateral lug spaced from its pivot and projecting toward said base and the latter being provided with a lateral abutment extending toward said lever and overlapping said lug, and a spring having two arms straddling said lug and abutment, whereby when the latch lever is swung in either direction, one arm of the spring will act against said lug and the other arm will re-act against said abutment.

1,539,174. BUTTON. JULIUS FISCHL, New York, N. Y. Filed Dec. 4, 1924. Serial No. 753,919. 1 Claim. (Cl. 24—90.)

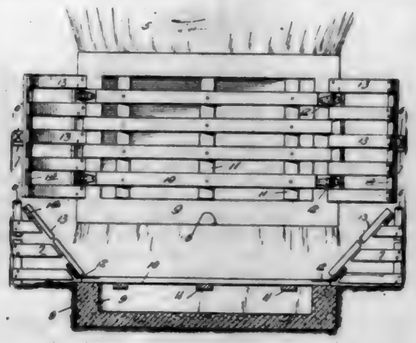


A garment button comprising a one piece head of compressed material, a shallow central depression in the back portion of said head shaped to guide the point of a needle without substantial interference across the back of said head; a loop shank seated in said central depression and protruding slightly beyond the back of said head with the ends thereof flattened or upset adjacent the front surface of said head; the size of said head being so proportioned with relation to the amount of protrusion of said loop shank that when the button is sewed to a garment said head will set close to the material and said shank will be invisible.

1,539,175. IRONING BOARD. ADAM C. FLECK, Minneapolis, Minn. Filed Jan. 12, 1922. Serial No. 528,695. 4 Claims. (Cl. 68—10.)

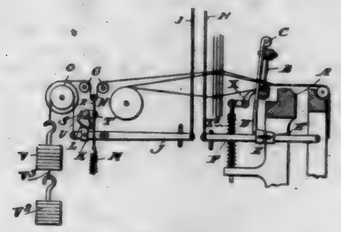
1. An ironing board having inner and outer pivoted pairs of leg bars in cross selation and arranged to be folded in the same direction onto the ironing board, a tie rod connecting the inner pair of leg bars and arranged to engage between the leg bars of the outer pair, enter lock notches at the inner faces thereof and engage said faces, thereby being held against endwise movement, and a toggle pivoted to the pairs of leg bars for holding the same spread and the tie rod interlocked with the notches.

1,539,176. AUTOMOBILE BUMPER. JAY D. FRY, Colon, Mich. Filed July 28, 1924. Serial No. 728,077. 1 Claim. (Cl. 293—55.)



An automobile bumper comprising a pair of supporting brackets, a metallic strip extending transversely across the forward ends of the brackets, wooden blocks at the ends of said strips, a semi-elliptical leaf spring secured at its intermediate portion to each block, the ends of each spring being looped, a pair of elongated wooden bars extending across the upper and lower edges respectively of the forward portions of the springs, said bars being spaced from the wooden blocks, and fastening bolts extending through the bars and the looped ends of the springs.

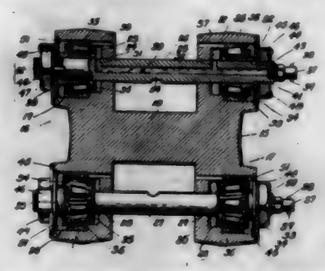
1,539,177. GATEWAY. ELMER E. GARDHOUSE, Palmyra, Mo. Filed Aug. 30, 1923. Serial No. 660,121. 2 Claims. (Cl. 30—5.)



1. A gateway for farms or the like comprising a slatted floor adapted to be supported flush with the ground to cover a pit dug in the latter at the entrance

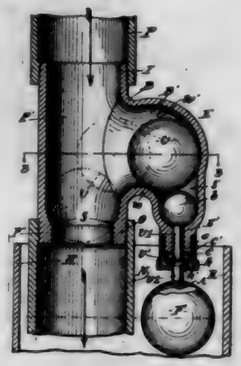
of the farm or the like, the slats of said floor being in spaced relation to exclude the passage of animals thereover while permitting the free passage of a motor

vehicle thereover, and slatted gates hinged to the sides of said floor and embodying slats adapted to jointly cooperate for closing the spaces between the slats of the floor when said gates are lowered.



1,539,178. LOOM. JOACHIM GIARDINO, West New York, N. J. Filed June 17, 1922, Serial No. 569,124. Renewed Nov. 6, 1924. 11 Claims. (Cl. 139—27.)

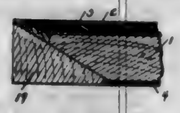
9. In an apparatus of the class described, comprising a beam, spaced rollers over which the warp from said beam is adapted to pass, tensionally controlled means positioned between said spaced rollers around which the warp passes for placing the warp constantly under slight tension, and means cooperating with said tensional means for adavncing the warp to permit of the formation of a loop or loops, said last named means comprising a lever commanded by the dobby of the apparatus, a cam actuated by said tensional means, a block on said lever and adapted to cooperate with said cam, a belt coupled with the end of said lever and passing around the beam and provided at its end with a weight.



1,539,179. SPRING CONNECTION FOR MOTOR VEHICLES. CHARLES I. GOODWIN, Kansas City, Mo. Filed Oct. 7, 1922. Serial No. 593,053. 1 Claim. (Cl. 267—54.)

A spring connection for motor vehicles comprising a support having spaced antifriction bearings located at opposite sides of the support, a hollow bolt mounted in the bearings and extending entirely through and projecting beyond both sides of the support exteriorly of the same, the opening in the hollow bolt extending from one end thereof, and terminating short of the other end of the same and the said bolt having ports leading from the opening to the bearings, nuts directly engaging the ends of the bolt and holding the same against longitudinal movement in the said bearings, a spring having a loop and encircling the bolt between the bearings, and a pin passed transversely through the loop of the spring beyond the opening in the bolt and arranged in a notch

in the latter whereby the loop of the spring is directly secured to the hollow bolt for preventing independent rotary and longitudinal movement of the loop and the bolt.



1,539,180. VALVE. ARTHUR H. B. GOBB, Maricopa, Calif. Filed Oct. 18, 1922. Serial No. 595,408. 4 Claims. (Cl. 226—127.)

1. A filling nozzle for tanks and the like having an inlet and outlet vertically alined for receiving and discharging a fluid into a tank, a ball valve adapted to be held in the lower portion of said nozzle for closing said outlet, a laterally disposed chamber communicating with and above said outlet for normally supporting said valve when said outlet is open, an operating member including a float adapted to be suspended into said tank and provided with means thereon for engagement with and dislodging said valve from said chamber for closing said outlet, when a predetermined level of the liquid is attained in the tank, said operating member being extended from said nozzle for connection with said float, and an auxiliary valve connected with said chamber and adapted to be closed by the pressure in said nozzle when said main valve is closed, for preventing the leakage of the fluid around the operating member, said chamber having a lower wall portion engaging the periphery of said ball valve whereby said valve will be held in open position by gravity.

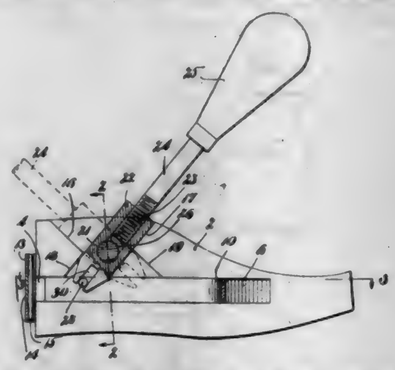
1,539,181. METHOD OF ATTACHING LINOLEUM. LOUIS C. GREINER, Evansville, Ind. Filed July 24, 1924. Serial No. 727,952. 3 Claims. (Cl. 45—31.)

3. A desk or table top comprising a base of relatively hard material having sides at right angles to its upper face, a covering of flexible material secured to the upper face of the base, strips of similar material secured to its sides, and edge strips extending along the meeting edges of the sides and upper face extending into the base at an angle oblique to the plane of the upper face and having

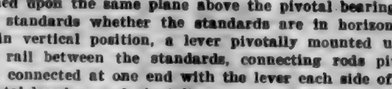
the upper and side faces of their outer edges in the planes of the upper surface of the top covering and the outer surfaces of the adjacent side covering respectively.

1,539,182. PEDAL ATTACHMENT FOR ACCELERATING LEVERS. LESLIE S. HACKNEY, Pasadena, Calif. Filed June 1, 1923. Serial No. 642,769. 4 Claims. (Cl. 74—81.)

1. In combination with an accelerator foot lever, a rotatable antifriction device, a support in which said rotatable device is journaled, means on said support for clamping the device to said foot lever and a device secured into said support for reinforcing its strength.



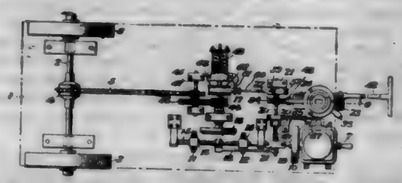
1,539,183. PLASTER BOARD. JOSEPH F. HAGGERTY, Buffalo, N. Y., assignor to Universal Gypsum Company, Chicago, Ill., a Corporation of Delaware. Filed July 23, 1921. Serial No. 487,004. 4 Claims. (Cl. 154—45.9.)



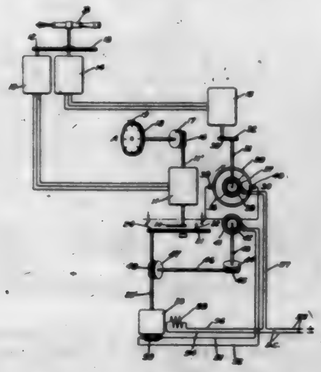
3. A plasterboard comprising a body made of plastic material, a sheet of fibrous covering material secured to each face of said body portion, each of said sheets of covering material having its marginal portions extending around the opposite edges of said body and over onto the marginal portions of the opposite faces of said body and overlapping, the corresponding marginal portions of the other sheet, the overlapping portions of said covering material being secured together by an adhesive.

1,539,184. STRETCHING APPARATUS. JOHN S. HANSEN, Brockton, Mass.; Elvena G. Hansen, executrix of said John S. Hansen, deceased, assignor to O. A. Miller Treeing Machine Company, Brockton, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1922. Serial No. 539,273. 1 Claim. (Cl. 12—128.5.)

Apparatus of the kind described, adapted to be applied to boots and shoes, consisting in expansible and collapsible members in the form of a skeleton last and pivotally mounted together at their rear ends, an expansion member enclosed within said members and adapted to reciprocate in a direction longitudinal to the said members, a horizontally arranged shaft in said members, a member rotatably mounted on said shaft and associated with the expansion member, and a threaded lever associated with said rotatably mounted member for oscillating the said member to cause a movement of the expansion member and to lock the said rotatable member in adjusted position on said shaft.

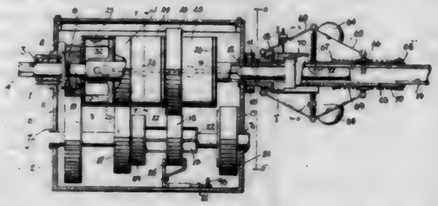


1,539,185. DAY BED. EDWARD HEIN, Grand Rapids, Mich., assignor to Foot Reynolds Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 12, 1924. Serial No. 706,078. 1 Claim. (Cl. 5—21.)



In day bed construction, a frame having vertically disposed side rails, a standard pivotally mounted upon one of said side rails near each end and near the lower edge thereof, an arm integral with and extending to one side of each standard and so positioned that the vertical distance of the end of said arms will be positioned upon the same plane above the pivotal bearing of the standards whether the standards are in horizontal, or in vertical position, a lever pivotally mounted upon the rail between the standards, connecting rods pivotally connected at one end with the lever each side of its pivotal bearing, and pivotally mounted at the other ends upon the ends of the arms on the standards, plain standards pivotally mounted upon the other bed rail in position to pair with the first named standards, and supporting beams secured to and connecting the upper ends of the standards in pairs, all so mounted that the operation of the lever will cause the standards to raise, lower and support the bed and bedding upon the cross beams.

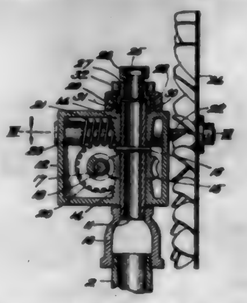
1,539,186. MOTORIZED PULL TRUCK. EDGAR W. HELLER, Newark, N. J. Filed July 11, 1923. Serial No. 650,809. 44 Claims. (Cl. 180—54.)



1. A motorized pull truck comprising a truck body, transporting wheels, a motor, a pull element adapted for drawing the truck, and means operated by the pull element to connect the motor to the transporting wheels.

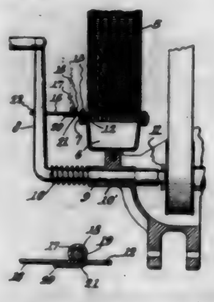
1,539,187. MEANS FOR REPRODUCING POSITION. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Dec. 27, 1921. Serial No. 524,882. 4 Claims. (Cl. 272—289.)

1. Means for reproducing position comprising in combination with a controlling object and a driven object, a fine reproducer of angular movement responsive to movement of said controlling object operatively connected to said driven object, and a coarse reproducer responsive to movement of said controlling object for determining the number of whole revolutions of said fine reproducer but leaving it free in a particular revolution to move the driven object into agreement with the controlling object.



1,539,188. AUTOMATIC TRANSMISSION FOR MOTOR VEHICLES. HENRY R. HOFFMAN, Chicago, Ill. Filed Feb. 17, 1923. Serial No. 619,689. 3 Claims. (Cl. 74—97.)

1. In a device of the type described, a hollow drive shaft, a clutch mechanism, a sliding cam disposed in said drive shaft and arranged to operate said clutch mechanism, a governor rotatably mounted on said drive shaft, a sleeve slidably mounted on said drive shaft yieldably connected at one end of said governor, a pair of cooperating locking members slidably supported at the opposite end of said governor, said locking members each being provided with a plurality of steps, and one of said locking members being relatively close to said shaft at its inner end, and the steps on the other locking member being arranged to lie away from said drive shaft at its inner end, and means associated with said locking members and with said governor, whereby said locking members may be actuated when said governor expands or contracts to permit said sleeve to become engaged with certain steps of said locking members with a quick forceful movement.



1,539,189. LAWN SPRINKLER. LOUIS E. HOLLAND, Kansas City, Mo. Filed Sept. 4, 1923. Serial No. 660,730. 2 Claims. (Cl. 299—68.)

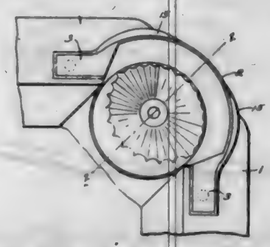
1. In a lawn sprinkler, a stationary upright water tube, a box journaled directly thereon for horizontal rotation, a nozzle carried by the box and in communication with the said tube, a horizontal shaft journaled in the box, a bladed water spreader wheel on the shaft with its blades in the line of water discharge from the nozzle to receive the impact of the water to turn said shaft, a worm on said shaft, a worm wheel within the box and rigid on the said tube, a horizontal shaft journaled in the

box in the horizontal plane of the worm on the tube and extending at right angles to the first-named horizontal shaft, and a worm and worm wheel on said second shaft and respectively enmeshed with the worm wheel on the tube and the worm on the first-named shaft for utilizing the resistance of the last-named worm wheel to rotate the box on the said tube when the wheel is turned around its own axis by water from the nozzle.

1,539,190. CRANK HOLDER. AMBL W. HOOKOM, Iowa City, Iowa. Filed May 10, 1924. Serial No. 712,328. 2 Claims. (Cl. 74—33.)

1. A device for holding a crank of an automobile against turning movement, comprising a substantially horizontal part adapted to be mounted upon the forward end of the automobile and having a knuckle, a substantially horizontal resilient tongue carried by the horizontal part and projecting forwardly beyond the knuckle, a swinging part for engagement with the crank and having a knuckle, means pivotally connecting said knuckles so that the knuckle of the swinging part is in permanent frictional engagement with the resilient tongue, said resilient tongue supporting the swinging part when in the horizontal position, and securely holding the same in the vertical inactive position when shifted thereto.

1,539,191. WINDOW-SILL BOLT. FRANK E. HUME, New York, N. Y. Filed Aug. 20, 1923. Serial No. 658,204. 6 Claims. (Cl. 20—72.)

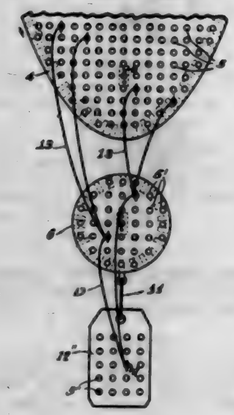


1. In a device of the class described, the combination with a support having an outer accessible side and an inner inaccessible side, said support provided with two apertures, a U-shaped bolt having a crotch portion engaging the rear side of the support and threaded ends

extending forwardly through the apertures, a face plate provided with a head adapted to be engaged by a belt clip, said plate positioned on the outer side of the sup-

port and nuts engaging the threaded ends of the bolt and bearing on the face plate to secure the same in position.

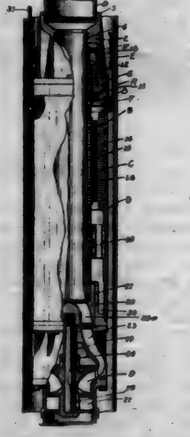
1,539,192. POCKET FOR POOL TABLES. GUSTAV A. JAEGER, Morrison, Ill. Filed Aug. 6, 1923. Serial No. 656,058. 1 Claim. (Cl. 273—12.)



In a device of the class described, in combination with an arcuate pool table iron, having a recess in its inner face, and a supporting member at a central point in said recess; a ball pocket adapted to be secured at its upper edge in said recess, and provided with a metal band attached thereto, said pocket and band being fitted with means for releasable engagement with said supporting member; and fastening means at the ends of said band, for holding the same releasably in said recess, with the inner face of the band flush with the face of said iron.

1,539,193. WATERPROOF COATING AND PROCESS. HENRY G. JAEGER, Rose Hill, Calif., assignor of one-fourth to Dr. Everett R. Lambertson, and one-fourth to George P. Clements, both of Eagle Rock City, Calif., and one-fourth to Julius Schneider, Los Angeles, Calif. Filed Oct. 4, 1922. Serial No. 592,420. 4 Claims. (Cl. 91—68.)

1. The method which comprises applying an oil sizing or excluding agent to a surface to be coated in sufficient quantity to overcome suction without actually filling the pores thereof, and afterward applying thereto an oxychloride cement thinned to the desired consistency and capable of undergoing crystallization throughout its mass and partially within said pores.

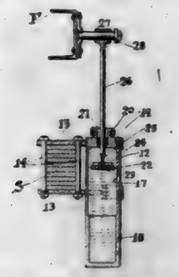


1,539,194. EDUCATIONAL APPLIANCE. ALFRED KORZYBSKI, New York, N. Y. Filed July 6, 1923. Serial No. 649,844. 4 Claims. (Cl. 35—12.)

1. In a device of the character described, the combination of a body shaped to denote a figure of indefinite extent and having a number of points of attachment, a plurality of bodies shaped to denote bodies of finite extent, each of which bodies has a plurality of points of attachment, cords extending from various points of attachment in said first-named body to each of said plu-

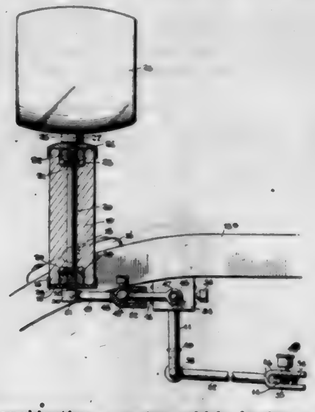
rality of bodies, a plurality of additional bodies each provided with a number of points of attachment, and lines of attachment extending from said first-named plurality of bodies to said second-named plurality of bodies.

1,539,195. SUBMERGED PUMPING UNIT. ALOIS KREMSER, San Francisco, Calif. Filed Mar. 29, 1922. Serial No. 547,832. 18 Claims. (Cl. 103—87.)



1. A deep well pumping unit comprising an electric motor, a pump driven thereby, said pump having an inlet and a discharge connection, a hollow shaft in the motor, a stationary pipe extending through the hollow motor shaft, and means for directing the discharge from the pump through said stationary pipe.

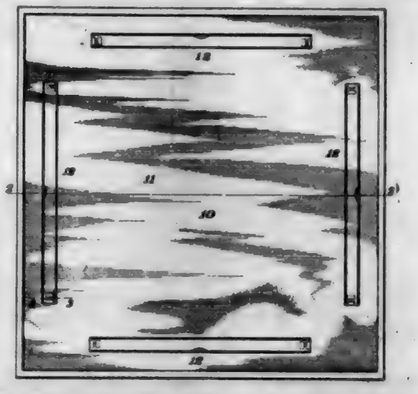
1,539,196. SNUBBER. IRA E. LITTEN, Orange, Calif. Filed July 5, 1924. Serial No. 724,504. 1 Claim. (Cl. 188—88.)



A snubber comprising a cylinder, one end of which is provided with a reduced bore, a fluid in said cylinder, a piston adapted to reciprocate in said cylinder, means

permitting said piston to be easily forced from one end to the other of said cylinder during its downward

stroke, and means tending to prevent the movement of said piston in the opposite direction for substantially the first half of its return stroke.

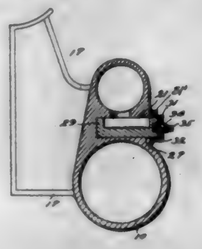


1,539,197. HEADLIGHT. FRED J. LONG and WILLIAM H. EMERY, Carbondale, Colo. Filed May 4, 1923. Serial No. 636,713. 2 Claims. (Cl. 240—62.)

1. In combination, a motor vehicle having a steering mechanism including the usual steering knuckles and connecting rods therebetween, shafts rotatably mounted on the vehicle, a pair of headlights rigid with said shafts, a rock arm rigid with each shaft, the free end of the rock arm being provided with a sleeve, a socket at the inner end of the sleeve, said sleeve being provided with slots, a rod having a ball mounted in the socket of each sleeve with the rod movable through the slots in a respective sleeve, a rod disposed transversely of the motor vehicle and longitudinally shiftable, and means connecting the end of said rod with the ball equipped rods, and means connecting the transversely disposed rod with the connecting rod associated with the steering knuckles.

1,539,198. GAME BOARD. LUCIEN A. MARSH, Mill Valley, Calif. Filed Feb. 12, 1923. Serial No. 618,503. 8 Claims. (Cl. 273—136.)

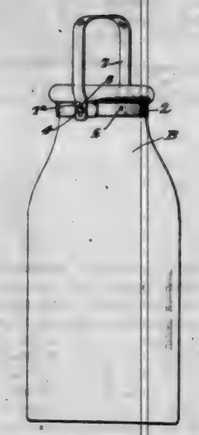
1. A rectangular game board adapted for use in playing a game employing flat oblong playing pieces, said board having a plane playing surface, V-shaped grooves formed in said playing surface parallel to the sides of the game board, said grooves being adapted to receive and support playing pieces at an angle with relation to the vertical, and filler members fitted in said grooves and hinged to the game board whereby they may be oppositionally disposed in an upright position to cooperate with the groves to support the playing pieces at an angle to the vertical or be nested in said grooves with



their surfaces parallel to the playing surface of the board whereby the playing surface of the latter will be uninterrupted.

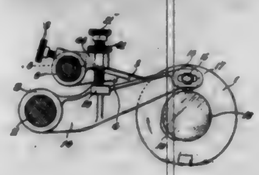
1,539,199. PNEUMATIC INSOLE. MASON J. MERRIHEW, Avalon, Calif. Filed Jan. 7, 1924. Serial No. 684,826. 4 Claims. (Cl. 36—29.)

4. An inner sole adapted to be worn within foot-wear comprising an upper portion, a bottom portion secured to said upper portion and adapted to be disposed adjacent the outer sole, said bottom portion being divided into a separable toe section and a heel section normally retained in abutting relation, and a pneumatic cushion disposed between said bottom portion and said upper portion having a downwardly extending nozzle extending through one of said sections.



1,539,200. CUT-OFF VALVE FOR STEAM ENGINES. BENJAMIN F. O'BRYANT, Gadsden, Ala., assignor of one-half to I. M. Rosen, Gadsden, Ala. Filed May 12, 1921, Serial No. 468,905. Renewed Mar. 30, 1925. 1 Claim. (Cl. 251—100.)

A valve member removably mounted in a bore extending transversely of a passage, said passage and bore being formed in a body member and said bore having its inner end closed, and said valve member comprising a pair of circular heads and a connecting portion therebetween adapted to be utilized for controlling fluid flow

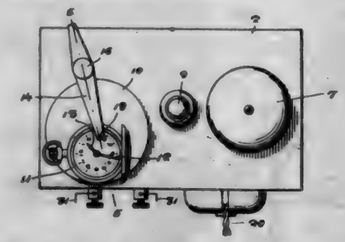


through the passage, said valve member having one circular head slightly extending from the open end of bore, a cap fitted upon the last named end of the valve, a securing flange formed with the cap whereby the same may be secured to the body member, and a set screw threaded through a side wall of the cap whereby the valve member may be adjustably held against rotation.

1,539,201. MILK-BOTTLE CARRIER. FREDERICK A. OTTOW, Los Angeles, Calif. Filed Dec. 13, 1923. Serial No. 680,416. 3 Claims. (Cl. 215—100.)

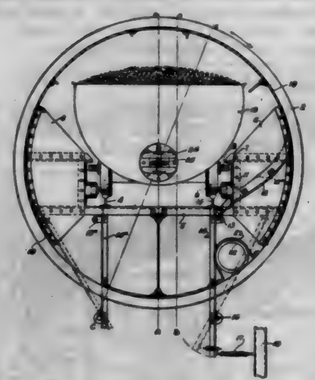
1. A milk bottle carrier consisting of a split band, having on one end a pin with an elongated head, the other end of the band being apertured to receive the head of the pin, and a handle pivoted at one end on one side of the band and having in its opposite end an aperture to receive the head of the pin, said head holding the handle when the latter is turned to a carrying position.

1,539,202. INTAGLIO-PRINTING MACHINE. MALCOLM OWEN, London, England. Filed July 9, 1923. Serial No. 650,458. 8 Claims. (Cl. 101—157.)



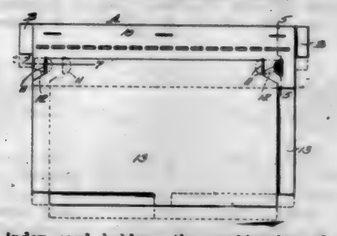
1. In combination, a printing cylinder having a gap in which the ends of a printing sheet are fastened, a rocking shaft, a doctor mounted on said shaft, a cam rotating synchronously with the printing cylinder, a lever rocked by said cam, adjustable means imparting the movement of said lever to said doctor, whereby the pressure of the doctor on the cylinder may be varied, and a roller adjustably mounted for longitudinal movement on that end of the lever operated by said cam, whereby the lift of the doctor effected through said lever can be timed to suit the speed of the cylinder.

1,539,203. TROUSER STRETCHER. JOHN FORBES PALMER, Clapham, London, England, assignor, by mesne assignments, to Strechanpres Trouser Appliance Company Limited, Cheapside, London, England. Filed Apr. 30, 1923. Serial No. 635,687. 6 Claims. (Cl. 223—19.)



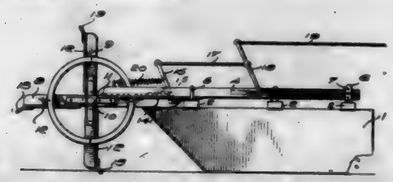
1. A trouser stretcher, comprising a convex supporting surface, clamping means at the respective ends of such surface and adapted for relatively opposite movement to stretch the garment, and pressing means overlying the surface and connected to and operated in the movement of the clamping means.

1,539,204. TIME SWITCH. JOSEPH SALVADOR PROWENES, Kansas City, Mo. Filed Jan. 27, 1923. Serial No. 615,388. 2 Claims. (Cl. 200—35.)



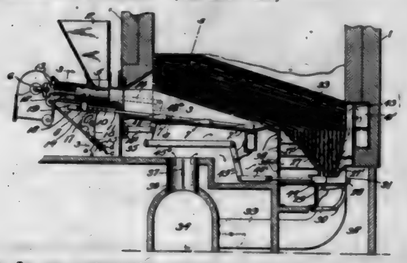
2. The combination of a conductive plate adapted for the arrangement thereon of a watch, and a terminal mounted in spaced relation to the conductive plate and adapted to cooperate with a watch hand for the closing of a circuit at a predetermined time; the mounting of the terminal including a threaded post about which terminal is adapted to turn, a spring about said post and interposed between the terminal and an abutment, and a nut mounted on the post and arranged at the opposite side of the terminal with reference to the spring.

1,539,205. CONTINUOUS ROTARY DUMP. ERSKINE RAMSAY, Birmingham, Ala. Filed Sept. 5, 1922. Serial No. 586,163. 20 Claims. (Cl. 214—52.)



1. In a car dumping apparatus, a dump movable to dump a car thereon laterally, tracks having movable sections adjacent to the dump, and means co-ordinated with the dump's movements to move said track sections into and out of operating position, as and for the purposes described.

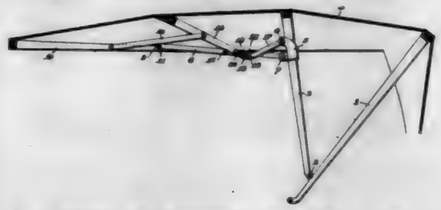
1,539,206. CARD-INDEX DEVICE. JAMES H. RAND, Jr., Tonawanda, N. Y. Filed Jan. 25, 1923. Serial No. 614,810. 10 Claims. (Cl. 129—16.7.)



1. In index card holders, the combination of an attaching portion having parts for attachment to a support, and a plurality of card-supporting portions hinged to said attaching portion, each of said card-supporting portions having parts for engaging and supporting a plurality of separate cards.

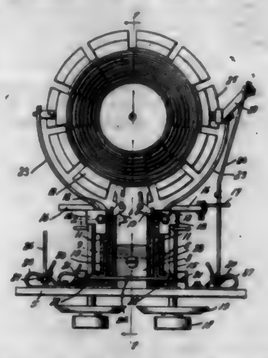
1,539,207. RIDGING MACHINE. JACOB RANKER, Anaheim, Calif. Filed July 26, 1921. Serial No. 487,757. 1 Claim. (Cl. 97—55.)

In a ridging and blocking machine, a frame, a ridger board mounted thereon, a blocking device mounted on said frame in the rear of said ridger board, said blocking device comprising a revoluble frame, a plurality of blades mounted thereon, one of said blades being adapted to extend downwardly and collect a portion of the earth cut by said ridger board, a trip lever normally engaging another of said blades, a transverse shaft on which said lever is mounted, a crank formed on one end of said shaft, a spring connected to said crank to normally retain the trip lever in operative position, a link connected to the end of said crank to permit operation of said shaft to release said trip lever, and an offset member formed on one end of said shaft and adapted to engage a portion of said frame to limit the movement of the shaft in one direction.



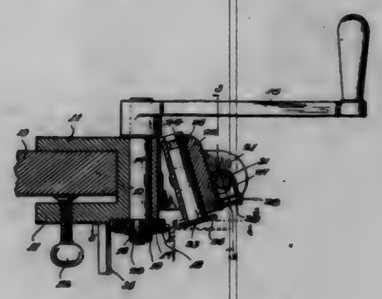
1,539,208. UNDERFEED STOKER. MAURICE RATEL, New York, N. Y. Filed Aug. 16, 1920. Serial No. 403,905. 23 Claims. (Cl. 110—44.)

1. In an automatic stoker, a fuel retort or trough, a set of compound pushers in said retort having their longitudinal axes in different vertical planes, and means for moving adjacent compound pushers in opposite directions.



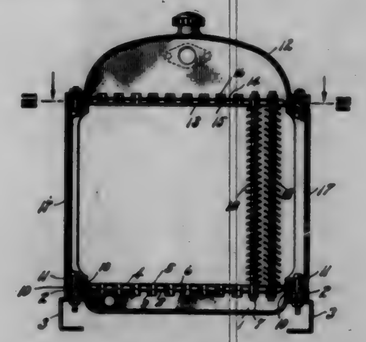
18. In an automatic stoker, the combination of a series of retorts and twyers alternating therewith, means supplying fuel to the outer ends of said retorts, means advancing the fuel through said retorts, an ash-receiving hopper at the inner ends of said retorts and provided with an opening in the bottom thereof, a refuse-receiving dump plate arranged below said hopper in spaced relation therewith, and means for pushing the refuse over said plate and ejecting the same rearwardly of said hopper.

1,539,209. VEHICLE TOP. EDGAR A. RATHBUN, Pontiac, Mich., assignor to American Forging and Socket Company, Pontiac, Mich., a Corporation of Michigan. Filed Aug. 15, 1921. Serial No. 492,357. 2 Claims. (Cl. 296—116.)



1. A vehicle top framework comprising a bow, an outrigger bow, arms connecting said outrigger bow to said front bow, an intermediate bow pivotally connected to said arms and having a portion thereof below said arms, supporting means on said arms adapted to hold said intermediate bow at an inclination to said arms, and links connecting the portion of said intermediate bow below said side arms to said front bow above said side arms for holding said intermediate bow on said supporting means to cooperate therewith in supporting said arms relative to said front bow, said links causing synchronous movement of said bows.

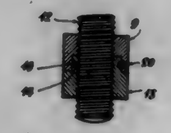
1,539,210. INDUCTION COIL MOUNTING. RICHARD C. ROSE, Osceola, Ark. Filed Aug. 27, 1923. Serial No. 659,591. 5 Claims. (Cl. 171—119.)



4. An inductance coil mounting comprising a panel, a supporting member on the panel, bearings on the supporting member, operating rods having right angled ends disposed in the bearings, fingers carried by the right angled ends of the rods, a stationary inductance coil mounted on the panel, movable frames disposed on opposite sides of the stationary coil, pivoted coil frames mounted in the movable frames, operating arms for the frames, said operating arms having openings to accommodate the fingers, and said pivoted frames adapted to be moved by the operating arms to move the coils supported by the coil frames in parallel relation with the stationary coil.

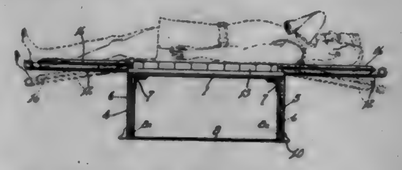
1,539,211. CAN OPENER. EDWARD C. SCHUDES, Nashville, Tenn. Filed Nov. 7, 1922. Serial No. 599,533. 5 Claims. (Cl. 30—3.)

1. A can opener including a body member, a rotatable knife carried thereby, feeding means associated with said knife, a bearing block, a shaft rotatable upon said block, means pivotally connecting the block with the body member and also rotatably connecting the shaft with said block, feeding means carried by said shaft, and means for rocking the block to clamp the upper margin of the side wall of a can between said feeding means.



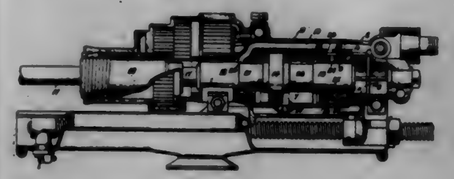
1,539,212. RADIATOR. PAUL R. SEEMILLER, Detroit, Mich. Filed Jan. 21, 1922. Serial No. 530,768. 5 Claims. (Cl. 285—25.)

5. In a radiator construction wherein top and bottom headers are connected by tubes which establish communication between said headers —means for connecting said tubes to said headers, said means comprising spaced parallel sheet metal walls having contacting marginal portions connected together, said walls having outstruck portions extending into said headers and connected to said tubes to maintain said tubes in spaced relation and attached to said walls.



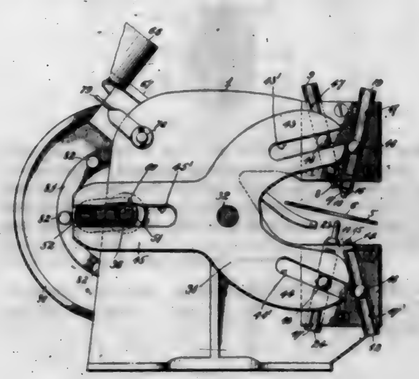
1,539,213. MEANS FOR LOCKING NUTS UPON BOLTS. GEORGE SHAW, Ashton-under-Lyne, England. Filed Mar. 29, 1923. Serial No. 628,629. 1 Claim. (Cl. 151—19.)

Means for locking a threaded nut upon its bolt, comprising a central smooth bored recess in said nut, a locking stud bored and threaded to fit upon the bolt, a radially compressible tubular boss upon the locking stud to engage in the nut recess, the outer wall of the said tubular boss being eccentric to the said nut recess, a peripheral groove formed exteriorly upon the tubular boss, the said groove being concentric with the bore



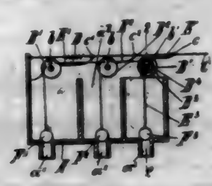
of the nut and eccentric to the boss of the locking stud, and an orifice in the nut through which a locking device may be pressed to engage within the groove and prevent relative radial movement of the bolt and locking stud and maintain the grip of the latter upon the bolt thread.

1,539,214. EXERCISING DEVICE. WILLIS G. SHOCKEY, Chicago, Ill. Filed July 19, 1923. Serial No. 652,616. 8 Claims. (Cl. 272—58.)



1. In a device of the type described, a body portion having a substantially flat supporting surface, said body portion being provided with longitudinal grooves, spring arms disposed normally in the grooves and being movable longitudinally to form extensions of said body portion for supporting the latter, and brace members extending between the end members.

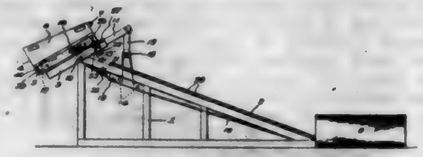
1,539,215. MOTOR. ARTHUR H. SHAER, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 360,696. 12 Claims. (Cl. 121—17.)



1. A motor comprising a cylinder member having a piston chamber, and a bushing fixedly and removably located in the cylinder member and havig a reduced bore in communication with the piston chamber, said bore forming an extension chamber, a piston having an active pressure surface in the piston chamber, and a reduced extension operating in the bushing and having a similarly facing pressure surface, and means for distributing the motive fluid to the piston chamber outside the bushing to operate against the pressure surface of the piston in said chamber and ports for simultaneously delivering a portion of said motive fluid from the piston chamber to the outer end of the bushing bore and against the said pressure surface of the piston extension in said bore.

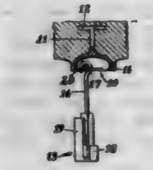
1,539,216. MACHINE FOR SETTING EYELETS, RIVETS, AND THE LIKE. EDMUND S. SPINNEY, Abington, Mass., assignor to Jeremiah Fitzpatrick, Braintree, Mass., and Charles H. Fitzpatrick, North Abington, Mass. Filed Mar. 26, 1924. Serial No. 701,978. 13 Claims. (Cl. 218—15.)

6. In a machine of the type specified, the combination comprising a punch mechanism having separate members movable in reverse directions into and out of an engaging position, a setting mechanism having separate members movable in reverse directions into and out of an engaging position, means for mounting said members of said respective mechanisms to be movable as aforesaid along independent lines of travel and to have a substantially common engaging point relatively to the work, means for successively operating said mechanisms and means for automatically supplying eyelets to the said mechanisms.



1,539,217. LONG-DISTANCE TRACTION-ROPE DEVICE. KARL STAHL, Friedrichshafen, Germany, assignor to the Firm: Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,604. 3 Claims. (Cl. 244—1.)

1. In a device of the kind described in combination, a main traction member secured at both ends, means for keeping said member taut, and slack branch traction members of different length, each connected at one end with said main member and at the other with an object to be operated by a tractive effort.

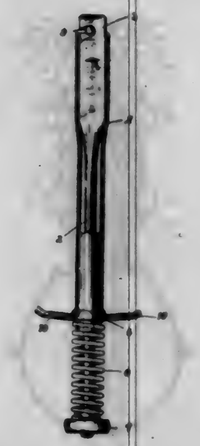


1,539,218. GRAVEL LOADER. HOWARD E. STILES, Bolivar, Mo. Filed Dec. 31, 1921. Serial No. 526,207. 3 Claims. (Cl. 214—104.)

1. A dumping apparatus of the class described comprising an inclined track, a car engaging the same, means at the lower end of the track for permitting a load to be placed upon the car, a dumping section pivotally mounted at the upper end of the track, a guiding pulley at the pivoted point of the section, a depending part at the rear of the section, a recessed member for receiving said depending part, pulleys carried

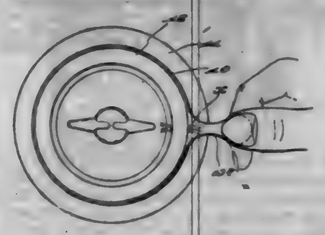
by the recessed member and the depending part, a cable passing around said pulleys and having one end connected with the car and its other end adapted to be pulled upon to draw the car up to the track.

1,539,219. HANGER FOR SUSPENDED CEILINGS. JOHN TASEFF, Los Angeles, Calif. Filed Mar. 30, 1925. Serial No. 19,322. 4 Claims. (Cl. 72—118.)



1. A hanger for suspended ceilings comprising a hook member adapted to be fixed in the floorwork of a building so as to extend therebelow, a short up-turned hook on the lower end of said hook member and a longer up-turned hook adjacent said short hook but above it and at an angle of 90 degrees thereto.

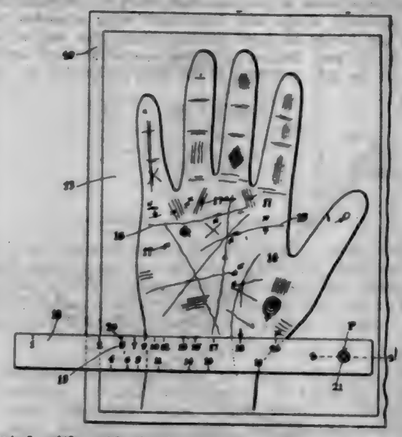
1,539,220. KEY-RING HOLDER. ROBERT C. TAYLOR, Thomasville, Ga. Filed Nov. 12, 1923. Serial No. 674,319. 1 Claim. (Cl. 24—8.)



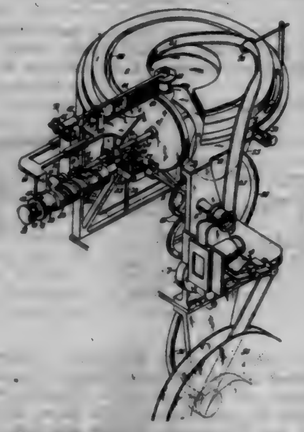
The combination with a resilient strip having an opening, of a garment engaging tongue at one side and integral with the strip, a key ring retaining tongue at the other side of and integral with the strip, said tongues being extended in opposite directions, the retaining tongue cooperating with the apertured strip to provide an elongated key ring holding loop, and a pointed finger extending at an obtuse angle from the retaining tongue and normally projecting through the opening for engagement with a garment or the like seated between the apertured strip and the garment engaging tongue.

1,539,221. WELDER'S ROD HOLDER. JOHN WILLIAM TENNANT, Salinas, Calif. Filed Oct. 30, 1923. Serial No. 671,806. 2 Claims. (Cl. 118—111.)

1. A rod holder of the character described comprising a tube, a rod slidably mounted therein, one end of said rod being flattened and projecting through one end of the tube, a hook-shaped member formed on the outer flattened end of the rod, said tube being also flattened to form a guide for the flattened end of the rod and to limit movement of the rod in one direction within the tube, and said flattened end having recesses formed therein to cooperate with the hook-shaped member, and a spring actuated handle on the opposite end of the rod and adapted to normally retract the flattened hook-shaped end of the rod with relation to the tube.



1,539,222. SEALING RING FOR JARS. MARTHA L. TURNER, West Roxbury, Mass. Filed Mar. 30, 1923. Serial No. 628,925. 2 Claims. (Cl. 215—37.)

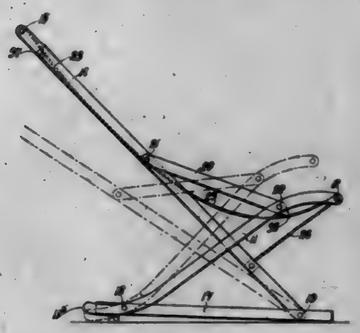


1. A resilient sealing ring for jars having a tab projecting from the periphery thereof in a relatively narrow neck portion bearing a relatively enlarged head constituting a finger grip, whereby a tension exerted upon said narrow neck portion results in stretching and reducing the thickness of a relatively small, closely localized area of the ring to permit venting at such area.

1,539,223. PALM-READING CHART. EMIL WATERSTRAAT, Ocean Park, Calif. Filed Aug. 28, 1924. Serial No. 734,623. 3 Claims. (Cl. 273—161.)

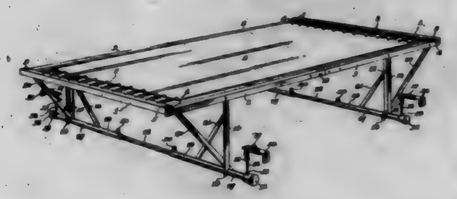
1. A device of the class described comprising a chart disclosing the palm of a hand, location marks upon said chart, a guide strip movable over said chart, said guide strip having indicia thereon adapted to be brought into register with said location marks, and a table associated with said chart adapted to disclose the significance of said location marks as registered by said guide strip.

1,539,224. FILM DELIVERING OR WINDING APPARATUS SUITABLE FOR CINEMATOGRAPHS. EDWARD JOHN WAY, Johannesburg, Transvaal, South Africa, assignor to Bioscope Improvements Limited, Johannesburg, Transvaal, Union of South Africa, a Company of Transvaal, South Africa. Filed Sept. 14, 1922. Serial No. 588,258. 9 Claims. (Cl. 88—18.7.)



1. In a film delivering or winding apparatus the combination of a rotatable carrier for film coil, continuously variable speed gear for rotating the same and means positively driven with the speed gear for varying the velocity ratio of said gear substantially by equal increments for each revolution of the carrier.

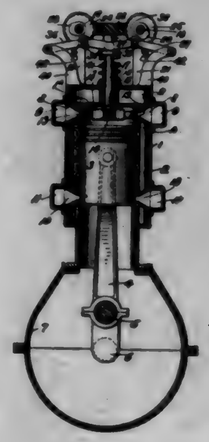
1,539,225. COMBINED DECK CHAIR AND ROCKING-CHAIR. CHARLES WEST AND ARTHUR GREEN, London, England. Filed June 3, 1922. Serial No. 565,710. 2 Claims. (Cl. 155—56.)



1. A combined deck chair and rocking chair comprising in combination substantially rectangular back and seat frameworks, a base framework on which the chair rests,

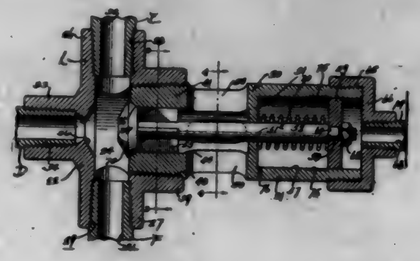
comprising side members and a transverse member on the underside and at the rear thereof, the side members of the seat framework being pivoted at their lower ends to the side members of the base framework at the rear, the side members of the seat framework being extended beyond the pivots to form limiting stops, the side members of the back framework being pivoted at their lower ends to the side members of the base framework at the

front, a seating fabric having its lower front portion supported by a member between the upper ends of the sides of the seat framework and its upper portion supported by a member between the upper ends of the sides of the back framework, link members on each side connecting the side members of the seat and back frames, and means for maintaining the said frames in any adjusted position, for the purposes set forth.



1,539,226. COLLAPSIBLE COT. ALBERT C. WHITE and LEE H. FROMWILLER, Detroit, Mich. Filed Apr. 16, 1923. Serial No. 632,543. 2 Claims. (Cl. 5—118.)

1. In a collapsible cot for automobiles, transverse supports adapted to be fitted between walls of an automobile body, hangers for supporting said supports relative to the walls of the automobile body, a frame, foldable legs carried by said frame, said foldable legs being arranged so that ends thereof may be placed in scissor-like relation for gripping said transverse supports, and a web in said frame.



1,539,227. INTERNAL-COMBUSTION ENGINE. MARSHALL L. WOOD, Montpelier, Vt. Filed June 30, 1921. Serial No. 481,516. 6 Claims. (Cl. 123—65.)

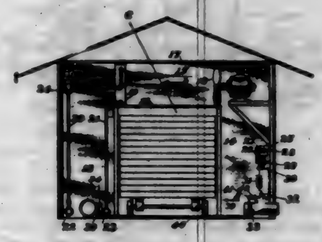
5. In an internal combustion engine, the combination with the cylinders, pistons, and inlet valves thereof, the latter having collar-provided stems and a spring device for moving the valve in one direction, parallel shafts, cam devices on said shafts, spiral wheels also on the shafts, a spiral gear intermediate of and operating the spiral wheels, and means for moving one of the spiral wheels on or with its shaft so as to vary the position of the cams, together with lever devices acted on by the cams and having free ends engaging the stems of the

valves, all arranged so that the cam shafts are driven simultaneously while one of them may be retarded or accelerated relatively to the other.

1,539,228. COMBINED QUICK-RELEASE AND CHECK VALVE FOR AIR BRAKES. WALTER C. WRIGHT, Youngstown, Ohio. Filed July 1, 1924. Serial No. 723,609. 12 Claims. (Cl. 303—69.)

1. In a quick release construction for air brake systems the combination with a brake cylinder, an air pressure supply arrangement for the brake cylinder, and means for regulating the flow of air from said air pressure supply arrangement to the brake cylinders, a quick release valve having connection with the brake cylinder, and reduced pressure means for operating the quick release valve to close the air pressure supply arrangement to the brake cylinder and open the latter to the atmosphere to allow pressure to escape therefrom.

1,539,229. SWAB. SWAN M. AKEYSON, Long Beach, Calif., assignor, by mesne assignments, of one-fourth to Albert W. Warr, Los Angeles, Calif., and one-fourth to W. J. Holland, Huntington Park, Calif. Filed May 10, 1923. Serial No. 637,942. 9 Claims. (Cl. 74—109.)

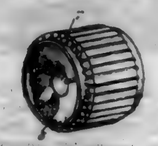


1. A swabbing device for wells comprising tubular sections and tubular connections arranged end to end, and adjustably connected to each other, and packing

rings upon the tubular connections between the sections adapted by an adjustment of the sections to be compressed axially and expanded radially to cause their

peripheries to project from the peripheries of the sections, there being cupped washers at the ends of the packing rings.

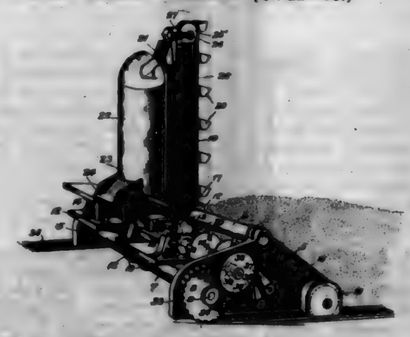
1,539,230. DRIER. GEORGE R. ANDERSON, Santa Rosa, Calif. Filed Jan. 10, 1923. Serial No. 611,757. 2 Claims. (Cl. 34—46.)



1. A drier of the character described comprising a housing having a tunnel formed therein and extending from end to end of the housing, a series of separated aligned compartments disposed on each side of the tunnel and dividing the tunnel into a series of transverse compartments, an air duct connecting each set of aligned side and opposed compartments, means for maintaining an independent circulation of air through each set of opposed compartments and through the connecting air duct and also transverse of the tunnel, a radiator in each transverse duct through which the air is circulated, temperature actuated means automatically regulating the flow of steam through each radiator, and means for automatically maintaining a predetermined moisture content in each compartment.

1,539,231. ADVERTISING NOVELTY. JESSE A. ARMSTRONG, Lexington, Ky., assignor to Spotswood Specialty Company, Lexington, Ky. Filed Jan. 26, 1924. Serial No. 688,745. 10 Claims. (Cl. 46—37.)

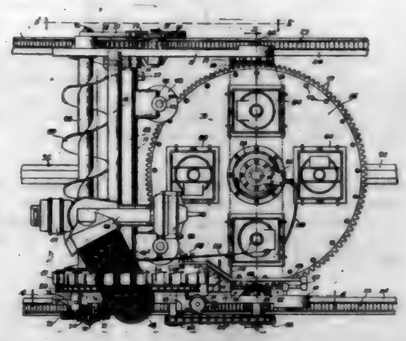
1. An advertising novelty comprising a sheet having a fold, and a blank secured upon the face of the sheet and having a fold coinciding with the fold of the sheet, the blank having a slit intersecting the fold and having folds extending from the first mentioned fold to the slit.



1,539,232. ROTOR. JOHN M. BARR, Milwaukee, Wis., assignor, by mesne assignments, to Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 18, 1922, Serial No. 537,554. Renewed Aug. 20, 1924. 5 Claims. (Cl. 172—120.)

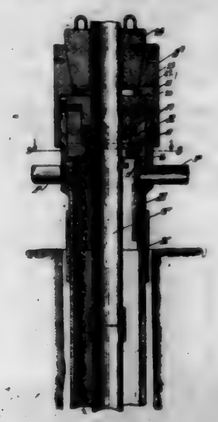
1. The method of making a rotor, which consists in placing a cylindrical core with longitudinal slots into a cylindrical stamped metal winding having integral longitudinal conductors and end rings, and then contracting said end rings perimetrically to insert said longitudinal conductors in said slots and hold them therein against radial displacement.

4. A cylindrical winding for a rotor, having integral longitudinal conductors and end rings, the end rings being partially enclosed by rings which become nonmagnetic as the temperature thereof increases to a critical point so as to increase the effective conductivity of said end rings.



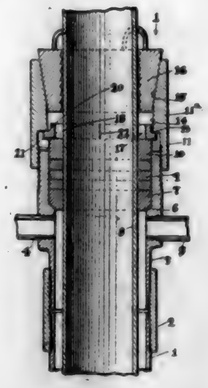
1,539,233. MOLDING MACHINE. ELMER O. BEARDSLEY, Chicago, and WALTER F. PIPER, Oak Park, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1921. Serial No. 485,506. 4 Claims. (Cl. 22—35.)

1. In a molding apparatus, the combination of a portable truck adapted to travel on a molding machine floor, means for propelling the truck, a molding machine



mounted on the truck, a reservoir for a working supply of sand fixed on the truck and located relatively to said machine so sand may be conveniently shovelled therefrom into a flask on or in the molding machine, and mechanism for conveying sand from a pile on the floor and delivering it into the reservoir.

1,539,234. MOLDING MACHINE. ELMER O. BEARDSLEY and WALTER F. PIPER, Chicago, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1922. Serial No. 599,191. 51 Claims. (Cl. 22—36.)



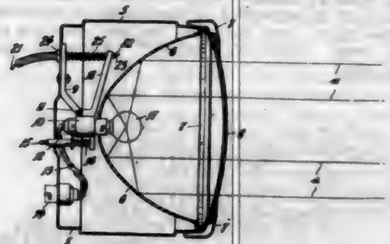
1. In a machine for making molds, the combination of a sand projector mechanism to operate the projector to forcibly deliver sand into flasks, mechanism for feeding sand to the projector, means for conveying flasks to the projector, and mechanism for driving said conveying mechanism to bring flasks successively into and out of position beneath the projector.

1,539,235. PACKING HEAD FOR WELL CASINGS. MILLARD SUMTER BLACK, Brea, Calif. Filed Jan. 4, 1923. Serial No. 610,668. 5 Claims. (Cl. 285—22.)

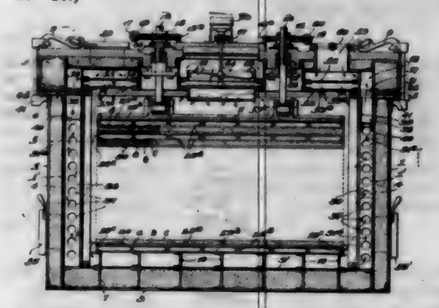
1. A packing head for well casings comprising a casing extension having an annular shoulder formed interiorly thereof, a false ring resting upon said shoulder and engaging the interior of said extension substantially its complete length, a centering ring within the false ring, packing rings superimposed upon the centering ring, a gland movable upon the false ring, and a sleeve adjustable on the extension and engaging said gland.

1,539,236. CASING HEAD FOR OIL WELLS. MILLARD S. BLACK, Huntington Park, Calif. Filed July 19, 1924. Serial No. 727,000. 4 Claims. (Cl. 166—14.)

1. A casing head comprising a casing extension having a packing seat, a compression member screwed upon the extension and having a bore large enough for the insertion of packing through the bore into the packing seat and having a compression ring seat, and a two-piece compression ring insertible through the bore into the ring seat to overlap the packing and hold the package in place.



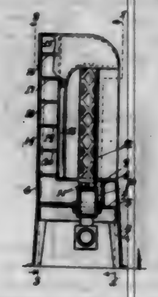
1,539,237. SCREENING BALL MILL. WALTER O. BORCHERDT, Austinville, Va., assignor to John Herman, Los Angeles, Calif. Filed Feb. 11, 1924. Serial No. 692,044. 3 Claims. (Cl. 83—9.)



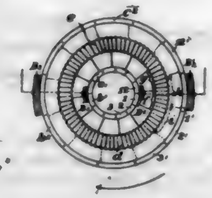
1. In a screening ball mill, a base screen forming a hollow cylinder, railroad rails secured against the inner face of the base screen parallel with the axis of the screen, the bases of the rails being spaced apart to expose apertures in the screen but prevent a ball of the size to be used from bearing upon the screen, the ball being supported by the bases, the heads of the rails being separated a distance greater than the diameter of one ball and less than twice the diameter of one ball, the rails being of such a height whereby a grinding action may take place between the rails.

1,539,238. CONTROL MEANS FOR HEADLAMPS OF ROAD VEHICLES TO OBVIATE GLARE. CHARLES FOSTER BROWNE, Camberwell, near Melbourne, Victoria, Australia. Filed May 23, 1924. Serial No. 715,420. 2 Claims. (Cl. 240—44.)

1. A vehicle lamp, including a casing, a reflector therein, a bracket removably secured to the rear wall of the casing, a holder pivotally supported at the lower end of the bracket in rear of the reflector, an arm integral with and projecting upwardly from the holder, a control wire extending through the rear wall of the casing and removably connected to the upper end of the arm, and a spring encircling said wire and bearing between the arm and bracket.



1,539,239. APPARATUS FOR MAKING REENFORCED GLASS. WILLIAM C. BULL, Brooklyn, N. Y. Filed Sept. 1, 1922. Serial No. 585,599. 34 Claims. (Cl. 18—17.)



27. An apparatus for fabricating reenforced glass including an oven-chamber, means for sealing a press therein for the glass product, means for supplying dry heat to the chamber while the glass product is under pressure, and means for exhausting air during the dry heat and pressure period and for causing circulation of the heated air currents during the final stage of the dry heat and pressure period.

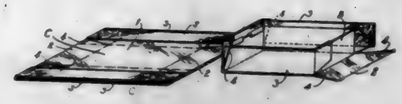
1,539,240. RADIANT GAS HEATER. WILLIAM H. CAIN, Los Angeles, Calif. Filed June 19, 1924. Serial No. 720,949. 5 Claims. (Cl. 126—92.)

1. A radiant gas heater having a box, radiant elements extending through the top of the box, a burner having jets in the box and discharging into the radiant elements, and means forming a zigzag air passage downwardly back of the radiant elements and discharging into the box.

1,539,241. SPARKLESS COMMUTATION. UGO CANTUTTI, Rome, Italy. Filed June 5, 1923. Serial No. 643,602. 1 Claim. (Cl. 171—228.)

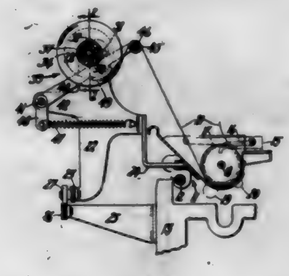
In a device for reducing commutation sparking in electric machinery, in combination, an armature, two electrically distinct, and oppositely wound, magnetically linked sectional windings on said armature, a commutator for said sectional windings, comprising a number of segments, the inter-linked winding sections of said windings being connected to those commutator segments, arranged at a position of 180 electric degrees relatively to each other.

1,539,242. OIL-WELL CLEANER. JAMES L. CARDER, Los Angeles, Calif., assignor of one-third to John A. Street, Los Angeles, Calif. Filed June 2, 1924. Serial No. 717,268. 12 Claims. (Cl. 166—20.)



11. A device of the character described, comprising the combination of a service conduit, hollow bodies provided with an intermediate discharge section connected to said conduit; collapsible packings having shells of flexible material, each shell being disposed about and secured to a body at one end, longitudinally extending springs within said shells, slidable members on said bodies each secured to a shell at its free end; and means securing said slidable members together and operable at will to bow said springs and expand said packings.

1,539,243. STAYED BOX COVERING AND METHOD OF PRODUCING THE SAME. MARK B. CLAFF, Randolph, Mass. Filed Jan. 22, 1923. Serial No. 614,085. 9 Claims. (Cl. 220—82.)

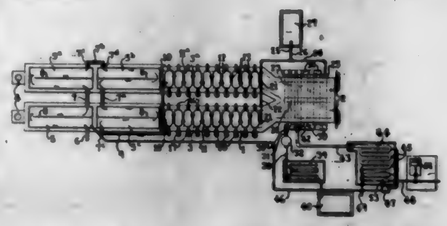


3. A web assembly for covering and staying a box shell, consisting of a continuous web of covering material slitted adjacent its margins and severed across said slits to provide covering blanks each having side

flaps and corner flaps attached to the ends of the side flaps, and two continuous webs of stay material adhesively united to said covering web marginally thereof

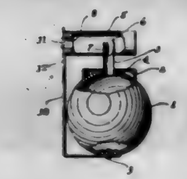
and disposed as attached stay strips coextensive in length with the side and corner flaps of the covering blank when the blank is severed from the covering web.

1,539,244. TYPEWRITING MACHINE. CLARENCE M. CREWS, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1923. Serial No. 622,476. 8 Claims. (Cl. 197—133.)



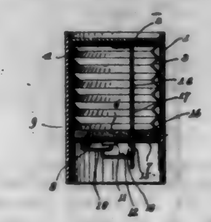
1. In a typewriting machine, a paper-reel, paper unreeling mechanism, a brake acting on said reel, and means for automatically rendering the brake ineffective during unreeling operations.

1,539,245. WHIPPER. ISRAEL P. DUNCAN and THOMAS M. GORE, Los Angeles, Calif. Filed July 30, 1924. Serial No. 729,075. 3 Claims. (Cl. 253—136.)



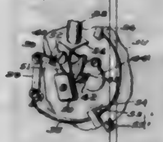
1. In a whipper, the combination of an impeller wheel, a horizontally extended vertically thin housing therefor having a rounded impeller chamber at one end corresponding in curvature to said impeller wheel and extended at the opposite end to form an inlet and outlet water chamber beyond said impeller, the lower face of said housing being inclined toward the upper face at the water chamber end thereof, the inclined portion of the lower face having an outlet at one side, an inlet coupling disposed at the median line of said housing in the upper face thereof and having a nozzle extending therefrom and directed toward the other side of said housing.

1,539,246. ACID CONCENTRATION. JOSEPH B. EDWARDS, Jersey City, and FREDERICK B. FAULKNER, Bayonne, N. J., assignors of one-fourth to Tide Water Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 1, 1920, Serial No. 393,338. Renewed Jan. 11, 1922. Serial No. 528,559. 24 Claims. (Cl. 23—173.)



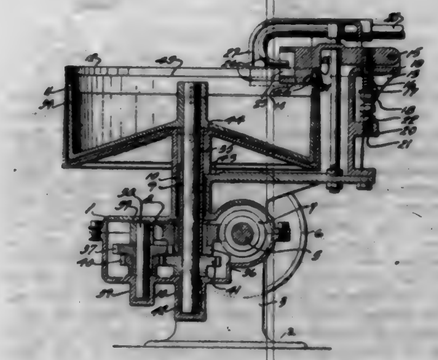
11. The method of treating sludge acids or separated sludge acids which consists in heating and agitating a body of the acid thereby effecting a partial concentration of the same and in then heating a body of the partially concentrated acid without agitation effecting a further concentration thereof.

1,539,247. TALKING-TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,492. 2 Claims. (Cl. 46—46.)



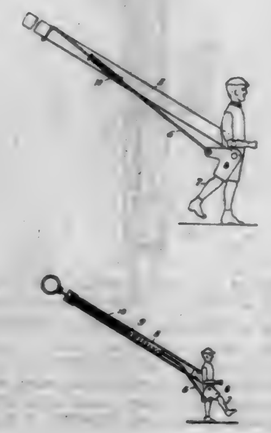
1. In a device of the class described, in combination, a hollow collapsible sphere, a tube mounted through the walls thereof, and having a sounding device mounted therein, a shield mounted on said sphere so as to encircle said tube, a chamber into which said reed box projects, said chamber being provided with an orifice, and a closure for said orifice provided with a plurality of apertures, said closure being operative by the collapse of said sphere to bring said apertures into registry with said orifice.

1,539,248. TALKING-TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,494. 6 Claims. (Cl. 46—46.)



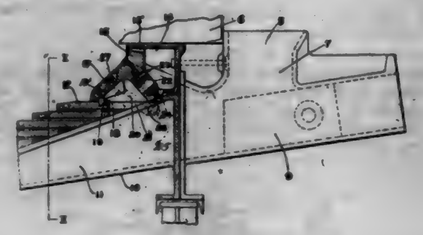
1. A device of the class described comprising in combination, a casing, a head therein, a bellows attached to said head, a weight attached to said bellows, a clamping disc thereon, a reed chamber on said disc in communication with said bellows, an orifice chamber communicating with said reed chamber, an arm mounted on said head and overlying said orifice, said arm being provided with a plurality of apertures adapted to register with said orifice as said bellows is collapsed.

1,539,249. SAFETY DEVICE FOR OIL BURNERS. MILTON A. FESLER, Stamford, Conn., assignor to Petroleum Heat & Power Company, Boston, Mass., a Corporation of Delaware. Filed Sept. 2, 1924. Serial No. 735,360. 19 Claims. (Cl. 158—42.4.)



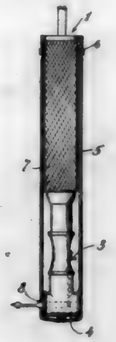
1. In a device of the class described, in combination, a spark plug, a source of electric current for producing electric sparks between the terminals of the spark plug, a pair of terminals other than those of the spark plug and positioned to form a spark gap, an electric connection between a terminal of the spark plug and a terminal of said spark gap, and means controlled by the current delivered by the spark plug, comprising a piece of thermostatic metal supported to bend under varying temperatures to actuate a control element and provided with one terminal of said spark gap which is heated by the sparks jumping said gap and causes the metal to bend.

1,539,250. COLLAR FINISHER. JOHN E. FIDLER, New York, N. Y., assignor to Asher Manufacturing Company, Irvington, N. J., a Corporation of New Jersey. Filed Oct. 24, 1921. Serial No. 509,794. 6 Claims. (Cl. 68—9.)



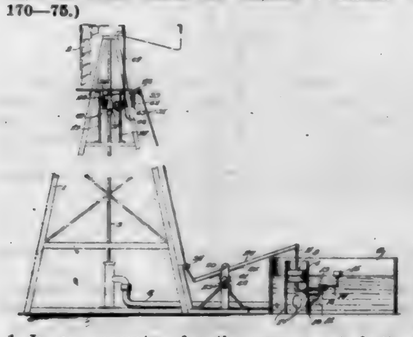
2. In a collar ironing machine, the combination with a mandrel for carrying a folded collar by supporting the same under its fold, of a polishing drum concentric with said mandrel and having its upper edge below the top of said mandrel for finishing the outer surface of the collar neckband, means for producing relative rotation between said mandrel and drum, and means on the other side of said drum from the mandrel for pressing the surface of the collar to be finished against said drum.

1,539,251. DEVICE FOR PLAYING TABLE FOOTBALL. ALGERNON PERCY FINDLAY, Launceston, Tasmania, Australia. Filed Sept. 22, 1924. Serial No. 739,212. 4 Claims. (Cl. 273—107.)



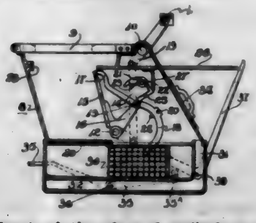
1. In an appliance of the kind indicated, an effigy of a football player, a handle or grip to which the player is attached, a bell crank on the body of the player one of the legs of which is on the bell crank, a spring controlled rod on the handle attached at one end to the bell crank and having means on its other end for operating the rod to compress the spring.

1,539,252. TUYÈRE STRUCTURE FOR STOKERS. ROBERT A. FORESMAN, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1920. Serial No. 393,018. 6 Claims. (Cl. 110—44.)



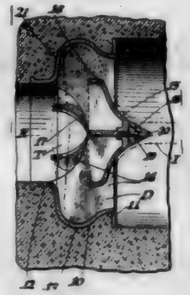
2. A stoker construction comprising an air distributing box extending across the furnace adjacent the front wall thereof, tuyère boxes extending longitudinally of the furnace, tuyères mounted on the tuyère boxes and receiving air therefrom, locking means for the tuyères disposed adjacent the air distributing box, and means for passing air from the tuyère boxes to the air distributing box through the said locking means.

1,539,253. SANITARY SHIELD FOR DENTAL INSTRUMENTS. CLARENCE W. FULLER, Yonkers, N. Y. Filed June 9, 1923. Serial No. 644,875. 11 Claims. (Cl. 32—10.)



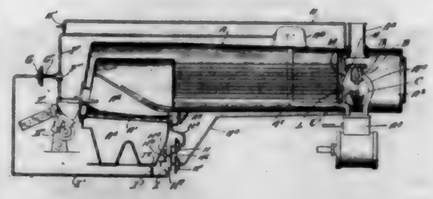
1. A shield of the type described, comprising a tube consisting of at least one layer of tough, inelastic material, and at least one layer of a vulcanized elastic material.

1,539,254. AUTOMATIC CONTROL FOR WINDMILL PUMPS. FRED H. GEHRER, Hazel Run, Minn. Filed Sept. 25, 1924. Serial No. 739,880. 7 Claims. (Cl. 170—75.)



1. In an apparatus for the purpose set forth, the combination of means for throwing a wind wheel out of gear, float-controlled means for setting the first-mentioned means, and a second float-controlled means for temporarily restraining the first-mentioned float-controlled means.

1,539,255. SANITARY CLOSET. DAVID GEORGE, Burwood, near Sydney, New South Wales, Australia, assignor to Samuel Aubrey Freshman, Sydney, New South Wales, Australia. Filed July 27, 1921. Serial No. 487,917. 6 Claims. (Cl. 4—111.)

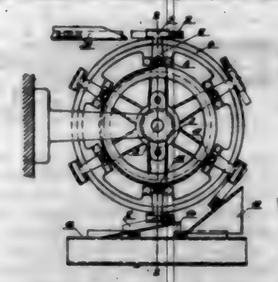


1. In a closet of the class described, a receptacle, a grating thereover, a movable seat above the grating, and means operated by the seat to press matter through the grating into the receptacle.

1,539,256. KINETIC-ENERGY ABSORBER. FREDERICK GEHLER, Alhambra, Calif., assignor to The Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed Nov. 20, 1924. Serial No. 751,133. 10 Claims. (Cl. 253—136.)

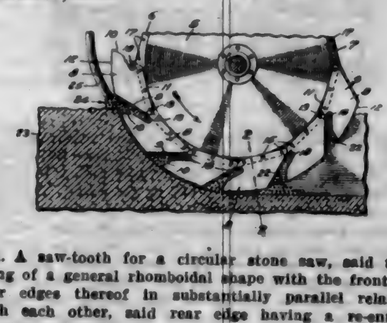
1. A kinetic energy absorber for absorbing the kinetic energy of a fluid stream comprising means for dividing the stream, and means for causing the divided streams to be directed toward each other behind the point of division of the initial stream.

1,539,257. COMBUSTION CONTROL. GEORGE H. GIBSON, Montclair, N. J. Filed Aug. 22, 1922. Serial No. 583,491. 4 Claims. (Cl. 236—15.)



1. The combination with a furnace comprising a grate on which solid fuel is burned and having its primary air inlet and its outlet for gaseous products of combustion connected, one to the atmosphere by a passage of constant flow resistance, and the other to a draft creating device, of fuel supply means automatically responsive to a force proportional to the difference between the resultant of the pressure in the furnace above the grate and the opposing pressure of the atmosphere over one area, and the resultant of the pressure in the furnace adjacent the draft creating device and the opposing pressure of the atmosphere over an area different from the first mentioned area, for supplying fuel to said grate as required to maintain a fuel bed of approximately constant resistance to gas flow therethrough.

1,539,258. MEANS FOR DELIVERING AND SORTING CIGARETTES FROM CIGARETTE-MAKING MACHINES. LOUIS PAUL GRAUPNER, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co. Filed Mar. 31, 1924. Serial No. 703,303. 8 Claims. (Cl. 131—39.)

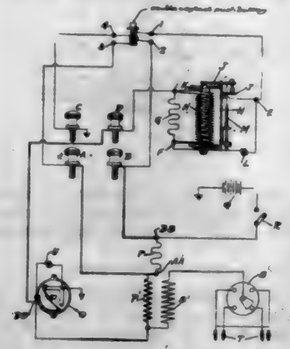


1. A device for delivering cigarettes from a rod forming cigarette machine, comprising a continuously revolving body, means on and revolving with said body

capable of periodically gripping a cigarette when brought into the path of the cigarette rod, a sliding surface in close proximity to the periphery of said body and

means for causing the release of the cigarette from said gripping means the instant it arrives close to said sliding surface.

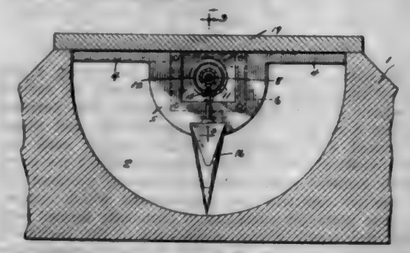
1,539,259. STONE SAW. JOHN A. HALL, Seattle, Wash., assignor to Parker Rotary Stone Saw Company, San Francisco, Calif., a Corporation of Nevada. Filed Sept. 4, 1923. Serial No. 660,919. 4 Claims. (Cl. 125—22.)



1. A saw-tooth for a circular stone saw, said tooth being of a general rhomboidal shape with the front and rear edges thereof in substantially parallel relations with each other, said rear edge having a re-entrant angular pocket therein.

1,539,260. ACID-RESISTANT ALLOY. CHARLES B. JACOBS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 6, 1922. Serial No. 559,068. 5 Claims. (Cl. 75—1.)

1. A copper-base alloy in which the copper is combined with sufficient silicon to form an alloy that is more resistant to acids than is pure copper, said alloy also containing a sufficient amount of manganese to render the alloy machinable and workable.

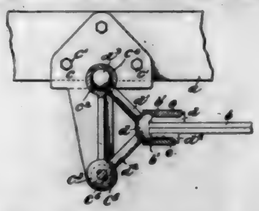


1,539,261. AUXILIARY IGNITION CIRCUIT. CHARLES M. LINDSAY, Washington, D. C. Filed Nov. 15, 1923. Serial No. 674,997. 8 Claims. (Cl. 123—148.)

1. In a system of the character described, the combination with a normally closed mechanically operated primary circuit interrupter, opened only during the ignition period of each cycle of an engine's operation, a condenser connected in parallel with said interrupter, a distributor, a battery connected therewith, an induction coil between the distributor and the battery and a resistance coil associated with the induction coil, of means for passing a continuous series of sparks through the distributor and only during the ignition and combustion period of each cycle of the engine's operation, said means including a high frequency low resistance electro-magnetically operated vibrator in shunt with the mechanically operated primary circuit interrupter, said vibrator consisting of a low resistance, inductive winding, a low resistance non-inductive winding shunted across, or connected in parallel with the inductive winding, a vibrating member connected in series with the windings, two contact points, one mounted on the vibrating member, the other normally

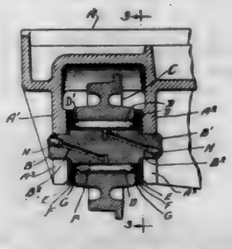
stationary, means to adjust the stationary contact point, a condenser in shunt with the contact points and a double pole push button, one pole serving to connect the stationary contact to ground, the other pole of the push button being connected in such a manner that it shorts out the resistance coil in the primary circuit.

1,539,262. INSTRUMENT. HUGH MCALEISH, New York, N. Y. Filed May 26, 1924. Serial No. 715,782. 1 Claim. (Cl. 33—215.)



In an instrument of the class described the combination of a stock, provided with a transverse opening extending therethrough, a bridge across the top of said opening and extending longitudinally of the stock, side flanges secured to said bridge, side plates secured to said flanges, a shaft supported in said plates, bearing hubs carried by said shaft, nuts on the ends of said shaft for clamping the side plates between the bearing hub and the nuts to hold the shaft and bearing hubs against rotation, ball bearings in said hubs, a barrel supported on said bearings, and on indicator adjustably attached to the periphery of said barrel and extending transversely of the barrel, said indicator and barrel being adapted to swing by gravity to vertical position at all times.

1,539,263. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. ALFRED F. MASURY and AUGUST H. LEIPERT, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,661. 2 Claims. (Cl. 267—54.)



1. In combination with the spring and frame of a motor vehicle, a wholly non-metallic support interposed between an end of the spring and the frame and comprising a block of non-metallic yielding material engaged at one end with the spring, a bracket carried

with the frame and secured to the lower end of said block, a second block of non-metallic resilient material connected at one end with the spring and at the other end with the bracket and disposed in line with the

first-named block, and a third block of non-metallic yielding material interposed between the end of the spring and the bracket to transmit longitudinal stresses therebetween.

1,539,264. CAR-WHEEL MOUNTING. PAUL A. MEEHAN, Cleveland, Ohio, assignor to American Dressier Tunnel Kilns, Inc., a Corporation of New York. Filed Sept. 23, 1924. Serial No. 739,375. 4 Claims. (Cl. 295—36.)

1. In a car of the type specified comprising a plurality of supporting wheels, a separate axle for each of said wheels having reduced end portions with flattened sides and a metallic car frame mounted on said wheels and formed with depending flanges, one at each side of each wheel and each having a seat in which the corresponding reduced wheel axle end is snugly received and held against rotation, the improvement which consists in a wear plate for each end of each axle formed with an aperture snugly receiving the reduced end portion of the axle and held by the latter against rotation and forming a removable facing for the side of the corresponding flange adjacent the corresponding wheel.

1,539,265. HAMMER-HEADED TOOL. GEORGE G. MITCHELL, Union, N. J., assignor to L. A. Sayre Company, a Corporation of New Jersey. Filed May 28, 1924. Serial No. 716,289. 3 Claims. (Cl. 145—29.)

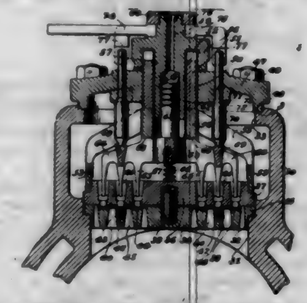
3. A tool having a hammer head formed of hardened steel with two series of grooves in its face, the grooves of one series being disposed at right angles to the grooves of the other series, said grooves being so spaced and arranged as to form a plurality of rows of pyramidal projections and two rows of chisel-shaped projections at right angles to each other and each on a transverse center line of said face, a substantially smooth flat surface being also provided at the center of said face by the intersection of said series of grooves, said projections providing an anti-slip surface for said face, and said flat surface serving to receive blows from a scleroscope to permit testing of the steel at the center of said head.

1,539,266. VARIABLE RESISTANCE. CLARENCE E. MOUNTFORD, Brooklyn, N. Y. Filed Dec. 29, 1922. Serial No. 609,676. 10 Claims. (Cl. 201—62.)

6. In a variable resistance, an outer tube of insulating material, a pair of electrical contacts mounted upon the ends of said tube, a conductor of low conductivity and varying cross sectional area enclosed within said tube and a conductor of greater conductivity slidably mounted for movement longitudinally of said tube on one of said contacts and extending within said tube to contact with said first mentioned conductor.

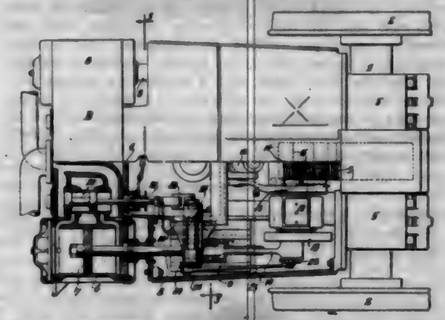
1,539,267. HEAT-EXCHANGE APPARATUS. KARL MUHLHEIM, Philadelphia, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 29, 1923. Serial No. 628,430. 7 Claims. (Cl. 257—236.)

1. In heat exchange apparatus, the combination of a casing, a plurality of tubes therein, a tube plate relatively movable with respect to the said casing to which one end of each of said tubes is connected, the said tube plate having at its peripheral edge an outwardly extending flange which is spaced from the inner surface of the said casing, packing within the space between the said flange and the said casing, a head plate for closing the adjacent end of said casing, which head plate is adjustable axially of said casing and means intermediate the said head plate and the said packing whereby upon adjustment of the said head plate inwardly the said packing is compressed.



1,539,268. EMERGENCY MEANS OF EGRESS FROM ELEVATOR CARS. OSCAR A. NORMAN, Newark, N. J. Filed Aug. 15, 1923, Serial No. 657,517. Renewed Oct. 24, 1924. 24 Claims. (Cl. 187—1.)

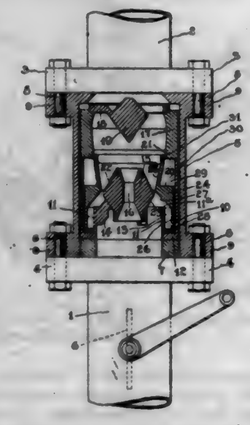
5. In an elevator car, an emergency means of egress near the top or ceiling of said car and means of access to said egress means, comprising a removable side panel,



a series of foldable steps attached thereto adapted to fold into a closet formed between said side panel and the exterior side wall of said car.

1,539,269. UNLOADER FOR COMPRESSORS. ALBERT F. PARKS, South Norwalk, Conn., assignor to The Norwalk Company, South Norwalk, Conn., a Corporation of Connecticut. Filed Aug. 15, 1924. Serial No. 732,237. 8 Claims. (Cl. 137—153.)

8. In combination with an inlet valve of a compressor, an unloader comprising a valve lifter, means for depressing said lifter, said means including plungers directly engaging said lifter at equally spaced points about its center, and means for manually depressing the plungers.

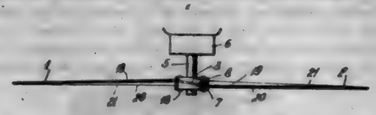


1,539,270. LOCOMOTIVE BOOSTER-MOTOR CONSTRUCTION. FRANK R. PETERS, New York, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Dec. 19, 1922. Serial No. 607,764. 6 Claims. (Cl. 105—40.)

1. In combination, a normally idle railway vehicle axle with its wheels, a crank shaft parallel to said axle between the wheels, gearing between the axle and the crank shaft, a large capacity bearing for the crank shaft on each side of the gearing, crank pins outside the bearings, a booster cylinder and piston opposite each crank pin, a connecting rod between each piston and crank pin, cylinder valves between the cylinders, and valve motion parts crossing the connecting rods and connected to the crank shaft beyond the crank pins.

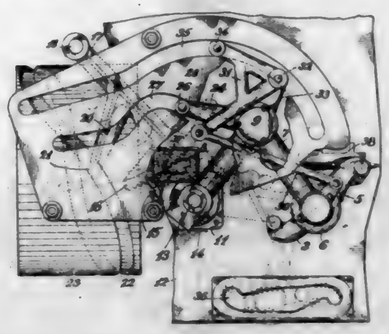
1,539,271. FLUID-CONTROL MEANS FOR MOTORS. FRANK POKORNY, Mamaroneck, N. Y., assignor, by direct and mesne assignments, of one-half to Francis W. Keegan, New York, N. Y. Filed May 1, 1920, Serial No. 378,190. Renewed Sept. 18, 1924. 3 Claims. (Cl. 137—153.)

1. In fluid supply means for internal combustion engines, in combination, a control valve, means whereby said valve is caused to open under the suction pull created by the aspiratory operation of the engine, a lower skirt portion for said valve, a flange for said skirt to enlarge its area, a concentric chamber in which



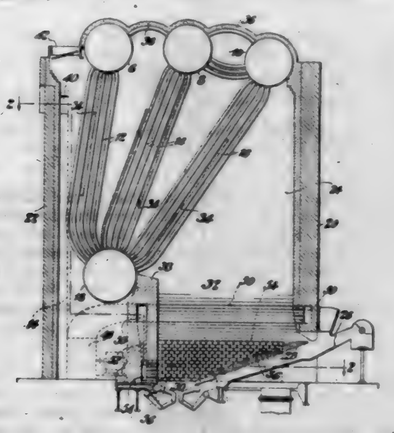
said skirt portion operates, and means whereby the influence of the suction pull is exerted as a drag force upon said valve skirt and flange to retard the valve opening movement.

1,539,272. MOTOR-CAR SPRING SUSPENSION. SIDNEY I. PRESCOTT, New York, N. Y. Filed Oct. 7, 1921. Serial No. 505,993. 8 Claims. (Cl. 267—20.)



1. In a motor car spring suspension, the combination with an axle, of a frame, an intervening load-carrying volute spring, and connections between said axle and said frame which include two slightly flexible bars pivotally connected with said frame one above the other and rigidly bolted one to the top and one to the bottom of said axle to relieve said spring of all stress excepting that caused by its deflection.

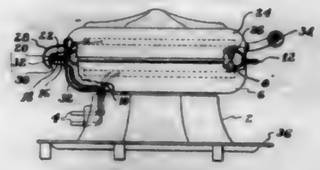
1,539,273. PROPELLER. SYLVANUS A. REED, New York, N. Y., assignor to The Reed Propeller Co., Inc., New York, N. Y., a Corporation of New York. Original application filed May 26, 1920, Serial No. 384,293. Divided and this application filed June 26, 1923. Serial No. 647,897. 14 Claims. (Cl. 170—159.)



1. In propelling means, a hub and a propeller attached thereto bent or twisted in one general angular direction in its entirety in the region of connection with said hub to maximum pitch-angles, and beyond said region twisted in the reverse direction to provide pitch-angles diminishing helically towards and to the tips.

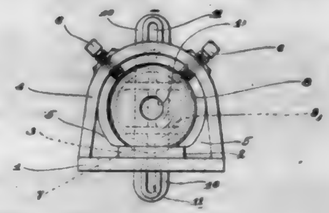
1,539,274. CIGAR-WRAPPER-DELIVERING MEANS. RUPERT E. RUNDELL, Rockville Center, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed June 26, 1924. Serial No. 722,592. 12 Claims. (Cl. 131—39.)

1. Cigar wrapper delivering means, comprising a flying wrapper carrier, carrier supporting means articulated approximately at its centre, an anchorage for said means, mechanism for moving said means about said anchorage, and a movement controlling device for said carrier.



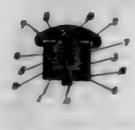
1,539,275. METHOD OF PROTECTING THE LININGS OF FURNACES. GEORGE W. SAATHOFF, South Orange, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1922. Serial No. 537,651. 10 Claims. (Cl. 110—1.)

1. A method of protecting furnace refractories from corrosion which comprises passing adjacent to the side refractories a sufficient amount of an oxidizing gas which will not evolve heat when reacting with furnace gates to maintain the said refractories below the slagging temperature and to deflect the flame from said refractories.



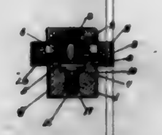
1,539,276. ELECTRIC WAFFLE IRON. GEORGE B. SAVAGE, Meriden, Conn., assignor to Manning, Bowman & Company, Meriden, Conn., a Corporation of Connecticut. Filed Oct. 25, 1924. Serial No. 745,758. 5 Claims. (Cl. 219—19.)

2. In an electric waffle iron, the combination of upper and lower grids, casings for said grids, a hinge pivotally connecting the two grids together, and a flange surrounding the lower grids, said flange being fixed in substantially the plane of the upper surface of said lower



grid and projecting horizontally beyond both of said casings, the lower leaf of the hinge being connected to and supported by said flange.

1,539,277. ADJUSTABLE BRACKET. PIERCE D. SCHENCK, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed Oct. 19, 1923. Serial No. 669,598. 1 Claim. (Cl. 248—3.)



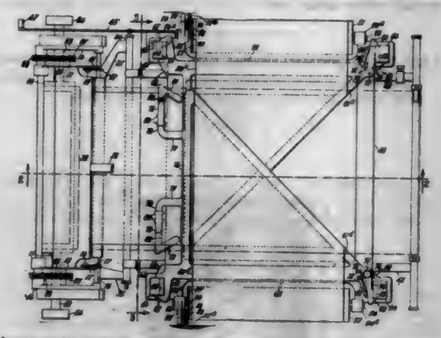
In combination in a bracket, a cast member comprising a base having a recess in the face thereof, and an inverted U-shaped member with its ends integral with such base and its concave portion extending over said recess in opposition thereto, an adjustable cast member including a hollow ball lying in said U-shaped member and engaging said recess, and a supporting portion projecting laterally from the ball, and a plurality of clamping bolts threaded through the curved portion of the U-shaped member and engaging said ball and lying radially with respect to said ball.

1,539,278. ELECTRICAL SWITCH. CHARLES C. SCHREIL, Chicago, Ill. Filed Jan. 29, 1924. Serial No. 689,220. 8 Claims. (Cl. 200—159.)

1. In a device of the class described, a body portion of insulating material having a bore in two diameters, a terminal plate positioned in the bottom of the larger bore and having a threaded part extending through the smaller bore to the exterior of the body with means for attaching a conductor thereto, a contact member fitting into said larger bore above the said terminal and having a bore therein and a reduced portion extending outward from the body, a spring positioned in the bore of the contact member and extending toward the terminal plate, an insulator positioned between the spring and said plate, a cap fastened to the contact member and having a recess extending over said body portion, a yoke fitting over the reduced portion of said contact member and fastened to the outer part of said body for the purpose described.

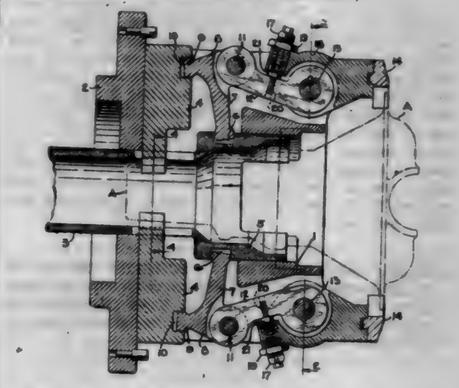
1,539,279. ELECTRICAL SWITCH. CHARLES C. SCHREIL, Chicago, Ill. Filed Jan. 29, 1924. Serial No. 689,221. 11 Claims. (Cl. 200—4.)

1. In a device of the class described, a body portion having a plurality of contacts, a cap fitting over the body and means for operatively fastening the cap and body together but permitting relative rotation therebetween, a metallic plate carried by the cap and adapted in one position of the cap to connect a pair of said contacts together, a push button movably carried by the cap, a contact member operated by the push button to engage at least one of said plurality of contacts, and a circuit completing member extending from said contact member to the outer periphery of the body.



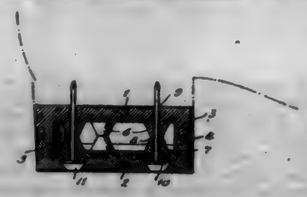
1,539,280. LOOSE-LEAF BINDER. HARRY J. SILVERMAN, New York, N. Y. Filed Oct. 12, 1923. Serial No. 668,048. 4 Claims. (Cl. 129—18.)

1. A loose leaf binder comprising clamping members, telescopic tubes respectively carried by said members, one of said tubes having a laterally disposed hole and having a longitudinal bore communicating with said hole, a controlling member operative in said bore and provided with an inwardly tapering stem at its inner portion located in operative relation to said hole, a friction member operative in said hole with relation to said tubes and to said tapering stem, and a spring within said bore cooperative with the corresponding tube and with the controlling member to normally cause said stem to force the friction member against one of said tubes said tapering stem being in position to permit the clamping members to be moved toward one another without operation of said controlling member.



1,539,281. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 23, 1923. Serial No. 627,026. 21 Claims. (Cl. 197—126.)

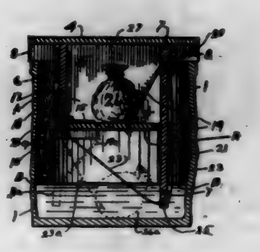
1. The combination with a typewriting machine, of a table, means for guiding a multiple-ply work-sheet web over the table to the platen of the machine, a carbon-carrier movable on the table toward and from the platen in the line of movement of the work-sheet web, a rotary spool on the carbon-carrier for holding superposed carbon-webs, means for locking the spool against rotation, and for releasing the same for withdrawal of the carbon-webs from the spool, means for guiding the carbon-webs crosswise of the path of movement of the carbon-carrier as such webs are withdrawn from the spool, and for separating the superposed web-portions thus withdrawn, for interleavement thereof with the plies of the work-



sheet web, and means on the carbon-carrier for turning and directing the carbon-webs along the path of the work-sheet web.

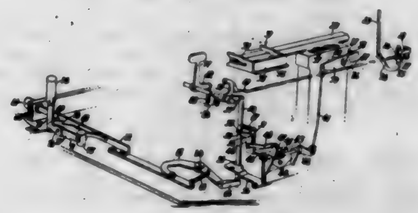
1,539,282. CHUCK. ROBERT E. SPURR, Detroit, Mich., assignor to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1920. Serial No. 393,620. 15 Claims. (Cl. 279—110.)

1. In a chuck, the combination with a set of jaws, of means connecting said jaws for movement in unison, said means including a lever for each jaw, a second set of jaws, each individual jaw of said second set connected to an individual jaw of the first set through the medium of one of said levers, and means engaging said levers for moving both sets of jaws.



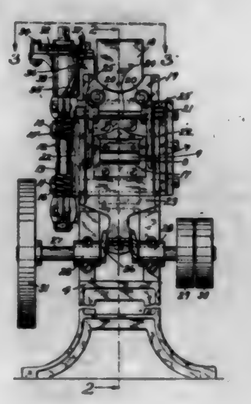
1,539,283. SHOE HEEL AND SOLE LIFT. RUDOLPH C. G. STAATS-OHLS, Brooklyn, N. Y. Filed Mar. 12, 1924. Serial No. 698,618. 4 Claims. (Cl. 36—35.)

3. A resilient lift for heels including complementary sections capable of engagement at their outer margins and recessed in their adjacent faces to provide an air



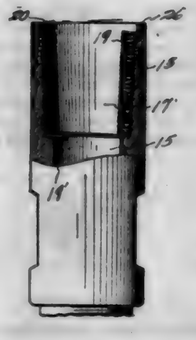
chamber interiorly of said lift, and bosses extending from said faces into engagement with each other, said bosses having closed ends and apertures extending outwardly from said ends.

1,539,284. FUMIGATING DEVICE. JOHN EDWARD THEBAUD, Philadelphia, Pa. Filed Feb. 14, 1921. Serial No. 444,876. 9 Claims. (Cl. 23—282.)



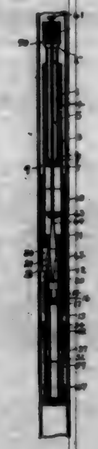
1. In a device adapted to cause two chemical substances, held thereby, to automatically come together for a reaction after time has elapsed from the setting of said device, a member, normally positioned to keep the said substances apart, and means for retaining said member in its normal position, said means including a part, perishable in one of said substances, whereby, upon the breaking of said part, weakened in the said substance, said means releases its hold upon said member, freeing the same to change from its normal position, permitting said substances to come together and react, after the time required by the said portion to weaken in the said substance and break.

1,539,285. TYPEWRITING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1923. Serial No. 610,746. 15 Claims. (Cl. 197—151.)



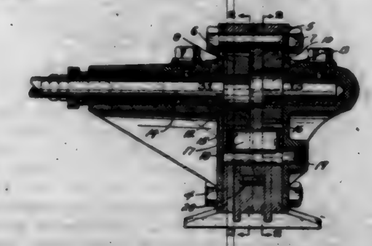
1. In a typewriting machine, in combination, a traveling carriage, a platen to support, at the printing line, a plurality of superposed work-sheets and interleaved carbons; types to press against the platen at the printing line to make ribbon impressions on the outside work-sheet and carbon impressions on the other work-sheets, and carriage-controlled means to prevent impressions from being made on the outside work-sheet during part of the making of carbon copies on the other or inner work-sheets.

1,539,286. TOBACCO CUTTER. VERNER J. WAHLSTROM, Brooklyn, N. Y., assignor to American Machine and Foundry Company, a Corporation of New Jersey. Filed May 22, 1924. Serial No. 714,997. 10 Claims. (Cl. 146—157.)



1. A tobacco shredder comprising means for feeding a sheet of tobacco, means for shredding said sheet as fed, and cam-controlled means actuated by said shredding means for intermittently operating said feeding means.

1,539,287. TUBULAR COUPLING. ROBERT A. WILSON, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed May 15, 1924. Serial No. 713,419. 9 Claims. (Cl. 285—149.)

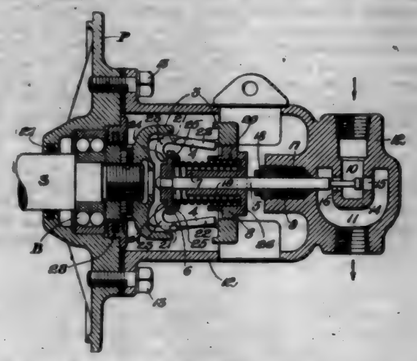


1. A coupling for tubular conductors comprising in combination, a pin member, a tapered pin carried by the pin member and having threads arranged in longitudinal panels on diametrically opposite sides thereof, shoes on the lower end of the pin, a box having a well shaped to receive said pin and provided with threads arranged in spaced vertical panels to mesh with the threads of the pin, and seats at the bottom of the well of the box between the thread panels thereof for receiving the shoes when the pin is inserted in the box, the pin member, pin and box having an axial bore.

1,539,288. PIPE CUTTER. HARRY S. CAMERON and JAMES S. ABERCROMBIE, Houston, Tex. Filed Oct. 31, 1922. Serial No. 596,130. 14 Claims. (Cl. 81—195.)

2. In a pipe cutter for use in deep wells, an operating pipe, an anchoring means thereon, means operable at a predetermined position in the well to fix said anchor, a cutter head having a rotatable bearing on said anchoring means, radially movable cutters in said head, means loosely mounted in said operating pipe to advance said cutters when said operating pipe is lowered relative to said head, said operating pipe also serving to rotate said head.

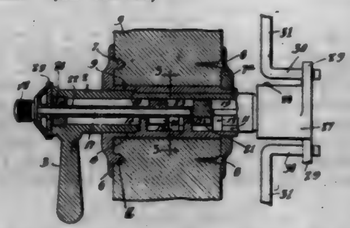
1,539,289. DIFFERENTIAL PUMP. CARL E. ANDERSON, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,208. 10 Claims. (Cl. 103—117.)



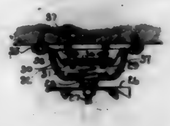
1. A differential pump, comprising two cylinders having capacities which differ in accordance with the required outflow, mechanism for circulating liquid from the larger cylinder through the smaller cylinder, discharging the excess liquid, and returning the remainder to the larger cylinder, and means for supplying additional liquid to the larger cylinder to replace the excess liquid discharged.

1,539,290. TERMINAL CONNECTER. HUGH W. BATCHELLER, Worcester, Mass., assignor to Winooski Electric Manufacturing Company Inc., Burlington, Vt., a Corporation of Vermont. Filed Oct. 18, 1923. Serial No. 669,228. 3 Claims. (Cl. 173—269.)

1. A terminal connecter comprising an insulating body having a bore, and a stop face at one end of the bore; and a fixed conductor having a contact portion, a shoulder adapted to bear on said stop face, and an anchoring portion spaced from the contact portion and formed to engage the bent end of a flexible conductor, the fixed conductor and the bent end of a flexible conductor engaged therewith being insertible in the bore to an extent determined by the said stop face and shoulder, and the diameter of the bore being such that the said bent end is confined by the bore in the form of a hook interengaged with said anchoring portion.

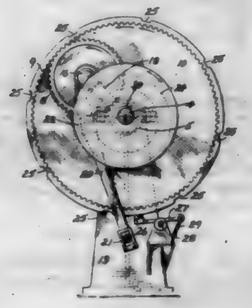


1,539,291. GOVERNOR. OLIVER D. H. BENTLEY, Roslindale, Mass., assignor to B. F. Sturtevant Company, Boston, Mass., a Corporation of Massachusetts. Filed July 10, 1918. Serial No. 244,160. 8 Claims. (Cl. 137—140.)



8. In a governor, the combination with a casing and a driven shaft having its end projecting through the casing, of speed controlled mechanism mounted upon the end of the shaft including a spindle and balanced valve mounted in alignment with the shaft, and a housing mounted at one end upon the casing and enclosing the speed controlled mechanism and carrying at its outer end a valve chamber for the balanced valve.

1,539,292. LOCK. JAMES F. BRIDGEBECK, Long Beach, Calif. Filed Feb. 5, 1924. Serial No. 690,759. 5 Claims. (Cl. 70—18.)

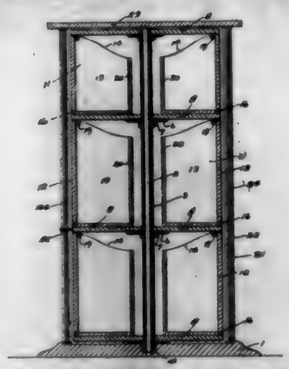


1. In a combination lock, a barrel having a longitudinal slot and circular slots intersecting said first slot, means providing lugs engaging the barrel to prevent rotation thereof in one position and operative when aligned with said circular ways to permit rotation of the barrel, and a plurality of separately controlled members adapted to normally hold the barrel in one position and in a certain position to permit movement of the barrel to the other position.

1,539,293. COMBINED THERMOSTATIC CIRCUIT CLOSER AND SPRINKLER. WILLIAM TONIS BRIDGES, La Fayette, Ga. Filed June 10, 1922. Serial No. 567,392. 8 Claims. (Cl. 200—142.)

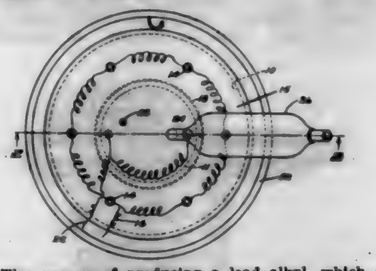
1. In a combined thermostatic circuit closer and sprinkler, main lead wires having portions disposed in parallel relation, a water conduit extending transversely of the parallel portions of the wire, nozzles connected with the water conduit at spaced points and provided with rotary valves for controlling the flow of water from said nozzles, a lever projecting from the stem of the valve, a coiled spring mounted on the stem of said valve and connected with the operating handle for maintaining the valve normally in open position, and easily fusible material connected with the handle and the nozzle for retaining the valve in closed position, a sprayer wheel adjacent the nozzle and adapted to be rotated by issuing water from the nozzle, spaced contacts connected with the parallel wires, and a movable contact held out of engagement with the spaced contacts and supporting the sprayer wheel, adapted to be moved into engagement with the spaced contacts by the pressure of the water from the nozzle.

1,539,294. MECHANICAL MOVEMENT. WILHELM B. BRONANDER, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed May 22, 1924. Serial No. 715,015. 14 Claims. (Cl. 74—7.)



1. A mechanical movement comprising a constantly moving primary member, a secondary member in constant engagement with said primary member, a tertiary member in constant engagement with said secondary member, and cam-actuated means including a floating lever having a pin and slot fulcrum for producing a to and fro movement of said secondary member to produce from the constant movement of said primary member an intermittent movement of said tertiary member.

1,539,295. COMPOSITION FOR SUBIRRIGATION PIPES AND FILTERING VESSELS. FREDERICK H. BROWN, Las Vegas, Nev. Filed July 22, 1920, Serial No. 398,802. Renewed Mar. 10, 1925. 2 Claims. (Cl. 106—24.)

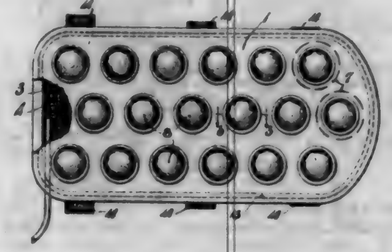


2. A plastic composition for the purpose described; consisting of earth, four parts; cement, two parts; vegetable matter, one part, and charcoal, five per cent of the bulk.

1,539,296. DISPLAY CASE. EDGAR A. BUNDY and WALTER B. GALVIN, Modesto, Calif. Filed Feb. 4, 1924. Serial No. 690,551. 5 Claims. (Cl. 211—25.)

5. A display case comprising a base, a vertical post revolvably supported thereon having platforms secured thereon in spaced relation and a plurality of sectorial receptacles grouped around the post on each platform presenting peripherally arranged outer faces adapted to have samples of goods stored in the receptacles secured thereto for display purposes, the receptacles being hinged on their outer supporting edges to allow the same to be tilted outwardly for giving access to their interior and a transparent housing surrounding the case.

1,539,297. METHOD FOR PRODUCING LEAD COMPOUNDS. GEORGE H. F. CALINGAERT, Watertown, Mass., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 2, 1923. Serial No. 648,872. 18 Claims. (Cl. 204—9.)

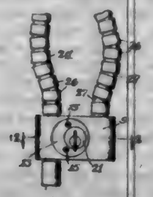


1. The process of producing a lead alkyl, which comprises forming a solution of an alkyl halide and an alkali, and reducing the reaction mass thus formed in contact with lead.

1,539,298. ADJUSTABLE SHUTTLE BINDER FOR LOOMS. HENRY VERNON CARVER, Gastonia, N. C. Filed Mar. 5, 1924. Serial No. 697,097. 7 Claims. (Cl. 139—185.)

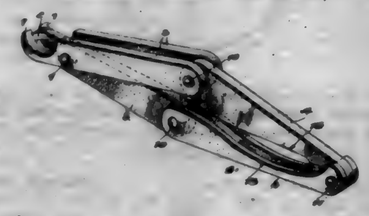
1. In a loom having a shuttle box with a protector rod supported near its mouth and having an upstanding thumb, a bracket having integral spaced arms with opposed slots therein, means for securing the bracket to the side of the shuttle box with the arms one above the other and the slots in vertical registration and disposed in transverse relation to the box, a bolt secured in said slots and adjustable longitudinally thereof, and a binder pivoted to swing freely on said bolt with its free end disposed in the path of the protector thumb.

1,539,299. ELECTROTHERAPEUTIC MASSAGE APPLIANCE. CHARLES W. CHENEY, Boston, Mass. Filed Mar. 15, 1923. Serial No. 625,305. 4 Claims. (Cl. 174—177.)



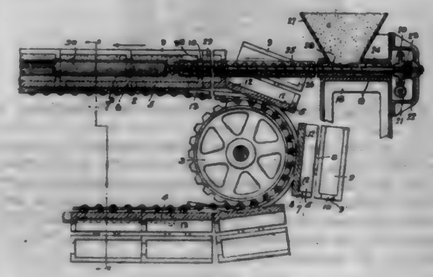
1. A device for use in giving electrotherapeutic massage treatments comprising a base made up of at least two layers of insulating material, a plurality of massaging members of electrically conductive material projecting from one side of the base, and conducting means held between said layers and electrically connected to said massaging members.

1,539,300. FISH CUTTING AND CLEANING MACHINE. ANDREW L. CHRISTIANSEN, Wilmington, Calif., assignor of twenty-four per cent to William S. La Londe, Los Angeles, Calif. Filed May 14, 1924. Serial No. 713,364. 11 Claims. (Cl. 17—3.)



11. In a fish holding and fish accommodating member, a pair of parallel bars, a pair of cross-bars secured to said first mentioned bars and provided with means for anchoring said bars in position, a second pair of parallel bars arranged in parallel relation with said first mentioned bars, means whereby the distance between said pair of bars may be adjusted, a series of spring-controlled devices arranged parallel to said pairs of bars and below said bars, and adjustable means arranged on said pairs of bars whereby the height of said devices may be adjusted.

1,539,301. LOCK. THOMAS C. COOPER, Chicago, Ill. Filed Mar. 1, 1923. Serial No. 621,997. 4 Claims. (Cl. 70—17.)

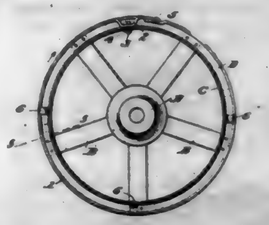


1. In a lock, a casing having a plurality of openings extending therethrough and a well formed therein, an element slidably mounted in said well and provided with a locking tooth designed to project into one of said openings in one position of said element, means for locking said element in such position, said locking means being housed within said element, and means for automatically moving said element to disengage said tooth upon release of said locking means.

1,539,302. SAFETY FUSE GRIP. ROBERT ELLSWORTH LEE CURTIS, Seattle Wash. Filed Mar. 29, 1924. Serial No. 702,921. 1 Claim. (Cl. 81—3.)

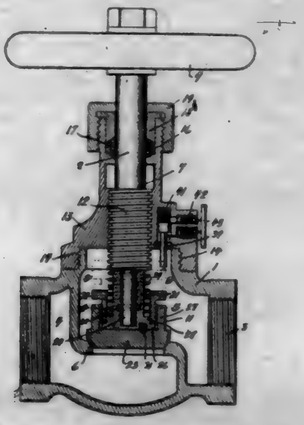
A safety grip composed of a pair of toggle joints each pair consisting of a double link and single link arrangement, said links being of insulating material, means by which the links are pivoted together completing the joint and pivoted to each other to complete the grip, said links being so disposed that a single link occupies the space between adjoining double links, gripping means including claws at one end of the grip, there being a single claw on a single link and a claw on each of the confronting double links, portions of the other links being removed at confronting places to permit insertion of the fingers of the holding hand so that the grip may be operated on the order of pliers.

1,539,303. MACHINE FOR MAKING HOLLOW TILE. GEORGE C. DERAY, Springdale, Pa. Filed Mar. 20, 1922. Serial No. 545,164. 2 Claims. (Cl. 25—99.)



1. In apparatus for forming a hollow tile, the combination of an endless conveyer, mold-members carried thereby, foldable sections on said mold members, a horizontally arranged trough adapted to be enclosed by said foldable sections of said mold, a spiral conveyer in said trough, and a horizontally arranged core-bar connected to the outer end of said spiral conveyer.

1,539,304. EMERGENCY TIRE. ROBERT W. DORN, Larkins, Fla. Filed Aug. 30, 1922. Serial No. 585,151. 6 Claims. (Cl. 301—39.)

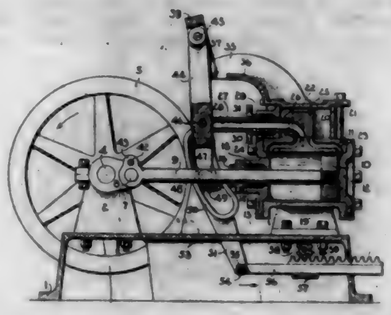


2. A supplemental tire or road band for a metal tired wheel having an outer surface transversely irregular, said supplemental tire consisting of a split ring having its ends arranged in overlapping relation, in arranged relation on the wheel, and having its radially outer and anchored end portion, in arranged relation, rigidly connected to the tire of said wheel by suitable

means and its radially inner end free to slide circumferentially under said anchored end portion and bifurcated to receive between its bifurcations a portion

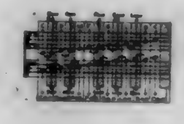
of the tire of said wheel, all portions of said supplemental tire intervening between said end portions being free to move circumferentially and radially of the wheel.

1,539,305. VALVE. JOSEPH J. DUNNE, Seattle, Wash. Filed July 13, 1923. Serial No. 651,390. 6 Claims. (Cl. 251—26.)



3. A valve of the character described comprising a stem adapted to be actuated by screw action, a valve head slidable thereon, spring means tending to impart endwise motion to the valve head relative to the stem, a pin extending from the stem into a transverse groove in the valve head normally preventing such motion and means for causing said pin to register with a longitudinal groove at predetermined times allowing the head to yield to the spring action.

1,539,306. TELEPHONE RECEIVER. VERNON DURBIN, Newton, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1923. Serial No. 625,942. 5 Claims. (Cl. 179—114.)



2. A core assembly for telephone receivers having, in combination, a core having a body portion, an enlarged head or pole piece and a reduced foot, a spool top on the core adjacent to the pole piece of the core, a core head on the core adjacent to the foot, and a core shoe embracing the foot, the foot being riveted in the hole in the core shoe.

1,539,307. OSCILLATING ENGINE. HENRY T. FARNSWORTH, deceased, late of Ligonier, Pa., by John T. Farnsworth, administrator, Everson, Pa., assignor of one-half to James S. Braddock, Mount Pleasant, Pa. Filed July 26, 1922. Serial No. 577,636. 8 Claims. (Cl. 121—63.)

1. In an oscillating engine, an oscillating cylinder, a piston reciprocable therein, a valve chest, ports connecting the valve chest with opposite ends of the cylinder, a valve controlling said ports, a rod connected with the valve, means operated by the engine for oscillating the rod, said means comprising a lever intermediately fulcrumed, a link connecting one end of the lever with the main shaft of the engine, an oscillatory arm having one end pivotally connected to the opposite end of said lever, said oscillatory arm having a connection intermediate its ends to the valve rod, arcuate tracks between which the opposite end of the oscillatory arm is guidded, and means for shifting the position of said tracks to reverse the engine.

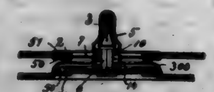
1,539,308. MUSIC NOTATION. EDITH A. FAUNT, Vancouver, British Columbia, Canada. Filed Mar. 4, 1922. Serial No. 541,097. 16 Claims. (Cl. 283—47.)

14. In musical notation, wherein is provided a blank, having thereon the customary staff, using leger lines where neccessary, combined with a distinctively different line adjacent to the E and F lines in the E and F spaces of the existing staff, and a further distinctive line adjacent to the B and C lines in the B and C spaces of existing staff, G and F clef signatures consisting of the letters G and F, the lower horisontal of the G being on the G line and the upper horisontal of the F being on the F line, a key signature consisting of a note-head, located on the line or in the space of the tonic, indicating by its form whether the tonic is a sharp, flat or natural and indicating by its note value the beat unit, and note-heads of three distinctive outlines, one of which indicates the white piano-keys, another the black piano-keys when termed sharps, and the third the black piano-keys when termed flats, said note heads having insets indicating the modifications in pitch of an adjacent note in the natural scale, and syllabic names adjacent to the notes wherein the initial consonant of the syllable is the letter-name of the pitch where the said letter-name is a consonant.

1,539,309. PROCESS OF TREATING FRUIT. IRVIN S. GOLDMAN, Merced, Calif. Filed July 21, 1923. Serial No. 652,980. 3 Claims. (Cl. 99—11.)

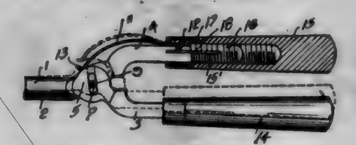
3. The herein described method of tendering the skins of figs which consists in first moistening the figs and then placing same in a sealed space containing steam under a fixed pressure and for causing the figs to remain subjected to the action of the steam for a fixed interval while sealed from the atmosphere.

1,539,310. ROVING, SPINNING, AND LIKE MACHINE. SIGURD H. HELLAND, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Jan. 3, 1925. Serial No. 434. 4 Claims. (Cl. 19—134.)



2. In a machine of the character specified, a plurality of top-roll sections, a revolvable, longitudinally slidable shaft for each section, a plurality of arms supporting the top-rolls and adjustably mounted on the shaft, a split hub on each arm, a bolt clamping the hub to the shaft, and fixed bearings for the shaft located between the ends of two adjacent sections, means for maintaining each section in a stationary position between the bearings, and means for the removal or replacement of a top-roll supporting arm.

1,539,311. FUSIBLE LINK. WILLIS K. HODGMAN, Taunton, Mass.; Emma A. Hodgman executrix of said Willis K. Hodgman, deceased. Filed Feb. 11, 1922. Serial No. 535,797. 1 Claim. (Cl. 169—42.)

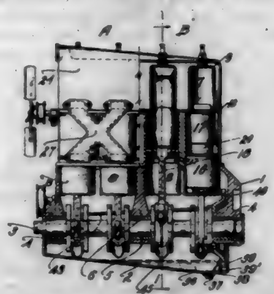


A fusible link comprising a pair of similar relatively thin flat plates each having an aperture near one end and a transverse channel of rectangular cross section between the aperture and the opposite end, the said aperture being countersunk at its edge adjacent the end of the plate in which it is located and at the face of the plate in which the channel is located and a fulcrum block having a thickness equal to the combined depths of said channels, having its longitudinal edges convex and having its width slightly less than the width of said channels whereby when the link is assembled with the plates reversed endwise and with the channels facing each other and with the fulcrum block in the channels and the parts united by fusible solder, the major part of the tension imparted to the link at the apertures will be taken by the fulcrum block and upon the melting of the solder a positive separating tendency is secured by the countersunk edges of the apertures presenting bearing edges definitely located on opposite sides of the plane of the adjacent faces of the plates.

1,539,312. TURNBUTTON FASTENER. GEORGE A. HOLMES, Newton Center, Mass., assignor to United States Fastener Company, a Corporation of Maine. Filed May 2, 1923. Serial No. 636,172. 2 Claims. (Cl. 24—221.)

1. A turn button fastener comprising a socket member having an elongated opening, and a button member composed of a base plate adapted to be secured to the part to be fastened, a pintle extending through an opening in said baseplate, a head secured to said pintle at one side of said baseplate and a button also secured to said pintle at the other side of said baseplate, and a spring interposed between said button and base-plate and yieldingly forcing said button away from said baseplate.

1,539,313. HAIR-WAVING IRON. EARLE W. HOMER, Spokane, Wash. Filed May 24, 1924. Serial No. 715,585. 5 Claims. (Cl. 132—37.)



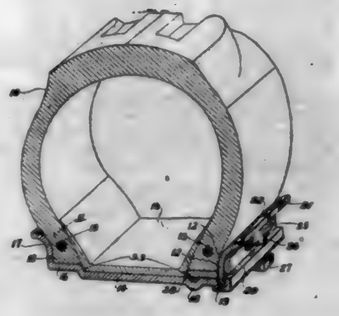
5. The combination with pivoted jaws each having a shank and a slotted pivoted head whereby the jaws may be spaced substantially apart, of a flat spring having an end fixed to a shank and bearing against the head of the other shank, screw threads on the end of the first shank, and a threaded handle-sleeve on the first shank adapted to vary the tension of the spring.

1,539,314. TEAT-ENGAGING TIP. MURRAY V. C. HOWES, Portland, Oreg. Filed Aug. 17, 1922. Serial 582,512. 1 Claim. (Cl. 128—239.)

A teat-engaging tip having a body; a stop flange formed around said body; a circular V-shaped wall formed on said flange on its teat engaging side and having a central opening passing through said body; and means for attaching a hose to said body.

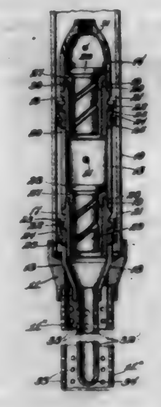
1,539,315. INTERNAL-COMBUSTION ENGINE. THOMAS A. HUTSELL, Spokane, Wash., assignor to Hutsell Motor Company, Spokane, Wash. Filed Jan. 27, 1921. Serial No. 440,279. 1 Claim. (Cl. 123—59.)

The combination in an internal combustion engine with a pair of co-axial compression and working cylinders and complementary compression and working pistons, said working cylinder having an extension within the compression cylinder below the bottom rings of the working piston, of a manifold casting having an intake port to each compression cylinder and a closely related exhaust port from each working cylinder, and a transfer manifold comprising intercepting tubular structures having communicating outlet ports from said compression chambers and communicating inlet ports to said working cylinders, for the purpose described.



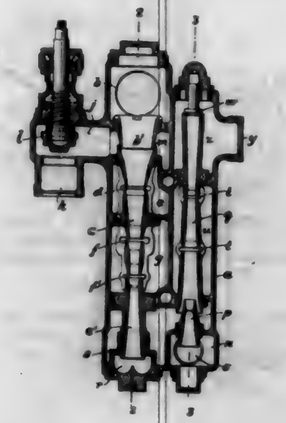
1,539,316. POLE SWITCH. OLOF JACOBSON, Stockholm, Sweden. Filed May 3, 1923. Serial No. 636,326. 6 Claims. (Cl. 200—44.)

1. In a pole switch, the combination of a swinging frame and a spring actuated arm contacting with said frame and tending to urge the same upwardly, the contact of said frame and arm being slidable when said frame is swung whereby the effective length of said arm is varied, thus causing said arm to exert a varying force on said frame at different angular positions to counterbalance the weight thereof.



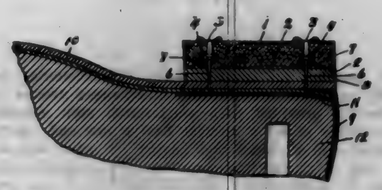
1,539,317. WHEEL RIM. FRANK P. JOHNSON, Danville, Pa. Filed Mar. 28, 1924. Serial No. 702,640. 4 Claims. (Cl. 152—21.)

4. A wheel rim having a body portion with an integral flange at one side and an integral ledge inside the flange terminating at its inner side with an inwardly sloping shoulder, the remainder of the body portion having a cylindrical surface of substantially uniform diameter less than the diameter of the ledge and merging into said sloping shoulder, said body portion having near its opposite side an annual channel, a split retaining ring having a flat inner face removably locked in said channel, and a removable face removably locked in said channel, and a removable ledge section inside said retaining ring and retained thereby,



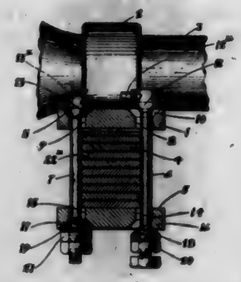
said ledge section being similar in shape to the integral ledge and opposed thereto, the inner wall of said channel forming a rounded annular shoulder, and said removable ledge section having a correspondingly shaped flange projecting inwardly from its outer edge and filling the space between said rounded shoulder and the flat inner face of the retaining ring to fix the position of said removable ledge section.

1,539,318. STANDING VALVE FOR DEEP-WELL PUMPS. VINCENT P. KILL, Lawton, Okla., assignor of one-third to Henry J. Muller, Oklahoma City, Okla., and one-third to Orrin J. Gaster, Lawton, Okla. Filed Dec. 13, 1924. Serial No. 755,742. 3 Claims. (Cl. 103—229.)



1. A standing valve for the working barrels of oil wells comprising upper and lower crowns, upper and lower barrel sections and a lower seating valve, a valve operating within each of the upper and lower crowns, said upper barrel section connecting the upper and lower crowns, the lower barrel section connecting the lower crown and said lower seating valve, each of said barrel sections supporting packing upon the outer surfaces thereof for engagement with the walls of the working barrel.

1,539,319. INJECTOR. STRICKLAND L. KNEASS, Philadelphia, Pa., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,651. 2 Claims. (Cl. 162—1.)



1. A steam boiler feeder comprising, in combination, an injector comprising a steam nozzle, a combining tube provided with a lateral overflow opening positioned at a point where the cross sectional area of the tube is substantially smaller than the minimum diameter of the steam nozzle and greater than the area of the water entrance, means to prevent influx through said opening, and a delivery tube operated by low pressure steam, a second injector comprising a steam nozzle, a combining tube and a delivery tube operated by high pressure steam, a passage affording communication from said first mentioned injector to said second injector and a check valve in said passage adapted to prevent reflux.

1,539,320. RESILIENT HEEL. EUCLID I. LA CHAPELLE, Brockton, Mass. Filed May 24, 1924. Serial No. 715,615. 3 Claims. (Cl. 36—35.)

1. A resilient heel having a base portion, a top portion, and an intermediate body portion having a plurality of washers embedded therein and also having a plurality of lines of fastenings arranged coaxial with the embedded washers, said base portion being weaker on the lines of fastenings than the top portion on the lines of fastenings, whereby the weaker portions only of the base portion are moved towards the shoe, to which the heel is applied, under the influence of the driving home of the fastenings against the washers, to thereby convert the base portion into a plane surface and force the plane surface firmly against the shoe without affecting the top portion.

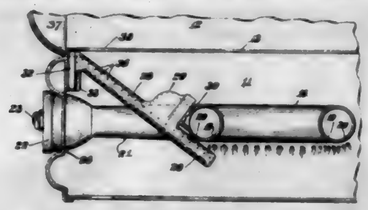
1,539,321. SPRING-CLAMPING DEVICE AND THE LIKE. RALPH M. LOVEJOY, Boston, Mass. Original application filed July 2, 1920, Serial No. 393,586. Divided and this application filed Nov. 9, 1922. Serial No. 599,810. 5 Claims. (Cl. 267—52.)

1. Mechanism for clamping together a series of superimposed devices of equal width comprising a base and a co-operating clamping member, separate means located on opposite sides of said superimposed devices connecting said clamping member to said base operable to force said clamping member toward said base and simultaneously to be forced bodily laterally against the edges of the superimposed devices.

1,539,322. APPARATUS FOR MAKING PHOTOGRAPHIC ENLARGEMENTS. LAWRENCE B. MORTON, San Francisco, Calif. Filed May 2, 1923, Serial No. 636,096. Renewed Mar. 30, 1925. 2 Claims. (Cl. 88—24.)

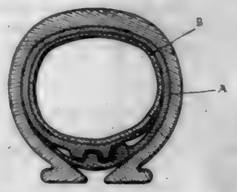
1. Enlarging apparatus comprising a driving roller and a guide between which a film is adapted to be advanced, a light slot adjacent said advancing film, a lens positioned to establish the image of the film, a cylinder to receive the image projected by the lens and adapted to carry a strip of sensitive paper and a common power means and driving connections therefrom to the film and the cylinder, said connections constructed and adapted to advance the film and the paper in opposite directions and at rates of speed proportional to the degree of the inlargement and a roller to receive the utilized film and another roller for receiving the exposed paper, and means having a slipping relation actuated from said driving connections to wind the paper and hold it tight against the cylinder.

1,539,323. SLOW-ACTING DEVICE. WALTER P. NEUBERT and WILLIAM E. SMITH, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1924. Serial No. 759,217. 10 Claims. (Cl. 188—96.)



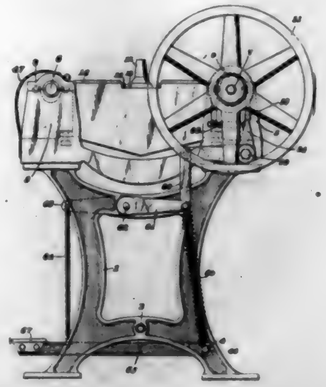
1. A slow acting device, comprising outer and inner fluid containers, a plunger within the inner container, fluid in said containers of sufficient specific gravity to float said plunger, said containers communicating with

each other above the highest level of the fluid in the outer container, a passage connecting said containers below the lowest level of the fluid in the outer container,



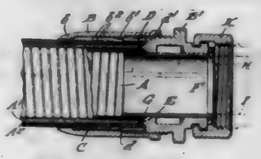
a valve member having a plurality of apertures of different sizes, and means for including any selected one of said apertures in said passage.

1,539,324. IGNITION DEVICE FOR GAS RANGES, ETC. HENRY W. O'DOWD, Jersey City, N. J., assignor, by mesne assignments, to Standard Gas Equipment Corporation, Baltimore, Md., a Corporation of Maryland. Filed Sept. 28, 1921, Serial No. 503,972. Renewed Nov. 1, 1924. 17 Claims. (Cl. 158—115.)



1. In a gas-range, the combination with a heating chamber, of a heating burner in said chamber having ports disposed at a predetermined plane, a pilot-burner provided with a continuous line of perforations intersecting said plane and disposed on both sides thereof, and means for supplying gas from the heating burner to the pilot-burner; whereby a flame applied to the perforations of the pilot-burner will be transmitted to the ports of the heating burner.

1,539,325. BLOW-OUT PATCH FOR PNEUMATIC TIRES. ALEXANDER OMAND, Toronto, Ontario, Canada, assignor of one-half to Ralph C. Lambert, Toronto, Canada. Filed May 5, 1924. Serial No. 711,171. 1 Claim. (Cl. 152—24.)

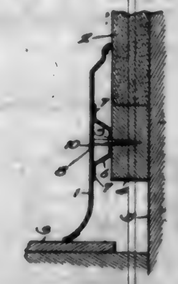


A blowout patch having overlapping sides adapted to encircle the inner tube, said sides being provided with parallel beads for interlocking engagement with each other.

1,539,326. CRIMPING MACHINE. HARRY A. PALMER, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich. Filed Dec. 8, 1921. Serial No. 521,018. 28 Claims. (Cl. 140—3.)

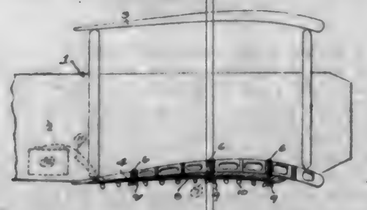
1. A crimping machine including means for holding a spring and suspending its base convolution therebeneath, and a crimping mechanism including dies for operating in the horizontal plane of said base convolution to crimp a bar onto said base convolution.

1,539,327. HOSE COUPLING. WALTER E. PHILLIPS, Cleveland, Ohio, assignor to International Metal Hose Company, Inc., Cleveland, Ohio. Filed June 16, 1923. Serial No. 645,806. 5 Claims. (Cl. 285—86.)



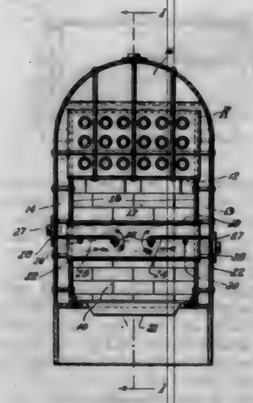
1. A coupling for covered metal hose including two coupling members, one of which is arranged around the hose and is provided with an internal stop shoulder, a contractible gripping member having one end adapted to engage said shoulder and having its other end bevelled, and a contracting ring having a bevelled face adapted to cooperte with the bevelled end of said gripping member, said other coupling member having an inner sealing part adapted to engage the end of said hose and a part surrounding said sealing part and adapted to move said contracting ring toward said gripping member.

1,539,328. STRUCTURAL ELEMENT FOR BUILDINGS. CHARLES H. RICHARDS, Aurora, Ill., assignor of one-half to Richsto Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Mar. 25, 1924. Serial No. 701,718. 1 Claim. (Cl. 189—85.)



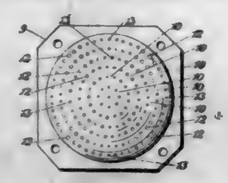
The combination with a building finishing board made of sheet material; of a spacing rib upon the inner side of said board and also made of sheet material formed

substantially into U shape and joined at its longitudinal edges with said board; said board and the base of said



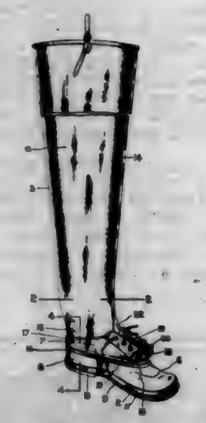
rib being formed with aligned screw receiving holes; and screws passing through said holes and which are free of threaded engagement with said board and rib.

1,539,329. ADVERTISING DEVICE FOR AIRPLANES. HAROLD J. RICKON, San Francisco, Calif. Field Aug. 22, 1923. Serial No. 658,754. 2 Claims. Cl. 40—127.)



1. In combination, an airplane having wings, the lower surface of the lowermost wing having a depression therein; and means for arranging advertising indicia in said lower wing depression.

1,539,330. BOILER. JAMES A. ROSS, Chicago, Ill. Filed May 19, 1922. Serial No. 562,115. 4 Claims. (Cl. 122—61.)

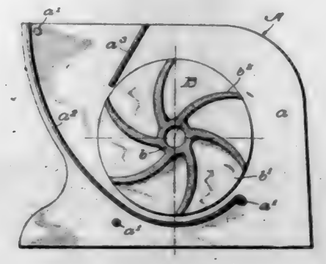


4. In a boiler, the combination with the arch wall thereof, of an arch support comprising a hollow box-shaped structure in communication with the water compartments of the boiler, the side walls of said arch support being reinforced by transverse stay-bolts; oppositely disposed horizontal baffle-plates arranged in said arch support and supported by said stay-bolts and having their adjacent ends curved downwardly to embrace the adjacent stay-bolts, said plates being supported by said stay-bolts in said arch support midway between the top and bottom walls thereof and adapted to direct connecting currents therethrough.

1,539,331. LAWN SPRINKLER. HENRY M. SIEMANN, Fort Lupton, Colo. Filed Mar. 12, 1923. Serial No. 624,537. 7 Claims. (Cl. 299—19.)

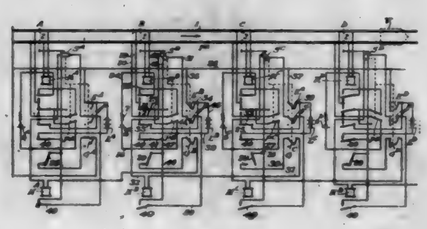
1. In a lawn sprinkler, a nozzle having jet-apertures of different sizes, radially arranged in a horizontal curve, two apertures of substantially equal diameter being at the ends of the curve and the other apertures decreasing in diameter progressively from said end apertures to a mediate point between them.

1,539,332. BOOT. PEARL Y. SMILEY, Kitchener, Ontario, Canada. Filed Oct. 5, 1922. Serial No. 592,613. 3 Claims. (Cl. 36—4.)



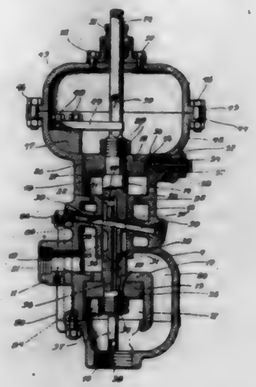
1. A boot of rubberized material comprising a foot portion located entirely below the ankle consisting of a lining, vamp, counter, and sole and an elastic leg portion extending down over the instep and ankle and attached to the foot portion, said leg portion having a restricted opening at the ankle adapted to snugly fit the same without distortion of its cross-section.

1,539,333. FEEDING DEVICE. SIMON SNYDER, Muncy, Pa., assignor to Sprout, Waldron & Co., Muncy, Pa., a Corporation of Pennsylvania. Original application filed June 21, 1923, Serial No. 646,964. Divided and this application filed July 13, 1923. Serial No. 651,340. 3 Claims. (Cl. 83—44.)



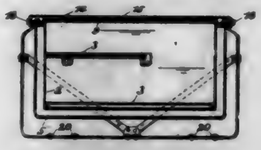
1. In a machine of the character described, a feed drum rotatably mounted in a casing having a feed hopper arranged to deliver material to the drum in front thereof, the front wall of said hopper being extended

in a gentle curve downwardly and rearwardly and thence upwardly to a point at the rear of the drum near the rear wall of the casing and curved to conform to the curvature of the peripheral portion of the drum; an open space being provided between the periphery of the drum and the rear wall of the casing extending from a point considerably above the axis of the drum to the lower end of the casing, said drum being constructed with a hub-like central portion having a series of uniformly spaced pocket-forming blades or vanes projecting from said central portion in curved lines each struck upon substantially the arc of a circle inter-



secting said central portion at a point diametrically opposite the point at which another vane is joined thereto and having its concave surface facing the convex surface of the next preceding vane in the series, in the direction of rotation of the drum, whereby the vanes are adapted to operate with a scoop-like action in filling the pockets and to effect a gradual discharge of the contents of the pockets commencing at a point above the horizontal axis of the drum and continuing until the outer edge of the blade or vane forming the bottom of the pocket that is being emptied has passed considerably below said axis, substantially as described.

1,539,334. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LESTER E. SPRAY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1924. Serial No. 742,217. 7 Claims. (Cl. 246—41.)

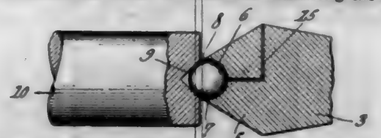


1. In combination, a stretch of railway track comprising a plurality of track sections, a track relay for each section responsive to the polarity of the current supplied to the rails of the section, a signal for each section controlled in part by the associated track relay, and means controlled by each signal for supplying the section next in rear with current of one polarity when the track relay associated with such signal is energized and the signal displays one indication but effective when the relay is de-energized to reverse the polarity of such current irrespective of the indication displayed by such signal.

1,539,335. ATTACHMENT FOR LOCOMOTIVES. CHARLES STERN, Jersey City, and RICHARD W. BRADEN, Newark, N. J., assignors to B. & S. Manufacturing Products Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed May 4, 1922. Serial No. 558,398. 11 Claims. (Cl. 121—137.)

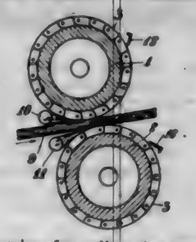
1. A control device comprising a casing in communication with a lubricant source and the steam supply pipe and valve chest of an engine, a reciprocating valve stem in the casing, a plunger moving with the valve stem and in communication at one side with the pressure in the valve chest, said valve stem having a duct to place the lubricant source in connection with the valve chest and a channel to place the lubricant source in connection with the steam supply pipe, and means whereby the valve stem may be shifted upon reduction of pressure in the valve chest.

1,539,336. REFRIGERATOR. FRANK M. STOLL, Denver, Colo., assignor to The Rocky Mountain Novelty Company, a Corporation of Colorado. Filed Aug. 7, 1923. Serial No. 656,212. 9 Claims. (Cl. 62—91.)



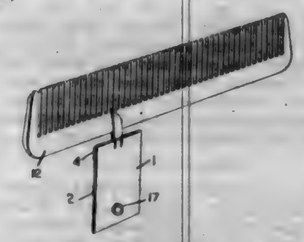
8. A refrigerator of the character described, comprising a feed receptacle having a trough-shaped rim projecting laterally from its walls, a fabric bag spaced from the walls of the receptacle and folded over the outer wall of the rim, a sheath fitted over the portion of the bag engaging with the rim, a lid closing the top of the receptacle on the inside of the rim, a flanged fabric cover fitted over the outer wall of the rim and having a flap fastened inside the sheath at one side of the rim, and means for fastening the sheath and the parts of the bag and the cover within the same, to the rim.

1,539,337. LATHE CENTER. LAMBERT H. VERVOORT, Cleveland, Ohio. Filed July 22, 1920. Serial No. 398,096. Renewed July 2, 1923. 3 Claims. (Cl. 82—33.)



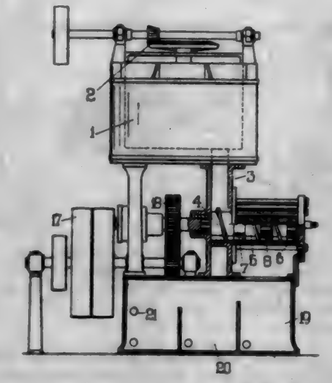
2. A lathe center having a spherical recess in its pointed end, and a ball seated in the recess, the metal of

the center at the marginal edge of the recess being extended beyond the center of recess and embracing the ball



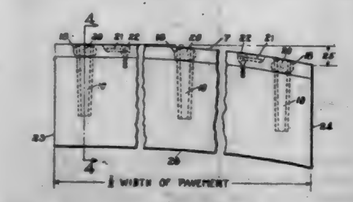
beyond the center thereof to retain the ball in the recess, said ball projecting from the recess at the apex of the center sufficiently to engage the work.

1,539,338. COVERING FOR ROLLERS FOR PRESSING APPARATUS AND THE LIKE. RUDOLF ERNST WAGNER, Karlstad, Sweden, assignor to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden, a Manufacturing Company of Sweden. Filed Feb. 14, 1921. Serial No. 444,819. 10 Claims. (Cl. 92—49.)



1. A roller covering for rollers for pressing apparatus and the like consisting of a number of unyielding metallic parts which in the peripheral direction at least of the roller have less extension than the length of the periphery of the rollers, each of said parts having its outer surface curved in such manner that when said parts bear against the roller said outer surfaces are concentric with the roller, and each of said parts having slots in its outer surface.

1,539,339. MARKING TICKET. GUSTAF A. WALLIN, Brooklyn, N. Y., assignor to A. Kimball Company, New Yory, N. Y., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 735,321. 2 Claims. (Cl. 40—21.)

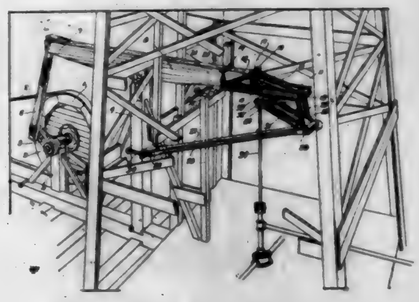


1. A prong fastener marking ticket for attachment to an article, without penetration thereof by the prong and non-removable therefrom without destruction of the ticket comprising two foldable main flaps, one flap having a transverse slot near its free end, a flexible connector secured at one end to and projecting from the free end of the second flap, and a prong fastener adjacent the free end of said secured to the second flap and adapted to engage and secure the free end of the flexible connector between two flaps and to pass through the first flap and to be turned down thereupon, a prong covering flap on the free end of the first flap having an elongated tongue adapted to pass through the slot and extend between the two main flaps, and means for permanently securing together the two main flaps and the interposed tongue.

1,539,340. MACHINE FOR COMPRESSING OR MOLDING PLASTIC SUBSTANCES. ALBERT WILLIAM SIEBE, Heesle, England. Filed Oct. 29, 1924. Serial No. 746,622. 2 Claims. (Cl. 100—48.)

1. A machine for expressing liquor from material comprising a compression chamber having ducts throughout its entire length for the escape of the liquor, a plurality of spaced stationary die plates located within said chamber and engaging the inner surface of said chamber, each of said die plates having a plurality of tapered ports or passages at the periphery thereof, and a worm section associated with each die plate and located between adjacent die plates for forcing the material through the tapered passages in said die plates in succession, whereby the pressure on the material is distributed throughout the length of the compression chamber.

1,539,341. EXPANSION-JOINT FORM. WILLIAM F. WIEBERG, Chaffee, N. Y. Filed Feb. 2, 1923. Serial No. 616,608. 9 Claims. (Cl. 94—51.)



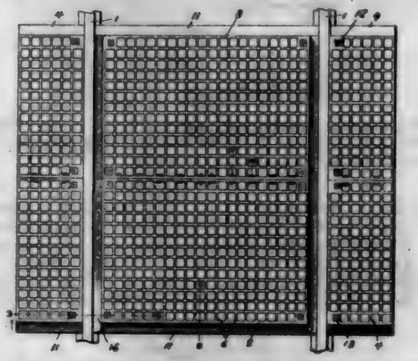
1. An expansion joint form for concrete roads, consisting of two pieces fastened together on diagonal surfaces and adapted to be separated, whereby said form may be removed from said concrete road and leave an expansion joint.

1,539,342. ADSORBENT MATERIAL AND THE MANUFACTURE AND APPLICATION THEREOF. EVAN C. WILLIAMS, Huddersfield, England, assignor to National Benzole Association, London, England. Filed Dec. 8, 1923. Serial No. 679,499. 3 Claims. (Cl. 23—182.)

1. Adsorptive silica gel free from alkali metal salts.

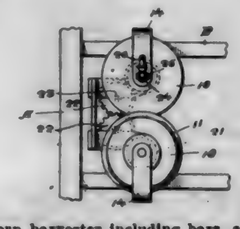
2. The process of producing dry silica gel which comprises mixing silicon chloride with water with such agitation and in such proportions that a gel is obtained on standing and then drying said gel slowly by heating.

1,539,343. STROKE-MULTIPLYING PARALLEL-MOTION DEVICE. EDWARD B. WINTERS, Coffeyville, Kans. Filed May 29, 1924. Serial No. 716,808. 7 Claims. (Cl. 74—5.)



1. In a stroke multiplying parallel motion device, a rocking beam, an elbow lever pivoted to one end of the beam at the angle of the elbow lever and compensating means having one end anchored and the other pivoted to one arm of the elbow lever.

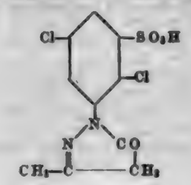
1,539,344. MAST HOIST. ROBERT M. ADAM, Philadelphia, Pa., assignor to John H. McClatchy, Philadelphia, Pa. Filed June 21, 1923. Serial No. 646,751. 11 Claims. (Cl. 187—2.)



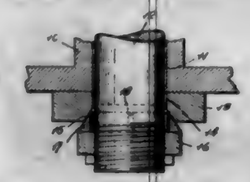
5. An apparatus of the class described comprising a mast, a channel forming a track and having its base abutting and secured to the side of said mast, the side walls of said channel being bent inwardly forming outer guideways with an entrance slot between them, a lifting platform including a floor and an upright connected thereto and extending above and below said floor, a pair of brackets carried by said upright and extending through said entrance slot into the channel, one of said brackets being located above and the other below the level of the floor, rollers carried by said brackets in line with said guideways and adapted to roll either upon said guideways or the base of the channel, a hoisting cable connected to said upright, and means for actuating said cable.

1,539,345. RAILWAY CROSSING. WILLIAM M. BAGG, Hamilton, Ohio. Filed Oct. 4, 1924. Serial No. 741,718. 5 Claims. (Cl. 238—8.)

1. In a railway crossing, a frame having cells open at their upper and lower ends, and plastic material in said cells, said cells provided in the lower portions thereof with means for supporting said plastic material.



1,539,346. CUTTING MECHANISM FOR CORN HARVESTERS. COURTLAND B. BIRD, Wheeler, Wis. Filed Dec. 22, 1922. Serial No. 608,526. 2 Claims. (Cl. 56—102.)

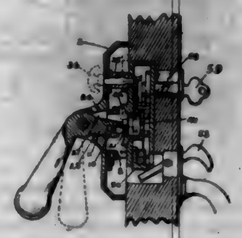


1. In a corn harvester including bars, a cutting mechanism comprising a pair of similar horizontally disposed U-shaped brackets mounted upon the bars and arranged with their open sides toward each other, pivot bolts traversing the U-shaped brackets, disks mounted upon said bolts and having cutting edges arranged in overlapping relation, gears on said bolts below the brackets, rearward extensions at the inner ends of said brackets formed with bearings, gears journaled at said bearings and meshing with each other and with first named gears, and means for driving one of the gears.

1,539,347. AZO DYES OF THE PYRAZOLONE SERIES AND PROCESS OF MAKING SAME. MELCHIOR BOENIGER, Basel, Switzerland, assignor to Society Chemical Works formerly Sandoz, Basel, Switzerland. Filed Feb. 4, 1925. Serial No. 6,896. 2 Claims. (Cl. 260—87.)

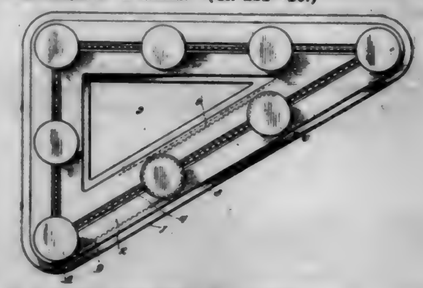
1. The hereinbefore described process for the manufacture of yellow azo dyes by combining in an alkaline solution a diazo compound with 1.2'.5'-dichloro-3'-sulfophenyl-3-methyl-5-pyrazolone of the formula

1,539,348. LOCK WASHER. LEO J. BOTSCHELLER, Dalton, Pa. Filed Oct. 27, 1924. Serial No. 746,223. 2 Claims. (Cl. 151—10.)



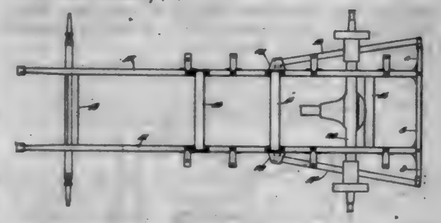
1. A lock washer adapted for embracing association with a bolt, said bolt extending through a counter-sunk bolt hole in an element and carrying a substantially plane faced nut, said washer comprising a resilient split externally beveled annulus having three gripping and locking surfaces, said annulus adapted to extend into the countersink and surround the bolt, a bottom surface thereof for contacting with the plane face of the nut, an external surface thereof for wedging engagement with the countersink, and an internal surface adapted for embracingly engaging the bolt, the upper edge of the washer adapted to be forced uniformly and concentrically toward the bolt hole at the inner end of the countersink, the whole so arranged that the washer centers and locks the bolt in the element, simultaneously locking the nut against retrogression.

1,539,349. GRADING APPARATUS. WILLIAM P. BULLARD, Albany, Ga. Filed Dec. 26, 1924. Serial No. 758,200. 10 Claims. (Cl. 130—32.)



1. In a grading machine, spaced article-carrying members, one of which comprises an endless hollow belt of coiled wire, and means for moving said belt longitudinally.

1,539,350. EMERGENCY LOCK. RALPH S. CLARK, Rochester, N. Y. Filed Jan. 29, 1923. Serial No. 615,593. 12 Claims. (Cl. 292—92.)



1. In an emergency lock, the combination of a swinging bar, an actuating member actuated by said bar, a locking bolt operated by said actuating member, and means to simultaneously lock said actuating member and said swinging bar in a predetermined position and hold said locking bolt in its unlocked position.

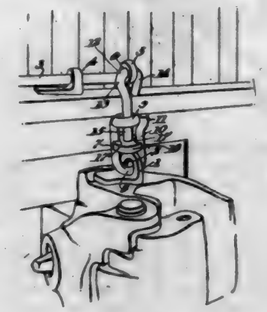
1,539,351. DISPLAY APPARATUS. CHARLES D. DEARDURFF, Newark, Ohio. Filed July 15, 1922. Serial No. 575,190. 1 Claim. (Cl. 211—20.)

In a display apparatus, the combination of a casing having an endless slot in its top, rails secured within the casing at the sides of the said slot, platforms disposed above the casing and having depending hubs extending into the slot and resting slidably upon said rails, shafts depending from said hubs between the rails, gears upon the several shafts, racks secured upon the opposite sides of the casing to be engaged successively by the said gears whereby to rotate the shafts and the platforms alternately in opposite directions, upper and lower guides upon the sides of the casing within the same to receive the said gears, a chain connecting the lower ends of the said several shafts and co-extensive with the slot in the top of the casing, means within the casing for guiding said chain, and means for driving said chain.

1,539,352. SPRING SUSPENSION FOR AUTOMOBILES. STEPHEN I. FERETE and STUART G. BAITS, Detroit, Mich., assignors to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 26, 1923. Serial No. 653,927. 4 Claims. (Cl. 280—106.5.)

1. In combination, a chassis frame having side members connected at their rear ends by a rear cross member extending laterally beyond said side members to form horns, springs, the rear ends of which are secured respectively to the outer ends of said horns, the front ends of the springs being attached at about the line of the side frame members and a rear axle secured to the springs intermediate their ends.

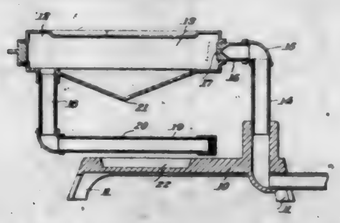
1,539,353. AZO DYESTUFFS AND PROCESS OF MAKING SAME. HERMANN FREITZSCHE, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed July 12, 1924. Serial No. 725,695. 12 Claims. (Cl. 260—70.)



5. As new products the substantive polyazo-dyestuffs of the general formula

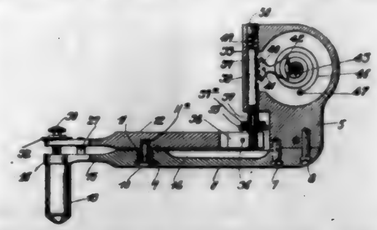
$$R_3—N=N—R_1—NH—CO—NH—R_2—N=N—R_4$$

wherein R_1 and R_2 represent aryl-5-pyrazolone radicals in which the —NH-group is attached to the aryl nucleus and the —N=N-group to the pyrazolone nucleus, and wherein R_3 and R_4 signify radicals of azo-dye-



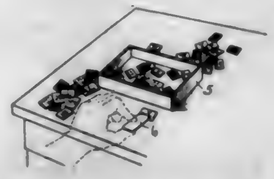
stuffs which contain at least one azochromophor, which dyestuffs form brown-red to brown-black powders which dye unmordanted cotton yellow to brown and red shades which are fast to light.

1,539,354. UNCOUPLING ATTACHMENT FOR CAR COUPLERS. CLEON M. HANNAFORD, Richmond, Va. Filed Jan. 31, 1925. Serial No. 6,013. 2 Claims. (Cl. 213—166.)



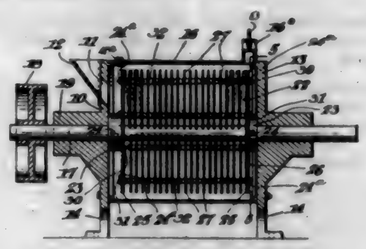
1. An uncoupling mechanism for car couplers, comprising two unlike interengaged and relatively sliding members, one of which is adapted to be attached to an uncoupling arrangement on a car and the other to engage the means to control the operation of a coupler, said last mentioned member having a transversely arranged eye in which the other member has sliding movement and the eyed member having a looped portion the free end of which is offset and adapted to be closed against the eye after said member is connected with the coupler element.

1,539,355. OIL BURNER. HENRY W. HATHORN, Mason City, Iowa. Filed June 8, 1923. Serial No. 644,200. 1 Claim. (Cl. 158—63.)



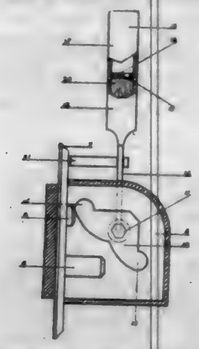
An oil burner comprising a base, a relatively flat hollow generating chamber spaced above the base, a feed pipe connecting the base and generating chamber for supporting the latter, a nipple spacing the feed pipe and generating chamber respectively and having a restricted fuel outlet port within the chamber, a downwardly extending pipe connected at its upper end to the opposite side of the generating chamber and connected at its lower end to a horizontally disposed burner pipe located between the base and generating chamber, said burner pipe having its free end closed and a gas escape port in the top and adjacent the center thereof, an inverted substantially cone-shaped lower wall for the generating chamber, the point of the cone being positioned directly above the escape port of the burner pipe, said lower wall increasing the heating surface and defining a flame spreader, and an oil pan provided in the base beneath the burner pipe.

1,539,356. CALIPER. FREDERICK W. HORSTMANN, Irvington, N. J. Filed Feb. 16, 1923. Serial No. 619,502. 9 Claims. (Cl. 33—148.)



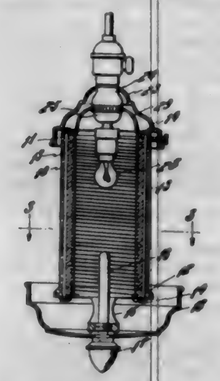
1. An inside indicating caliper comprising a stationary arm having an indicator supporting body and an indicator, a movable arm fulcrumed on the stationary arm to actuate the indicator, means for adjusting said movable arms relatively to said stationary arm thereby setting the indicator to a predetermined position, and work engaging contact means carried by the respective arms for rocking the movable arm to determine the calibration of the work.

1,539,357. BALLOT-BOX GAME. GEORGE HARRISON JOHNSON, Tottenville, N. Y. Filed July 11, 1923. Serial No. 650,962. 2 Claims. (Cl. 273—95.)



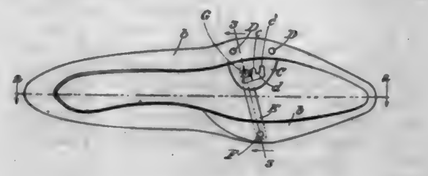
1. A game consisting of a plurality of loose discs, each having but one State designated on each side thereof, a number thereon corresponding to the number of electoral votes of said State as cast by its electors, the slides of said discs also representing the two principal parties.

1,539,358. MACHINE FOR HULLING WHEAT. BENJAMIN PLOWMAN KENT, Outlook, Saskatchewan, Canada. Filed June 27, 1924. Serial No. 722,833. 5 Claims. (Cl. 83—30.)



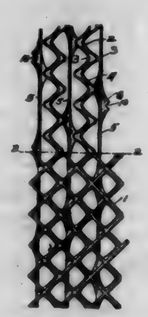
1. A machine for hulling wheat, comprising a suitably supported outer casing, a rotatable shaft journalled through said casing, a driving pulley on said shaft, a hulling drum within the casing and fixedly mounted on said shaft, a plurality of hulling blades on said drum, rubbing plates on the end of said drum and rubbing plates registering therewith on the inner end of the casing, intake and discharge means for the casing, means for adjusting the hulling blades and water intake means in the casing.

1,539,359. SWITCH-ACTUATING DEVICE. WILLIAM STIERS KISINGER and JAMES ASA ENSLEY, Covington, Ky.; said Kisinger assignor to said Ensley. Filed Nov. 10, 1923. Serial No. 673,969. 4 Claims. (Cl. 200—33.)



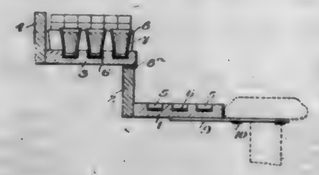
1. The combination with a push button type switch comprising two push buttons, of a pivotally mounted cam provided with a pair of lugs, each lug being arranged to engage one of the push buttons, and means associated with the cam for automatically moving the cam about its pivotal mounting for moving its respective push button said means comprising a container mounted for movement with the cam and having spaced communicating chambers therein, and a fluid for movement between the chambers for actuating the cam.

1,539,360. INSECT DESTROYER. CARL KNUTSSON, Charleston, S. C. Filed June 9, 1924. Serial No. 718,913. 2 Claims. (Cl. 43—112.)



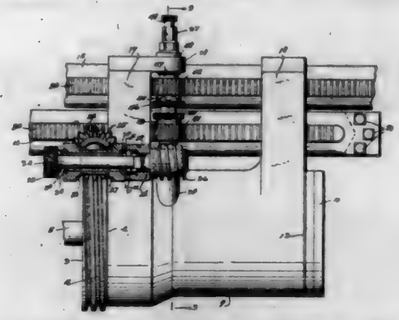
2. An insect destroyer comprising a frame open at both ends, a plurality of electric coils mounted thereon and arranged in parallelism, said coils being used to kill an insect coming in contact therewith when the coils are energized, a cap covering the upper end of said frame and supported thereby, an electric light bulb, suspended from the cap and arranged within the frame, a yoke suspended from the frame, and having a centrally threaded opening, a receptacle arranged beneath the frame and surrounding the latter, and into which the dead insects fall, a bait holder including a rod having a head, said rod being adapted to be passed through the opening in said yoke and through an opening in the bottom of the receptacle, to project within the frame, said rod including a threaded portion adapted to be threaded into said opening in the yoke, whereby the receptacle is clamped between the yoke and the head of said rod to hold the parts associated.

1,539,361. SHOE FORM. ALFRED G. LAGGE, Brockton, Mass. Filed Feb. 19, 1923. Serial No. 619,856. 5 Claims. (Cl. 12—128.5.)



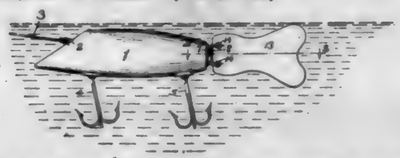
1. A shoe form having on one side a notched member and on the other side a movable strut extending transversely of the form and engaging the notched member, the notches in the member being of different depths.

1,539,362. RADIATOR. GEORGE H. LOBER, Toledo, Ohio. Filed Aug. 25, 1922. Serial No. 584,175. 2 Claims. (Cl. 257—130.)



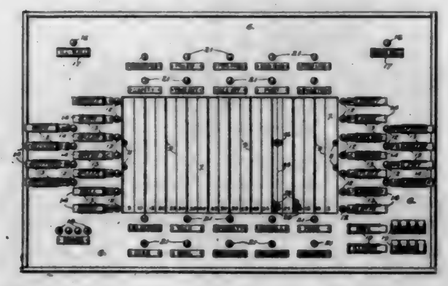
1. In a radiator for internal combustion engines, water passageways formed of a plurality of pairs of angularly corrugated strips, the apices being located in horizontal planes, the portions between the apices of the angles of the strips being bellied arcuately inward with respect to the passageway and expansible outward on freezing the water in the passageway of the radiator.

1,539,363. COMMUNION TABLE. WALTER P. MADDOCK, Rochester, N. Y. Filed Oct. 22, 1923. Serial No. 669,995. 1 Claim. (Cl. 65—53.)



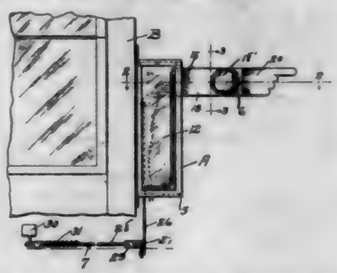
A portable communion table including a glass holding section comprising base and rear walls with glass holding pockets in its base, a second glass holding section hinged to said rear wall and comprising base and rear walls with glass holding pockets in the last mentioned base, the second glass holding section when open occupying a position at the top of the first mentioned rear wall and extending rearwardly from the first mentioned glass holding section and when closed occupying an inverted position over the first named glass holding section with its rear wall at the front of the latter, thereby forming a closed cabinet for the glasses.

1,539,364. TURNING MACHINE. CLAUDE EDWARD MARSH, Atlanta, Ga. Filed Feb. 7, 1924. Serial No. 691,237. 8 Claims. (Cl. 82—4.)



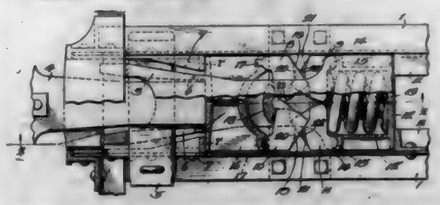
1. A machine of the character described comprising a work engaging member, a body rotatable upon said work engaging member, a tool carrier slidable longitudinally of said body, a rotatable shaft carried by said body, a rack carried by said tool carrier, a gear rotatable about said shaft and meshing with said rack, clutch means for locking said gear to said shaft and movable into and out of an operative position, and means carried by said body for imparting rotary movement to said shaft and receiving rotary movement from said work engaging member as said body rotates about the work engaging member.

1,539,365. ARTIFICIAL FISH LURE. HAROLD S. MASONER, Detroit, Mich. Filed Mar. 8, 1921. Serial No. 450,776. 2 Claims. (Cl. 43—46.)



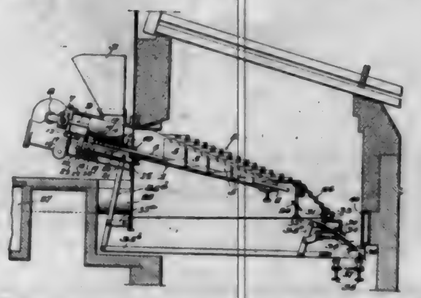
1. In an artificial fish lure, the combination of a body, a tail of rather stiff flexible material, and a hinge securing the tail in position, one of the members of said hinge embodying a pair of buttons and the tail having eyelets to receive the buttons.

1,539,366. GAME-REPRODUCING MECHANISM. ROBERT R. O'BRIEN, Council Bluffs, Iowa. Filed Nov. 24, 1923. Serial No. 676,829. 9 Claims. (Cl. 116—120.)



3. In a game reproducing mechanism, a field-board, horizontal guide-bars extending across the rear side of said field-board, a ball-supporting and controlling mechanism mounted upon said guide-bars and slidable bodily longitudinally thereof from end to end of the field-board, said mechanism having portions extending about the upper and lower edges and across the front of the field-board, a ball carried upon said front portions, and means carried upon the rear portion of said supporting and controlling mechanism and connected with said ball for moving the same vertically across the front of the field-board from one side to the other thereof, whereby through the combination of said vertical movements and of the horisontal movements of the supporting mechanism as a whole the ball may be moved in any direction across the front of the field-board from and to any points thereon.

1,539,367. AUTO DIRECTION SIGNAL. HENRY H. OWENS, Madison, Ind. Filed Dec. 7, 1923. Serial No. 679,181. 1 Claim. (Cl. 116—54.)

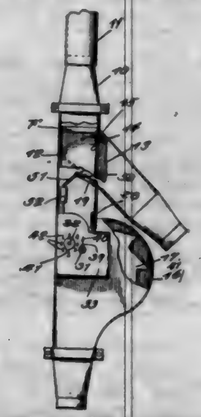


A direction signal including an upright elongated casing open at its outer side, a vertically swinging signal arm normally disposed within and having a body substantially conforming to said casing, a shaft horisontally arranged in the upper part of the casing and having its ends supported by the front and rear walls of the latter, a plate rigid and co-extensive with the normally inner-wall of the signal arm body and normally projecting upwardly from the normally upper end of the latter, said plate being engaged with said shaft to permit outward and upward swinging of the signal arm to an exposed horizontal position, and an operation lug rigid with and normally projecting inwardly and upwardly from said plate and the shaft, whereby a downward pull on said lug will affect the outward and upward swinging of said signal arm, said signal arm embodying a pointer member rigid with and normally projecting downwardly from the normally lower end of the signal arm body.

1,539,368. DRAFT GEAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed July 31, 1924. Serial No. 729,240. 7 Claims. (Cl. 213—27.)

1. In a draft gear, the combination with a draft sill structure; of two draft elements that are movable longitudinally and which are in lost motion relation permitting their relative longitudinal movement; an abutment structure moved by one of said draft elements and including two abutments spaced apart longitudinally of the gear; a follower movable by the other of said draft element and with respect to said abutment structure; motion limiting stops upon the draft sill structure respectively individual to said abutment structure and follower to limit the relative movements of the abutment structure and follower; and motion resisting mechanism including two coacting rockers respectively individual to and horizontally turning upon said abutments, one rocker also horizontally turning upon the follower, said rockers having interleaving formations.

1,539,369. UNDERFEED STOKER. MAURICE RATEL, New York, N. Y. Filed Aug. 29, 1921. Serial No. 496,509. 49 Claims. (Cl. 110—44.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

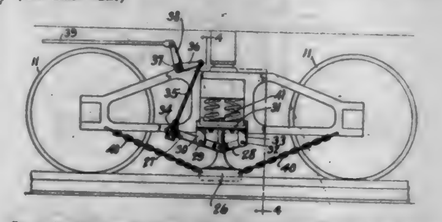


1. In an automatic stoker, a series of alternating stationary twyers and fuel retorts or troughs, a main fuel feeding member for each retort, and a set of compound pushers disposed side by side in each retort and operatively connected with the main fuel feeding member, said compound pushers each comprising a plurality of secondary fuel feeding members.

7. In an automatic stoker, a main fuel feeding member, a secondary fuel feeding member, and driving connections between said fuel feeding members including means automatically making and breaking connection therebetween intermediate the limits of motion of the secondary fuel feeding member.

34. In an automatic stoker, a fuel retort or trough, a fuel feeding member in said retort, means for imparting translatory movement of the fuel feeding member, and means for moving said member vertically during its translatory movement.

1,539,370. CUT-OUT FOR CISTERN WATER PIPES. PETER RAUCH, Beloit, Kans., assignor of one-half to Jacob J. Kindscher, Beloit, Kans. Filed Oct. 10, 1923. Serial No. 667,747. 3 Claims. (Cl. 137—9.)

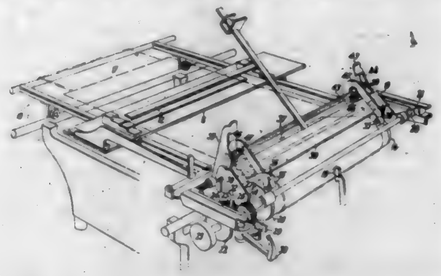


1. In a cistern system, a fitting receiving water from a source of supply and having branches communicating with a sewer and with the cistern, a valve controlling the passage of water through the fitting to the sewer to direct the same to the sewer or cistern and normally positioned to direct the water to the sewer, a water-wheel in the sewer branch, means operated by the water-wheel for shifting the valve to close the sewer branch and open the cistern branch adjustable to determine the amount of water passing through the sewer branch including an operating arm for the valve, a trip associated with the arm and in one position thereof holding the valve through said arm in position closing the cistern branch, a rotatable member for shifting the trip out of said position, means yieldably resisting rotation of the rotatable member, a driving member for the rotatable member intermittently engaging the same, and a driving connection between the driving member and water-wheel including a part shiftable to disconnect the driving member and water-wheel while itself remaining connected to the driving member to drive the same, said part being manually operable.

1,539,371. SEGMENTAL CLAMPING BODY. JOSIAH SCOTT and ALFRED A. BENNETT, Toledo, Ohio. Filed June 4, 1923. Serial No. 643,822. 2 Claims. (Cl. 126—317.)

1. In a segmental pipe collar, a pair of spring wires, each spring wire having a circular part surrounding in hook form more than one-half of the pipe and having an end portion extending parallel to the axis of the pipe, the collar segments having openings so located as to receive the portion of the spring extending parallel to the axis of the pipe when the springs are deformed to cause the springs to elastically draw the parts of the collar toward the pipe.

1,539,372. BRAKE. THOMAS SIMPSON, Beaumont, Tex. Filed Dec. 4, 1920. Serial No. 428,341. 1 Claim. (Cl. 188—41.)

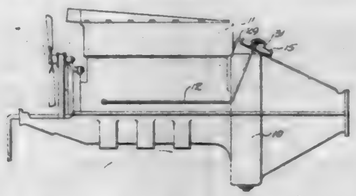


In a brake mechanism, the combination with the truck of a railway car, a vertically movable rail engaging shoes supported upon the truck, a pair of levers pivoted intermediate their ends and each having operative connection with a shoe, a beam extending transversely across the truck and connected rigidly with the levers, a manually operable rock shaft, crank arms arranged on the rock shaft and fixed to rock therewith, and operative connections between the beam and the crank arms, the beam normally serving to hold the shoe above the rail.

1,539,373. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 18, 1918, Serial No. 262,939. Divided and this application filed May 1, 1922. Serial No. 557,630. 8 Claims. (Cl. 197—126.)

1. In a typewriting machine, the combination with a platen and a platen-frame which is displaceable on the

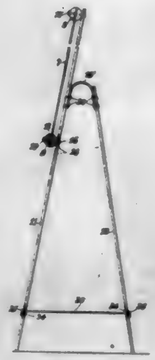
carriage to release the work-piece, of means to clamp an additional work-sheet on the platen, a work-support or paper-shelf forming a part of the platen-frame at the delivery side of the platen, and spring-controlled roll-



carrying arms mounted on the back of said paper-shelf for adjustment longitudinally of the platen and swingable away from the platen, said arms extending over the top of the paper-shelf and downwardly thereover to the platen to engage the latter.

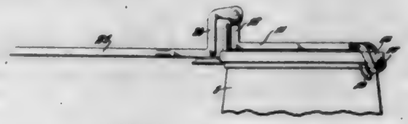
1,539,374. MANUFACTURE OF DRILLS AND SIMILAR TOOLS. ROBERT LOW SMITH, Erith, England, assignor to Vickers Limited, Westminster, England. Filed July 3, 1924. Serial No. 724,036. 6 Claims. (Cl. 76—108.)

1. A method of forming two drills from a steel bar of double drill length, which consists in hardening and tempering the same, cleaning up the outside diameter, thereafter severing the bar at the middle, pointing the severed ends, and forming the usual cutting edges.



1,539,375. OILER FOR AUTOMOBILES. LOUIS A. STANLEY, Hillsboro, Ohio. Filed June 9, 1924. Serial No. 718,682. 10 Claims. (Cl. 123—196.)

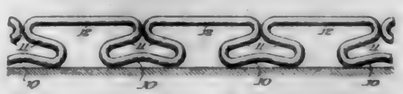
1. In combination with an internal combustion engine having a fly-wheel running in an oil sump, a scoop positioned to receive oil thrown off said fly-wheel by centrifugal force, a collecting chamber for the oil from said scoop having an air dome and an air bleeder passage therefrom, an oil delivery pipe, and a control valve therefor adapted to meter the oil in inverse proportion to the engine intake manifold depression.



1,539,376. POSTER. WILLIAM J. SWEENEY, East Orange, N. J. Filed Dec. 26, 1924. Serial No. 758,157. 3 Claims. (Cl. 40—125.)

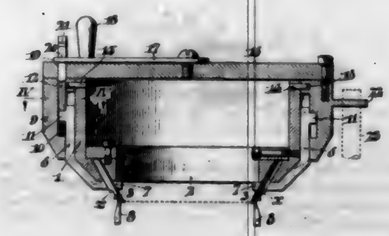
1. In combination, a flexible poster having edge strips at top and bottom of the same, the upper edge strip being perforated near the ends for passage of fastenings, light supporting strips at the back of the poster perforated at their upper ends, readily releasable fastenings detachably engaged in the perforations in said supporting strips and the upper edge strip, whereby the supports are detachably secured to the upper edge of the poster, said supporting strips being sufficiently longer than the poster to support said poster with the lower edge strip clear of the floor or other support, fastenings detachably holding said lower edge strip to the lower por-

tions of the supporting strips and a prop for the supports having a swinging mounting and provided with means for pressing the same in extended relation.



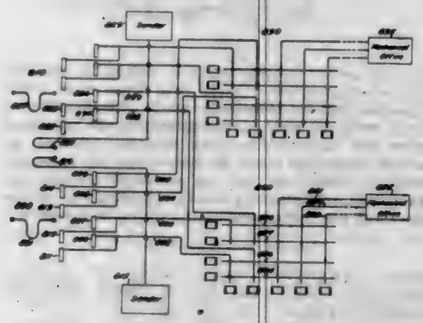
1,539,377. BARREL-CLOSING PROCESS AND MECHANISM. EDWARD C. WALKER and FREDERICK J. BRINKER, St. Louis, Mo., assignors to National Lead Company, New York, N. Y., a Corporation of New York. Filed May 18, 1923. Serial No. 639,876. 9 Claims. (Cl. 113—22.)

1. In the art of closing barrels, the process comprising placing the head on the barrel end, slipping a closed flanged ring over the barrel end and on the head thereon, and simultaneously rolling the ring flange inwardly against the barrel while the top of the ring is being rolled downwardly against the head.



2. A barrel closing hand tool comprising a roll adapted to run on the barrel rim to press endwise thereagainst a roll adapted to run against the side of the barrel, and means for pressing said rolls together.

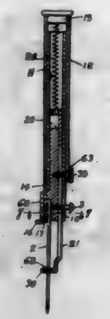
1,539,378. BAR SPACER. WILLIAM E. WHITE, Chicago, Ill. Filed Nov. 7, 1923. Serial No. 673,275 2 Claims. (Cl. 72—122.)



1. A spacer consisting of a length of stiff wire having substantially closed loops therein, said loops being separated by straight aligned intervening portions, said loops being alternately angularly disposed to occupy planes which intersect at the center line of said intervening portions the ends of adjacent intervening portions being in contacting relation.

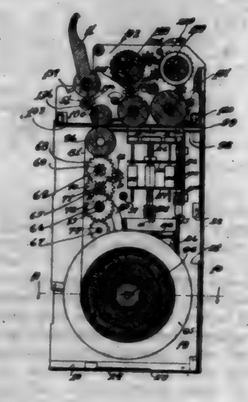
1,539,379. TRANSFERRING DEVICE FOR KNITTED WEBS. LOUIS N. D. WILLIAMS, Ogontz, Pa. Filed Dec. 14, 1922. Serial No. 606,790. 4 Claims. (Cl. 66—82.)

1. In a web transferring device, the combination of a series of stitch quills adapted to be engaged simultaneously with all the needles of a knitting machine, stitch strippers individually associated with the quills, and means for actuating the strippers to successively transfer the stitches between the quills and the needles.



1,539,380. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 5, 1922. Serial No. 604,975. 9 Claims. (Cl. 179—27.)

1. The combination with an operator's position, of a number of conversational circuits terminating in said position, means under the control of the operator for making connection with said circuits, a group of trunks, a switch responsive to the act of the operator in making connection with one of said circuits for connecting such circuit to one of said trunks, a selective switch for further extending said trunk, a register sender comprising a plurality of registers for storing designations, means responsive to the act of the operator in making connection with one of said circuits for connecting the register sender to such circuit, and means controlled by the sender for governing the operation of said selective switch.

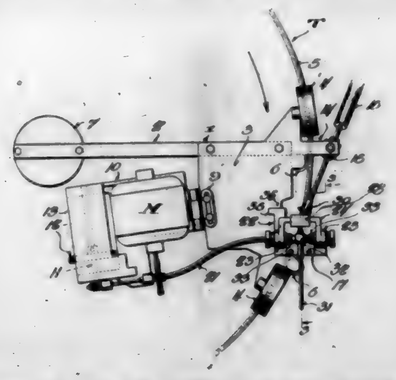


1,539,381. EMBROIDERING DEVICE. MICHAEL S. BASSISTY, New York, N. Y. Filed Oct. 11, 1920. Serial No. 416,269. Renewed Apr. 14, 1925. 3 Claims. (Cl. 112—80.)

1. An embroidering device comprising a bar, a needle and a presser-foot fixed to said bar, a sleeve slidable on said bar, and co-operating thread-gripping elements on said sleeve and bar adapted to grip the thread when the sleeve is moved upwardly on the bar, the thread gripping element on the sleeve comprising a tongue projected downwardly from one side thereof and having

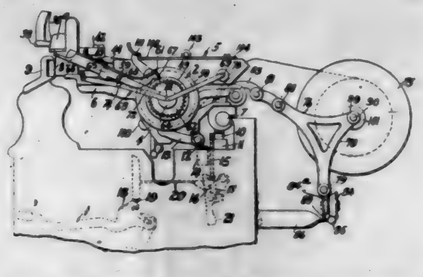
a lip formed on its lower end adapted to engage the bottom of the said bar, said tongue having a thread re-receiving aperture in its lower end.

1,539,382. TRANSFER-ISSUING MACHINE. ERNEST H. THOMPSON and HUGO J. BAUR, Chicago, Ill., assignors to Johnson Fare Box Company, Chicago, Ill., a Corporation of New York. Filed Jan. 3, 1920, Serial No. 349,323. Renewed Nov. 7, 1924. 36 Claims. (Cl. 101—70.)



1. A transfer-issuing machine comprising means for feeding a continuous strip of material therethrough, impression devices to impress characters on a portion of said strip, and a plurality of levers operatable to vary the position of the impression devices and each lever serving to set the machine in operation for impression and discharge of a certain portion of the strip.

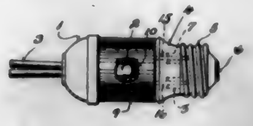
1,539,383. WELDING MACHINE. EDGAR A. BIENENSTOK, Milwaukee, Wis., assignor to Milwaukee Tank Works, Milwaukee, Wis. Filed May 17, 1924. Serial No. 714,012. 6 Claims. (Cl. 113—59.)



1. A seam welding machine comprising a frame adapted to be mounted on an article to be welded, a

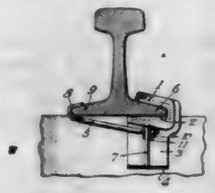
torch carried by said frame, means for laterally guiding the frame on the article, and means for propelling said

frame and urging the guiding means into lateral engagement with said article.



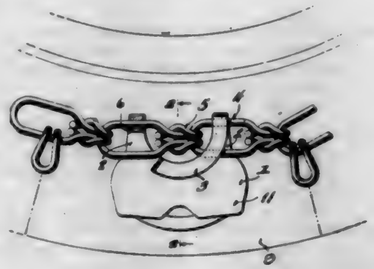
1,539,384. TYPEWRITING MACHINE. THOMAS J. COO, Toronto, Ontario, Canada, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 18, 1920. Serial No. 404,287. 15 Claims. (Cl. 197—129.)

1. The combination with a typewriter carriage in which is mounted a divided platen, comprising an axle, a platen-section attached thereto, and a second platen-section rotatable about said axle, of two ratchet-wheels connected with said axle, one at each end, two ratchet-wheels connected with the second platen-section at one end thereof, and means for actuating said platen-sections, including a carriage-returning line-space lever for one ratchet-wheel of each platen-section swingable longitudinally of said axle, an actuating lever for the other ratchet-wheel of each platen-section swingable around said axle, and a finger-wheel connected to each platen-section for turning it in either direction, said carriage-returning levers spaced apart from each other and both of them spaced apart from said ratchet-wheel-actuating levers, to be freely operable independently of the latter, and each ratchet-wheel-actuating lever to be freely operable independently of said carriage-returning levers.



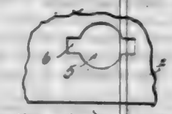
1,539,385. BATTERY PLUG. WILLIAM H. ELLIS, Two Rivers, Wis.; Ruby K. Ellis administratrix of said William H. Ellis, deceased. Filed Mar. 23, 1923. Serial No. 627,020. 1 Claim. (Cl. 200—115.5.)

A fused electric plug comprising an insulating member having conductor receiving terminals and projecting contacts connected thereto, an auxiliary plug having sockets for receiving said projecting contacts and having projecting contacts connected thereto and having a fuse interposed between one of the sockets and the corresponding projecting contact, and a screw plug having



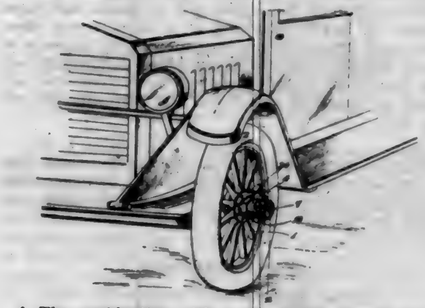
sockets for the reception of the last mentioned projecting contacts and having a threaded metallic shell and a central contact electrically connected with said last mentioned sockets.

1,539,386. RAIL ANCHOR. MICHAEL W. FRENEY, Rochester, N. Y., assignor to Anchor Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1921. Serial No. 453,693. 6 Claims. (Cl. 238—321.)



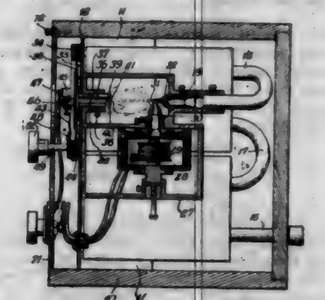
4. A rail anchor comprising a pair of jaws for engaging and increasingly gripping a rail base flange when tilted, a depending leg for abutting a tie to tilt the jaws as the rail tends to creep, a strengthening web extending between the leg and the jaws, and an attacher arranged to engage the other rail base flange and extending transversely under the rail at an angle thereto and engaging the strengthening web for holding the anchor in place and positively insuring the tilting of the jaws.

1,539,387. TRACTION LUG. FRANK M. FICHTEN, Davenport, Iowa. Filed Oct. 9, 1923. Serial No. 667,469. 3 Claims. (Cl. 152—14.)



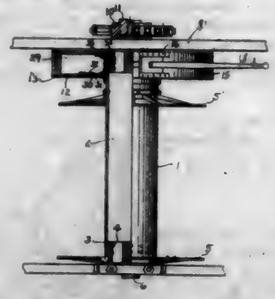
1. A traction lug adapted to be permanently applied to anti-skid chains for automobile tires comprising a body portion, a pair of arms projecting from said body portion, a member joining said arms and folded over said chains, means projecting inwardly from said body portion and adapted to lie against the outer face of said tire, and a flared member projecting outwardly from said body portion and angularly arranged with reference to said first mentioned member.

1,539,388. BINDER POST FOR LOOSE-LEAF BINDERS. CHARLES FRANZ, Jr., Milwaukee, Wis. Filed Feb. 1, 1924. Serial No. 689,923. 2 Claims. (Cl. 129—21.)



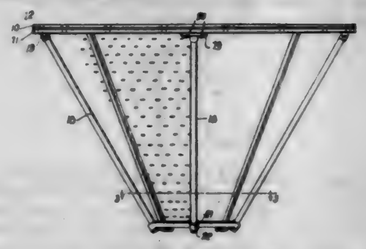
1. The combination of an apertured strip having notches communicating with said aperture, and a tubular post positioned within said aperture and having an integrally formed folded flange intermediate its ends, and in contact with one side of said binder strip and having an outwardly extending flange positioned upon the opposite side of said binder strip, one of said flanges being pressed axially of said post into said notches.

1,539,389. GUIDE LIGHT FOR AUTOMOBILES. WILLIAM F. GAFFNEY and JOHN V. WEIR, Albany, N. Y. Filed Oct. 17, 1923. Serial No. 669,109. 13 Claims. (Cl. 240—7.)



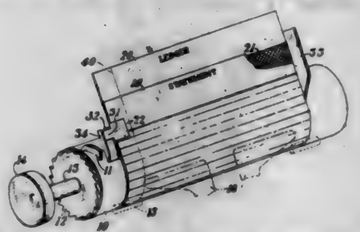
4. The combination with a vehicle front wheel and a fixed part of its turning spindle mounting, of a source of electrical illumination upon the wheel and rotating therewith and positioned to direct its light rays onto the wheel to illuminate the same, and coacting electrical contact means upon the wheel and the said fixed part for maintaining electrical communication between the source of illumination and a source of current supply.

1,539,390. METHOD OF AND MEANS FOR TRANSLATING SOUNDS. RAY E. HALL, Rock Island, Ill., assignor to Hall Research Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 8, 1922. Serial No. 559,170. 24 Claims. (Cl. 178—70.)



24. The combination of means for producing a jet including a nozzle, means for impressing sound waves on said jet adjacent to the nozzle, a movable medium spaced from said nozzle, and means between said movable medium and said nozzle providing aligned passages of different diameters for said jet.

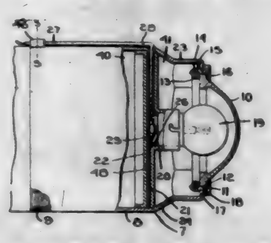
1,539,391. HOISTING DRUM. JOHN H. HERMAN, Los Angeles, Calif. Original application filed June 18, 1921, Serial No. 477,292. Divided and this application filed May 1, 1922. Serial No. 557,741. 4 Claims. (Cl. 188—264.)



3. In a hoisting drum, a hollow brake drum, a fluid chamber inside said drum, said chamber having a steam outlet and an automatically closing inlet port therein adjacent the center thereof, a brake band on said drum and means to regulate said brake band on said drum.

1,539,392. FINISHING MACHINE. AUGUST HOLMQUIST and WILLIAM A. BJORKLUND, Hoopeston, Ill., assignors to Sprague-Sells Corporation, Hoopeston, Ill., a Corporation of Delaware. Original application filed Feb. 14, 1924, Serial No. 692,716. Divided and this application filed Oct. 3, 1924. Serial No. 741,836. 10 Claims. (Cl. 146—1.)

1. A perforated screen for a finishing machine comprising a plurality of sections joined along their adjacent edges by an interlocking fold, and provided with means for securing and embracing said fold.



1,539,393. COLLATING DEVICE. ARTHUR A. JOHNSON, New York, N. Y., assignor, by mesne assignments, to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 15, 1918. Serial No. 250,089. 7 Claims. (Cl. 282—29.)

1. A collating binder for work-sheets comprising a plurality of leaves certain of said leaves confined between others thereof, all of said leaves secured together at one side, holding means associated with each of said leaves to hold in collated position work-sheets inserted between the free portions of said leaves, and a tab on

said binder and projecting outwardly from the side edges of said work-sheets to facilitate the handling and positioning of the latter while held by the collating binder, said tab being perforated so as to fit over an aligning pin and to be positioned and held by the latter.

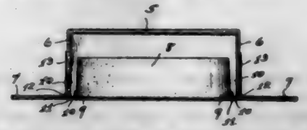
1,539,394. ILLUMINATED HUB CAP. CHARLES E. LEEMAN, Boston, Mass., assignor to William F. Gaffney and John V. Weis, both of Albany, N. Y. Filed Oct. 24, 1923. Serial No. 670,608. 5 Claims. (Cl. 240—7.)

1. In an automobile, the combination with a front wheel, of a hub cap therefor having an end of light-transmitting material, a bulb within the hub cap, a contact ring secured to the wheel, a wire connection between said contact ring and the bulb and a brush carried by the frame of the automobile and engaging said contact ring.

1,539,395. BLADING OF FLUID-PRESSURE TURBINES. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed May 16, 1924. Serial No. 713,842. 15 Claims. (Cl. 253—77.)

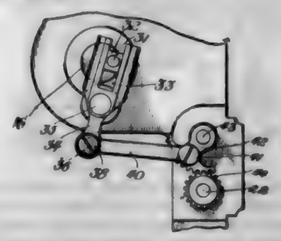
1. A blade for an elastic fluid turbine having an entrance edge partly rounded and partly sharp.

1,539,396. ELASTIC-FLUID TURBINE. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 26, 1924. Serial No. 734,355. 8 Claims. (Cl. 253—77.)



1. A steam turbine in which the low pressure or wet zone stationary blades are formed with smaller exit angles towards the outer circumference of the turbine and in which the entrance edges of the rotating blades which function with the aforesaid stationary blades are provided with varying entrance angles from their innermost ends to their outermost ends.

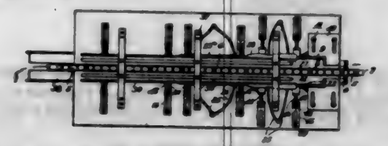
1,539,397. DEVICE FOR TEACHING ENGLISH. CHESTER H. MATRAVERS, Manitowoc, Wis. Filed June 15, 1923. Serial No. 645,679. 1 Claim. (Cl. 35—9.)



A device of the class described having two parts connected together, certain incomplete subject matter carried by one part and matter rendering the same complete carried by the other part, openings in the first part where the matter is incomplete and through which the matter carried by the second part is visible, said parts adapted to receive therebetween a blank record sheet upon which insertions are made through the openings to render the matter carried by the first part complete, and said sheet adapted to be removed there from and corrected by the association of the first part with the second part.

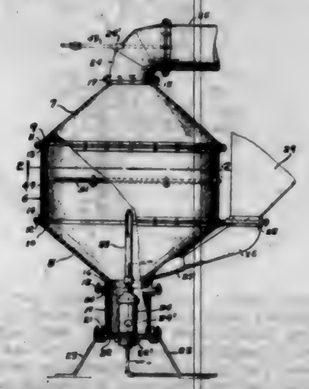
1,539,398. HAT. HERBERT L. MOSES, Baltimore, Md., assignor to M. S. Levy and Sons, Inc., Baltimore, Md., a Corporation of Maryland. Filed Apr. 20, 1923. Serial No. 633,394. 1 Claim. (Cl. 2—182.)

A hat having a crown and a brim extending laterally from the crown and forming an exterior bend around the hat at the junction of the brim with the crown, a sweat-band in the crown and of a size to provide an annular space between itself and the crown and sewing stitches passing directly through the lower edge of the sweat-band itself and extending across the said space between said sweat-band's lower edge and the crown-wall said sewing stitches also passing through the bend between the crown-wall and brim and holding the said sweat-band by its lower edge in a floating condition within the hat-crown.



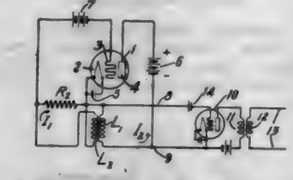
1,539,399. LOOPER-DRIVING MECHANISM FOR SEWING MACHINES. CHARLES W. MUELLER, St. Louis, Mo., assignor, by mesne assignments, to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed Apr. 30, 1923. Serial No. 635,459. 3 Claims. (Cl. 112—176.)

2. In a sewing machine, the combination with a frame, a main shaft mounted therein, accessible at the front of said frame, a looper mounted at the front of said frame



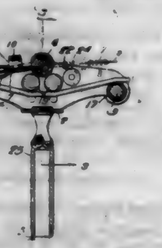
and having operative front connections with the main shaft for imparting two components of movement to said looper, a rock shaft connected with said looper for imparting four additional components of movement thereto, and connections between said rock shaft and said main shaft comprising a cross shaft extending through the frame, gearing connecting said main shaft and cross shaft, a crank on the rear end of said cross shaft, a slide block thereon, a lever pivoted to the rear side of the frame and having a slideway engaged by said block, a pinion carried by the rock shaft on the rear side of the frame, a gear segment of small diameter mounted on the frame above the pinion, and a generally horizontal link connection between said gear segment and the said lever.

1,539,400. WRAPPING AND SEALING MACHINE. CHARLES W. NEUSHAUM, Rochester, N. Y., assignor to Beechnut Packing Company, Canajoharie, N. Y., a Corporation of New York. Filed Mar. 27, 1922. Serial No. 547,157. 9 Claims. (Cl. 93—2.)



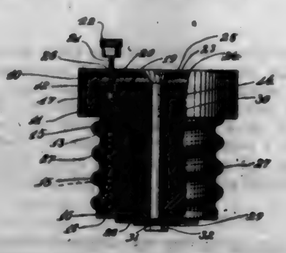
1. In a wrapping and sealing machine, the combination with a table, a runway thereon and a conveyor traversing the runway at a uniform rate, of a fixed package receiving pocket at one end of the runway adapted to fold upwardly the lower end flap of a partially wrapped package when placed therein, means at the side of the runway for folding down the other flap as the package travels on the conveyor and means for heating the folded flaps to seal them upon the package.

1,539,401. PULVERIZING MACHINE. JACOB NEUBURGER, Chicago, Ill. Filed Feb. 21, 1925. Serial No. 10,744. 6 Claims. (Cl. 83—46.)



1. The method of pulverizing and conveying materials which includes entraining and projecting particles of such materials by a high velocity non-tortuous stream of fluid against the center of a surface substantially transverse to the direction of flow to break up the particles by impact upon said surface, producing a moving curtain of air at and substantially parallel to said surface for causing the particles thus formed to pass across the surface of the edges thereof, and simultaneously producing an accelerated stream of fluid past the edges of said surface and transversely thereof for positively extracting the smaller particles from the first mentioned stream.

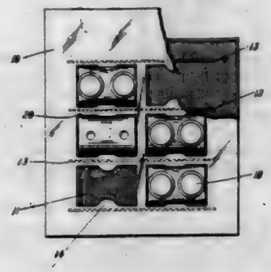
1,539,402. MEANS FOR PRODUCING ELECTRICAL OSCILLATIONS. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,573. 8 Claims. (Cl. 250—36.)



1. An oscillation generator comprising a work circuit, an amplifier having input and output circuits, and a network of negligible capacity electrically associating said circuits to connect the output circuits in aiding relation to the input circuit, said network and circuits determining the frequency of the generated oscillations substantially solely by virtue of the resistance and inductance thereof.

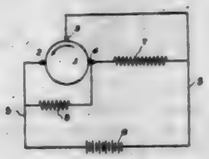
1,539,403. RAZOR-BLADE STROPPER. WINFIELD S. NICHOLS, Rockford, Ill. Filed Oct. 6, 1921. Serial No. 505,706. 4 Claims. (Cl. 51—153.)

1. A blade-stropping machine comprising a frame with a swinging blade-holder fulcrumed thereon, a cylindrical member operatively connected with the blade-holder, a strop guided in the frame and a pair of friction rollers positioned for simultaneous frictional engagement with the cylindrical member and the strop for transmitting rotation to the former to swing the blade-holder on its fulcrum as the frame is reciprocated on the strop.



1,539,404. MULTIPLE FUSE. HENNING NOTEDURFT, Richmond Hill, N. Y. Filed May 2, 1924. Serial No. 710,598. 5 Claims. (Cl. 200—125.)

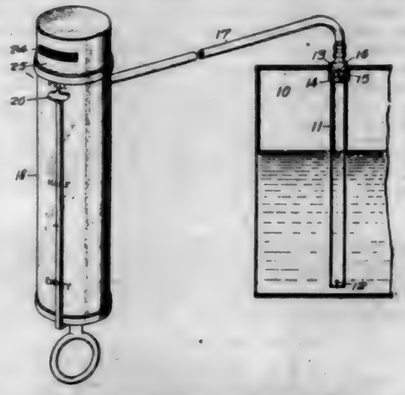
1. A multiple fuse comprising a dielectric body, dielectric fuse receiving means arranged within said body, a plurality of fusible elements associated with said fuse receiving means for electrically uniting one end of all elements, a conductive member disposed above said fuse receiving means and provided with means for facilitating making individual connection with the other ends of



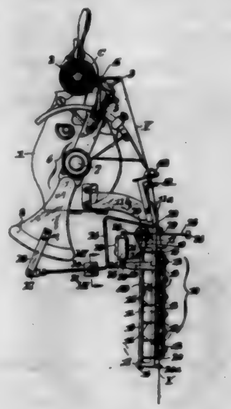
said elements, and means disposed above said conductive member and adapted to be broken before contact is made between said conductive member and said other ends of an element, and serving for indicating which of said elements has been used.

1,539,405. DISPLAY DEVICE. WILLARD A. ORMSBEE, Taunton, Mass., assignor to Taunton Pearl Works, Inc., Taunton, Mass., a Corporation of Maine. Filed Feb. 18, 1924. Serial No. 693,433. 9 Claims. (Cl. 211—34.)

1. A display card comprising a supporting sheet having a pair of spaced tongues projecting towards each other and an article carrying card having spaced parallel slots along opposite edges thereof and adapted to receive the tongues of the supporting sheet, the distance between said slots being such, relative to the distance between the bases of the tongues, that the cards are held in arched position.



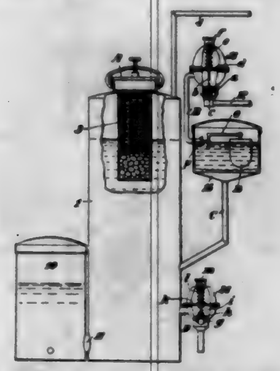
1,539,406. GENERATOR. LAURENCE M. PERKINS, Syracuse, N. Y., assignor of one-half to Owen Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Original application filed Jan. 3, 1921, Serial No. 434,528. Divided and this application filed Apr. 16, 1924. Serial No. 707,013. 4 Claims. (Cl. 171—223.)



1. The combination with a variable speed generator in which the main circuit is connected to two brushes, one of which is substantially on neutral and the other of which is off neutral at a point of relatively low field density, of a third brush substantially on the other neutral point, a field connected between the brush which is off neutral and said third brush, and a second field winding connected across the two brushes on the neutral points.

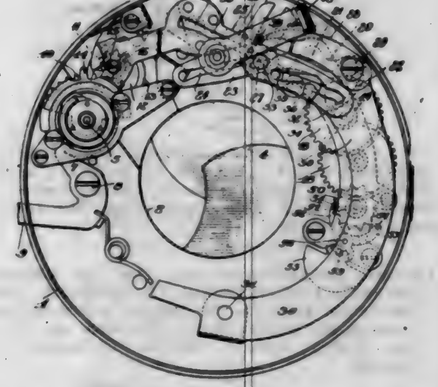
1,539,407. LIQUID-LEVEL INDICATOR. WILBUR M. PHELPS, Staunton, Va. Filed Apr. 21, 1922. Serial No. 555,847. 6 Claims. (Cl. 73—54.)

1. A liquid level indicator comprising a chamber adapted to communicate at its lower end with a liquid surrounding said end at the full depth to be measured, a suction device in communication with the upper end of such chamber and having a movable member that when actuated causes the ascent of liquid in such chamber, means to prevent the ascent of liquid in such chamber above a predetermined level, and means operatively associated with the suction device that shows the extent of movement of the moving member thereof required to produce the ascent of the liquid to the predetermined level.



1,539,408. YARN-TENSIONING DEVICE. ALBERT M. PIGEON, deceased, late of Norristown, Pa., by Anna M. Pigeon, administratrix, Norristown, Pa. Filed Dec. 19, 1923. Serial No. 681,572. 9 Claims. (Cl. 242—45.)

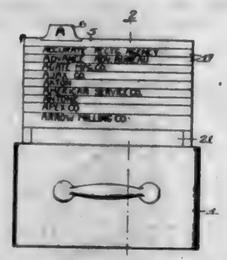
1. A yarn tension device comprising yarn-engaging instrumentalities capable of being influenced to vary the drag on the yarn, a lever associated with said instrumentalities, a weighted member with its end bearing on the lever, and means for automatically shifting the end of the member along the lever to compensatively vary the drag induced by the yarn-engaging instrumentalities in accordance with changes in linear speed of the yarn.



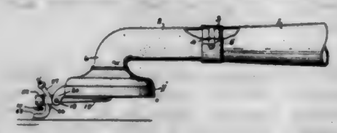
1,539,409. APPARATUS FOR THE PRODUCTION OF HIGH-PRESSURE ACETYLENE. LUDWIG REITZ, Duesseldorf-Eller, Germany. Filed Nov. 14, 1924. Serial No. 749,878. 5 Claims. (Cl. 48—19.)

2. In an apparatus for generating high-pressure acetylene gas, comprising a closed generator adapted to operate under a predetermined pressure and containing a water space and a carbide holder, a conduit for supplying water to the generator, an automatic pressure regulating device in said water conduit, said pressure regulating device cooperating with the generator and operating to

supply water thereto when the pressure in the generator drops below the predetermined pressure, and a closed pressure compensating vessel adapted to enclose an air bolster and connected with the water space of the generator.



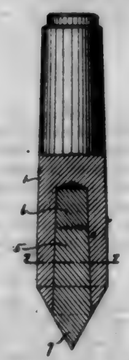
1,539,410. PHOTOGRAPHIC SHUTTER. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 1, 1921. Serial No. 504,717. 12 Claims. (Cl. 95—63.)



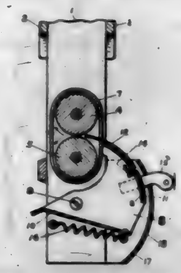
1. In a photographic shutter, the combination with blade mechanism, actuating mechanism therefor and a retarding device also driven by the actuating mechanism, of a pivoted element for regulating the influence of the retarding device and a pivoted element, turning on a different center, for operating the regulating element and having a lost motion connection therewith for the purposes set forth.

1,539,411. CARD-INDEX SYSTEM. ELMER W. DAVIS, Chicago, Ill., assignor to Shaw-Walker Company, Muskegon, Mich., a Corporation of Michigan. Filed Mar. 11, 1921. Serial No. 451,544. 14 Claims. (Cl. 129—16.5.)

3. A card index system comprising a container, a series of individual card-holding members adapted to be normally retained in said container in registering relation from front to rear thereof, said card-holding members being interconnected whereby each member may be displaced vertically a predetermined distance relative to the preceding member, by the vertical withdrawal of one of said card-holding members.

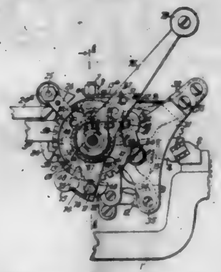


1,539,412. SOUND-REPRODUCING DEVICE. ZENA ECKELBARGER, Goshen, Ind. Filed Sept. 9, 1920. Serial No. 409,202. 8 Claims. (Cl. 274—28.)



4. In a device of the class described and in combination with a sound box, a stylus bar pivoted thereto; a shaft in alignment with the bar and carried thereby; a stylus carrier rotatable about the shaft; and a stylus carrier in alignment with the bar.

1,539,413. LATHE CENTERING TOOL. HAROLD FISH, Bridgeport, Conn. Filed Jan. 10, 1923. Serial No. 611,883. 3 Claims. (Cl. 76—108.)

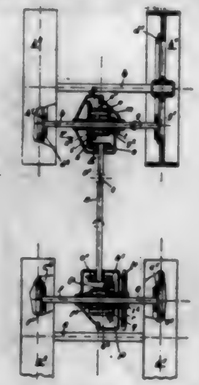


2. A method of making a cutting tool which consists in forming a shank made of machine steel with an outwardly tapering hole therein, heating the said shank so as to enlarge the said hole, driving into the said hole a correspondingly tapered cutting member and then quenching the said shank, the temperature of said shank after the heating thereof being sufficiently high to cause the shrinkage thereof upon quenching to tightly bind said cutting member in said shank, said temperature being sufficiently low to avoid any distortion of the parts when said cutting member is forced into said shank.

1,539,414. SAFETY DEVICE FOR CLOTHES WRINGERS. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed June 5, 1922. Serial No. 566,178. 4 Claims. (Cl. 68—32.)

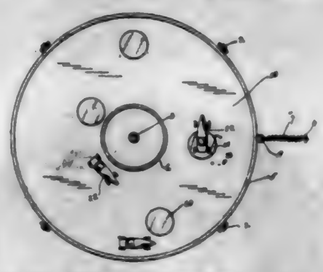
1. An attachment for a clothes wringer frame having pressure rolls, comprising a frame pivotally mounted on said wringer frame below said rolls, an actuated feed plate pivoted by one of its edges to said pivoted frame, the opposite edge of said feed plate being adapted to be swung against clothing to force the same between the pressure rolls, and a coiled spring secured to the wringer and pivoted frame to return said pivoted frame to inoperative position.

1,539,415. TYPEWRITING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 5, 1923. Serial No. 666,698. 27 Claims. (Cl. 197—117.)



1. In a typewriting machine, the combination of a platen, a finger piece, operative connections between said finger piece and said platen effective to move said platen when said finger piece is actuated, a stop effective to limit the movement of said platen in one direction when actuated by said finger piece, locking devices for normally locking said stop against movement, and devices for automatically rendering said locking devices ineffective.

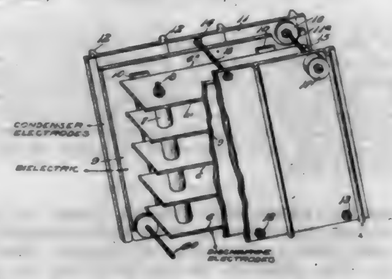
1,539,416. RADIODETECTOR AND PROCESS FOR MAKING THE SAME. FREDERICK H. HENDEY, Passaic, and RUSSELL B. EVERSON, Clifton, N. J. Filed Aug. 3, 1922. Serial No. 579,497. 8 Claims. (Cl. 250—31.)



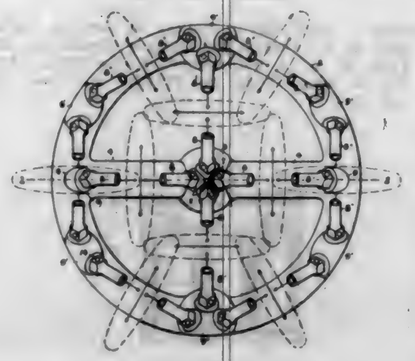
1. A detector for radio apparatus comprising a substantially complete mixture of lead sulphide and free lead.

1,539,417. FOUR-WHEEL DRIVE FOR POWER VEHICLES. FRITZ HUBER, Mannheim, Germany, assignor to Heinrich Lanz, Mannheim, Baden, Germany, a Copartnership. Filed Apr. 16, 1924. Serial No. 706,804. 5 Claims. (Cl. 180—49.)

1. A four-wheel drive for power vehicles in which two differential gears driving each a wheel pair are operatively connected through a free-wheel connection incorporated in one differential gear and said differential gear is driven from the engine and in turn drives the other through said free-wheel connection.

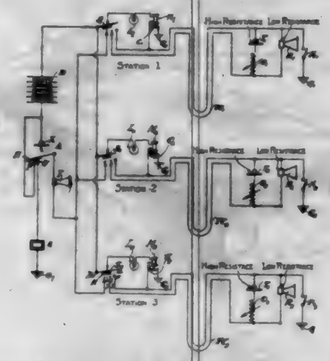


1,539,418. CHANCE-CONTROLLED RACING GAME. ELMER N. JOHA, Milwaukee, Wis. Filed Mar. 30, 1922. Serial No. 547,969. 16 Claims. (Cl. 273—86.)



3. As a new article of manufacture, a board pivoted for oscillation about a given axis and providing a curved raceway having surface areas of differing texture, a certain area being comparatively rough and another area being polished.

1,539,419. OZONE-GENERATING UNIT AND METHOD OF REGULATING THE AIR GAP THEREIN. WALTER KEISER, St. Louis, Mo., assignor to The Air Conditioning and Engineering Co., St. Louis, Mo. Filed Aug. 6, 1923. Serial No. 656,066. 22 Claims. (Cl. 204—32.)

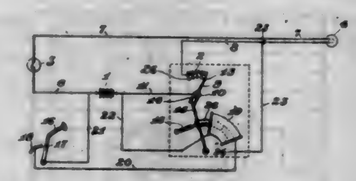


1. In an ozone generating device, a flat dielectric and a flat separable support therefor, said support comprising an electrode.

1,539,420. GAS BURNER. HARRY E. KERR, Cleveland, Ohio. Filed Dec. 29, 1924. Serial No. 758,616. 7 Claims. (Cl. 158—99.)

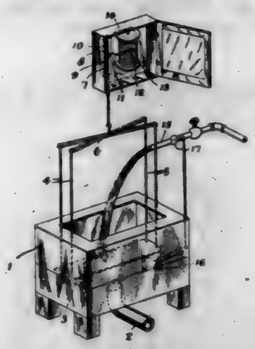
1. A gas burner, comprising a hollow ring having a circular hollow central part and a plurality of complementary pairs of gas nozzles mounted radially in reversely-inclined position upon said ring and central part.

1,539,421 ELECTRIC COMMUNICATING SYSTEM. CARL KRAFT, New York, N. Y., assignor of one-half to L. Stewart Gatter, New York, N. Y. Filed July 6, 1920. Serial No. 394,215. 3 Claims. (Cl. 179—2.)



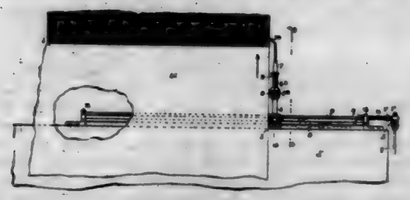
1. In an electric communicating system the combination, in a two wire circuit from each of a plurality of elevator cars to a central dispatcher station, of a loud speaking receiver of low resistance with a loud speaking transmitter of high resistance at each car connected in parallel with said low resistance receiver so that the transmitter is not a short circuit for the receiver and so that the receiver does not receive the effects of the transmitter; batteries common to all and connected in series with one of said wires to each car; a master telephone at said dispatcher station with low resistance transmitter and receiver; the hook of said master telephone; which said hook when in talking position makes contact connecting the common batteries in series with the master telephone transmitter and receiver and to the other wire of said wires to each car as selected at the dispatcher station; selector switches arranged to open both wires to the car and by means of which said selection can be made.

1,539,422. COMBINATION TOOL. JOHN E. LUNDQUIST, Chicago, Ill. Filed Jan. 14, 1921. Serial No. 437,188. 2 Claims. (Cl. 33—148.)



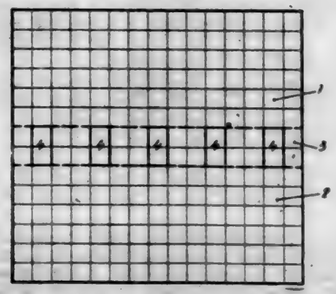
1. A combination tool having, in combination, two flat body members disposed in overlapping relation, a stud connecting said members for relative pivotal movement, a blade element on each of said members extending radially from said stud and having a curved outer end, said blade elements having their curved ends disposed either toward or away from each other according to selected positions of said members, there being two arcuate scales arranged on one of said members concentric with said stud, and two indicator points on the other member, one registering with one of said scales when said curved ends are disposed toward each other and the other registering with said other scale when said curved ends are disposed away from each other.

1,539,423. SIGNALING LIGHT FOR MOTOR VEHICLES. PHILIP MALCAMP, New Orleans, La. Filed Aug. 3, 1922. Serial No. 579,428. 4 Claims. (Cl. 177—339.)



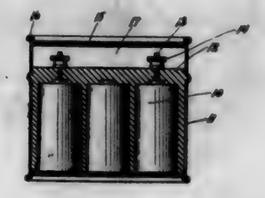
1. In a signaling means for motor vehicles, the combination of a lamp; an electric circuit containing a rheostat adapted to light said lamp; a second circuit including a circuit maker under the control of the driver said lamp and said driver also adapted to light said lamp; and means controlled by said circuit maker for cutting said rheostat out of said lamp circuit, substantially as described.

1,539,424. LIQUID METER. ELIAS MONESS, New York, N. Y. Filed May 9, 1923. Serial No. 637,709. 4 Claims. (Cl. 73—167.)



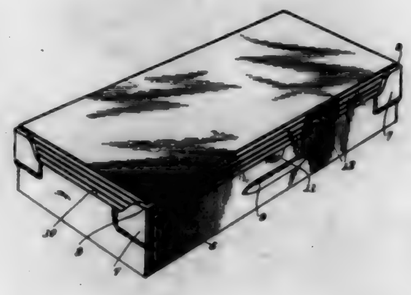
3. A meter of the kind described comprising a tank, a board, a spring-balance from which the board is suspended, means for causing a stream to fall upon the board, and a pen connected with the spring-balance.

1,539,425. FELL-FINDING MEANS FOR LOOMS. MARINUS PEPLING, Paterson, N. J. Filed Oct. 6, 1923. Serial No. 666,918. 4 Claims. (Cl. 139—1.)



1. In a loom, the combination of mechanism to maintain the sheet of warp and cloth taut and shift the same forward or backward, said mechanism including a forward-and-backward-movable take-up means for the cloth, and means, having a movable controlling part arranged rearward of and adapted to be actuated by the fell of the cloth, to stop the backward movement of the take-up means on shifting the sheet backward.

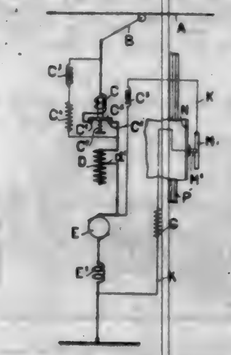
1,539,426. GAME. FRANZ RAMMELMEYER, Heidelberg, Germany. Filed Aug. 7, 1924. Serial No. 730,681. 2 Claims. (Cl. 273—131.)



1. A strategical game apparatus comprising, like a checkers game, a playing-board and two sets of figures and to be played by two parties and one umpire, said figures being roof-shaped, and detachable distinguishing badges removably located on one side of said figures only, said latter side always facing the player during the play, so that neither party is allowed to find out the character of his adversary's figures, this being left to an umpire only.

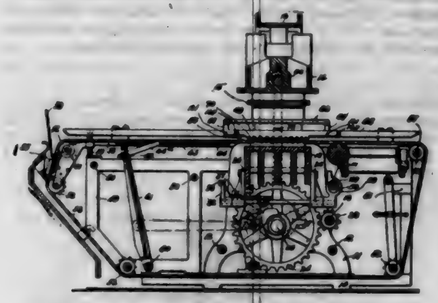
1,539,427. BATTERY. THOMAS M. RECTOR, Rutherford, N. J., assignor to Vitapack Corporation, New York, N. Y., a Corporation of New York. Filed May 10, 1924. Serial No. 712,221. 5 Claims. (Cl. 136—38.)

1. In a dry-battery construction, a cell unit, a sealed container for the cell unit sufficiently larger than the cell to provide space between the cell and the walls of the container, insulating material separating the cell and the container, and the remaining space in the container being filled with an inert gas.



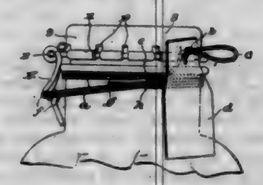
1,539,428. DENTAL MIXING SLAB. THEODORE ROMAINE, Irvington, N. J. Filed May 2, 1924. Serial No. 710,577. 5 Claims. (Cl. 32—5.)

1. A mixing slab comprising a thin oblong rectangular body, outstanding frame corners integral therewith and extending to a uniform height thereabove, and a plurality of plates having rounded edges disposable within said corners on the upper surface of said body.



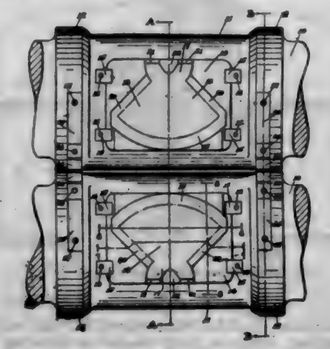
1,539,429. OVERLOAD-CIRCUIT BREAKER FOR MOTORS STARTED BY MEANS OF A STARTING RESISTANCE. WILLY SARTIG, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 10, 1922. Serial No. 542,736. 3 Claims. (Cl. 172—152.)

1. In combination with an electric motor, a body propelled by said motor, a prescribed track for said body, a main circuit in connection with said motor, an overload circuit breaker having a main current releasing coil in said circuit, an auxiliary coil for supplementing



the action of said main current releasing coil, and means for automatically exciting said auxiliary coil at predetermined points in the travel of said body.

1,539,430. SAFETY CLUTCH MECHANISM. CHARLES ADRIAN SAWYER, Jr., Newton, Mass. Filed Apr. 9, 1921. Serial No. 460,117. 4 Claims. (Cl. 192—138.)



1. An improved clutch operating mechanism comprising a rotatable shaft, a cam thereon, a clutch for connecting said shaft to a source of power, clutch operating means, a stub shaft connected thereto, a roller slidably and rotatably mounted on said stub shaft, and means for moving said roller into and out of the path of movement of said cam at predetermined times.

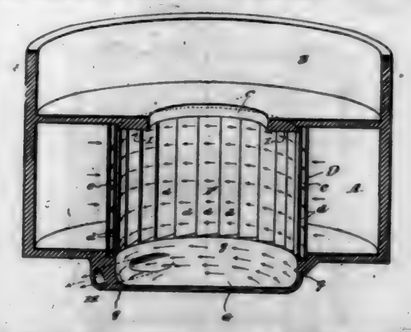
1,539,431. BOTTLE CLOSURE. SAMUEL M. SCHENKEIN, Newark, N. J. Filed Jan. 2, 1924. Serial No. 683,978. 11 Claims. (Cl. 215—82.)

1. The combination with a bottle and a cap closure for the same having means to lock the cap to the bottle when the cap is rotated thereon, said closure having an opening, hole or the like in a part thereof extending over the lip of the bottle; of a single flexible member passing through said opening and tightly wound about the bottle neck contrary to the releasing motion of the cap a plurality of times to anchor or hold the cap in closed position, and means to seal the end of said turns to the bottle.

1,539,432. MILL FOR ROLLING TAPERED DISKS. OTTO C. SCHOENWERK, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1921, Serial No. 516,987. Renewed Oct. 9, 1924. 10 Claims. (Cl. 80—16.)

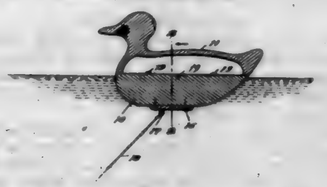
10. In an apparatus of the character specified, the combination of a pair of cooperating rolls, each roll having a cylindrical collar at each end thereof, provided with a recess, and an eccentric body portion between the collars, said collars being normally in rolling contact with each other, said body portions having working faces so disposed with reference to the roll axis as to separate the contacting collars, when said faces engage a blank, thereby exerting pressure on said blank, a wedge positioned in the bottom of each of said recesses and cams secured in position upon said wedges and projecting slightly above the cylindrical surfaces of said collars, the high points of said cams contacting with each other at predetermined positions to shift the pressure from said faces and relieve the pressure on said blanks while they pass from between said faces.

1,539,433. METHOD OF UTILIZING RESINOUS WOODS. ARLIE WILLIAM SCHORGER, Madison, Wis., assignor to C. F. Burgess Laboratories, a Corporation of Wisconsin. Filed May 25, 1920. Serial No. 384,281. 10 Claims. (Cl. 92—6.)



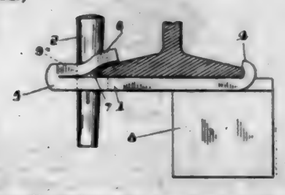
7. The method of making mechanical pulp from resinous woods, which consists in grinding the wood in the bolt in the presence of an aqueous solution of an agent having solvent and emulsifying action on resin, squeezing and washing the pulp so produced and delivering the wash water to the grinder for solvent action on fresh pulp, and recirculating the grinder solution through the grinder until it is well charged with resinous material, substantially as described.

1,539,434. THIMBLE. MARY JOSEPHINE SCHUBERT, Glendale, Mo. Filed Mar. 7, 1923. Serial No. 623,427. 3 Claims. (Cl. 223—51.)



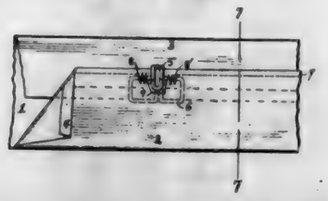
1. In a thimble of the character described comprising a circular band, a conical shaped member supported by one end of said band, and a circular plate having indentations therein supported between said conical shaped member and the other end of said band as and for the purpose indicated.

1,539,435. CENTRIFUGAL APPARATUS. JOSEPH MARTIN SCHUTE, Chicago, Ill., assignor, by mesne assignments, to Centrifix Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed Feb. 5, 1924. Serial No. 690,861. 8 Claims. (Cl. 183—85.)



1. The herein described improvement for the centrifugal treatment of fluids without resort to rotating parts, comprising a ring containing a circumferential series of longitudinal inwardly directed and operatively overlapping slit-like tangential tuyères, in combination with an end closure presenting an annular inner surface edgewise to said tuyères and perpendicular to the axis of said ring, a second closure of a bowl-like shape providing a longitudinal extension for the other end of said ring and containing a peripheral outlet for the heavier constituents of the fluid, and, one of said closures having a central outlet, smaller than said ring, for the lighter constituents of the fluid.

1,539,436. DECOY DUCK. LOUIS E. SHAW, East Orange, N. J. Filed Sept. 14, 1922. Serial No. 588,277. 3 Claims. (Cl. 43—3.)

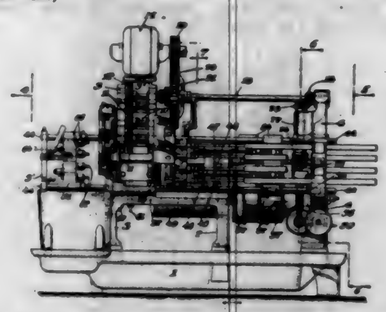


1. A decoy duck formed of a cork composition simulating in outline a natural duck, including a solid flotation member and a hollow superstructure secured thereto, said decoy duck having its center of mass and its center of flotation adjacent each other and both located within the outlines of the flotation member and adjacent the top of the flotation member.

1,539,437. RAIL ANCHOR. ALBERT E. SHIRLEY, Toronto, Ontario, Canada. Filed Sept. 22, 1922, Serial No. 589,913. Renewed Oct. 27, 1924. 2 Claims. (Cl. 238—324.)

1. In a rail anchor, the combination of an integral reach bar having a hook formed at one end adapted to engage one edge of the base of a rail, a recess at its other end in which the other edge of the base of the rail is adapted to be received, said recessed portion having a hole therethrough and a downwardly directed abutment member, and a conical key adapted to be received in said hole and engage the edge of the rail base.

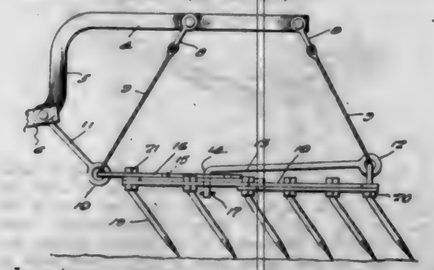
1,539,438. HOOK AND EYE TAPE. DAVID SILBERMAN, New York, N. Y. Filed Aug. 19, 1924. Serial No. 732,955. 2 Claims. (Cl. 2—265.)



1. Hook or eye tape comprising two plies of imperforate fabric forming flaps, wire fastening members provided with base loops, said base loops lying between the open edges of the flaps with their engaging portions extending beyond a flap and a line of stitching extending along the flaps and uniting them, said stitching including stitches extending transversely of said line and encircling the wire of the base loops whereby the fastening members are securely locked between the flaps.

1,539,439. TOOL-HOLDING MEANS. OSCAR AUGUST SMITH, East Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 26, 1921. Serial No. 510,413. 1 Claim. (Cl. 279—74.)

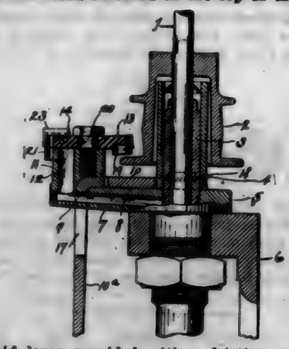
The combination of a rotary spindle having a bored tool holder of different diameters forming a shoulder, a tool releasably held in said bore and having a slabbed portion and therebelow a recess, a driving pin carried by said holder transversely of its bore for engaging the slabbed portion of said tool, a spring pressed plunger also carried by said holder and projecting into the tool recess, a shiftable sleeve carried by said holder of different diameters fitting the different diametered holder and spaced from a part of said holder and having a flaring end for engaging said plunger and a pair of shoulders one adapted to contact with the holder shoulder to limit the upward movement of the sleeve and the other to contact with the plunger to limit the downward movement of the sleeve, said plunger in its outward position contacting with the flaring end of the sleeve to hold it adjacent to the tool holder.



1,539,440. NUT FORMING AND DRILLING MACHINE. OSCAR A. SMITH, East Cleveland, and GEORGE J. LEBER, Cleveland, Ohio, assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 13, 1923. Serial No. 631,759. 87 Claims. (Cl. 29—52.)

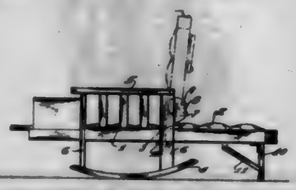
1. In a metal working machine, the combination of a supporting frame of gable section, work spindles, end working tools and side forming tools located on two of the faces of said supporting frame whereby they are in gable formation, and means for operating them.

30. In a metal working machine, the combination of a plurality of work spindles located in gable formation, a plurality of sets of tools likewise located in gable formation, a single cam shaft mechanism for controlling the operation of said tools, and a centrally located driving mechanism for operating the work spindles and rotating the cam shaft, said driving mechanism having its source of power located at the apex of the machine and said cam mechanism being located in parallelism therewith.



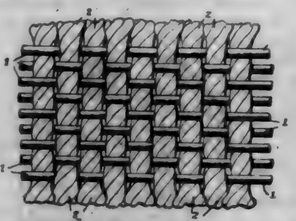
1,539,441. HARROW STRUCTURE. DAVID SPAHN, Wheatland, Wyo. Filed Aug. 27, 1924. Serial No. 734,456. 1 Claim. (Cl. 55—31.)

In a harrow structure of the class described, a collapsible diamond shaped frame, rearwardly inclined teeth carried by said frame, a plate attached to the forward end of the frame and extending into the interior thereof and provided with apertures, a rod connected to the rear end of the frame and extended into the interior and having a down turned end adapted to be selectively engaged with the apertures in said plate.



1,539,442. KNEE BRAKE. BERTRAM R. SWEET and HENRY DALTON, Whitinsville, Mass., assignors to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed May 10, 1924. Serial No. 712,415. 2 Claims. (Cl. 118—8.)

1. In a device of the character described, a spindle having a flanged whorl, a knee brake lever having a pair of arms loosely embracing the spindle bolster case, a friction pad affixed to each arm adapted to engage the underside of the bottom flange of the whorl at points substantially opposite diametrically with relation to the axis of the spindle, a post adjacent to the whorl having an oil inlet therein connecting with a channel in the base of the spindle bolster case, a lever fulcrumed on a stud fastened in the top of the post, one



arm of said lever provided with a friction pad adapted to normally engage the upper surface of the whorl flange when the knee brake is operated, the other arm of said lever serving as a cover for the oil inlet, and means for locking said lever in operative position.

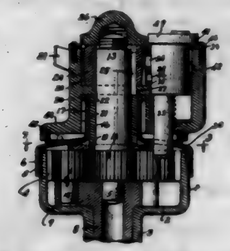
1,539,443. COMBINATION BED AND CHAIR. MAY C. TALMAGE, Apollo, Pa. Filed Mar. 21, 1923. Serial No. 626,603. 2 Claims. (Cl. 155—49.)

1. In a convertible chair having a seat, a drawer mounted below the seat, side extensions hingedly connected to the sides of the drawer and adapted to be raised to vertical position when the drawer is pulled out, a rest plate pivotally connected to the underside of the seat and adapted to be projected beyond the front of the seat to form a rest, and a board adapted to be supported upon said rest and the front of the drawer to form an extension of the seat.

1,539,444. BRAKE LINING. EDWARD J. TRAINOR, Brooklyn, N. Y., assignor to Asbestos Spinning and Weaving Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1921. Serial No. 499,557. 7 Claims. (Cl. 188—259.)

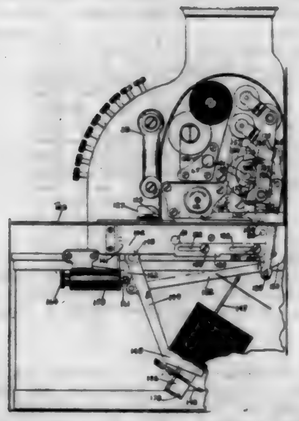
5. A brake lining comprising interwoven strands of bare wire and heat resisting fibrous material folded upon itself along the line of the wires, coated with a resilient composition and having attached thereto a fibrous backing.

1,539,445. WHEEL SKATE. THEODOOR VAN BUUREN, Amsterdam, Netherlands. Filed Oct. 17, 1923. Serial No. 669,136. 2 Claims. (Cl. 208—178.)



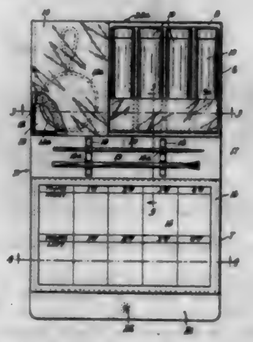
1. A skate, comprising in combination a metal foot plate having forwardly and rearwardly extending bifur-

cated portions at its opposite ends which are disposed substantially co-planar therewith; the members of each bifurcated portion being twisted at right angles to the body of the plate and formed with aligning openings, and the free outer ends of the members of the rear bifur-



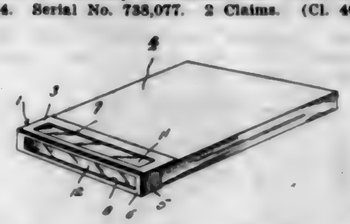
cated portion being bent downward and rearward; front and rear wheels journaled in said bifurcated portions with their axles mounted in the alining openings in the twisted members thereof, and a brake roller journaled in the bent ends of the members of the rear bifurcated portion.

1,539,446. STEERING-WHEEL LOCK. FREDERICK VINCENT, Detroit, Mich. Original application filed June 22, 1921, Serial No. 479,627. Divided and this application filed Jan. 19, 1923. Serial No. 613,584. 15 Claims. (Cl. 70—129.)



1. In steering mechanism, a rotatable steering shaft, a steering wheel mounted thereon to turn therewith and removable endwise of said shaft, a nut having flat sides and attached to said shaft and engaging said wheel to prevent removal of said wheel, and a slidable locking member having engagement with a flat side of the nut to prevent removal of said nut from the shaft, removal of said wheel being prevented until the nut is removed from the shaft.

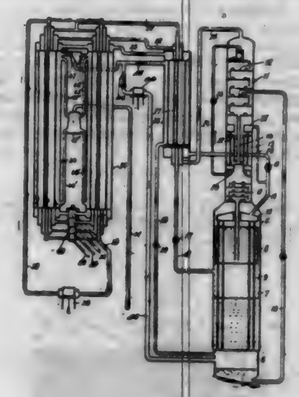
1,539,447. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed Nov. 18, 1921. Serial No. 516,100. 37 Claims. (Cl. 271—63.)



1. In a machine of the class described, the combination of movably mounted record material retaining means, and means for moving record material toward said retaining means during movement of said retaining means.

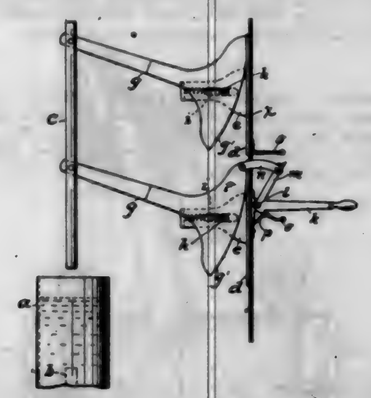
1,539,448. POCKET FINGERPRINTING KIT. THOMAS M. WHITE, Austin, Minn. Filed Apr. 11, 1924. Serial No. 705,749. 10 Claims. (Cl. 41—4.)

1. A pocket finger printing kit comprising two connected sections foldable transversely upon each other, and a means on one of said sections for overlapping the edges of and holding in place a plurality of loose sheets whereby the top sheet will be exposed to receive finger impressions and be prevented from moving edgewise.



1,539,449. NAME HOLDER FOR SALES BOOKS. HENRY E. WIENKE, Huntington, Ind. Filed Sept. 16, 1924. Serial No. 738,077. 2 Claims. (Cl. 40—11.)

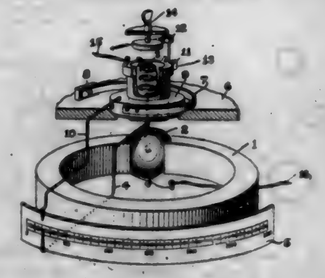
1. A name holder for sales books comprising a casing open at its forward end and adapted to fit over the closed end of the book, the upper and rear faces of the casing having elongated slots formed therein, name plates removably supported in the casing against the under side of the upper face and the inner side of the rear face over the slots formed therein, transparent strips interposed between the name plates and the adjacent faces of the casing, means for preventing the displacement of the casing from the book, said means comprising flat springs secured at their forward ends to the under side of the under face of the casing adjacent the ends thereof.



1,539,450. METHOD OF SEPARATING THE CONSTITUENTS OF GASEOUS MIXTURES. WALTER WILKINSON, Jersey City, N. J., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,444. 7 Claims. (Cl. 183—115.)

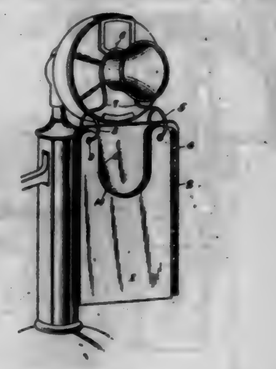
1. A method of separating the constituents of a gaseous mixture by liquefaction, which comprises compressing and cooling the mixture, liquefying a portion thereof at the initial pressure, expanding another portion, subjecting the expanded portion to selective liquefaction by indirect contact with colder products, thereby forming a liquid containing the constituents and a residual gas, subjecting the liquid to rectification with vapors of the preceding portions thereof, withdrawing

and dividing the residual gas, liquefying non-selectively a regulated portion thereof and subjecting said vapors to final contact with the liquefied residual gas.



1,539,451. CIRCUIT BREAKER. WALTER N. WILLIS, Easton, Md., assignor of one-half to George J. Harding, Merion, Pa. Filed June 23, 1923. Serial No. 647,280. 10 Claims. (Cl. 200—153.)

1. The combination with a lever having a plurality of arms and an element connected with one of said arms, of a fulcrum therefor, the fulcrum being movable to cause variation in the relative lengths of the arms of the lever.

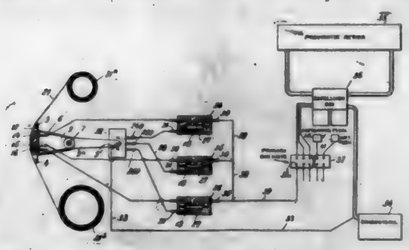


1,539,452. COMPENSATING MEANS FOR TEMPERATURE-MEASURING INSTRUMENTS. CHARLES H. WILSON, Mount Vernon, N. Y., assignor to Wilson-Maeulen Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 8, 1921. Serial No. 506,285. 8 Claims. (Cl. 73—82.)

1. In a pyrometric indicating instrument associated with a thermocouple having a cold junction, a common thermo-sensitive element adapted both to measure the temperature of the instrument and to compensate the indicating devices thereof for cold junction temperature variations, means supporting said common thermo-sensi-

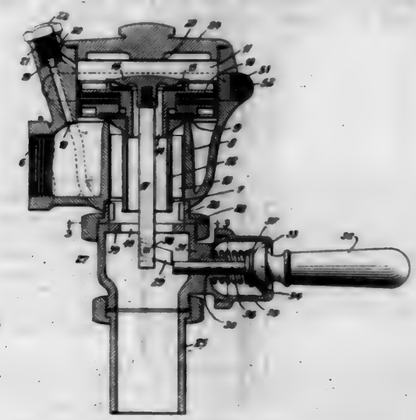
tive element, and means connected to said supporting means and adjustable relative thereto for supporting one of said indicating devices.

1,539,453. TELEPHONE-PAD ACCESSORY. HORACE WILTBANK, Washington, D. C. Filed May 29, 1924. Serial No. 716,680. 9 Claims. (Cl. 40—10.5.)



2. A telephone pad accessory, comprising a plurality of leaf members, eyelets extending through the upper portions of the leaf members, rings for hingedly mounting the leaves, means for supporting the pad in closed pendent position, a recess through a plurality of the leaves adjacent the top of a size to permit a leaf or leaves to be swung past telephone mouthpiece and to permit the wall of the recess to contact the mouthpiece, thereby supporting the pad in open position by virtue of the contact of the wall of the recess with the wall of the mouthpiece.

1,539,454. REPRODUCING PIANO. FRANCIS LINCOLN YOUNG, New York, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed July 1, 1922. Serial No. 572,225. 5 Claims. (Cl. 84—157.)

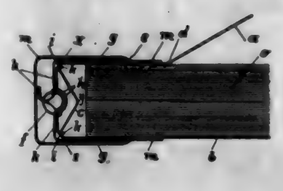


1. Means for adapting a reproducing piano to play interchangeably with music-sheet having different kinds and arrangements of expression controlling perforations, said means comprising a main tracker bar having note playing ducts; a supplemental section having plural rows of expression controlling ducts, the said rows being respectively adapted to co-act with the expression controlling

perforations of said different kinds of music-sheets; said supplemental section being supported for transverse adjustment at the end of the main tracker bar to permit

any of its rows of expression ducts to be brought into proper playing position relatively to the note ducts in the main tracker bar.

1,539,455. FLUSH VALVE. WILLIAM H. YOUNG, Bayonne, and JAMES MUIR, Lyndhurst, N. J. Filed Mar. 9, 1923. Serial No. 623,828. 13 Claims. (Cl. 137—93.)



9. A flush valve including a casing formed with inlet and outlet openings, means providing a valve seat formed within and carried by said casing, a valve adapted to engage said seat, a secondary casing secured to said first named casing and adapted to be turned and set in the desired position with respect thereto, means for forming a liquid-tight joint between the secondary casing and the first casing in all positions into which the secondary casing may be turned and an actuating member carried by said secondary casing and adapted to effect an unseating of said valve.

12. A flush valve including a casing formed with inlet and outlet openings, a piston slidable within said casing, a valve forming a part of said piston, means within said casing providing a seat for said valve, said piston being formed with an opening and a valve seat adjacent to said opening, a second rocking or tilting valve carried by said piston and adapted to normally engage said last named seat, a stem secured to said valve and extending through the opening in said piston and beyond the same, a trigger pivotally secured to said stem and a plunger movable endwise toward the stem to engage said trigger and adapted to engage the same only when said valves are in seated position.
